Mr. Tite contented himself in his address at the preceding meeting with a general expression of regret that the love of Pointed architecture was becoming too exclusive, but with some compliments to its favourers on their success as compared with their fellow-labourers in France. He commences his second series of remarks with a somewhat stronger expression of his regret, especially that we do not keep ourselves to the buildings for which our style is suited. Warming as he proceeds, he accuses us of being mere blind copyists, incapable of thinking for ourselves, and winds up by showing that our style is unfit for any purposes at all, unless it be for Roman Catholic churches. Now, would it not have been better to have acknowledged this opinion at the outset? We can readily understand that the majority of those who were firmly grounded in the old state of things before our movement had made much progress, are likely to disapprove of what we are doing. It is so with every movement, whether in art, science, or politics: the movement party are invariably maligned and opposed by those whose prepossession they disturb. It is an understood thing, and no one wonders at or complains of it. Mr. Tite, however, takes a higher ground: he admits at first that, in some respects, and in some cases, we are right, and meets us on this ground, but at last winds up by denying that we are in the right anywhere, unless it be in Roman Catholic churches!

I will, however, crave your patience while I follow him into particulars. His first complaint is that our style is applied "to buildings for which Classical architecture is more fitted, such, for example, as town halls and markets." I rejoice to hear that there is such cause of complaint! *I* have long been complaining that it was *not* applied to such buildings, for which it seems to me so eminently adapted. Where, for instance, are finer town halls to be found than in the great mediæval cities of Germany and Flanders; and where better market houses than the *halles* of the Flemish towns? They are only too good and too noble for us; but surely a style which produced *them*, and which has produced equally appropriate buildings for the humblest purposes of trade and husbandry, will not fail in giving such modifications of its nobler conceptions as will meet our circumstances, whatever they may be. Only give us the chance, and I think we can show whether town-halls and markets are unsuited to our style.

Mr. Tite next complains that in building churches in towns we do not respect the style of the "elegant" houses adjoining. I sincerely wish we could say much for the elegance of our town houses! They certainly carry out Lord Bacon's axiom. If they are built *to live in*, they assuredly are not generally built *to look at*; though it is the misery of our lot that we are hourly compelled to look at them! Be this, however, as it may; it is inherent on a period of change that such discordances of style should exist. The architects of the seventeenth century did not scruple to build in their own Renaissance style because surrounded by Gothic buildings: they even patched up the latter in their own style. No change would be made in anything were this principle to be admitted. It is simply the principle of obstruction, which comes ill from the chairman of an institute like ours, which professes to aim at progress.

If, however, our vice-president merely means that we build in our *towns* churches better suited to *rural* situations, I heartily join with him; but is this his own criticism? has he not, or might he not, have learned it from ourselves? I can refer him to able articles on the subject from the pens of leading members of our movement, in which he will find it impartially discussed, and our errors severely exposed. Surely, he will hardly venture to say that Gothic architecture is suited to the country, but unfit for towns![*] that it is unsuited to be placed near houses 70 or 80 feet high! I confess I have never heard want of height quoted as one of the defects of Gothic architecture. I do not know whether he refers to the church in Gordon-square as being unfit for such a position, but if he will look out from the side of Hampstead-hill, he will find that this *alone* among all the churches of London (St. Paul's and Westminster Abbey only excepted) is seen rising predominantly over the house-tops, and is a conspicuous object without the aid of a tower. All that keeps us from raising our town churches above the "elegant" houses around them is *our poverty*; a hindrance which would apply equally to any style, excepting that a Gothic church would be vastly improved if we could afford to make it tower above our houses, while an Italian church would probably be thrown out of all proportion by the operation. Our misfortune is independent of our style. We are compelled to build *town* churches with *country* means, and are then laughed at for building country churches in our towns. If we had the funds which were expended a few years back on some of the worst of our "classical" churches, we should not dread the proximity of houses 70 or 80 feet high, nor fear to be accused of building churches only suited to the country. But even if we have in some cases deliberately fallen into the error (which I think has sometimes occurred), that has nothing to do with the style, for no one will accuse Gothic architecture of falling short of the *classical* in *loftiness*.

Mr. Tite then proceeds to compliment the builders of some of the great City warehouses, and further on imagines what some Gothic architect would have made of them. Has he ever seen the *noble* and almost *majestic* mediæval warehouses in some of the ancient German cities? A nobler type for buildings of their kind can hardly be conceived: they have rather too much roof for modern purposes, but are designed with a perfect appreciation of their use, and obtain their noble aspect solely from the simplicity and truthfulness with which their uses are provided for. Some of the finest warehouses I have seen in England and Scotland, built by persons who never thought about building in any style, but simply thought of doing *well* and *efficiently* what they were about, have struck me as having a strong family likeness to these stern and noble structures; and they certainly look better than the huge, over-corniced, though handsome, fronts in the city of London. It is curious that while Mr. Tite lauds our City warehouses in the same breath in which he speaks of the *small projection* in French street architecture, as showing that their architects lean "to the wants of the place and the times," Mr. Fowler very justly complains of their enormously projecting cornices as reducing, in narrow streets, the sky as seen from the street to one-half! He might also have animadverted on the *frightful danger* they incur.

After some very judicious remarks upon *fitness*, and on making a building suitable to its purpose, sentiments which, by the way, he will find admirably enlarged upon by Mr. Pugin in several of his works, and laid down as the key-note of Gothic as distinguished from *modern* architecture—Mr. Tite returns to churches, selecting one which he has seen in the neighbourhood of a manufacturing town as a beautiful piece of copying, but as failing in all its practical uses. Surely, however, he will not argue that the mistakes of an individual architect are to be taken as condemnatory of the style he happens to be working in; or what style would escape? "The congregation *could not hear*;" but is this usually the case with Gothic churches? The very reverse is more frequently the fact. Nor could they "*sit with comfort*;" but surely a seat may be made comfortable or uncomfortable in any style! There was "*no ventilation*;" but is Gothic architecture opposed to ventilation? The "*warming* was defective:" surely a few more hot-water pipes would not have marred the style! The clergyman *complained of the reading-desk*:" what clergyman does not complain of his reading-desk, whatever be the style? It is said that every new incumbent of every church wishes to inaugurate himself by moving the pulpit: then why not complain of his reading-desk? Let him alter it to his mind, and it will not, I dare say, be less "Gothic" than at present, or less like what it would have been in Edward III.'s time! "Indeed, the church is so inconvenient, that *the people would rather stay away than go to it*;" but this may be the fault of the people and the clergyman as much as of the church; yet after all this, the church is "far more beautiful than the architects and masons of Edward III.'s time *could have made it!!!*" Really this *is too* complimentary! What! more so than *Exeter cathedral*; than *St. Stephen's chapel*; than the west front of *York*; than all the churches of Lincolnshire, or the church of St. Ouen, or the *façade* of Rheims? If so, I do pity the taste of those who would rather stay away than go to it! I would willingly bear a little cold, or sit in an uncomfortable seat, for the luxury of seeing such a building!

Now I think I happen to know the church alluded to. It is, if I am right, a very nice, simply designed church. It is generally (it is true) in the form of an old church, but is absolutely free from slavish copyism: instead of being a most accurate and elegant imitation of the style of Edward III. it comes home to my recollection as a somewhat severely simple adaptation of that of Edward I. Instead of being far more elegant than the old people could have made it, all little elegancies of workmanship are carefully eschewed. It is rather ascetic than elegant in its character. Instead of being a specimen of "*identical copying*," and having "no ventilation," it has the novel feature of the clerestory devoted to newly constructed ventilators in lieu of windows. Its seats are unquestionably faulty, as much an exaggeration of *lowness* as the seats of thirty years back were of *height*; and the hot-water apparatus (whether or not from being constructed as a type of Edward III.'s days) does not answer. My own impression was, that this arose not from the style of the apparatus, but from the engineer having been chary of his pipes. There are possibly a few ritual affectations about the chancel which would be as well modified; things which usually depend more on the fancy of the clergyman than the architect, and certainly have nothing to do with the style; one thing, however, I observed, which I much liked—a large and cleverly-contrived recess in

[*] It is an unfortunate admission on the part of our opponents that Gothic architecture, while it harmonizes with the works of God, clashes so severely with the modern works of man.

the chancel for the organ, such as I have never seen in any church, ancient or modern, and which certainly did not strike me as a specimen of copying or of "*want of all thought.*" The clergyman, however, not only complains of his reading-desk, but of his pulpit. "Being made of stone, it is so cold he cannot put his hand upon it!" Did this ingenious priest never think of the expedient of lining the top with cloth or velvet, which is usual even with wood pulpits? Surely a pulpit may be made either of wood or stone, whatever be the style of the church! It is usual to give the clergyman his choice, and I generally find them choose stone, forgetful of their hands; and among old pulpits I think I have seen more stone or marble ones of the Renaissance than of the Mediæval periods, and I do not at this moment recollect any of the time of Edward III. The last complaint is described "as a most enormous mistake:" it is that the altar-rail only allows room for twelve communicants. It may be better to allow more, but if Mr. Tite will look into it at such a time, he will find that it really makes no practical difference, or very little, whether the rail be long or short, if the rule of the church be carried out of repeating the words prescribed to *each communicant*, or even to two together. If, however, the indecent custom be admitted of repeating them only to each "rail" of communicants, I admit that time is saved by making the rail long, but it is a custom more honoured in the breach than in the observance. Finally, however, we come to the "sweeping clause," which condemns all the forms of Gothic architecture as suited to the Roman Catholic religion and unsuited to our own; and on this ground, in Mr. Tite's *sincere opinion*, he thinks "the architecture which was learnt in Italy was much better suited than that now in fashion. So we are to go into Italy to learn Protestantism! The Popes then were sadly mistaken when they built St. Peter's. Little did they think they were erecting the type of Protestant architecture. I will not, however, follow out the subject: the fallacy of it is too obvious.

One word, however, on the subject of copyism. It is unquestionably one of the great vices of our day, and the more it is run down the better; but let us have fair play. *Laudari a laudato Viro*, is what we all desire; and we equally rebel against being blamed by those who wallow in the same mire with ourselves. Now, the classic architects have no kind of excuse for their copyism. They have been at work for three centuries, and yet too often work like schoolboys: not only every detail is most abjectly copied, but they actually scruple not at copying nearly whole buildings at a time! If we are copyists, we have learned to be so in their offices, where copying is, with some bright exceptions, the sum and substance of architecture. They use *now* the very arrangement of leaves they find in ancient capitals, excepting that they fail of their spirit: even the triglyphs and guttæ, the symbols of transition from wood to stone when the Dorians adopted the materials of the Pelasgi, they copy to this day with scrupulous accuracy, and learn with infinite pains their proper proportions in decimals of minutes! and yet they have the conscience to accuse us of copying, because while learning and reviving the long neglected arts of our native country, we do not at once strike out into new developments. We have had first to make ourselves masters of our grammar, but already we develope more, we copy infinitely less, than they do after three centuries of training. I am one of those who have been behind the scenes, and have been put through all the facings of classical practice; and, while I admire genuine classical architecture quite as much as our excellent vice-president (though I think another style more suitable to ourselves), I know too well the practice of modern classicism not to be fully aware that *ours*, with all its faults, is freedom itself compared with the copyism which preceded it. Our aim is *not to copy* but to *develope*, and to render our style the truthful expression of the wants and circumstances of our day; and to effect this great object will be the constant aim of,

Yours, &c.

Geo. Gilbert Scott.

SUGGESTIONS AS TO THE EAST.

The East, the land of mystery, is now opened to us; and, if not too late, we would suggest several subjects of inquiry.

The geology of a country should be known in order to understand correctly the past and present history of a people. We therefore hope some competent person will inform us as to the order of stratification from the Dardanelles, and on throughout the whole extent of the Black Sea, and the adjoining portion of Asia Minor. The general features are known, but we wish for details. The Sea of Marmora, with its islands and shores of marble, declares the character of its geology in its name: something interesting may however be told as to the rocks found in contact with the marble beds, as also of the extent to which the marble quarries have been worked in times past, and are now worked. Then, as to the shores of the Bosphorus, and the foundations of Constantinople, how far does the clayslate extend, and the limestone beds found at Kulali? We know that coal is worked at Erekly, and Murray gives rather an odd account of the coal-beds, where he states;—"The coal-seams vary in inclination, the average being at an angle of about 30 deg. with the horizon. They crop out over the entire field on the sides of the mountain-ridges, 1,500 to 2,000 feet high, and are much broken by faults. *No evidence of volcanic action has been discovered.*" We have put this last paragraph in italics. It requires explanation. "Seams of coal" at "steep angles" and "mountain ridges" are evidence of "volcanic action," even without the "*faults.*"

The geology of Sinope, Samsoon, and Trebizonde may be correctly ascertained. We do know that much of this coast is oolitic; that the peninsula of Sinope is very like our own island of Portland, in size, in form, and in geology; and we also know that there are many traces of volcanic action, basaltic and other dykes having ruptured the strata. But no map that we have seen represents with any degree of accuracy this portion of Asia Minor. Spurs and ranges of mountains, from 3,000 to 7,000 feet high, can be seen from the deck of a vessel, having snow upon them in May, with the thermometer at 85 deg. in the shade. There is plenty of work for the geologist here. At Trebizonde, the celebrated 10,000 came out from their wanderings upon the sea. A correct knowledge of this country would raise our wonder at the marchings of ancient armies, and increase our admiration for the generals who commanded, and whose commissariat did not fail. The naturalist will find that the bees of this district continue to collect and store up "*mad honey*," as in the days when it proved fatal to the Greeks. We were told it is honey from the wild azalia. Georgia and Circassia present mountains, and, no doubt, minerals, we know little about. Then there is the Crimea: our return transports may bring home samples of the various rocks, and specimens of the fossils so abundant in the oolite and chalk. We should then have visible evidences of the rock cut through in the trenches, and of the fatal Crimean mud. The caves of Inkerman and the ruins of Sebastopol can yield trophies as interesting to science as broken muskets, or as disabled cannon are to national glory. Napoleon I. would not have neglected such hints. Napoleon III. and John Bull may probably "care for none of these things." What is John in his governing capacity? John Bull, the man of science, may think and act with more judgment. Pictorial *sketches* we have had,—good and bad,—more than enough: we wish now to obtain accurate scientific details. These the geologist, the botanist, and concholo-gist alone can give. The field is wide, and, for the first time in modern history, is fully open. At Constantinople, and throughout Asia Minor, the architectural student may visit tombs, palaces, and mosques, and live: he may study at leisure the construction of Santa Sophia: he may see the eight porphyry columns from the Roman Temple of the Sun; and the four "green granite" columns from the Temple of Diana, at Ephesus, with other wonders, "too numerous to mention." He will see how said columns are bound and braced with copper hoops and bars; how said building has given way, and shrunk beneath the ponderous dome, piers having cracked and floors sunk. Turbaned, but obsequious Turks will tout for "*backshish*," like our own cathedral vergers, and offer bits of the glass mosaic to relic-hunters; or said Turks will knowingly and cunningly point to the cross, as it was carved by the Christian builders, thinking thereby to draw an additional infidel sixpence. We should like to know, from one competent to judge, what is really the effect of the exterior of Santa Sophia: it surely must have some features of grandeur. There are also the Hippodrome, the aqueducts, the fountains, and the palaces,—these latter, huge shams having marble steps and marble columns to support wooden entablatures and shingle pediments. We hope our suggestions may not be too late, but that they may be in time to prompt examination and inquiry. Specimens of Turkish bricks, tiles, and earthenware pipes, as used in collecting water for domestic use, will add value to an architectural museum. Any account of existing Turkish waterworks will be useful; and a sample of water from "*the sweet waters of Europe*," for analysis, may serve to throw light on the name.

ST. OLAVE'S GRAMMAR-SCHOOLS.

In our last volume (XIII. p. 564) will be found some particulars of the foundation of the School of St. Olave's and St. John's, Southwark, with a description of the buildings recently erected, under the direction of Messrs. Allen, Snooke, and Stock, architects. The engraving in our present number shows the entrance-tower, with the court-room and residence of the principal on the left-hand side, and part of the classical school, with cloisters under it, on the right.

This valuable school was first instituted by Henry Leeke, of St. Olave's, a brewer, who bequeathed, in 1560, 8*l.* per annum for that purpose. In 1571, a charter of incorporation was obtained from Queen Elizabeth, who ordained that it should be called "The Free Grammar-school of Queen Elizabeth, of the parishioners of the parish of St. Olave, in the county of Surrey," and that sixteen men of discretion, and most honest inhabitants in the said parish for the time being, should be governors thereof. In 1579, the churchwardens assigned to the governors a field called Horseydowne, now Horslydown, containing sixteen acres. This field in process of time was built over, and the leases having expired, the yearly revenue derivable therefrom, and from various other donations and bequests, is about 3,400*l.*

The old school and masters' houses stood in Churchyard-alley, near St. Olave's Church, and were removed in 1830, to make the approaches for London-bridge. A new edifice was then erected on the south side of Bermondsey-street, but the ground being required for railway extension, this also was removed in 1849.

Considerable difficulty having arisen in selecting a new site, it was not till 1852 that the governors were enabled to take possession of their chosen spot, and commence operations.

The new buildings, situate in Queen Elizabeth-street (late Back-street), in the parish of St. John, Horslydown, were commenced in April, 1853, and completed by Mr. Jay, the contractor, in November, 1855: the total cost, including fittings, was under 24,000*l.* The principal materials employed are red brick, from Sittingbourne, in Kent, with blue Staffordshire headers in diapers, and Hare-hill stone, from Messrs. Smith's quarry, near Leeds, Yorkshire. The buildings comprise a court-room, library and offices, large classical and English school, with various class-rooms appurtenant to each, two residences for the principal of each school, and porters' lodges; and they afford accommodation for 800 pupils. It will be seen on the plan that a small part of the design on the right-hand side has yet to be completed. The letters from A to J mark the various staircases.

Assistant Engineer for Dublin.—We have received some comments on the recent election of an assistant engineer at Dublin. The salary is 250*l.* per annum: there were fifty-two applicants.

ST. OLAVE'S GRAMMAR SCHOOL: PLAN OF PRINCIPAL STORY.

GRAMMAR SCHOOL OF ST. OLAVE'S AND ST. JOHN'S, SOUTHWARK.—MESSRS. ALLEN, SNOOKE, AND STOCK, ARCHITECTS.

THE MEDIÆVAL REVIVAL QUESTION.

I REGRET that Mr. Scott should have given a somewhat personal tone to his remarks on my paper, not because it gives me the slightest offence or annoyance,—which I assure you I am far from feeling,—but because it seems likely to confuse the main question.

At the same time I will not deny that he is justified in the line he has taken. I had in some measure rested my case on my own impressions: he naturally wishes that these should not be taken at more than their proper value, and accordingly charges me with having changed my views, with having preached a virtue which I do not practise—namely, patience—and with having allowed my opinions to be biassed by personal considerations, on which account they must be received with caution. Such, I presume, is the drift of his argument.

That my views have changed during the last fifteen years, is no more than I admitted. Few who have pursued a course of study on any subject for that length of time, or who have observed what was passing around them, can say that they have not changed their views in some respects. I stated, "that when few modern Gothic works of merit were in existence, I thought the revival possible, and that a careful study of ancient examples might enable us to work in the ancient spirit." But, after having seen many new Gothic works of great merit, I considered that the attempt to revive the style would not be successful. As soon as I am convinced, by the full success of the Gothic movement, that I am wrong, and that I have mistaken a surmountable difficulty for an impossibility, I shall again change my opinion, and have great satisfaction in confessing it. My judgment is grounded not upon the amount of the progress already made, but upon the direction it has taken. It appears to me to tend rather to mere conformity with mediæval types, than to development of mediæval principles. The progress already made, though very great and most creditable to the energy, talent, and research of those who have attained it, I do not consider to be marvellous, nor more than was to be expected from their exertions. It was probable that after a long course of study among ancient models, some new buildings should appear, not only correct as to general forms and details, but in a considerable measure imbued with the spirit of their types. Many correct Gothic buildings have sprung up, and these I consider as having no small degree of merit. Some have caught the spirit of the mediæval period. These I look upon as possessed of merit of a very high order; but I cannot recognise any such development of mediæval architecture as, without losing its Gothic character, shall meet the wants, conform to the refinement, and express the spirit of the present age; and, in searching for the cause of this deficiency, I thought I discovered it, not in any want of genius or industry on the part of our own architects, but in the nature of Gothic architecture itself.

Mr. Scott, in noticing my first publication on church architecture, says, "Throughout the whole of the book, he seems to take it for granted that our future churches will be Gothic." From this your readers would be led to infer that I recognised or advocated no other style. I find, however, that I said in my 1st vol. p. 44, "The Italian is, perhaps, better adapted for a church than Gothic, where it is necessary to enclose a wide area under a single roof, or to have two tiers of windows on account of galleries, or when the front must range with modern houses." I can assure you, when I prepared my paper for the architectural exhibition, I quite forgot that I had so pointedly referred to the very contingencies which I then brought before the notice of my hearers. After describing some churches of the Italian style, in the neighbourhood of Nice, I remarked (Vol. I. p. 41), "And even in England there are many situations where the horizontal lines of the Italian would harmonize better with the scenery than the more aspiring forms of Gothic." In Vol. I. p. 211, I observe, "The Roman or revived Italian, though grounded on inconsistent principles, nevertheless offers some beauties and advantages unattainable in other styles, and in towns will sometimes harmonise the best with surrounding buildings." In Vol. I. p. 89, I urged strongly, at least strongly enough to call down the wrath of the ecclesiologist, what I have often urged since, the attempt to form a pure and complete round arched style, having the character rather of the Italian than the Norman.

The object of my work was not to revive Gothic architecture, but to offer such suggestions as might tend to the improvement of Church architecture in general, which I by no means considered to be synonymous with Gothic, however probable I might think it that Gothic or mediæval churches alone would be built for some time. I could not easily write on Church architecture without giving my chief attention to the Gothic styles, or dwelling upon their beauties; and if I have given any useful suggestions to the builder of a Gothic church, I am heartily glad of it, and would willingly do so again. If people are determined to build Gothic churches, I can only wish them to be as good ones as possible.

I hardly think my judgment has been warped by any personal feeling against the ecclesiological party. They certainly handled my first publication somewhat roughly, but I have since had no great reason to complain of them. We have often met rather as friends than enemies; and if we have now and then exchanged a rap or two, I hope it has been without malice. I have specially to thank them for their review of my last work, and their full and fair statement of many of the propositions which I most wished to bring under discussion; nor do I quarrel with the strong terms in which, on several points, they have expressed their disapproval. I am sure they will take my part when I am accused of fickleness or inconsistency, and will admit that, to the best of their knowledge, I have continued pretty steadily *qualis ab incepto*.

It was hardly necessary to bring my friend Mr. Winston's name into the discussion, but I may safely leave him to fight his own battles, if he thinks it worth his while; merely remarking that his perfect knowledge of his subject, and the care, labour, and study which it has cost him, might fully justify an occasional demonstration of intolerance on his part, which on mine would be quite unwarrantable.

If any bitter feelings have influenced my judgment, they have been caused by the ruthless tide of restoration which has swept over our ancient monuments, and in so many cases confused or obliterated the most authentic records of their history.

Mr. Scott assures us of the enthusiasm and earnest zeal which exist among the authors and promoters of the Gothic movement. I most sincerely rejoice that their devotion has not entailed upon them the necessity of any heavy sacrifice as regards their interest, prospects, or reputation. They have not been struggling without the favour or encouragement of friends. The style which they are labouring to restore to its perfection is that which has been selected for nearly every new church during about a quarter of a century, and seems still likely to retain its predominance. I cannot flatter myself that I have been in any degree instrumental, as Mr. Scott intimates, in urging or assisting them in their present course; but if so, I am happy to think I have done them no injury; and if I were to deny them my share of the praise to which they are so justly entitled, they would not feel the loss. No opinions expressed by me, or many more, can shake them from their position; nay, whatever may be the actual result of their labours, whether the re-establishment of the Mediæval Gothic as a living progressive style, or the introduction of one altogether new, they will in any case occupy a worthy and conspicuous page in the annals of architecture. They have already achieved no ordinary triumph. if they fail in the full attainment of the object they propose to themselves, it will be only because it involves an impossibility. I must, at least for the present, leave the arguments on the main question as they now stand. The imperfection I noticed in geometrical tracery is but one of many that cannot be avoided, however they may be disguised or modified. Mr. Scott's observation, that "No one has had much to do with architecture without knowing that little mathematical inaccuracies beset him in every style, which it is a part of his art so far to abate as to render them inoffensive," enables me to refer you to a proposition I suggested in my "Architectural Notes in France," and which, though I do not lay it down dogmatically, I think deserves some attention, namely, that a refined style requires a design providing for the strict mathematical observance of certain laws, expressed or understood, even though it may admit of inaccuracies in execution (p. 47, &c.);—in short, that a design should bear the test of accuracy instead of requiring the assistance or disguise afforded by inaccuracy. I do not suppose the proposition to be stated by me for the first time, though I do not remember to have met with it. I am sorry it did not suit my purpose to practise the patience I have preached by waiting forty or fifty years longer before expressing my opinions. I thought, if I had anything to say, I had better say it at once, even at the risk of being premature. However, as I am proved to have no patience myself, I do not feel justified in trespassing any longer on yours. J. L. PETIT.*

THE PROPOSED ROAD ACROSS ST. JAMES'S-PARK.

ON the motion of Sir Benjamin Hall, a select committee has been appointed to consider the best means of communication between those parts of the metropolis which lie north of St. James's-park and those parts which lie south and south-west thereof, and to report thereon to the house.

The committee consist of the following gentlemen;—Sir Benjamin Hall, Lord John Manners, the Chancellor of the Exchequer, Mr. Disraeli, Lord Robert Grosvenor, Lord Hotham, Sir Joseph Paxton, Mr. Stephenson, Sir John Shelley, Mr. Hutchins, Colonel Boldero, Mr. Drummond, Mr. Stuart Wortley, Colonel Wilson Patten, and Mr. Milnes.

Amongst the suggestions which have been sent to us is one from Messrs. Horner and Molesworth, who propose a *sunk* road under the park, and through the ornamental water:—"The road," they say, "would commence in Pall-mall, close to St. James's Palace, and would fall with an inclination of 1 in 24, until it reached the required depth. Where it crossed the Mall (or broad walk), the ornamental water, and the Birdcage-walk, it would be arched over: in other places it would be an open road, with retaining walls at the sides: the tops of the retaining walls would be coped with stone, just above the level of the ground, and would have a light iron railing fixed to the coping."

For our own parts we do not see the necessity for a carriage-way across of any sort. Opening the gates at Marlborough House, in Pall-mall, at Buckingham Palace, and Constitution-hill, would give all the accommodation required, and cost nothing.

The magnificent Mall, extending from the Palace-gates to Spring-gardens, is divided by ranges of trees into four alleys. Might not *one* of these be dedicated to the public throughout the whole line, and a way opened into Pall-mall at the end of it? The retirement of the palace need not be interfered with, while to the public the accommodation would be of incalculable benefit; but to make that advantage complete, there should be no restriction, as in Hyde-park, against Hackney vehicles. So far as the *drive* is concerned, perhaps there is some reason in the prohibition; but in the direct line, the distinction is insensate; and, as relates to a great commercial capital, not in the spirit of our free constitution. The road in the Regent's-park, where these absurd exceptions are not made, is not the less orderly.

The bridge and roads across St. James's-

* We have received the following note:—"Sir; I feel it my duty to correct an error I made in my paper on Mr. Petit's lecture. I alluded in it to a church spoken well of by Mr. Petit in his first book, but which a friend of mine had found to be very inferior. My friend has since told me that, though this was the case, I was mistaken as to the church he meant. I must, therefore, withdraw the statement so far as it helps my argument, to which I find that it is inapplicable; and I should be sorry to say anything which would appear intended to impugn Mr. Petit's judgment in a matter not affecting the argument in hand, though we may fairly differ in our judgment on facts as well as on principles.
GEO. GILBERT SCOTT."

park, designed by Mr. Pennethorne, are very handsome, and include a large amount of ornamental sculpture; but we must nevertheless continue strongly opposed to the proposed division of the park, and hope the committee will elect other means to give the thoroughfare required.

THE GOVERNMENT AND ARCHITECTS' REMUNERATION.

WE are informed that a Treasury minute has been drawn up to the effect, that in future 3 per cent. only is to be paid to the Government architects for public buildings! It needs no foresight to see that, should this be the case, the precedent will greedily be adopted by public companies, boards, &c. and the position of the architect be greatly injured. Some stir should at once be made by the profession to prevent the threatened evil. In the greater number of cases, the present received commission of 5 per cent. affords but bare remuneration for the proper discharge of an architect's duties. The Institute should at once move in this matter if the statement be found correct, and doubtless will do so.

THE BARRACK COMPETITION.

AT last we are able officially to make known the names of the successful candidates in the Barrack competition. 114 sets of designs were sent in, namely, eighty-nine for infantry, and twenty-five for cavalry; the estimated costs varying from 28,000*l.* to 230,000*l.* The designs fill six of the committee-rooms at the House of Commons, and show that many of the competitors have taken great pains in the matter. The following are the names of the successful candidates:—

For Infantry.

1. Mr. Geo. Morgan.
2. Messrs. Lockwood and Mawson.
3. Mr. John Jones.

For Cavalry.

1. Messrs. T. H. and M. D. Wyatt.
2. Mr. Geo. Morgan.
3. Mr. Wm. Young.

Mr. Morgan and Mr. Young have worked together to some extent, and it will be seen that they have had the good fortune to take three of the six premiums. The first on each list will of course be employed, when occasion serves, to carry out his design. Lord Monck was the chairman of the Committee of Selection, and Professor Donaldson was added to the committee to assist.

METROPOLITAN BOARD OF WORKS.

AT the meeting of 22nd ult. the Secretary, Mr. Woolrych, read the report, adopted by the committee of the whole Board, as to the appointment of officers, recommending, as two principal assistant clerks, John Pollard and Edwin Cresey, at 350*l.* per annum each. As assistant clerks, Wm. Tyler, at 175*l.*; C. F. Pocock, 120*l.*; W. P. Andrews, 100*l.*; James Pafe, 90*l.*; and George Edward Link, 80*l.* per annum. In the accountant's department, E. F. Browne at 180*l.*; Charles Nixon, 140*l.*; and Henry Edwards, 100*l.* per annum. That Mr. Thomas Lovick, Mr. John Grant, and Mr. Edwin Cooper, be appointed assistant engineers during the pleasure of the Board, at a salary of 350*l.* each, with an allowance of 50*l.* per annum for travelling expenses respectively. The following as clerks of works, at three guineas per week each, viz. John Douglas, W. Walker, J. J. Lloyd. E. Lacy, J. Robinson, and C. Andrews. That the following be draughtsmen, at three guineas per week: W. Graves, D. M'Laughlan, T. Granger, and H. Coffee; at two-and-a-half guineas per week—R. J. Hunter and E. D. Hacman. As engineer's clerks, W. Conquest, at 175*l.*; Thomas Graham, 150*l.*; and H. R. Merly, at 100*l.* per annum. As clerks to the accountant—principal clerk, Walter Newell, at 200*l.*; assistant, Henry Hale, at 150*l.* That Messrs. Smith and Son be appointed solicitors during the pleasure of the Board.—Some discussion ensued in reference to a proposal to substitute Mr. Donaldson as an assistant engineer instead of Mr. Grant; but the report was finally adopted by a majority of 21 to 15.

The appointment of a committee of works, to consist of fifteen members, was moved by Mr. Wright, pursuant to notice. It was not intended, he said, to delegate to such a committee any executive functions, or any of the powers of the Board itself. He wished to divide the metropolis into about fifteen districts, with reference to public works and to this committee.

Mr. Hunt submitted that they ought not to proceed with the improvements of the metropolis in particular parts, until they had before them some grand scheme for its general improvement, and had recommended that scheme for adoption. If the object of the motion was to let the public know that the Board was ready to receive plans for the general improvement of the metropolis, and then to proceed to select that which they thought best, he was prepared to support the motion of Mr. Wright.—Mr. Hows objected to hand over to such a committee the power which, as was implied in the very name of the Board, it ought itself alone to exercise.—Mr. Turner said it was impossible to consider any particular measure of improvement *per se*, till they had before them such schemes as might be offered for the improvement of the metropolis as a whole. Mr. Bidgood, Mr. Barslem, Mr. Hawkes, Mr. Corrie, Mr. D'Iffanger, Major Lyon, Mr. Hall, Mr. Ware, Mr. Harrison, Mr. Carpmell, and the president, having also joined in the discussion, *pro et con.* the motion for the appointment of the committee was put and carried.

Re Building Act.—On (this) Friday, February 29th, the Board will take into consideration a report from the committee appointed to consider the duties of the Board under the Building Act, containing the following recommendations:—

That the application of Mr. Charles Warr to erect in the Wandsworth-road certain dwelling-houses and shops beyond the general line of frontage be not granted.
That the application of Mr. George Needham to construct the eaves of four adjoining houses in the district of Hackney, in the manner described in such application, be granted.
That Messrs. J. H. Taylor and R. Parkinson be apprised that in the opinion of this Board they are continued by the Metropolitan Building Act as district surveyors of Tottenham and Hornsey, respectively, for the purposes of that Act.
That the hamlet of Penge be constituted a separate district, for the purposes of the Building Act.
That the parishes of Plumstead and Eltham be constituted a separate district, for the purposes of the Building Act.
That Putney and Roehampton be constituted a separate district, for the purposes of the Building Act.

At the Board on Friday, 22nd, it was ordered that the election for the new districts take place on Friday, the 7th March.

THE LEWISHAM DISTRICT-SURVEYORSHIP.

THE QUEEN *v.* BADGER.

AN appeal on the part of Mr. Badger was heard at the Court of Queen's Bench on the 23rd ult. to quash an order of the justices of Kent, for the removal of a district-surveyor from his office. The point in issue was, whether the justices had exceeded their jurisdiction.

Mr. Justice Coleridge delivered judgment, and said the Court was of opinion, after full consideration, that the justices had no jurisdiction in the matter, and that the order for removal of the surveyor ought to be quashed.

Lord Campbell's opinion was read, but as the learned lord's judgment stood alone, Mr. Justice Wightman and Mr. Justice Erle agreeing with Mr. Justice Coleridge in their judgment, the order was quashed.

Mr. Badger will therefore be reinstated.

THE METROPOLITAN BUILDINGS ACT.

HOT-WATER PIPES.

ON the 21st ult. Messrs. John Weeks and Co. of King's-road, Chelsea, appeared before Mr. Traill, at the Greenwich Police Court, to answer a summons taken out against them by Mr. Browne, acting in lieu of the district-surveyor, who was the architect for the alterations, charging them with having placed certain pipes for the conveyance of hot water nearer than 3 inches to the woodwork of the pews of the church of St. Paul, Deptford, contrary to sec. 1, rule 4, of the Metropolitan Buildings Act, 18th and 19th Vict. cap. 122.

The defendants acknowledged the fact, but contended that the provisions of the Act of Parliament did not apply in the case, inasmuch as the water to be conveyed through the pipes could not, by any possibility, be used at a higher temperature than 212 degrees, and that wood would not char under a temperature of 500 degrees.

Mr. Traill said it was not a question as to the degree of heat to be conveyed that the words of the Act of Parliament applied to, but the purpose for which the pipes were to be used.

Mr. Browne said the question had been fully discussed before a committee of the House of Commons, and the evidence of Mr. Braidwood went to show there was danger to be apprehended in such cases. Besides, although there might be no danger from water supplied at a heat of 212 degrees, yet the pipes might, at some future time, be used as a means of conveying dry heat at a much higher temperature.

Mr. Traill said he had no alternative but to make an order on the question, as the point raised called upon him to do no other than expunge the words of the Act of Parliament.

The defendants said it was a question of the highest importance, and affected nearly every church and well-finished house in which hot-water pipes were used.

It was suggested that the Board of Works might be induced to apply to Parliament for an amendment of the Act.

Notice required to Surveyor.—On Saturday last, Robert Dunger, builder, was summoned by the District Surveyor of St. Pancras, to Clerkenwell police-court, for penalties incurred by commencing alterations to two houses without giving proper notice. The builder had called at the surveyor's office, and although Sec. 38 was pointed out to him, and the absolute necessity that his notice must be in writing, he refused to give any other than a verbal communication: he was accordingly fined, and had to pay the costs in both cases.

THE CONDITION OF THE THAMES.

INSTITUTION OF CIVIL ENGINEERS.

THE discussion of Mr. Robinson's paper was continued on the 5th and again on the 12th of February.

It was contended, that the health of the inhabitants should not be endangered on account of the conflicting claims of the Government and of the Corporation to the rights of administration, or of dealing with certain powers, by which alone a great benefit could be conferred upon or withheld from the metropolis; for there could be little doubt of the miasmatic vapours arising from the impurities held in suspension by or deposited upon the mud-banks by the waters of the Thames augmenting the spread of disease. It was, therefore, incumbent upon the contending parties rather to combine their forces for the execution of the works of improvement for the common weal.

Ague was formerly the prevalent disease; but the drainage of the land of the marshy districts near the river almost obliterated that malady: then followed fevers of various kinds; but they were diminished or prevented by abolishing cesspools beneath the houses, and by more rigid attention to house sewerage: then came cholera, the recurrence of which would doubtless be in some degree counteracted by ameliorating the state of the banks and shoals of the river, to whose noxious vapours much of the disease of the metropolis must be attributed, when it was considered how many millions of gallons of vapour were given off per day from the river alone. It had been stated that the mortality was three times as great on some parts of the coast and on the shores of muddy rivers, as in the inland districts; and there could be little doubt, that there would be a great accession of disease, but for the constant ebb and flow of the tide. It was therefore much to be doubted, whether any plan by which that incessant change in the water of the river would be to some extent arrested, would be beneficial to the general health of the metropolis.

There could be little doubt also of the advantages to be derived from such shore works as would give to the bed of the river an uniform capacity. The propositions of Wren, Rennie, Mylne, Wyatt, Trench, Martin, Walker, and Page, all had that object in view, and it was most desirable that the Government and the City should settle their differences, in order to the execution of some definite and comprehensive plan.

Recurring to the plan proposed in the paper, it was contended that the scheme of raising the sewage from the mouths of the present sewers would be so expensive as to amount to a prohibition, especially if such power was provided as to enable all the storm-waters to be raised. Besides, if the sewage was all dammed back to the extent that would be necessary for such a system, large portions of Lambeth and Westminster would be rendered uninhabitable.

With reference to an address [by the City solicitor], remarkable not only for the humour and vivacity with which the statement had been given, of the long and close intercourse between the Corporation and the river, and the litigation now induced by the pretensions of the Government, but which had even raised from his bed the venerable genius of the stream, and induced him to unveil his griefs, it was doubted whether the confidence had been fully given; whether, in these conversations, which had probably taken place in the "cool tranquillity of dewy eve," and under the genial influence of City hospitality, Old Father Thames had not made some remonstrance, in a tone of complaint, of sundry negligences on the part of his old friends; of the utter neglect of the grand plan of Sir Christopher Wren; the entire disregard of architectural propriety, or of uniformity of

line, exhibited by the warehouses and wharfs; vast shoals and mud banks on all sides; several of the bridges in a state of jeopardy; and that dire foe "vested interest" allowed to rise up as a lion in the path, barring all improvement. The Corporation had only themselves to blame for all this; but as it appeared that there was such confidential communication between that plain-spoken old gentleman Father Thames, and the worthy energetic legal representative of the Corporation, it was to be hoped that, henceforth, all good plans for amelioration would receive active support and assistance in the City;—for instance, that concessions would be granted by the Corporation to persons desirous of improving their water-side premises, merely on the production and approval of their plans, instead of obliging them, as at present, to obtain the sanction of their neighbours, which was virtually a prohibition, because every man knew that he would be obliged to follow the example of his more energetic neighbour, or he would soon find his premises at the bottom of a mud trap, and out of the reach of the river.

The complaints against Government interference were but too well founded, as was, unfortunately, felt by all who had Bills before the House, for any works on the banks of the Thames. The Bill might go on very smoothly until the third reading, when a sleek gentleman made his appearance with an application merely for the insertion of a little clause for the protection of the rights of the Crown; which meant, that all plans should be submitted to, and be approved by, various heads of "Circumlocution" Offices; the inevitable result being, that the unlucky wight seeking to have his plans approved, wasted his time, and then had to pay a good round sum for some imaginary right supposed to be conceded to him, for doing something which could be of no earthly use to him, or for proceeding without let or hindrance to some place whither he had no intention of or interest in going. Now if he was thus mulcted for the welfare of the nation, or the benefit of our sovereign lady the Queen, no one would grumble very much; but when it was known that the money so obtained only went to fatten "the red-tape worms," the matter was beyond endurance.

ARCHITECTS' RESPONSIBILITIES.

Sympson *v.* Lloyd.

In the Court of Exchequer Jan. 29, Mr. H. T. Cole showed cause against a rule for a new trial, which had been granted on the ground that the verdict which passed for the defendant at the trial at Bristol before Mr. Justice Williams was not justified by the evidence. It appeared that the plaintiff was an attorney, and that he had employed the defendant, who was an architect, to prepare plans and drawings for, and to superintend, the alteration of a house near Weston-super-Mare, on which he contemplated an expenditure of nearly 3,000*l.* The works were extended over a period of six years, and, on their completion, the defendant sent in his bill to the plaintiff, who, although he had occasionally complained of delay on the part of the defendant, did not make any direct or serious imputation on him. The plaintiff, however, disputed the amount of the bill, which was 322*l.*; and, after some legal proceedings, he settled the action through a friend and agent, by paying a sum of money which, with past payments, amounted to 230*l.* With this settlement the defendant deemed that his connection with the plaintiff ceased; but the plaintiff then brought this action against him, in which he claimed compensation from the defendant *for alleged neglect of duty as architect, and for the delay in the prosecution of the works occasioned by the absence of working drawings and plans.* At the trial the plaintiff succeeded in establishing his case to a trifling extent, but the jury disregarded the evidence, and, acting on prejudice, gave a verdict in favour of the defendant. When the report of the learned judge was read, he certified that he thought the verdict ought to have been for the plaintiff for nominal damages, but added that he could not regret the verdict which the jury had given. It was now contended, for the defendant, that the jury were justified in the course they had taken, as it was clear that the claim of the plaintiff was included in the settlement of the defendant's action against him, and that as the jury were the best judges of the facts, their finding ought not to be disturbed, or, at all events, it could only be so on payment of costs.

Mr. Serjeant Kinglake and Mr. Karslake, who appeared for the plaintiff, were not called upon to support their rule, for

The Chief Baron was of opinion that the report of the learned judge was conclusive, and that, the jury having taken a wrong view of the evidence, the case must be sent down to a second trial, unless the defendant would consent to a *stet processus*, the result of which would be that neither party would get his costs. There was no doubt that the plaintiff had made out a case, but it was one of a most trumpery description, and one which entitled him to damages of the smallest, the lowest, the meanest amount. A farthing, or any smaller sum by which the jury could have signified their contempt for his cause of action, might well have been awarded as damages; but to the verdict, with some amount of damages, the plaintiff had made out his title, and the jury were not to be allowed to find for the defendant in defiance of the law and evidence. It might be that the Court would gladly deprive the plaintiff of his costs though he might show himself to be entitled to a verdict; but the Court could not make a law for a particular case or allow a jury to do so. The judgment of the Court, therefore, was, that the rule for a new trial must be made absolute, but without costs, as the verdict was so clearly wrong; but the better way for both parties would be that the defendant should agree to a *stet processus*. Judgment accordingly.

COMPETITIONS.

Darlington Cemetery.—In reply to the advertisement from the Burial Board, which appeared in our columns, thirty-two competitors entered the field, some of whom sent eight or ten designs, making a total of 252 drawings. These were all hung in the Mechanics' Hall for about a month, when the Board selected five designs marked "Labor et spes," (two) "Ad rem cum Deo," "L'esperance," and "Excelsior" (which was also the motto adopted by two other competitors). After satisfying themselves that the plan could be carried out for the estimated amount, the Board selected "design No. 1" marked "Labor et spes;" but have not yet agreed as to the recipient of the second premium. The successful competitor is Mr. Pritchett.

Luton Schools.—Sir,—surely the advertisement for designs for the new National Schools at Luton, Beds. must be intended as a hoax, merely to see whether architects are become totally imbecile, as they offer no inducement, but charge five shillings for a plan of the site to candidates for the *honour* and *mental* as well *manual* labour, and the *materials* required to produce these designs. Now, suppose this Committee were offered the *privilege* of sending one cwt. of tea, sugar, or raisins, one score pair of boots, one hundred tin kettles, or half a hundred straw bonnets, to an unknown *Committee*, and ordered to pay the carriage, and five shillings for a printed description of the articles required in competition, what would they think of the sanity of the advertisers?

An Architect.

METROPOLITAN IMPROVEMENTS.

At a Court of Common Council, held in the City on the 21st ult. the chairman of the City improvements committee brought up the report upon the reference to consider of the appropriation of the site of the Fleet prison and other vacant ground belonging to the City. It stated that the committee were of opinion that no steps should be taken for the appropriation of the site of the late Fleet prison until it be determined whether anything is to be done respecting the removal of Newgate-market, and the arrangement of the markets of the City generally; and whether any alterations are likely to be made with respect to the Central Criminal Court and the gaol of Newgate, so that the site might remain available for any great and comprehensive improvements which may hereafter be agreed upon. After some discussion, the report was agreed to. A report by the City Lands Committee, on the construction of new City law-courts, was then considered. This report, after some preliminary explanation and detail, recommended that the offices lately used for the transaction of the Bridge House business and the Guildhall kitchen, with the adjoining offices, should be converted into new courts, agreeably to plans accompanying the report, and at an estimated expense of 7,500*l.*, and that in the mean time no expense should be incurred in making alterations in the existing courts of law. In the course of the discussion which ensued, Mr. Bunning, the City architect, stated that adequate arrangements for the accommodation of attorneys would be made in the law courts, and that the crypt under the hall would undergo no defacement or injury by being used for the purposes of a kitchen two or three days in the year, especially as the cooking apparatus by gas might be adopted. This report also was agreed to. A voluminous report on Blackfriars Bridge repairs was then made by the Bridge House estates committee, detailing the enormous sums of money expended in repairing Blackfriars Bridge from time to time, and recommending that the unsightly water-ways under the fifth and sixth arches of Blackfriars Bridge, and the dolphin piles and booms connected therewith should be removed, and that in lieu thereof iron ribs should be placed under these arches as shown by the model accompanying the report, at the estimated expense of 17,000*l.* This report was ordered to be printed.

Notices of Books.

The Food of London. By George Dodd, author of "British Manufactures," &c. London: Longman and Co. 1856.

The supply of food to a great city is, indeed, amongst the most remarkable of social phenomena,—full of instruction on all sides. And, perhaps, the most wonderful of all its characteristics, at least so far as regards the supply of food to London, is the fact, that there is no organised commissariat—no individual responsibility,—that, in fact, "nobody does it." Yet there are *nine hundred millions* of daily rations annually supplied, and by never failing daily, weekly, or other periodical instalments, within the bounds of our immense metropolis! Here is a grinding-mill, of two-million-and-a-half jaw-power, ever at work, and grist ever going into its hoppers and grinders! Not only, indeed, is abundance provided, even while hundreds may be perishing from want of the means to purchase it; but, as Mr. Dodd remarks, the rations are so infinitely varied as to meet every caprice of taste; and if a gourmand or an epicure only wish, once or twice perhaps, for "a dish of peacocks' brains, or of stewed humming-birds, or dove's hearts," doubtless, if his pockets be well lined, "his taste will be gratified: it will simply be a question of price." That London is better supplied without a commissary-general's department than with one who can doubt? Yet how differently such matters are managed in Paris! What a heavy responsibility rests on the shoulders of the authorities and the Government there, even because of a very partial and limited intermeddling with the City's supply. But probably the poor of Paris reap some immediate benefit thereby, which those of London lose in consequence of the want of some such ruling power. The London poor were lately made to pay nearly double price for sugar to their tea and coffee for a time, simply in consequence of certain selfish, greedy, and over-reaching speculations on a great scale amongst the London merchants. Perhaps it would have been well for the London poor had the speculators been compelled by some over-ruling and despotic authority to disgorge their ill-gotten gains, or rather, had they been prevented from reaping so illegitimate and iniquitous a harvest. Yet we should not like to see much intermeddling with the food supply of the people for all that. Our own present freedom of trade, however, or want of interference with its regular routine, did not always exist. In times of old, the corporation of London not unfrequently thrust in a charitable and kindly hand between the poor and their necessities or their oppressors. Thus Stow tells us of two very bad seasons in succession, 1392 and 1393, when the people sickened by eating nuts and apples, wanting better food, and when the mayor and aldermen advanced corn at very low prices to the poor. Again he tells us that the pillory and a pair of stocks upon it at the cage on Cornhill was "for the punishment of bakers offending in the assize of bread, and for millers stealing of corn at the mills." Some such implements for behoof of our modern adulterators, not only in the baking line, but in hundreds of other branches of business connected with the food supply of the metropolis, might have a *wholesome* effect on scoundrels, as well as on their victims, even now.

Mr. Dodd's volume is a very elaborate one, and full of research, as regards both the ancient and the modern supply of food to London. Much of it, however, unavoidably, relates to the metropolis only by inference, and more properly belongs to the subject of the food of England, or of Britain, or the British Isles. The author is chary, and most properly so, of presenting general or aggregate calculations as to slump quantities, or costs, in the matter of supply. Indeed, it must be very difficult, or nearly impossible, correctly to estimate the total supply of almost any one single article, derived from every particular source. Accordingly, he more frequently gives us exact details

of the sale of certain special markets, or of the conveyance by certain particular routes or railways, leaving us rather to infer the probable sum-total, than to be guided by any given figures. Thus we are informed, that "the quantity of milk now brought to London by rail, is prodigious, chiefly by the Eastern Counties Company: in 1854, the conveyance of this company exceeded three millions of quarts." Again; — "the seven railway companies brought nearly 1,200,000 head of live stock to the metropolis, in 1853:" — "in the year 1854, nearly 12,000 coal-laden ships arrived, bringing 3,400,000 tons of coal; and as the railways brought nearly 1,000,000 tons more, the figures show how extensively large was the aggregate quantity." In the first half of 1855, the South-Eastern Railway brought up 16,000 sacks of wheat, together with 21,000 sacks of flour; but some of the other lines far exceed this limit. Vessels from foreign ports, too, frequently bring enormous cargoes of 2,000 or 3,000 quarters at a time. There are 2,500 bakers' shops in the metropolis at present, all "doing" a greater or lesser number of "sacks" a week, — say from ten to twenty, as frequently advertised. A round guess has been made that London disposes annually of 700 to 800 tons of mere watercress, or fifteen millions of bunches of that wholesome little article. In assisting towards the washing down of the more solid provender, one firm alone, Messrs. Truman, the brewers, are said to possess four vats that will contain 80,000 gallons each, and store vats, altogether, for 3,500,000 gallons. The store in spring at one of these vast establishments, has even reached 4,000,000 gallons. The author gives a list of fifteen of the principal brewers of London. "Some computers," he observes, "have guessed that there are 1,200,000 barrels of beer and ale consumed in London annually; while another computer has set down 2,000,000 barrels as the probable quantity brewed in London; and a third has named about a thousand million tumblers' as a probable quantity,—estimates but little accordant, and tending to show how difficult it is to arrive at correct results on such a subject. If, as there seems not much doubt, the two great breweries send forth 50,000 gallons per day each, the magnitude of the trade is rendered sufficiently apparent."

In the estimations of a careful and discreet writer such as this, one cannot but confide with much more surety and satisfaction than in the slap-dash of more daring and *effective* authors. In all the 524 pages of Mr. Dodd's volume, the interest never flags; and the abundance of research makes itself obvious in every page. The portion of his work devoted to old London usages, in respect to food and drink, to "meals," and manners, and to social life in general, is particularly interesting, and replete with substantial "entertainment," — "for man" at least, though not for "beasts." The question of food for the body is made to supply food for the mind.

VARIORUM.

MR. TIMBS'S "Year-Book of Facts in Science and Art," for 1855-6, has been issued by Bogue, of Fleet-street. It is illustrated with a wonderfully good likeness of Sir Roderick Impey Murchison, and is really a most useful and interesting publication, in which all the more important facts (and theories too, occasionally) in science and in art that have been elicited in the course of the past year are recorded in moderate compass and in a get-at-able form. All who peruse it will derive refreshing and pleasant reminiscences of the progress of science and art throughout the year: even the facts one has aided in contributing to the store acquire a new interest when thus seen ranged in their new rank and file, and stored away in an easily available shape, for future reference.——Under the title of "Chamouni and Mont Blanc" (published by Cornish, High Holborn), Mr. Eustace Anderson gives a pleasant account of his ascent of the monarch of mountains, on the 15th of August, 1855,—an ascent described in the journals at the time. Mr. Anderson condemns the present system pursued as to guides, which prevents travellers having the assistance of those in whom they have confidence, unless it happens to be "their turn" on the roll.——Hardwicke's "Shilling City Guide" is a pocket directory, containing a list of public companies, assurance offices, and a variety of useful information.—— Mr. Fairbairn's new book, "Useful Information for Engineers" (Longman and Co.) is certainly not misnamed. It will have our attention at greater length before long.

Miscellanea.

ILLUMINATING CANDLES.—Your correspondent— "Deborah H."—may *illuminate* her candles, of whatever kind they may be, by dissolving a lump of *spermaceti* of the size of a filbert in 1 ounce of rectified ether; then adding 5 ounces of *spirits of wine*, and using the mixture as the menstruum for her colours. *Mineral pigments* should be avoided as much as possible; and with the softer varieties of *composites*, one colour should be allowed to *dry perfectly* before another is laid on near it, otherwise sharp outlines will be unknown, and the whole will present the attractive appearance best expressed by the word *smudgey*.—W. L. S.

RAILWAY COMPETITION AND CHEAP FARES.—In course of the apparently reckless and ruinous competition which has been going on of late between the Great Northern and the North-Western Railway Companies, a result has even here been realized which fully confirms the truth of what we have so often urged as to the profit of comparatively low fares when contrasted with high, although in the present instance such confirmation could hardly have been anticipated, and indeed could scarcely be expected long to hold good. From Doncaster to London, previously to the present competition, the average weekly passenger traffic yielded about 60*l.* drawn from 40 passengers. During the first week of the cheap trains, the sum realized (from 556 passengers) was 104*l.* 2s.; and although, doubtless, a rush might be expected at the outset which would not be very likely to continue for any length of time, nevertheless, at the close of last week, the receipts at the same station for the up-trains during the week amounted to no less than 146*l.* 17s. derived from 775 passengers. An agreement to refer the dispute back to Mr. Gladstone has probably put an end to the present competition; but it ought to teach every railway company a lesson in the science of profit and loss.

THE SOUTH-STAFFORD WATERWORKS.—The turning of the first sod of these works at Lichfield by Lord Ward, took place on Friday in last week. The district which this company proposes to supply with water, extends from Walsall on the north to Dudley and Rowley Regis on the south, and from Westbromwich on the east to Bilston and Sedgley on the west. It includes, besides the towns above named, Lichfield, Wednesbury, Darleston, Willenhall (if not supplied by the Wolverhampton Waterworks Company), Tipton, and Oldbury, containing an aggregate population of upwards of a quarter of a million of souls. It is proposed in the first instance to make provision for a daily supply of four million gallons, which will be collected at Lichfield in a reservoir capable of holding sixty million gallons, and pumped up from thence to a reservoir of similar capacity at the Moat Hill, near Walsall, from which it will flow by gravitation to reservoirs at Wednesbury and Dudley, for the supply of the district, the pipes to be laid alongside the South Staffordshire Railway. The contract for the construction of the reservoirs at Lichfield and Walsall was announced to have been taken at the half-yearly meeting held in September last, and although some delay occurred, the contractors engage to complete the works in the course of the present year.

THE IRON TRADE.—The ironfounders in Glasgow number about fifty, and we observe that another has just opened in St. James'-street, Paisley-road. Within twenty miles of Glasgow there are also about as many more; so that the consumption of pig iron in this neighbourhood is now upon a very extensive scale, particularly for the production of castings for railways, gas and water works, buildings and bridges. ——Mr. Mickle, of Willington, has obtained a patent for the economising of fuel in iron smelting by the dry distillation of coal, and the use of coke and gas in the blast furnace as fuel, causing, it is said, a much larger production of iron, of improved quality, with an average saving of 7s. to 15s. per ton of pig metal.—— Mr. E. Ripley, of Troy (U.S.), has taken out a patent for a method of casting metals, which consists in a peculiar arrangement for quickly withdrawing the air from the mould, so as to insure a better filling up of the same.——Mr. A. Warner, of New Broad-street, has taken out a patent for combining sheet-iron or steel with sheet-lead, zinc, tin, copper, or their alloys. Any two sheets to be combined have a coating of soldering material placed between them, and they are subjected to heat while pressed in a flat state until completely united.

ARCHITECTURAL INSTITUTE OF SCOTLAND.—The Architectural Institute met on Monday, the 18th, Mr. P. Wilson, architect, presiding. A paper was read by Mr. T. Davies, on the relative merits of wrought and cast-iron, as applied to beams for building purposes. Mr. Davies then entered into calculations of the strength of different sections of cast-iron beams; the result of which was, he considered, for general purposes, the most eligible section of beam is that having a web from $\frac{1}{3}$ to $\frac{1}{2}$ of the sectional area, and flanges from $3\frac{1}{2}$ to 1, or 3 to 1. The paper was illustrated by a series of tables and diagrams. It was agreed that the Institute should consider about being at the expense of further experiments on the subject, which Mr. Davies consented to superintend. Mr. John Murray, advocate, then read a paper on "The Laying-out of Open Spaces in Towns." Mr. Murray, after discussing the subject generally, stated as his opinion that while large spaces like West Princes-street-gardens and Queen-street-gardens, were most advantageously enclosed and laid out, at other places, where there was no great extent of ground—such as the spaces at Nicolson-square, and at the crossing of Walkes-street and Melville-street—there ought to be no enclosure, but the open space laid down with stone pavement.—*Edinburgh Post.*

ARCHITECTS' BILLS.—At the Cardiff County Court, in course of last week, an action was brought by Mr. George Chittenden, architect, against Mr. V. W. Pritchard, a gentleman resident at Crofta, near Llantrissent, for payment of 11*l.* 18s. for attendances and advice respecting a dispute between the defendant and his builder, Mr. Waller, of Cardiff, and for making certain drawings for additions and alterations to his house at Crofta. The sum of three guineas had been paid into court by defendant. In course of the evidence led, it was proved to the satisfaction of the judge, by the evidence of the plaintiff himself, that he delivered the ground-plan in dispute to the defendant personally, pointing out to him afterwards, on his asking plaintiff for the one-pair plan, dotted lines on the ground-plan, which indicated what defendant required. In respect to this ground-plan, defendant denied, on oath, that he ever either instructed or received any such plan or drawings of any description, from plaintiff, although he admitted that he had consulted him, and for the advice given had paid in the three guineas lodged in court as adequate compensation. The judge expressed his dissatisfaction with certain portions of the defendant's evidence on the one hand, and his favourable impression of the plaintiff's on the other, and at once gave a verdict for the plaintiff.

THE SCRIPTURAL MUSEUM.—The project for the establishment of a Gallery of Scriptural Illustration, with the view of awakening an interest in the study of the Scriptures, and collecting materials for their elucidation, and for the confirmation of their historical accuracy, is assuming a definite form. Rules and regulations have been printed, and the promoters meet at the rooms of the Palestine Archæological Association, in Hart-street, Bloomsbury, where the Rev. Mr. Edwards receives communications and contributions. Amongst the subjects embraced in the collection, are Landscape Scenery of Palestine, Models of Jerusalem, &c. Sacred and Domestic Antiquities of the Israelites, Assyrians, Egyptians, &c. &c. A scheme of lectures will also be organized in connection with the Institution.

SANITARY PROGRESS AT CROYDON. — From printed mortality tables, &c. for the parish of Croydon, for the years ending December 31, from 1848 to 1855 inclusive, it appears that a large proportion of the zymotic class of diseases, occurring at Croydon, prevail in those districts without drainage or water supply. The total number of deaths from all causes last year was 508, which is less by 112 than would have occurred at the average rate of mortality per annum for the last seven years, allowing for increase of population. The births for the year were 747. The total number, of houses in the parish is now 4,287. Of this number there are in the special district 3,296; and of these supplied with water, 2,046; showing still without water supply 1,250; and probably 200 or 300 above that number in the special district unconnected with the drains. Notices of 178 new houses were received and approved in 1855.

THE ARCHITECTURAL EXHIBITION.—In the report last week, the printers turned Mr. Theodore *Phyffers*, the sculptor of the pleasing group called "The Heavenly Chorus," into Mr. Phyggen. We gladly correct the error, and add that the same artist exhibited some wood-carving deserving notice.

LONDON AND MIDDLESEX ARCHÆOLOGICAL SOCIETY.—A meeting of this Society was held at the French Gallery, Pall-mall, on Tuesday evening last, Mr. Beresford Hope presiding, when several interesting papers were read, of which we will give some particulars next week. The meeting was well attended.

RELICS AT BOW.—On the 6th of February, as some workmen were excavating at Mr. Hemming's Iron Church and House Manufactory, Bow, they struck against a large stone, which proved to be the cover of a coffin of the same material cut out of the solid. On opening it the skeleton was found quite perfect, and, from the size of the bones, appeared to be that of a largely-proportioned man. The arm-bones were crossed, and the whole in good preservation. The coffin was found in a firm but moist loamy soil some 4 feet below the surface, and lay due east and west, the head of the skeleton being towards the west. In close proximity an urn was dug out: this contained several small bones, and was of a dark grey pottery, with a diameter at the base of between 4 and 5 inches. Its original shape could not be made out, as the workman's tools had broken it in pieces. A smaller urn or vase of red pottery was likewise discovered. This was much mutilated, but, from the remains, appears to have been very elegantly fashioned in the bowl, with an attenuated neck and a curved handle leading from the top rim to the body of the urn. The ground in which these remains of another age were found was for many years the fair-field, and at one time I believe the site of a monastery. The coffin and urns themselves would, however, appear to belong to the time of the Romans.—JOHN NICHOLLS.

IMPERIAL HOTEL ON SITE OF NATIONAL GALLERY.—It is reported that the bill for an Act to establish at Charing-cross a gigantic English hotel is in a fair way of being passed. The proposed capital for it is 1,000,000*l.* At first sight it certainly seems rather a wild notion to buy the National Gallery; but we have no reliable information on the subject.

ARCHITECTS' BENEVOLENT SOCIETY.—The annual general meeting of this excellent society will be held in the rooms of the Institute of Architects, Grosvenor-street, on Wednesday, the 12th of March, to elect officers and council for the year, and for the general purposes of the society. It is hoped there will be a good muster. The subscribers propose dining together afterwards.

FIRE AT LEEDS INDUSTRIAL SCHOOLS.—With reference to this occurrence, the architects, Messrs. Perkins and Backhouse, wish us to say, that "the origin of the fire is a mystery, for it had no connection whatever with any hot-air flue by which the building is warmed." It commenced in the foul-air extraction-flue, under the raised desks, the platform of which has perforated risers for the exit of the air. The warm-air flues and the extraction-flues for ventilation have no connection whatever. The damage done by the fire is not very serious.

FALL OF A STAIRCASE AT CHELMSFORD.—At the Shire Hall, Chelmsford, on Thursday in last week, while a crowd of persons were collected on the stone staircase leading to the petty sessions room, the staircase fell, carrying those on it down to the flight of stairs below, where one person was killed, and several were severely injured.

CAREY-STREET IMPROVEMENTS.—I notice a movement being made with these anxiously-looked-for and much-required improvements, purposing to carry them out according to the plan in the Sixth Report of the Office of Works, *i. e.* connecting the Strand with the west end of Cheapside, proceeding at once with that portion between Carey-street and Fetter-lane. I therefore suggest that levelling the street should be made a principal feature, in order that so noble a thoroughfare as is contemplated may not be otherwise deteriorated, as in the case of common streets; to facilitate which, I propose a simple plan, viz. that every proprietor of the several buildings on the line of street should contribute to the work proportionately, either by labour under proper direction or by the value thereof. If adopted, it will be of great public benefit in preventing accidents, as well as materially adding to the effect of the street.—W. F. H.

ARCHITECTS IN BOLTON.—In the *Bolton Chronicle* of the 16th ult. I was struck with another of those very interesting accounts that have so lately opened the eyes of the profession to at least one subject connected with it, "competitions," and which you have so ably commented upon at different times. The report I refer to in the above paper is that of the Board of Guardians for the Bolton Union. It appears they are proposing to erect a new union-house, and after a series of squabbling meetings, have come to the resolve to advertise for plans for the same. So far good; but of course these worthy individuals do not do their business by halves: the architect's remuneration must form one item for their discussion, and accordingly they have arrived at the conclusion that 5 per cent. is far too much, and 2 per cent. is quite sufficient. I think such conduct as this of the Bolton guardians should not pass unnoticed, and I am sure I cannot do better than commit the matter to your notice (knowing your zeal in advocating the rights of the profession) to benefit my brother architects.

ONE OF THE VICTIMISED.

DISCOVERY AT MOYSE'S HALL, BURY ST. EDMUND'S.—An archæological discovery, of some local interest, has been made at Moyse's Hall, now occupied as the police-station. The question as to the connection of the eastern side of the adjoining inn with the western division of Moyse's Hall, has been settled by the discovery just made of the original staircase to the upper floor in the first arch between the western and middle alleys, with its perfect well, lighted by two small apertures, one pointed and the other square, and having a doorway into each alley. It is the intention of the authorities, it appears, to preserve this curious staircase, to remove the white-wash from the masonry, and to clear away such obstructions to the view of the whole crypt as can be removed without inconvenience.

SLAG, AS TO CASTING AND ANNEALING.—The liquid slag is conveyed to the casting-table, or mould, similar to metal casting, poured out, and immediately a heavy polished iron roller is passed over the whole surface: the roller rests on two edges, or grooves, equal in height to the intended thickness of the slab or tile, so as to spread out the mass into an equable sheet, and gives a flattened form to a shapeless yielding mass. The quantity of slag cast at once depends on the size of the table: as soon as the slag has solidified, the door of the annealing oven is opened, and the slab, or tile of slag, is thrust from the table into the oven. The ovens are very deep, so as to allow several slabs to lie in them edge to edge; and the oven is closed up very tightly when full, the heat allowed to decline gradually, so that by slow cooling the slag is annealed. On the floor of the building a railway is laid, along which the casting-table is wheeled from one oven to another, as it is necessary that the table should be placed close to the oven into which the slab is removed for annealing so soon as solidified. It will clearly be seen that this manufacture much resembles that of plate-glass, but does not require, in every stage, so much care, experience, and attention as to colour, freedom from specks, veins, wrinkles, mist, or cloudiness, but simply the manual labour of casting, rolling, or pressing into iron moulds of any form or shape, and annealing. As regards the simple manufacture of slag, after reading the evidence of Mr. Davison, of the Dowlais Ironworks, and others, and witnessing the samples produced at Dr. Smith's lecture, and the manufacture of the thin slabs, to represent slate, by Messrs. Chance and Co. who can doubt the practicability of the manufacture becoming general?—W. G. E.

RAILWAY SERVANTS.—It appears from a return just published, that on the 30th June, 1855, the following persons were employed on the railways of the United Kingdom then open for traffic:—viz. 204 secretaries and managers, 33 treasurers, 140 engineers, 356 superintendents, 193 storekeepers, 181 accountants and cashiers, 823 inspectors or timekeepers, 2,183 masters of stations, 322 ticket-collectors, 153 draughtsmen, 7,732 clerks, 1,132 foremen, 3,157 engine-drivers, 3,488 deputy-drivers or firemen, 3,237 guards or breaksmen, 21,247 artificers, 2,836 switchmen, 2,470 gatekeepers, 1,622 policemen, 14,498 porters, 7,172 platelayers, 22,449 labourers, and 2,324 miscellaneous adjuncts. This makes a grand total of 97,952 against 90,409 on the 30th June, 1854:—viz. 80,877 in England, 11,403 in Scotland, and 5,672 in Ireland. The length of line open for traffic was 8,116 miles, and the number of stations 2,798. The total number of persons employed on railroads not open, on the 30th of June, 1855, amounted to 38,546; the length of line in course of construction being 879 miles, and the total length authorized, 4,481. Of these 38,546 persons, 104 were secretaries, 16 treasurers, 181 engineers, 238 superintendents, 55 accountants, 331 inspectors, 61 draughtsmen, 110 clerks, 601 foremen, 216 policemen, 47 porters, 4,962 artificers, 31,370 labourers, and the remainder storekeepers, besides 171 adjuncts of no special vocation. The total number of persons employed on all railways, open or not, was, on the said 30th of June last, 136,498, against 135,810 in 1854; and of these 104,292 were employed in England, 17,388 in Scotland, and 14,818 in Ireland.

ECHO IN ROOMS.—A correspondent from the Menai Bridge asks for "some plan to lessen the echo in a school-room, the size of which is 53 feet by 30, 14 feet to the wall-plate, and 32 feet to the ridge; open-timbered roof, boarded floor, the windows having tumbler casements 6 feet above the floor." The judicious disposal of drapery in such cases often lessens the evil. We understand that a very remarkable cure of a similar annoyance has been recently effected by this means in the new vestry-hall at Paddington.

CAMBRIDGE ARCHITECTURAL SOCIETY.—At the first meeting of the Lent term, held on 20th February, the Rev. W. M. Campion in the chair, some notes on Mediæval illumination and Missal painting were read by Mr. R. W. Brundrit, of Christ's College, who exhibited some magnificent foreign specimens.

THE PLYMOUTH SCHOOL OF ART.—This school, according to the local papers, promises to be a successful undertaking. The accommodation at present provided does not meet the wants of the town, and the managers have been obliged to refuse admission to new applicants.

GREAT BLAST AT HOLYHEAD.—A blast which has required the labour of six men for the last ten months, and 6½ tons of powder to explode it, was let off in the quarry belonging to the new harbour works on Wednesday before last, in presence of the chief engineer and a numerous staff. It is calculated that the quantity of stone loosened by the explosion will be 60,000 tons.

NEW CHURCH IN SOUTHWARK.—A new church is to be erected in Union-street, Blackfriars-road, one of the worst parts of the densely-populated parish of St. George the Martyr, Southwark. The new church will be dedicated to St. Michael.

THE HOMES OF THE PEOPLE.—We may congratulate ourselves on the adoption of this subject for lectures. At Darlington, a few days ago, Mr. Joseph Pease delivered a lecture "On Homes and Habitations."

TENDERS

For West Bromwich Union Workhouse. Messrs Briggs and Everal, architects. Quantities supplied by Messrs. Batstone and Hunt:—

Wilkes, Darlaston	£20,830	0	0
McKenzie, Wellington	17,600	0	0
Hardwick and Son, Birmingham	17,212	0	0
Stokes, Birmingham	17,177	6	0
Wilson, Handsworth	16,896	0	0
Cox and Son, Tipton	16,812	10	0
Heritage, Handsworth	16,471	15	0
Trow and Sons, Wednesbury	16,083	10	3
Parnell, Rugby	15,039	10	4
Ferguson, Nottingham	13,950	0	0

For alteration of premises and building a warehouse for Messrs. W. and J. Freeman, 15, Millbank-street, Westminster. Mr. John Turner, architect. Quantities supplied by Mr. Charles Freeman:—

McCurry, Pimlico	£1,065	0	0
Nick and Son	1,054	0	0
Wilson, Pimlico	1,044	0	0
Tombs, Westminster	960	0	0
Wardle and Baker	900	0	0
Greig, Pimlico	826	0	0
Farmer, Westminster	825	0	0

For extensive alterations at the Devon and Exeter Hospital. Mr. J. Hayward, architect:—

Moass and Bradford	£9,350	0	0
Stafford	9,078	0	0
Mason	8,832	0	0
Ware (accepted)	7,948	0	0

For plastering mansion for Mr. Hartley, at Fairy-hall, Mottingham, Kent. Mr. Thos. Turner, architect:—

Carter	£1,707	0	0
Denison	1,674	0	0
Pottifer and Sons	1,610	0	0
Todd	1,218	0	0

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

NOTICE.

FROM and after the 1st January, 1856, the *entire postage* upon all newspapers sent to France, and Foreign countries *vid* France, must be prepaid: the stamped copy of the paper is of no avail.

ADVERTISEMENTS.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives superior tone and facility for ringing.

CLERK of the WORKS. — The Vestry of the Parish of St. Mary, Rotherhithe, will meet on the 4th day of MARCH next, at the COMMITTEE-ROOM at the Workhouse, Deptford Lower-road, at HALF-PAST SIX o'clock in the evening precisely, to appoint a fit and competent person to execute the duties of CLERK of the WORKS for this Parish. Such officer will be required to reside in this parish, and to devote his whole time and attention to the duties of his office. The salary will be 3l. 15s. per week. A thorough and practical acquaintance with the making of drains, laying of drain-pipes, bricklayers' work, and other similar works, will be a necessary qualification. The duties can be ascertained, and applications at the Vestry Clerk's Offices, 61, Paradise-street, Rotherhithe.—Written applications for the office, in the handwriting of the candidates, with testimonials, endorsed "Application for Office of Clerk of the Works," must be sent or delivered to the Vestry Clerk, on or before the 3rd day of MARCH next, and the candidate must attend personally at the time fixed for the Vestry.

By order, R. SHAFTO HAWKS, Vestry Clerk.

Rotherhithe, 22nd February, 1856.

CARPENTER WANTED, to undertake the REPAIRS of several HOUSES, &c &c. A clever tradesman, with a good recommendation, and above the age of 40, only will be employed; also married, without family: the wife will have to take charge of a lodging-house, and must understand plain cooking, washing, &c. Wages, 24s. per week, and rent free. Apply, by letter only, to T. C. Office of "The Builder."

THE MERTHYR TYDFIL LOCAL BOARD of HEALTH are desirous of receiving applications for the appointment of SURVEYOR to the said Board. He will be required to give the whole of his time to the Board, receive plans for building, inspect and measure all work done by the Board and their contractors, make out the accounts, and perform the duties required by the Public Health Act. Salary, 150l. per annum.—Applications to be addressed to Mr. JAMES WARD RUSSELL, Clerk to the said Local Board, on or before SATURDAY, the 15th day of MARCH next.

Merthyr Tydfil, February 28, 1856.

AN APPRENTICE WANTED, by a Working Master, in the Plumbing, Painting, Glazing, Papering, Gas-fitting, &c. One who has a slight knowledge of the trade preferred.—Address, J. H. 69, Castle-street, Leicester-square.

TO PARENTS AND GUARDIANS.

WANTED, at a Patent Office in Chancery-lane, a well-educated Young Man, to LEARN the BUSINESS, who can write a good hand, and is quick and active in his habits. Good references are indispensable. No premium is required, his services being considered in lieu thereof.—Address, J. M. 30, Chancery-lane.

WANTED, in a Builder's Office, by a Surveyor, of many years' practice as a Measurer and Estimator of all kinds of building work; and thoroughly conversant in Book-keeping and Accounts, a PERMANENT SITUATION. A moderate salary only expected.—Address, A. B. Mr. W. Holmes, Plumber, &c. Church-street, Stoke Newington.

TO BUILDERS' CLERKS.

WANTED, by a London Firm, a steady YOUNG MAN, who has been accustomed to the routine of a Builder's Office. Application by letter, stating age, particulars, and salary required, to be addressed to B. C. Office of "The Builder."

WANTED, by an Architect and Surveyor, in Norfolk, an ASSISTANT, capable of making working drawings (chiefly Gothic), measuring up work, and a little land surveying. The salary required, and a brief reference, to be addressed, in writing only, to M. A. at the Office of Mr. Papworth, 14a, Great Marlborough-street, London, and none will be answered except those preferred.

WANTED, a Person of good practical experience in building generally, well understands working drawings, can design or copy, wishes to meet with a SITUATION as MANAGER, or INSPECTOR of WORKS, or the management of a builder's business, or a gentleman's estate. Would undertake to collect rents, keep accounts, &c. No objection to the country, or to go abroad. Unexceptionable references will be given, and good security for any situation of trust.—Address, A. B. to Mr. Clark, News Agent, at the Crystal Palace.

TO BUILDERS.

WANTED, a SITUATION, in a Builder's Office, by a Young Man, who is fully capable of taking out quantities, measuring up works, and the general routine of the office. References unexceptionable.—Address, S. S. 47, Essex-street, Strand.

TO CARPENTERS AND BUILDERS.

WANTED, by a Young Man, aged 22, a SITUATION as IMPROVER in a Carpenter or Joiner's shop. Wages not an object.—Address, A. B. 3, Harvey's-buildings, Strand.

TO CARPENTERS AND BUILDERS.

WANTED, by a steady, active Young Man, aged 23 a SITUATION as IMPROVER in a Carpenter's and Joiner's Shop. Wages not so much an object.—Address, E. D. 35, Clark-street, Stepney, London.

TO MANUFACTURING UPHOLSTERERS AND HOUSE-DECORATORS.

WANTED to APPRENTICE, a genteel YOUTH, in an establishment where he will have the opportunity of obtaining a thorough practical knowledge of the various branches of the trades. A liberal premium will be offered.—Applications, by letter, to Mr. HENRY HODGE, Architect, 7, Castle-terrace, Kentish-town.

TO BUILDERS, CONTRACTORS, &c.

WANTED, by an experienced Man, a SITUATION as TIMEKEEPER, and to make himself generally useful in the counting-house. Wages, 23s. per week. Address, Z. Office of "The Builder."

TO ARCHITECTS AND OTHERS

WANTED, a SITUATION as OUTDOOR SUPERINTENDENT of WORKS, by one having a thorough practical knowledge of building in detail; also measuring up works, and can make working drawings. Reference to Lond-n and provincial architects, by whom he has been employed several years.—Address, J. B. 131, Albany road, Kent-road, London.

WANTED, a RE-ENGAGEMENT as CLERK of WORKS: a thorough practical man, having just finished large public works. The highest testimonials.—Address, M. A. at the Office of "The Builder."

TO BUILDERS AND PLUMBERS.

WANTED, a SITUATION as THREE-BRANCH HAND, by a Young Man aged 28. Has been fourteen years in the trade.—Address, H. K. Mr. Helsen's, 25, Gray-street, Webber-street, Blackfriars road.

TO ARCHITECTS OR BUILDERS

WANTED, a SITUATION as GENERAL or WORKING FOREMAN of MASONS, by one of active business habits, good plain draughtsman, can take out quantities, set out work, &c. Testimonials and reputable reference from last employer.—Address, A. R. 16, North-street, Lambeth, London.

TO ARCHITECTS OR BUILDERS.

WANTED, by an experienced practical Man, a SITUATION as CLERK of WORKS, SHOP or GENERAL FOREMAN of WORKS.—Address, A. B 38, Gibson-street, Lambeth. Character will bear the strictest investigation.

TO SURVEYORS, CONTRACTORS, AND OTHERS.

WANTED, by a practical STREET MASON, a SITUATION as FOREMAN of FOOTWAYS and ROADS. The Advertiser has had many years' experience in the above line, and can have good reference as to ability. Age, 40. Country not objected to.—Address, W. B. 18, Spring-garden-place, Elizabeth-street South, Pimlico.

NOTICE TO STEAM SAW-MILL PROPRIETORS.

WANTED, by a Young Man, a SITUATION as CIRCULAR SAWYER. Can work either segment or plate saw. No objection to town or country. Address, post-paid, T. W. D. 32 Barnet-street, New North-road, Hoxton.

WANTED, a SITUATION, as SHOP OUT-DOOR FOREMAN, or STAIRCASE HAND, by a steady Man, aged 34. Good reference given.—Address, S. H. E. J. Jackson, 2, Cumberland row, King's-cross.

TO BUILDERS, PLUMBERS, PAINTERS, &c

WANTED, by a married Young Man, aged 26, a permanent SITUATION as PAINTER, GLAZIER, and can do plumbing and paper-hanging; has no objection to doing general repairing. Wages, 4s. per day. Good reference can be given if required.—Address, A. B. C. 13, Norfolk-street, Shoreditch.

TO CARPENTERS, JOINERS, &c.

WANTED, to place a YOUTH as INDOOR APPRENTICE.—Apply to R. M. at the Office of "The Builder."

WANTED, a RE-ENGAGEMENT as SHOP FOREMAN, by an active Man, who has had a shop of from thirty to forty men under his management, also a steam saw-mill. Two years' character from last place of engagement.—Address, G. E. M. 2, Bear's-place, New North-road, Islington.

N.B.—No objection to the country.

WANTED, by a Gentleman, aged 27, a SITUATION, in an Architect and Surveyor's Office, at the West end. Is a first-rate draughtsman, has a fair knowledge of quantities but can finish up entirely. Salary, 100 guineas per annum. Address, K. L. Office of "The Builder."

TO ARCHITECTS, SURVEYORS, OR ENGINEERS

THE Advertiser, who has just completed his articles, is desirous of IMPROVEMENT, and wishes an ENGAGEMENT. Has been in the above profession five years. Salary a secondary consideration.—Address, ALPHA, 4, Victoria-street, Paddington.

TO CIVIL ENGINEERS, ENGINEERING SURVEYORS, &c

THE Advertiser, who can undertake surveys, take levels, trace and "cut up" plans, with neatness and accuracy, is desirous of meeting with EMPLOYMENT, in either of the above professions. Salary is not an object. A reference can be given, and a testimonial of ability produced.—Apply, by letter, E. J. H. Post-office, 2, Upper Charles-street, Westminster.

TO BUILDERS AND OTHERS.

THE Advertiser, aged 31, a thoroughly competent FOREMAN and CLERK, well versed with the general routine of building and office work generally, is a good draughtsman, quick estimator, measure up work, take out quantities, &c. &c. is desirous of an immediate ENGAGEMENT.—Address, W. H. at Campbell's Coffee-house, No. 3, Mount-street, Lambeth.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

THE Advertiser, an ARCHITECT and SURVEYOR, wants a SITUATION in either of the above Offices. Salary moderate. References given.—Address, pre-paid, BETA, at the Office of "The Builder."

THE Advertiser wishes to meet with a Person practically acquainted with the MANUFACTURE of GUN-POWDER, and willing to undertake the management of a mill. Address, J. H. care of Mr. John Bracher, 2, Walbrook-buildings.

TO ARCHITECTS AND SURVEYORS.

THE Advertiser is desirous of a SITUATION in either of the above Offices; is a good plain and perspective draughtsman, and accustomed to assist generally in taking out quantities. Address, to the care of R. M. 34, Windsor-terrace, City-road.

TO ARCHITECTS

THE Advertiser, who has had fifteen years' experience, is desirous of a RE-ENGAGEMENT, in a London Office. Is well acquainted with colouring, perspective, mediæval, and Italian detail, and is considered a good draughtsman. References good. Salary moderate.—Address, Q. E. D. 3, Bloomfield terrace, Pimlico.

THREE YOUTHS, from 14 to 18 years of age, required for an ARTIST'S STUDIO. None need apply but those who have a decided taste in that direction. No premium required, but specimens of ability absolutely requisite.

N.B.—Also two experienced Assistants in Oil Decoration.

Apply, from Ten to Four, at 8, Angel-terrace, St. Peter's-street, Islington-green.

TO CONTRACTORS, BUILDERS, AND ENGINEERS.

THE Advertiser, having been engaged in superintending extensive works of this character, and thoroughly acquainted with measuring, valuing, and estimating all kinds of artificers' works, and making plans and working drawings of every description, is open to an ENGAGEMENT.—Address, E. L. at Mr. Nash's, Stationer, No. 4, Upper Weymouth-street, Marylebone.

TO BUILDERS &c.

EMPLOYMENT WANTED in a BUILDER'S OFFICE, or to take charge of a small business, by an active middle aged man, who has a thorough practical knowledge building in all its branches; can take out quantities, estimate, measure up and value works fixtures, and dilapidations and wishes to make himself useful. Unexceptionable references for integrity and ability. Salary moderate.—Address, J. C 5, Beech-lane, Beech street, Barbican. N.B. No objection to the country.

TO PARENTS AND GUARDIANS.

AN Architectural Firm in a good practice in the Midland Counties has a VACANCY for an ARTICLED PUPIL.—Address, Messrs. PARSONS and DAIN, St. Martin's, Leicester.

TO LAND SURVEYORS, AGENTS, AUCTIONEERS, &c. IN THE COUNTRY.

A TRADESMAN, who is prepared to pay a handsome premium, if adequate advantages are secured, wishes to PLACE his SON, many eighteen, for about three years, in a good ESTABLISHMENT, in a healthy part of the country (not in a large town), and where he would be boarded, lodged, and well treated on the premises. No sceptic or Papist need apply, nor any but principals.—Address, stating proposals, to T. G. Marylebone Literary and Scientific Institution, 17, Edwards-street, Portman-square.

TO ARCHITECTS.

A GENTLEMAN, desirous of improvement, who has had nine years' experience, and understands perspective, wishes to meet with an ENGAGEMENT, in the office of a London Architect, of good practice. Satisfactory testimonials can be given.—Address, M. C. Office of "The Builder."

TO ARCHITECTS.

A GOOD DRAUGHTSMAN, competent to make complete sets of working or finished drawings, in either Gothic or Italian, and perspectives in outline or colour, is open to an ENGAGEMENT.—Address, M. 34, Albany-street, Regent's-park.

A GENTLEMAN, aged 30, a good Book-keeper, Accountant, Correspondent, and Draughtsman, desires an immediate ENGAGEMENT. Has just left the Metropolitan Board of Works, through a reduction of staff. Salary less an object than immediate employment. Superior references and testimonials.—Address, X. X. 11, Pembroke-terrace, Caledonian-road.

A GOOD and Practical DRAUGHTSMAN, accustomed to quantities, measuring up works, and land surveying, is OPEN to an ENGAGEMENT. Good references.—Address, W. H. J. 10, Stratford-place, Camden town.

TO ARCHITECTS' ASSISTANTS.

AN ASSISTANT is REQUIRED in an ARCHITECT'S and SURVEYOR'S OFFICE. He must possess first-rate qualifications, and thoroughly understand levelling and land surveying.—Applications, with testimonials, to be made by letter only, to A. B. care of W. Clements, Stationer, Wood-street, City.

TO ARCHITECTS.

A GENTLEMAN is desirous of a SITUATION in an ARCHITECT'S OFFICE, who has an extensive Gothic practice, as he is fully competent to take the entire management of that department. Is a good draughtsman, and can give unexceptionable references.—For further particulars apply to E. P. 23, Bayham-terrace, Camden-town.

TO AUCTIONEERS, SURVEYORS, LANDED PROPRIETORS, AND OTHERS.

A GENTLEMAN, respectably connected, of considerable experience in building and house property in general, is desirous of an ENGAGEMENT, with a view to a partnership or otherwise. Has had the management of a large estate in the vicinity of London, in laying out ground, forming roads and sewers, superintending advances to build-rs, and collecting ground-rents to a large amount; is also much acquainted with brickmaking. Unexceptionable references. Security, if required.—Address, O. G. Office of "The Builder."

A BUILDER'S CLERK, who understands taking out quantities, drawings, &c.; with the usual routine of the office, and practically acquainted with the building department, is desirous of an ENGAGEMENT in the above capacity.—Address S. Barton's Post-office, Holloway.

TO BUILDERS.

A YOUNG MAN wishes to IMPROVE himself at the BENCH, for one or two years.—Wages moderate.—Address, S. MONK, Plough, Old-road, Stepney.

AN ARCHITECT requires in his Office an experienced ASSISTANT,—not a mere Colourist or Draughtsman, nor a young man full of promise, but one who has the talent to design good and original Street Architecture, and who is thoroughly qualified to carry out a work to completion, including plans, sections, detailed drawings, and specification, &c. Apply by letter, with full particulars, salary, &c. to F. G. at Warren's Library, London-street, Fitzroy-square.

TO ARCHITECTS, &c.

A NEAT and expeditious DRAUGHTSMAN is desirous of a RE-ENGAGEMENT in town. Understands the getting out of perspective, finished, working, and detail drawings, and the general routine of an office. Good references.—Address, A. B. 9, Elizabeth-street South, Pimlico.

TO ARCHITECTS.

A YOUNG MAN who has been upwards of three years in the profession, and is acquainted with the ordinary duties of an office, as well as perspective drawing, &c. desires an ENGAGEMENT.—Address SELLIO, care of Mr. C. Barker, 8, Birchin-lane, City.

A DRAUGHTSMAN and WRITER, for eighteen years past engaged by the most eminent engineers and surveyors, on extensive plans and drawings of every kind, is now OPEN to an ENGAGEMENT.—Apply by letter, to CYRUS, 15, Charing-cross.

A COMPETENT BUILDERS' CLERK, expert at measuring off works, taking out quantities, estimating, and the general routine of the Office, is open to a RE-ENGAGEMENT.—Address, Mr. WRIGHT, 10, Crawford-street, Bryanston-square.

TO CARPENTERS, &c

A YOUNG MAN, aged 22, is desirous of learning the above trade. A premium will be given.—Address, S. S. Post-office, Woolford, Essex.

PELICAN LIFE INSURANCE COMPANY, established in 1797.

70, Lombard-street, City, and 57, Charing-cross, Westminster.

For Prospectuses and Forms of Proposal, apply at the Offices as above, or to any of the Company's Agents

ROBERT TUCKER, Secretary.

THE PERMANENT WAY COMPANY, 26, Great George street, Westminster, have now published a Second Edition of their CIRCULARS, which may be had post-free upon application. Among other recent important inventions, the Company beg to call particular attention to Prim's Patent for Casting Railway Chairs, Pole's Patent Improved Fish Joint, and Dr. Boucherie's Improved Process for Preserving Sleepers, Fencing, Telegraph Posts, &c from decay.—Every information may be had upon application to CHARLES MAY, F.R.S. the Manager; or to WILLIAM HOWDEN, Secretary.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED his Establishment on the Surrey side of the Thames, and that articles of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Fraed-street, Paddington.

BATH, PORTLAND, and ROMAN CEMENTS GROUND and LUMP HYDRAULIC BLUE LIAS LIME.

The LONDON and WEST of ENGLAND CEMENT COMPANY can offer to the trade the best Hydraulic Cements, at reduced prices, the material being excavated in its pure and unadulterated state, from quarries on their own property. The Company particularly recommend a trial of their XXXX Bath Cement, as far superior to any article now in the market. These cements can be sent by rail or shipped from their wharf, direct to all parts.—Agents required, and a liberal discount allowed. Orders received by Mr. RIALLMARK, 89, Old Bread-street, City, or by RICHARD WINTER, Cement Works, Dunball, Bridgewater.

BATH CEMENT.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

PORTLAND CEMENT.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C.J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 8, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Hidgeing, &c. Paints, Stucco, &c. Marble Merchants and Importers of Portzolano.

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c.—will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7	0	0
Fine	6	0	0
Coarse	2	10	0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

TATHAM & CO.—No. 14, SOUTH WHARF, PADDINGTON.
BRICK, LIME, and CEMENT MERCHANTS,
SOUTHAM BLUE LIAS LIME DEPOT.

Bath, Portland, Lias, and Roman Cements; Parian and Keene's Cements, Plaster of Paris, Glazed Stoneware Sewage Pipes, Fire Goods, Vitrified Blue Bricks, White Building Bricks, White Enamelled Pans and Troughs, and every description of Building Material.

N.B. Lump and Ground BLUE LIAS LIME delivered in boat-loads direct from the Works in Warwickshire, to any part of the river or canal.

SOUTHAM BLUE LIAS LIME DEPOT, No. 14, SOUTH WHARF, PADDINGTON.

TATHAM & CO. have arranged for a constant supply of the above very superior BLUE LIAS LIME, which for the last two years has been extensively at use of the large works constructed during that period or now in hand, and any orders they are favoured with will command their best attention.

Boatloads of either Lump or Ground Lime can be delivered direct from the Works in WARWICKSHRIRE to any part of the Rivers Thames or Lee, alongside any wharf on canal, or by boat or rail to any part of the kingdom.

PORTLAND CEMENT.—TATHAM & CO. are enabled to offer a very superior quality of this valuable Cement at a moderate price, and all orders addressed to No. 14, SOUTH WHARF, PADDINGTON, will receive the best and most prompt attention.

11, George-yard, Lombard-street, City

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. Thus internal stucco may be painted or papered within a few hours of its application, and rooms be thus made dry and habitable immediately.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.

These cements set under water in a few minutes, and are not affected by extreme heat or cold.

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stucco-ing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

HUBBUCK'S PATENT WHITE ZINC PAINT,
The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those dreadful maladies, paralysis and painters' colic, will be altogether unknown. The Patent Permanent White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK—LONDON—PATENT. And when so marked, the quality is guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.
N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.—T. H. BOORMAN, WILD, and CO. beg to inform the public and trade generally, that they have completed their works for the manufacture of PORTLAND CEMENT, and from their contiguity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enabling them thereby to transmit any orders they may receive to any station on the before-mentioned line, and confidently hope they shall be able to supply the public with a first-rate article, in both cement and lime, on moderate terms. Persons sending orders for cement, are respectfully requested to say for what purpose it is required, and printed instructions will be affixed to the head of each cask. Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.
Agents in London.—Messrs. GEORGE POTTER and CO. Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road, Paddington.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

DOVERCOURT CEMENT WORKS, HARWICH, ESSEX.
JOHN PATTRICK being now the only ROMAN CEMENT Manufacturer at Harwich, hereby informs the public that he continues to carry on a Wholesale Business, and offers to Contractors, Builders, &c. by the freight or half freight, ROMAN CEMENT of best quality upon advantageous terms.—Application either at Harwich or to his Agent, GEORGE MORRIS, 20, New Ormond-street, Queen-square, London.
P.S.—Inland London trade will in future be supplied from Messrs. ROBINS and Co. Scotland-yard, Westminster, instead of Whitefriars.

NOTICE.—BLUE LIAS LIME.—L. B. PEARSE and CO beg to inform Architects, Engineers, Builders, and Contractors generally, that they have now accepted the AGENCY for the above valuable HYDRAULIC LIME, from the original works, Skilton, Warwickshire, and are now supplying direct from the works in their own boats, at a reduced rate.
L. B. PEARSE and CO. beg further to give notice to consumers, that they have erected, at a considerable expense, large buildings and machinery for grinding lime and cement, so as to insure genuine quality and large supply, at their extensive premises, situate on the Great Northern Railway, York-road, King's-cross.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 4, NORTH WHARF-ROAD, Paddington.
WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.
Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 9d. per ton.
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

NOTICE.
GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 30, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Ardrossan, Glasgow, or Liverpool rivers, canals, or railway stations, should be given a few days before required.
GIBBS, CANNING, and CO.'s BLUE VITRIFIED BRICKS, PIPES, JUNCTIONS, BENDS, and FIRE GOODS.
ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.
SEOONDS, PAVIORS', STOCKS, and other BRICKS.

GREAVES'S BLUE LIAS LIME.
CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

NOTICE.
SOUTHAM HYDRAULIC BLUE LIAS LIME.
WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump, into boats, at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants Builders, contractors, and others supplied with every description of building material at the lowest market prices.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH (perfectly non absorbent) STUCCO CEMENT, STUCCO PAINT.—CLARK and BENGOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road, Office, 4, George-yard, Lombard-street

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c.—Messrs. MEESON and CO. supply stocks, pickings, rough stocks, place, red kiln bricks, pavions, &c. &c. on low terms, to any part of the Thames, the various canals, the River Lea, &c. or by rail to any station on the Eastern Counties line, or any railway connected with it. Also, flints for building boundary walls, stables, cottages, &c. by using which one-third of the expense may be saved. Also, lime, chalk, chalk rubbish, gravel, loam for foundries, &c. &c. Whiting of the best quality, lime, both white and flare, bricks fire-goods, &c. can be obtained at Messrs. MEESON'S Wharf Kilns at Bow-bridge, Stratford, Essex; or from the Works at Gray's, Essex.—Orders, by letter, to Messrs. MEESON and CO. Gray's, Essex, executed with despatch.

REMOVED FROM CRITCHILL-PLACE, NEW NORTH-ROAD, HOXTON.
BRICK MOULDS (improved), Steel-faced Stocks and Plates, with Screw Stock, Pegs, used four seasons. Various sizes kept on hand. References where to use Brick Mill Work and Implements.—J. LEACH, Millwright and Engineer, 9, St. Peters-square, Hackney-road, London.

THE BEST HERTFORDSHIRE MALM SECONDS;
THE BEST WHITE SUFFOLK and RED FACINGS:
DEEP-RED RUBBING BRICKS.
Also COWLEY and KENT STOCKS, in any quantity.
J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY
(Within a short distance of the fire bridges).
THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.
Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

WHITE SUFFOLK PERFORATED BRICKS.—Messrs. J. EASTWOOD and SONS take this opportunity of informing their customers and the trade, that they have made arrangements for the Manufacture of White Suffolk Perforated Bricks. In curing defects common to bricks of this description, care has been bestowed to produce them of a true and perfect shape, of an even and beautiful surface, and free from fire-flaws.—J. EASTWOOD and SONS, Belvedere-road, Lambeth

WHITE SUFFOLK and RED FACING BRICKS.
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters, Pavlors, Shippers, &c.
KENTISH RAG-STONE of the FINEST QUALITY.
MILLS and PRICE, 8, ADELAIDE-PLACE, London-bridge.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.
Malm Place, half washed Stocks, and Place Bricks, also on sale These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.
Apply to HENRY DODD and CO at the Counting-house, Hoxton Brickfields, Orange-walk, near the Rosemary Branch, Hoxton.
N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

CHEAP WHITE BRICKS for FACING HOUSES. Beard's Patent). These Bricks are of excellent make and colour, are imperishable from frost.—For particulars, apply PATENT BRICK WORKS, Lawford-road, Rugby.

THE PATENT BRICK-MACHINE COMPANY invite orders for their IMPROVED MACHINES, the only ones that manufacture solid bricks equal to hand-made, will shortly be at work in a field near London, accessible by railway, where it may now be seen with bricks of last season. H. C. MOUNT, Secretary.
37, King William-street, City, February, 1856.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 solid bricks per day, of far superior quality to hand-made, with 3-horse power; one man to feed the machine with clay, and boys to remove the bricks. For plate and description, see "Practical Mechanic's Journal," for January 1st, 1856. Any further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

BRICKMAKING by MACHINE, awarded the Gold Medal of Honour, at the Paris Exhibition. To CONTRACTORS, BRICKMAKERS, and EXPORTERS. CLAYTON'S PATENT BRICKMAKING MACHINE combining his recent improvements, will be in operation for public view, on MONDAY and TUESDAY next (the 3rd and 4th of MARCH), at the Manufactory, 48, Upper Park-place, Dorset-square, London. HENRY CLAYTON, Patentee.

TO BRICKMAKERS.—For SALE, a quantity of IRON WHEELING PLATES, barrows, wheels, &c.—Inquire of H. HARGRAVE, 88, High-street, Shadwell.

TO BRICKMAKERS and BUILDERS.—TO BE SOLD, a BRICKFIELD, in IPSWICH, consisting of superior WHITE and RED EARTH. There are about 2½ acres of land, a good cottage, tile shed, kiln, all the plant, and about 300,000 of earth raised.—Apply to WM. P. RIBBANS, Ipswich

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide place, London-bridge.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 1, Adelaide-place, London-bridge. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the admission of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.
Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUPER'S PATENT WIND-GUARD.—This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Ironmongers and Builders: and of the Patentee, at his Office, 65, Fenchurch-street, London.

By Her Majesty's Royal Letters Patent.

DUPREE and CO.'S DEFIANCE WINDGUARD and VENTILATORS, &c. for the perfect cure of Down-draft Smoky Chimneys, suitable for Public and Private Buildings requiring a constant change of air.

Also,

SHIP VENTILATORS, requiring no attention, imparting about six times the quantity of fresh air than any other in use.

Also,

VENTILATING ROOFLIGHTS, for Slate or Tile Roofing, without Paint or Putty.

Prospectuses sent on application.

London Depôt—ESNOUF and MANGER, 141, Minories, City.

HANDS'S PATENT ECONOMISING KILN is the only simple and effectual mode to use the heat, for drying moist moulded clays, found in any season, in time of burning and cooling the kiln, with perfect ventilation.—Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

TO THE COMMISSIONERS OF THE BOARD OF HEALTH, AND TO ALL PERSONS INTERESTED IN THE SMOKE QUESTION.

HANDS'S PATENT is the only simple and certain remedy for the SMOKE NUISANCE: it has combined, where necessary, the advantages of a drying process and perfect ventilation, without a particle of complicated machinery. Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

CHAS. MACINTOSH and CO. Patentees of the VULCANIZED INDIA-RUBBER, and GENERAL MANUFACTURERS of WATERPROOF, AIRPROOF, and ELASTIC RUBBER GOODS beg to inform all persons who desire to correspond with them direct, that their SOLE ESTABLISHMENTS are No. 3, Cannon-street West, London, and Cambridge-street, Manchester. This notice is necessary, as the term Macintosh Depôt, Macintosh Warehouse, &c. is frequently adopted both in London and the country by vendors of India-rubber goods, who deal in articles not of the manufacture of CHAS. MACINTOSH and CO. — Goods manufactured by CHAS. MACINTOSH and CO. are stamped with the name of the firm.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—PHILIP SIR RAYMOND JARVIS, Bart., YENTNOR, ISLE of WIGHT, Second Testimonial.—" March 16th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

TO ENGINEERS, MILL-OWNERS, &c.

N. Woolwich Elastic Steam-packing (Canvas and India-rubber), at 1s 4d. per lb.

S. W. SILVER and CO. INDIA-RUBBER WORKS, North Woolwich (opposite H. M.'s Dockyards), having considerably extended their manufacture in order to meet the daily increasing demand upon them for this effective and durable article, are enabled to offer the very best material at the reduced price of 1s. 4d. per lb. for sheet and rope.

Testimonials may be seen at S. W. SILVER and CO.'s Warehouses, Nos. 3 and 4, Bishopsgate-street (opposite London Tavern), where orders for Steam Packing, also Buffer Springs, Pump Clacks, and the various India-rubber appliances, will meet with prompt attention.

CAUTION.—S. W. S. and Co. have found it necessary to stamp all their manufacture, thus—" S. W. SILVER and CO. WORKS, NORTH WOOLWICH."

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. R. RICHARDS and CO.
PUMP MANUFACTURERS and ENGINEERS

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.
PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N B. The above can be worked either by hand, horse, or engine power.

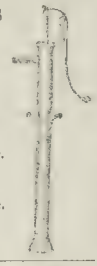
Iron Pails 48s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

TO BUILDERS AND PLUMBERS.
The attention of the Trade is called to JOHN WARNER & SONS'
PATENT VIBRATING STANDARD PUMP,
which is recommended for the simplicity of its construction, and the ease with which it works.

In the introduction of the vibrating standard, the cumbrous carriage and expensive Shanks Rods are entirely superseded, thus reducing the price to about [illegible] less than Pumps made in the usual way.

It is used under Water Works Engineers for raising fluids from a depth not exceeding 28 feet; also Garden Engines constructed on the same principle.



JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

B. FOWLER & CO.'S
PORTABLE PUMPS,
3-inch to 9-inch Barrels,
Plain or Sliding Telescope Suction,
ON HIRE.

SINGLE AND DOUBLE PUMPS,
all sizes,
to any depth, for Hand or Steam Power.

Patent Double-action and General Pump-makers, Builders' Smiths, &c.
WHITEFRIARS-STREET,
Fleet-street.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars Bridge (Surrey Side).

STEAM-ENGINES on SALE, new and second-hand, from one to twenty horse power, a 10-horse Jukes' smoke burner, and a variety of machinery, consisting of boilers, tanks, three-throw pumps, lathes, planing and drilling machines, screw presses, a 30-inch paper-cutting machine, &c. &c. Apply to D. W. ASH, 187, Southwark-bridge-road, Newington Causeway, where the above can be seen.

PUMPING and WINDING ENGINE.—TO BE LET on HIRE, or for SALE, a nearly new strong and simple PUMPING and WINDING STEAM ENGINE, of 10-horse power, by Medwin and Hall, with a pair of 10-inch pumps and all the driving gear complete. The contractor for whom it was fitted up will make a considerable sacrifice on the cost price, or let the whole on hire.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, 99, Blackfriars-road.

STEAM-ENGINES for SALE.—A Six and a Ten horse High-pressure. Also, a Donkey Engine.—Apply to JOHN ITT and CO. Engineers, Glasgow. Makers of Land and Marine Engines Boilers, Derrick and other Cranes, &c.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1s. per foot, super, together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 2, Overton-terrace, Mare-on House, or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

SUPERIOR LAND DRAINAGE.—AGRICULTURAL DRAIN-PIPES of all sizes, and in any quantities, can be SUPPLIED, either by water or land carriage, at a reduced rate, by applying to L. B. PEARSE and CO. Great Northern Wharf, York-road, King's cross.

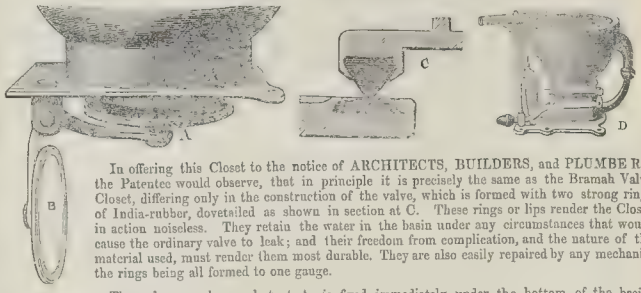
By her Majesty's Letters Patent.

THE PATENT ARCHITECTURAL POTTERY COMPANY, POOLE, DORSET, Manufacturers of PATENT GLAZED and COLOURED BRICKS, CASTS, &c.; also of Patent ENCAUSTIC, MOSAIC, and other FLOOR TILES. The above bricks are for the exterior and interior of buildings, conservatories, baths, reservoirs, &c. They are manufactured of superior Dorsetshire clay, and are the colour of Bath stone. The object of the glaze is to prevent the pores becoming filled with dirt, and so to preserve their appearance that they may be easily cleaned, the rain alone being sufficient for the purpose. The cost is reduced to that of ordinary bricks, for which they are substituted, and shapes, sizes, or patterns will be made to order. For samples, prices, &c. address the Company, as above.

JENNINGS'S PATENT DRAIN-PIPES.

For full particulars of these Pipes, and their advantages, AS COMPARED with the old-fashioned Socket and Half-Socket Pipes, see *Builder* of February 9.

For testimonials, &c. see *Builder* of the 9th, 16th, and 23rd ult.



Architects and Engineers describing these Pipes in their specifications will have the GREAT satisfaction of knowing that, in case of stoppage, they afford every facility for examination, as also for the introduction of Junctions, &c. without the slightest disturbance to the Invert or General Drain.

Prices per foot run, including the Patent Chairs and Saddles:—

4-inch.	6-inch.	9-inch.	12-inch.	15-inch.
6d.	8d.	1s. 1½d.	1s. 10d.	3s.

THE USUAL TRADE DISCOUNT ALLOWED.

JENNINGS'S PATENT DOUBLE-SEATED VALVE-CLOSET.

In offering this Closet to the notice of ARCHITECTS, BUILDERS, and PLUMBERS, the Patentee would observe, that in principle it is precisely the same as the Bramah Valve Closet, differing only in the construction of the valve, which is formed with two strong rings of India-rubber, dovetailed as shown in section at C. These rings or lips render the Closet in action noiseless. They retain the water in the basin under any circumstances that would cause the ordinary valve to leak; and their freedom from complication, and the nature of the material used, must render them most durable. They are also easily repaired by any mechanic, the rings being all formed to one gauge.

The valve, as shown shut at A, is fixed immediately under the bottom of the basin. B shows the valve open, the centre or flat part being filled in with enamelled ware, made to correspond with the basin it may be fixed under. D is an elevation of the Closet finished, and it is made to work with or WITHOUT wires and cranks, according to the situation it may be fixed in, EXPOSED TO FROST OR OTHERWISE.

G. JENNINGS has such confidence in this Closet, that a written warranty for seven years will be given with every Closet sold.

Illustrated Particulars and Prices of JENNINGS'S Self-acting and other Water-closets, Urinals, Lavatories, Pumps, Sluice-valves, Fire and other Cocks, Gully-traps, Shop-shutter Shoes, Earthenware Drain and Soil Pipes, &c. &c. can be had free, on application, or by post, on enclosing two stamps to

GEORGE JENNINGS, SANITARY ENGINEER, GREAT CHARLOTTE-STREET, BLACKFRIARS.

ESTABLISHED, 1795.

JOSEPH CLIFF,

WORTLEY, NEAR LEEDS, YORKSHIRE.

London Wharf, No. 4, Great Northern Goods Station, King's-cross,
M. B. NEWTON, Agent.

MANUFACTURER OF GLAZED STONEWARE TUBES, SOCKET, HALF-SOCKET, OR BUTT-JOINT; BENDS, SUCTIONS, TRAPS, INVERTS, URINALS, CLOSETS, &c.

CIRCULAR PIPES, from 2 inch to 54 inch diameter.
EGG-SHAPED, from 6 by 4 inches to 36 by 28 inches.

The Proprietor begs to call the especial attention of Engineers and Surveyors to HIS LARGE PIPES for DRAINAGE and WATER-CONDUITS, which can be made of any required strength or thickness.

FIRE CLAY RETORTS have been made at these Works for UPWARDS OF THIRTY YEARS, and have attained to the highest excellency, both in quality and internal smoothness; respecting which unexceptional references can be given.

Bricks, Lumps, Tiles, Chimney-Linings, Terra Cotta. Chimney-Tops, Windguards, &c. &c. also in Stock.

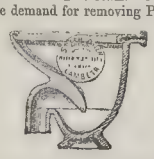
GREAT REDUCTION IN GLAZED STONEWARE PIPES.

STEPHEN GREEN,



IMPERIAL POTTERIES, LAMBETH.

S. G. wishes to call attention to his WHOLE and HALF-SOCKET PIPES, made on the principle of PILBROW'S IMPROVED REBATED SOCKET-END, which fully secures a joint free from obstructions, and meets the demand for removing Pipes at any point.

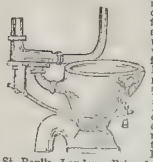
5s. 6d. each; if fitted with PATENT AIR-TIGHT VALVES, 1s. 6d. each extra.

Also to his IMPROVED REGISTERED CLOSET-PAN, with an impervious White Glaze inside, and formed to insure a Flush of Water over the entire Internal Surface. Made with or without STEPHEN GREEN'S PATENT AIR-TIGHT VALVE on the top of the Trap.

N.B. Prospectuses, with Prices and Terms, forwarded post-free, as also Prospectuses of STEPHEN GREEN'S PATENT SELF-ACTING FLUSHING CLOSET, complete, with Seat and Riser, &c.

GREAT REDUCTION IN PRICE OF SMITH'S DRAIN-PIPES.

THOMAS SMITH begs respectfully to call the attention of Contractors, Builders, &c. to the GREAT REDUCTION in his PRICES of GLAZED STONEWARE DRAIN-PIPES, &c.



T. S. is the ORIGINAL Manufacturer of the C. R. P. or REBATED SOCKET PIPES, and the Medium-backed Closet-pans (with superior White Enamel Glaze inside), as made under the direction of Mr. JAMES PILBROW, Engineer to the Tottenham Local Board of Health, with which he is now supplying several large towns.

N.B. Half-socket Pipes same prices, which obviate all difficulty arising AT ANY TIME from the Inspection of Pipes in the event of the unusual circumstance of a Stoppage occurring, or a Junction being required to be inserted.

DRAWINGS AND LISTS OF PRICES FORWARDED FREE ON APPLICATION.

MANUFACTORIES,—71 and 72, PRINCES-STREET, LAMBETH; and ALBION POTTERY, OLD FORD, BOW.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS.

manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 23, Old Fish-street, near St. Paul's, London.—Price for Closet and Apparatus complete, from 23s. and perfect action guaranteed.

SUPERIOR STONEWARE GLAZED

PIPES of a quality not to be surpassed.—F. and W. STURGE respectfully invite attention to the very superior character of their stone pipes, which they are confident are such as must give great satisfaction, the price being also lower than many in the trade, 2½, or even 5 per cent. off the list for cash. Junction Bends, &c. Pans and traps of the first quality. Yorkshire Paving, Sinks, Sills, &c. all at low cash prices.—F. and W. STURGE, Bridge Wharf, City-road.

N.B. A small extra charge is made upon goods required to be delivered.—October 1, 1855.

LYTCHETT POTTERY.—For SALE by

PRIVATE CONTRACT, the LEASE and PLANT of the above Premises. The lease consists of about fourteen acres of land and a good cottage. The land contains a large quantity of very superior clay for pottery and fire-goods. The steam pipes made from the clay are equal, if not superior, to any yet in the market; and the fire-goods will bear comparison with any yet made. The plant comprises three potters' wheels and two brick kilns, with pipe machines, pug mills, and all other necessary appliances. Lytchett Pottery is 2½ miles from the South-Western Railway, and 3 miles from the port of Poole. For further particulars, and to view, apply to H. T. FISHER, Blandford.

GREAT REDUCTION in the PRICE of STONEWARE POTTERY from this date.

VICTORIA POTTERY, LEIGH, near SOUTHEND; London Establishment, Falcon Wharf, 80, Bankside. DAVID MOUNTAIN, Manufacturer (late of Lambeth POTTERY), having now further reduced the prices, begs to draw the attention of Builders and others, to STONEWARE PIPES &c. &c. in the most advantageous terms. The new lists of prices will be forwarded on application as above.—Feb. 11, 1856.

Lee and Son, the proprietors, at their HARBOUR WORKS DEPÔT, near the Ordnance Jetty, Harwich; ten good Lighter BARGES, with the chain bobs, chain cables, and anchors complete; six iron crabs; four railway trucks; and upwards of thirty tons of iron, consisting of large and small chains, malleable scrap and castings; valuable old timber; rope; and other hull-boat materials, the scrap arising from the harbour dredging works; all which will be expressed in catalogues, to be had, with any further required particulars, on reference to the Depôt. Refreshments at Rebeth, London; or Mr. HENRY WEAVER, Manager at the Harbour Works Depôt; or the Auctioneer, Harwich.—Sale to commence at TWELVE o'clock at noon.

IN BANKRUPTCY.—WITHOUT RESERVE.—TO TIMBER MERCHANTS, SHIP-BUILDERS, BUILDERS, CARPENTERS, &c. &c.

MR. NEEMAN is instructed by the assignees of Messrs. Possey and Steel, bankrupts, to SELL by AUCTION, without reserve, on the PREMISES, Norway Wharf, Millwall, Poplar, on TUESDAY, MARCH 11th, at FIVE o'clock precisely, all the extensive and valuable STOCK in TRADE, comprising every description of English and foreign timbers, planks, and cut stuff, Norway and other spars, scaffold-poles, &c. yellow pine and white spruce deals, battens, and boardings, prepared yellow and white flooring boards, Dantzic lath-wood, laths, &c. &c., also a four-wheel phaeton, timber jacks, carriages, and other trade implements, &c. which may be viewed two days prior to the day of sale, and catalogues had of the Auctioneer, 3, Crooked-lane, London-bridge

TO LAND and BUILDING SOCIETIES and OTHERS.—Votes for the County of Kent.—Eligible Freehold Building Land lately redeemed, near to the entrance-gates of the Royal Arsenal, Woolwich.

MESSRS. CHURCH and SON are favoured with instructions to OFFER FOR SALE, by PUBLIC AUCTION, at the TOWN HALL, William-street, Woolwich, on THURSDAY, MARCH 13, 1856, at THREE for FOUR o'clock in the afternoon, SEVENTY-SEVEN PLOTS of Valuable FREEHOLD BUILDING LAND, lately redeemed, most eligibly situate within a few minutes' walk of the Royal Arsenal, and immediately adjoining the level crossing of the North-Kent Railway. This land offers advantages to large and small capitalists rarely to be met with. It forms part of the well-known and gardens, is in a high state of cultivation, and is planted with luxuriant fruit-trees. Each lot will have a frontage on an excellent new road, which it is proposed to extend to Plumstead-common, as a direct communication from Plumstead road, and will advertise the purchaser to a vote for the county of Kent. Plans, with particulars and conditions of sale, may be had on application to Mr. H. Davis, Solicitor, Rectory-place, Woolwich; of Garraway's Coffee House, Change-alley, London; and of the Auctioneers, William-street, Woolwich.

SALES BY AUCTION.

CHELMSFORD, ESSEX.—To Shippers, Colonists, Schools, and Public Establishments. To BE SOLD by AUCTION, at CHELMSFORD, on the Premises of the Patent Oven Company, h

VALPY and STOKES, on THURSDAY, 6th MARCH, 1856, by order of the Proprietors, about FORTY of FITCHES'S PATENT OVENS, in lots, for immediate clearance; also, a quantity of Old Iron, Smiths' Tools, Forge, Bellows, Vices, Grindstones, and Sundries. These well-known, useful, and economical ovens may be inspected and seen in full operation every morning previous to the sale, and are adapted for family use, wherein bread, meat, and vegetables may be cooked for a large family, to the No. 7, which is calculated to cook for 120 persons daily; and they are constructed in a most substantial manner, of cast and wrought iron, with the best workmanship. With the utensils or shippers and colonies of catalogues may be obtained of the Auctioneers, Chelmsford, Essex.

TO TIMBER MERCHANTS, SHIP and COACH BUILDERS, and OTHERS.—Capital ELM, ASH, and other TIMBER, TO BE SOLD by AUCTION by

MR. T. BAXTER, on TUESDAY, MARCH 4th, 1856, at TWO o'clock, at the GEORGE INN, a Beckenham, Kent; comprising Thirty very fine large Elm Trees, and Forty others, Thirty-five fine clean Ash ditto, Two large Beech, and Three fine large Limes, Horse Chestnut, &c.; all recently cut down, and lying on the Beckenham Park Estate, at Beckenham Kent.—May be viewed by leave preceding the Sale, by applying to Mr. Wynne, Kent-house-road, near Penge; or to the Carpenter, at the Yard near the lodge gate; and catalogues had at the Dover Castle, Deptford; Crooked Billet, Penge; at the Place of Sale; and of the Auctioneer, Ae Burnley, Kent.

ESSEX land MIDDLESEX.—Paulsbin Lodge, Dagenham.—Valuable Freehold Residence and Farm of Land, and Five Houses in the Regent's-park and Pimlico well

MESSRS. BEADEL and SONS have received instructions to SELL by AUCTION, at the MART, 1 on WEDNESDAY, MARCH 26, at TWELVE, a very desirable VILLA RESIDENCE, known as Paulsbin Lodge, with convenient, excellent out buildings and productive land and grounds, together with a small pasture adjoining, pleasantly situate on Chadwell-heath, within three miles of the village of Dagenham, two miles from Romford, and three from Ilford, at no distance from stations on the Eastern Counties Railway; a valuable detached enclosure of pasture and arable land, known as Mill Field, containing 3a. 3r. 8p. in the occupation of Mr. Thomas Ware, at 12l. per annum; also, a desirable Freehold Property, comprising five houses in Oldham-gardens, Bagnigge-wells-road, Clerkenwell, let to respectable tenants at rents amounting to 84l. 10s. per annum. Possession of the residence and land upon completion of the purchase. Particulars and conditions may be had of Messrs. Bayliss and Bevan, Solicitors, 18, Bloomsbury-street; at the Auction Mart; and of Messrs. BEADEL and SONS, 25, Gresham-street.

Sixth Sale of the Surplus Property belonging to the North London Railway Company, with Votes for the County of Middlesex.

MESSRS. BEADEL and SONS have received instructions from the Directors of the above Company to SELL by AUCTION, at the MART, on TUESDAY, MARCH 11th, at TWELVE o'clock precisely, the Sixth Portion of the valuable FREEHOLD BUILDING PROPERTY adjoining the Railway, Camden Town, comprising several freehold Houses, let at rents amounting to 69l. per annum; also well-situated ground-rents arising from leases in the various localities of Great and Little Randolph-street, Grange-street, and Frederick-place. Also Sheppard House, Homerton, and a plot of valuable Building Land adjoining, fronting the Lea Bridge-road, the property of Mrs. Thomas Parnell Layton, Solicitor, Guildhall yard; of Messrs. KENNEDY and BONNY, 10, Cornwall-crescent, Camden Town; at the London Mart, and of Messrs. BEADEL and SONS 25, Gresham-street.

Extremely valuable first-class Freehold Building Ground, Camberwell, Surrey.

MR. LEIFCHILD has received instructions to offer for peremptory SALE by AUCTION, at GARRAWAY'S, on TUESDAY, MARCH 4th, at TWELVE for ONE precisely, a very important FREEHOLD ESTATE, containing about 24 acres of productive pasture-land, on the south side of Denmark Hill-street, in the parish of St. George, Camberwell, 1 mile 3 furlongs from the Elephant and Castle, and 1 mile 1 furlong from Southgrove, and on public footpath from Grove-hill; its situation is eminently agreeable and healthful, being in the most elevated vicinity of Camberwell-grove, Champion-hill, and Denmark-hill, directly fronting East Dulwich, with a fine view of the Crystal Palace. Every part of the whole estate is peculiarly well adapted for building purposes of a high character, for, in addition to its decided advantages in situation, and the unusual extent of area so near to London, it contains a never-failing supply of capital spring water, which flows through it, with the necessary sewers at a great depth, have been carried in, ensuring a sanitary condition of the property, a demand for good healthy district for residences of a superior class. The lots will shortly be staked and marked out, and plans, containing particulars and conditions of sale, may be had at Garraway's: of Messrs. DAVIDSON & BRADBURY, Solicitors, 18, Basinghall-street; of Mr. RUSSELL, Solicitor, 30, Coleman-street; and at the Offices of Mr. LEIFCHILD, 69, Moorgate-street City

ARCHITECTS' BENEVOLENT SOCIETY.

PATRONS.

Sir Robert Smirke, R.A. George Stanley Repton, Esq.

PRESIDENT Sydney Smirke, Esq. A.R.A.

TRUSTEES.

Sir Charles Barry, R.A. Charles Robert Cockerell, Esq.
Philip Hardwick, Esq. R.A. R.A.

TREASURER—William Tite, Esq. M.P. F.R.S.

NOTICE.—The ANNUAL GENERAL MEETING of the above Society will be held at the Rooms of the Royal Institute of British Architects, 16 Lower Grosvenor-street, on WEDNESDAY, the 12th MARCH next. The Chair will be taken at THREE o'clock precisely. Information relative to the Society may be obtained of the Honorary Secretary, or of Mr. GOULD, the Collector, 8, Fitzroy-square, Fitzroy-square.

JOHN TURNER, Hon. Secretary, 15A, Wilton-street, Grosvenor-place.

1st March, 1856.

ROYAL INSTITUTE of BRITISH ARCHITECTS.

Incorporated 7th William IV.

16, Grosvenor-street, Grosvenor-square, London, Feb 1856

Her Majesty having been pleased to grant her gracious permission that the ROYAL MEDAL be conferred on such distinguished architect or man of Science, of any country, as may have designed or executed any buildings of high merit, or produced a work tending to promote or facilitate the knowledge of Architecture, or the various branches of Science connected therewith, the Council of this Institute will proceed in January, 1857, to take into consideration the appropriation of the Royal Medal.

Gentlemen desirous to compete for the SILVER MEDAIS of the Institute, and the SOANE MEDALLION, with its travelling fund, to be awarded for Essays, Illustrations, and Designs, may obtain the necessary information on applicat on to the Honorary Secretaries, by letter, prepaid, at the above address.

ROYAL ACADEMY of ARTS, Trafalgar-square.

NOTICE to ARTISTS.—All Works of Painting, Sculpture, Architecture, or Engraving, intended for the ensuing EXHIBITION at the ROYAL ACADEMY, must be sent in on MONDAY, the 7th, or TUESDAY, the 8th of APRIL next, after which time no Work can possibly be received, nor can any Works be received which have already been publicly exhibited.

FRAMES.—All Pictures and Drawings must be in gilt frames. Oil Pictures under glass, and Drawings with wide mounting are inadmissible. Excessive breadth in frames as well as projecting mouldings may prevent Pictures obtaining the situation they otherwise merit. The other regulations necessary to be observed may be obtained at the Royal Academy.

JOHN PRESCOTT KNIGHT, R.A. Sec.

Every possible care will be taken of Works sent for exhibition, but the Royal Academy will not hold itself accountable in any case of injury or loss, nor can it undertake to pay the carriage of any package.

The prices of Works to be disposed of may be communicated to the Secretary.

SCHOOL of ART and TRAINING SCHOOL, MARLBOROUGH HOUSE, Pall-mall.

The Spring Session will commence on the 3rd of MARCH, and terminate on the 18th of JULY. Hours of study—Morning, Ten to Three. Evening, Seven to Nine, daily, except Saturdays. Fees for Morning and Evening, 4l.; for Evening, 2l. per session. The School for Female Students not in training, is at 37, Gower-street, Bedford-square.—For prospectus's, apply at the Head Master's Office, Marlborough House.

ART UNION OF LONDON (by Royal Charter).

Prizeholders select for themselves from the Public Exhibitions. Every subscriber of One Guinea, will have besides the chance of a Prize, an impression of a plate of Harvest in the Highlands, engraved by J. T. Willmore, A.R.A. from the important and well-known Picture by Sir E. Landseer, R.A. and Sir Augustus Callcott, R.A. The Prints are now ready for delivery.

GEORGE GODWIN, } Honorary
LEWIS POCOCK, } Secretaries.

444 West Strand.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL-MALL, LONDON.

Art-Superintendent—RICHARD REDGRAVE, Esq. R.A.

Head Master R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful Art-education, to develope its relation to the requirements of trade and manufacture, and its application to the common uses of life. Special courses are arranged in order to qualify Schoolmasters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The Instruction comprehends the following subjects:—Freehand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Temperand Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of Still-life, &c., the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes of instruction in the technical processes of China and Enamel Painting, Drawing and Engraving on Wood, and Lithography in Chalk and Colour. The two last classes for female students only.

Hours of Study—Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees 4l. per session, or part of the session. For Evening Classes only, 2l. per session.

The Class for Practical Geometry and Perspective, or that for Moulding and Casting, may be attended separately on payment of a fee of 1l. per session.

Students have full access to the valuable collections of the museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students not in training, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. M'Ian. Fees per session,—Advanced Class, 2l. and 4l.; Elementary Class, 1l.; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall mall, London.

COMPETITIONS.

TO ARCHITECTS.

MIDDLESEX INDUSTRIAL SCHOOL.

The Committee of Visitors appointed under an Act of the 17th and 18th Vic. cap. clxix. to provide an Industrial School for the Juvenile Offenders of the County of Middlesex, invite Architects and others, to lay PUBLIC COMPETITION, for Plans and ESTIMATES for such building, to be forwarded, sealed up, and addressed to the Chairman of the said Committee, at the Session-House, Clerkenwell, on or before SATURDAY, the 26th day of APRIL, 1856. Each set of plans is to be marked with a motto or device, and the name of the author is not to appear, but to be put in a separate sealed letter, marked on the outside a corresponding motto or device. A premium of 150l. will be paid for the plan which shall be considered the best, 100l. for the next, and 75l. for the third.—Particulars as to the site, with a printed copy of instructions, and the conditions on which the premiums are offered, may be had upon application to me, at the Sessions House, any day between the hours of ELEVEN and FIVE o'clock.—Dated this 6th March, 1856.

CHARLES WRIGHT, Clerk to the Visitors.

GRANTHAM BURIAL BOARD.—EXTENSION of TIME for PLANS, &c.

The period for sending in Plans for Chapels, Lodge, and Entrance Gates, is EXTENDED to SATURDAY, 22nd MARCH. Plans are also required for PLANTING the GROUND and LAYING OUT the ROADS and WALKS therein two-thirds as consecrated, one-third unconsecrated, to be sent in by the same time, for which an additional premium of 5l. is offered. The ground is as near as may be square of 220 yards by 183 yards. Entrance west.—By order of the Board,

ROBT. HY. JOHNSTON, Clerk.

Grantham, February 20th, 1856.

BOLTON UNION.—NOTICE to ARCHITECTS, &c.—PLAN for a NEW WORKHOUSE.

The site of the intended New Workhouse for the Bolton Union not having yet been determined on, the advertisement requiring Plans to be prepared for the same is hereby WITHDRAWN.

JOHN WOODHOUSE, Clerk to the Guardians.

Union Offices, Acresfield, Bolton, 21st Feb. 1856.

CONTRACTS.

TUNSTALL LOCAL BOARD of HEALTH.—To BUILDERS.—CONTRACT for ALTERATIONS of TOWN-HALL.

The Tunstall Local Board of Health are desirous of receiving TENDERS for the necessary WORKS required in the Alterations and Improvement of the Town-hall. Drawings and specifications may be inspected at the Office of the Local Board, Amicable-street, Tunstall, from MONDAY, the 3rd, to SATURDAY, the 8th of MARCH; and further particulars may be obtained, on application to Mr. G. T. ROBINSON, Architect, 23, Upper Parade, Leamington.—Tenders to be delivered to me, sealed and endorsed, on or before TUESDAY, the 11th of MARCH next—By order,

Tunstall, 20th February, 1856. J. LOWNDES, Clerk.

BURSLEM LOCAL BOARD of HEALTH.

CONTRACT for FURNITURE and FITTINGS.—The Burslem Local Board of Health are desirous of receiving TENDERS for the SUPPLY of the necessary FURNITURE and FITTINGS for the New Town-hall. Drawings and specifications may be inspected at the Offices of Mr. G. T. ROBINSON, Architect, 23, Upper Parade, Leamington, from MONDAY, the 3rd, to SATURDAY, the 8th MARCH; and at the Public Offices, Moorland-road, Burslem, from MONDAY, the 10th, to SATURDAY, the 15th MARCH.—Tenders to be delivered to me, sealed and endorsed, on or before TUESDAY, the 18th MARCH next.

By order,
J. LOWNDES, Clerk.

Public Offices, Moorland-road, Burslem, 20th Feb. 1856.

CONTRACTS.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London District hereby gives notice, that sealed TENDERS, addressed to the Director-General of Contracts, will be received at the War Department, Pall-mall, on or before the 29th MARCH next, for the REPAIR of FIRE-ENGINES, BUCKETS, and for executing the WORKS and REPAIRS of the Royal Engineer Department in the London District, viz.—LONDON, WINDSOR, CROYDON and CHARLTON, HOUNSLOW and HAMPTON COURT; for a period of three years from the 1st APRIL, 1856, to the 31st MARCH, 1859. Printed schedules and forms of TENDER may be obtained at the Royal Engineer Office, No. 31, James-street, Pimlico, between the hours of TEN and THREE o'clock from the 1st to the 15th MARCH inclusive. The War Department reserves to itself the right of rejecting the whole or any of the Tenders.

Royal Engineers' Office, London District.

February 27, 1856.

TO CONTRACTORS and OTHERS.—The Committee for BUILDING a CHURCH at BYKER, Newcastle-on-Tyne, are desirous of communicating for the PURCHASE of the STONE on the Site of the said Church, to any extent, and the depth of good stone considerable, with very little boring. The purchasers will have to work out the stone within a limited period, and to comply with such other conditions as the Committee may require. Besides the ordinary modes of conveying away the stone the purchasers may have the facility of making an arrangement with the proprietors for a going private railway, terminating at a convenient wharf, which possesses every convenience for shipping stone on the River Tyne. Mr. CLIFFORD or Mr. YOUNG, Schoolmaster, Byker, will show the site, and offers may be addressed to the Rev. T. H. GREEN, St. Mary's place, Newcastle-on-Tyne, Byker, Feb 5, 1856.

ST. SAVIOUR'S DISTRICT.—To CONTRACTORS, BUILDERS, and OTHERS.—The Board of Works for St. Saviour's District are desirous of receiving TENDERS for the performance of the Works in making the requisite ENTRIES from Houses and Buildings into the MAIN SEWERS, and otherwise connected with Drainage and Sewerage within the District, for the term of one, two, or three years. The Tenders to be based on the schedule of prices printed for the purposes of the Board, a copy of which can be had upon application at the Board room, on any of the days between and until the Tender day sent in, or schedule returned. The Contractor will have to enter into a contract according to the printed form attached to such schedule, and he and two sureties to execute a joint and several bond in 500l. conditioned for the performance thereof. All persons tendering must fill in the printed forms, with their names and places of abode, and must sign their Tenders to the Board sealed up and endorsed "Tender for General Works." Before HALF-PAST FOUR in the afternoon of WEDNESDAY, the 12th of MARCH instant. The Board will pay the expense of the contract, that of the bond must be met by the Contractor. The Board do not bind themselves to accept the lowest or any Tender.—By order of the Board.

HERBERT STURMY, Clerk.

Board-room, Emerson-street, Paxton, Monday, March, 1856.

TO MASONS, PAVIORS, BUILDERS, CONTRACTORS, AND OTHERS.

THE VESTRY of the PARISH of ST. GEORGE-IN-THE-EAST hereby give Notice, that they will meet at the Board-room of the Workhouse, Charles-street, Old Gravel-lane, on THURSDAY, the 6th day of MARCH instant, at SIX o'clock p.m. precisely, to receive TENDERS for the supply of MATERIALS and for the execution of JOBBING and REPAIRED WORKS required for the repairing and relaying the carriage and footway pavement of the several streets and places; and also for the supply of Materials and the execution of the Jobbing and Measured Works required to the sewers and drains within the said parish, for the term of FOUR YEARS from the 25th MARCH, 1856. Tenders must be sent in upon the basis of schedules of prices obtainable at the Vestry offices between the hours of TEN and FIVE, on payment of 5s. for each schedule, such sum to be returned on the receipt of a bond fide Tender. Any Tender not upon the printed form of the Vestry will be rejected. The parties whose Tender shall be accepted for Paving will be required to enter into a bond with two responsible sureties in the sum of 200l. and for Sewers and Drains in the sum of 300l. for the due performance of the Contracts. The expense of the bond and contract will be borne by the Vestry, and the Vestry do not bind themselves to accept the lowest or any Tender.

By order of the Vestry, W. L. RAVELL, Clerk.

Vestry Office, 40, St. George-street East, 3rd March, 1856.

TO BUILDERS.

PERSONS desirous of TENDERING for ADDITIONS and ALTERATIONS to the FARMHOUSE in the occupation of Mr. W. PARSONS; and new FARM BUILDINGS, at Binfield, near Oakley, on the estate of Colonel North, M.P. may see the plans and specifications at Mr. W. PARSONS'S, Binfield. The Tenders are to be delivered at the Office of Mr. J. F. CLARK, Architect, Newmarket, on or before SATURDAY, the 22nd day of MARCH; and the lowest or any Tender will not necessarily be accepted.

WATERING.—The VESTRY of the Parish of SAINT LUKE, CHELSEA, will meet on TUESDAY, the 18th day of MARCH, at the Lecture-room of the Male Free House, King's-road, at ELEVEN o'clock in the Forenoon, to receive TENDERS from persons desirous of CONTRACTING to PROVIDE MEN, HORSES, and WATER-CARTS, from the 25th inst. to the 29th day of SEPTEMBER next, both days inclusive. Detailed particulars, and conditions, together with a form of Tender, may be had, on application at my Office. Sealed Tenders, signed by the proposed Contractor, with the names and description of two sufficient sureties for the performance of the Contract, to be left at my Office, on or before MONDAY, the 17th day of MARCH. The legal charges of the Contract to be paid by the Contractor upon the execution of the same; but no Tender will be received or accepted, unless made on one of the printed forms.—By order,

CHARLES LAHEE, Vestry Clerk.

Offices, Manor House, King's-road, March, 1856.

[For remainder of Contracts see next page.]

CONTRACTS.

THE DIRECTORS of the MIDLAND RAILWAY COMPANY are prepared to receive TENDERS for the SUPPLY of the following QUANTITIES of FISHED PLATES, 57 tons of FASTENINGS, 15 Tons of CHAIRS, Bolts of Iron and Metal suitable for the Fastenings of the Wheel CENTRES. Plans and Specifications and Tender Forms to control, may be seen at the SECRETARY'S OFFICE, Derby, on the BLACK PATH of the 8 o'clock TRAIN. MITTED must be sent to the Secretary not later than TEN, a.m. on TUESDAY, the 18th of MARCH, 1856.

By order, JOSEPH SANDERS, Secretary.

Derby, March 1, 1856.

METROPOLIS LOCAL MANAGEMENT ACT.—The Metropolis Local Management Act Amendment Act, 1856.—The Vestry of the Parish of ST. MARYLEBONE, pursuant to the above Act, hereby GIVE NOTICE, that they intend to APPLY to PARLIAMENT in the present Session for an Act to enable them to make a Sewer from the Eastern Boundary of the Parish, through Cumberland-gardens, Upper Berkeley-street, Seymour-street, and Portman-street, to the Tyburn Sewer in Upper Grosvenor-street, and to raise the Money required for the purpose by Rates, or by Loans on the Security of the Rates, or partly by Rates and partly by Loans, and to make Provision for the Repayment of the Loans, and for other purposes connected therewith.

Dated this 1st day of March, 1856.

By order of the Vestry,
WILLIAM HENRY WHITE, Vestry Clerk.

Vestry Hall, Marylebone, March 1, 1856.

TO STONE MERCHANTS.

THE VESTRY of the PARISH of ST. LUKE, CHELSEA, will meet at the Board-room, at the Manor House, King's-road, Chelsea, on TUESDAY, the 11th day of MARCH, at ELEVEN o'clock, in the Forenoon precisely, to receive TENDERS from persons willing to CONTRACT from the 25th day of MARCH inst. up to, and inclusive of, the 25th day of MARCH, 1857, pursuant to the terms of a Draft Contract, now lying at the Vestry Office, for SUPPLYING with Stone the Roads, Streets, Lanes, Courts, Alleys, Public Passages, Ways, Footpaths, Fares, and Places under the jurisdiction of the said Vestry. The Vestry will not be obliged to accept the lowest or any Tender, but reserve to themselves the power of contracting with the Owners of any Quarry or Quarries for the supply of Stone from the same, at such price as may be agreed upon between them.

Printed Forms of Tender, with the Specifications and Conditions of Contract, may be had at the Vestry Office, on and after MONDAY, the 3rd day of MARCH inst., on application at the Office of Mr. Lake, the Surveyor to the Vestry, at the Manor House, King's-road, Chelsea.

Each Tender must be delivered at the Vestry Office, sealed up, on or before TUESDAY, the 11th day of MARCH inst., at ELEVEN o'clock in the Forenoon precisely, and must be endorsed "Tender for Stone," and addressed to the Vestry Clerk.

CHARLES LAIRE, Vestry Clerk.

Offices, Manor House, King's-road, Chelsea, March, 1856.

VESTRY of ST MARY NEWINGTON, SURREY contracts for renewal of Roof, Portland Cement, Bricks, Granite Paving, Blue Lias Lime, Plaster of Paris, Roofing Rag, Grate Bars, Iron Pipes, Lead Pipes, Sheet Lead, Solder, &c. The Vestry will meet at the Board-room, Queen's Head-passage, Newington, on WEDNESDAY, the 19th day of MARCH, at ELEVEN o'clock in the forenoon precisely, to receive TENDERS from persons willing to CONTRACT for the performance of the same for the SUPPLY, and for the REPAIRING of the Roads, Streets, Lanes, Courts, Alleys, Public Passages, Ways, Footpaths, Fares, and Places within the Parish, for the term of one year from the 25th day of March next. Printed Forms of Tender, with the Specifications and Conditions of Contract, may be had at the Vestry Office, on and after MONDAY, the 17th day of MARCH inst., on application; and Tenders to be sent in to the said Office, sealed up, on or before TUESDAY, the 25th day of MARCH inst., at ELEVEN o'clock in the forenoon precisely, and endorsed "Tender for Repairing Roads," and addressed to the Vestry Clerk.

The Vestry will not be obliged to accept the lowest or any Tender, but reserve to themselves the power of contracting with the Owners of any Quarry or Quarries for the supply of Stone from the same, at such price as may be agreed upon between them.

Dated this 29th day of February, 1856.

By order of the Vestry,
RICHARD CHESTER, Jun., Clerk to the Vestry.
1, Cadogan-place, Sloane-street.

THE STOCKTON GAS-CONSUMERS COMPANY, LIMITED, Trustees appointed by MANUFACTURERS and MINERS for the purpose of carrying into effect the Gas Consumers Act, 1855, are prepared to receive TENDERS for the MANUFACTURING, SUPPLYING, and DELIVERING of ILLUMINATING GAS, for the Boroughs of Stockton and the County of Durham, and PAVING, LAYING, repairing, and maintaining the Mains of metal thereto belonging, from the 1st of June next. The apparatus now in use is not to be taken to, but the manufacturer is to provide and erect all apparatus, buildings, and premises necessary for the purpose. The Tenders must be sealed up, and addressed to the Secretary, at the Office, No. 1, Finkle-street, Stockton, on or before MONDAY, the 24th day of MARCH, 1856, and must specify the price per 1,000 cubic feet of Gas, and the Tenderer must attend at the Office of the Company, at Stockton, on the 25th day of March, 1856, at Eleven o'clock in the forenoon precisely, when the Tenders will be opened, and the Tenderer whose Tender is accepted will be required to enter into a Contract with the Company, and to give Security for the due performance of the same.

The Company will not be obliged to accept the lowest or any Tender, but reserve to themselves the power of contracting with the Owners of any Quarry or Quarries for the supply of Stone from the same, at such price as may be agreed upon between them.

Dated this 29th day of February, 1856.

By order of the Vestry,
RICHARD CHESTER, Jun., Clerk to the Vestry.
1, Cadogan-place, Sloane-street.

ELTHAM, KENT.—TENDERS are required for the ERECTION of FOUR COTTAGES at Eltham. Plans and specifications to be seen at the Office of Mr. THOMAS HUNTER HAWKINS, Surveyor, Eltham, and after MONDAY Tenders may be sent to MESSRS. Nelson on THURSDAY the 13th inst. The lowest or any Tender is not necessarily to be accepted.

TO GENERAL CONTRACTORS.

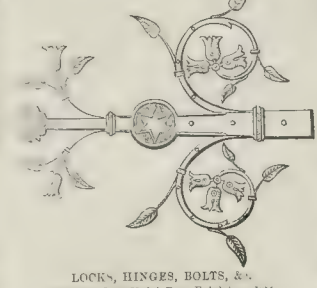
NORTH-COATS INCLOSURE, LINCOLNSHIRE. CONTRACT, No. 1.—The Valuer acting in the matter of the Inclosure of the Fifties or Outmeadow, in North-coats, in the County of Lincoln, in the Parish of NEW SPA SLUICE, Thirsk, and was and will be heard thereon; and all persons claiming any Right of Common or other Right in the said Fifties or Outmeadow are hereby required to send in their Claims in writing to the said Valuer, at his Office, No. 1, Finkle-street, Stockton, on or before the 1st day of APRIL, 1856, or in default thereof they will be excluded from the benefit of the said Award.

Dated this 1st day of March, 1856.

THOMAS HUNTER HAWKINS, Valuer.

Stockton, March 1, 1856.

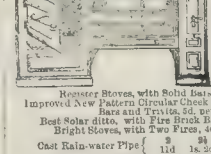
CONTRACTS.



LILLESHALL CHURCH, SALOP.—Builders are invited to TENDER for the RESTORATION and REBUILDING of the Parish Church of Lilleshall near the Donnington Station on the Shropshire Union Railway. Plans and specifications can be seen on application at the Rev. HENRY BEAN'S, at Lilleshall, or at the Office of the Architect Mr. NORTON 24 Old Bond-street, London, and after MONDAY, the 14th inst. Tenders to be sent to Mr. NORTON, on or before the 24th inst.

SURVEY of TIPTON PARISH.—The Tipton Local Board of Health are prepared to receive TENDERS for the SURVEY and LEVELS of the Parish, the whole of the work to be done in accordance with the requirements of the General Board of Health in Lond n. Conditions may be seen at the Board's Offices, Church-lane, Tipton on MONDAY, WEDNESDAY, and FRIDAYS, between the hours of NINE and ELEVEN A.M., after which no Tenders will be received. Tenders to be sent in by the 20th of MARCH, 1856. The Board do not bind themselves to accept the lowest or any Tender.

GEO. M. WARING, Clerk.



Church-lane, Tipton, Feb. 29, 1856.

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original Inventors of the PATENT ENAMELLED MANGER, RACK, and WATER TROUGH AS ONE FIXTURE, to which they have made important additions, the main features of the same being explained in the following description and Engraving.

A represents the Patent Halter-guide and Collar-rein, the bait of which is taken to the back of the manger-works with freedom and ease up or down the guide-bar, and is noiseless in its operation, as also a sure preventative against the mischievous Horse being cast in the stall.

B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C. The Seed-box detached, made of galvanized sheet-iron, light and durable

D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

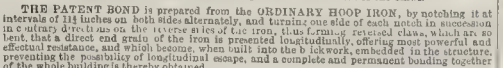
COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and impervious to infection. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE-DRAIN, with safety centre; Sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Saddle and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-Iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

The New Illustrated Catalogue for 1856 gratis on application. Estimates and Designs.



COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

TYERMAN'S PATENT HOOP-IRON BOND FOR BUILDING PURPOSES.

TARIFF OF PRICES
Beyond the current Price of Hoop-Iron.

The undermentioned Gauges are kept in stock; but any Gauge or width will be supplied within a few days, at a small advance on the following prices:—

Gauge.	In. wide.	Per 1,000 ft.
No 16	1½	7s. 6d.
15	1½	7s. 6d.
13	1½	8s. 0d.
15	2	8s. 6d.
13	2½	9s. 6d.

Plan and Elevation of Bond, showing Position and Form of the Claws.

THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 1½ inches on both sides alternately, and turning one side of each notch in succession in contrary directions on the reverse sides of the iron, thus forming retained claws, which are so bent, that a direct end grain of the iron is presented longitudinally, offering most powerful and effectual resistance, and which become, when built into the brickwork, embedded in the structure, preventing the possibility of longitudinal escape, and a complete and permanent bonding together of the whole building is thereby obtained.

Patentee—FREDERICK TYERMAN, Architect, 44, Weymouth-street.

Sole Manufacturers—THOMAS PERRY and SONS, Government Contractors, Bilston.

London Depôt—463, OXFORD-STREET.

JUDKIN'S IMPROVED GAS REGULATOR has the following advantages to recommend it to the consideration of all gas consumers:

1st. It can be easily adjusted to supply gas at any required pressure below that of the street.

2nd. When once adjusted, it will admit of NO VARIATION in LIGHTS BURNING, whether they are few or many, whatever the fluctuation of pressure may be.

3rd. The light being purer by perfect combustion, the atmosphere is more healthy and agreeable.

4th. A saving of at least from 25 to 35 per cent. in the consumption of gas is obtained.

DISADVANTAGES over other REGULATORS are as follow:—

1st. It is more simple in its construction.

2nd. It is more sensitive in its operation, having less friction, as it works only on two steel centres, which are immersed in quicksilver.

3rd. It is not liable to get out of repair, and requires less attention than a meter itself.

N.B. A Testing Apparatus has been fitted up on the premises of the Patentee, 23 and 25, Corporation-street, Manchester, and No. 1, Fleet-street, London, for the purpose of demonstrating the above-named facts.

CONTRACTORS' RAILS.—FIFTY to SEVENTY TONS of CONTRACTORS' RAILS TO BE DISPOSED OF, in good condition.—Apply to MATTHEW P. SHAW, 64, Cannon-street, London; Contractor for Railway Plant, Stores, &c. (Late 13, George-street, Mansion House)

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanised ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 55, High Holborn.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab the beautiful stone now raised from the lowest beds of their quarries. Chimney-pieces, Columns, Fonts, and ornamental works on view, at 20, Surrey-street, Strand.

HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent in London

MARBLE.—The Italian Marble Company, Importers of the produce of their own quarries, in the province of Massa-Carrara, Italy, beg to inform the general Marble Trade in the United Kingdom that they are prepared to undertake contracts for any quantity of Statuary, Veined, Sicilian, Bardilla, Dove, and other Marbles, in blocks of all dimensions, delivered on shipboard at Leghorn, or in dock, London. A constant stock always on view on the premises, where orders are taken for Paving Slabs, Garden and Hall Statues, Vases, Tazzas, Mortars, Consoles, Chimney-pieces of all classes, Circular Table-tops, Monuments, &c. executed in Italy.—For further particulars, inquire at the Office on their Wharf, Thames Bank, Pimlico, adjoining the east side of Vauxhall-bridge.

WILLIAM W. BONNIN, Secretary.

Lloyd's Marble Wharf, Thames-bank, Pimlico,

ANCASTER STONE, so remarkable for its free working quality, combined with cool hearth and durability. Price, and cost of transit to any part, may be obtained, upon application at Mr. W. THOMPSON'S Office, Elmer-street, Grantham.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to the r stock of Bangor slates, Lime, Plaster, Roman, Portland, and Keene's cements, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, close-pipes, and traps, Welsh fire-bricks, crawl, and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

YORKSHIRE STONE.—THOMAS TILNEY, Stone Merchant, Tanfield-place, Leeds, begs to inform Builders, Surveyors, and Local Boards, that he can supply direct from his Quarries, by water or railway, Paving, Landings, Steps, &c. cut to sizes, on the most advantageous terms.—Prices sent on application.

YORKSHIRE and PORTLAND STONE.—ROBERT DANIEL, Victoria Wharf, Pimlico, London and Island Wharf, Leeds, begs to inform Contractors, Builders, Masons, and others, that he still continues to supply every description of STONE to any extent at the lowest current prices, comprising Park Spring, Harehill, Potterwton, Robin Hood, Portland, and Caen, in block and slabs of any thickness; Bramley Fall, Yorkshire paving, landings, steps, copings sills, sinks, grindstones, headstones, ledgers, marble slab, granite curb, &c.

Any quantity sent direct by rail to all stations, or by vessel to any port in the kingdom.

A list of prices sent on application.—Address, Victoria Wharf Pimlico, London.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS,
MILLBANK-STREET, WESTMINSTER.

Marble of all kinds and of best quality, in block and slab, Marble mortars, &c.

DARLEY DALE STONE.—This Stone, introduced by Sir Charles Barry at St. Edward's Grammar School, Birmingham, and well known as having been selected for

ST. GEORGE'S HALL, LIVERPOOL,

and numerous works, including the Railway Station, Birmingham; Borough Bank, Liverpool; Evesham-bridge; Mr. Beaufoy's Schools, Lambeth; and the Portico and Cornice of the Town-hall, Leeds; is kept in considerable quantity at the Darley Dale Stone Wharf, City Basin, London.—Apply to W and J FREEMAN, Millbank-street, Westminster, or GEORGE WALL, at the Quarries, near Matlock.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts for any Depôts: Caen Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 248, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, and Co.), Caen-wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to supply from their Wharf, as above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE.

BATH STONE.—HENRY STONE, QUARRYMASTER, begs to inform Architects, Builders, and others, that he still continues to supply the best COMB DOWN, HAMPTON DOWN, and BOX GROUND WEATHER STONE. Delivered in the trucks at Box or Bath station on the most reasonable terms. H. S. begs to call particular attention to his Hampton Down Stone, it being of a very fine texture and rich colour, adapted for either external or internal purposes. Ashlar and Sawed Bath Stone cut to order. Cargoes shipped in Bristol, and delivered to any part round the coast.—Residence, WIDCOMBE, Bath.

YORKSHIRE STONE.

GEO. VINT and BROTHERS, IDLE, near LEEDS.

Beg to inform Architects, Surveyors, Contractors, Builders, and Masons, that they can supply to any extent all kinds of YORK STONE, including Paving, Bramley Fall, Park Spring, Robin Hood, Harehill, &c. of the very best quality, direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary accounts. Full particulars furnished on application to Mr. FRED RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

FOR MACADAMIZING ROADS.—The HARDEST and most DURABLE STONE.—The Proprietor of an extensive Quarry at Duncannon Rock, containing Blue Elvin Granite, is open to contract for to supply any quantity of the above Stone, its durability having been tested, and proved to be 25 per cent. harder than Guernsey Granite.—For further particulars apply by letter to Mr. JOHN NEWTON, Norway-wharf, Hertford-road, Kingsland-basin.—Two Coal Waggons for Sale.

SLATE CISTERNS, SINKS, and every description of SLAB-WORK, in Slate, Roofing Slates, or Covering.—T. B. HANNAFORD is not only in a position to execute orders to any amount in the above, at extremely low prices, but guarantees a first-class material in all respects, similar to the slate he has used in fitting up and covering the principal mercantile and Governmental buildings in the City. A priced list sent on application.—TREVALGA WHARF, Ratcliff-cross.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

PARIS EXHIBITION.—ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS:—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1848. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, down to the humblest class of the buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of lobbies, chiffoniers, consoles, &c.; baths, baptistries, altar-tablets, pilasters, columns, vases, pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and entrances. Price list can be had on application to Mr. MAGNUS, 23 and 24, Upper Belgrave-place, Pimlico.

N.B. Plans altered and executed from a single article to the most extensive contracts, for home and abroad.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in stamp Asphalte.

FROM 2s. 9d. PER SQUARE YARD.

Country Builders supplied with Asphalte for footings and barn floors, with instructions for using it.

Apply to JOHN PILKINGTON, Poloneeau and Limmer Asphalte Office, Monument-chambers, 14, Fish-street-hill, London.

N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.

W. and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, lately removed from No. 21 Wharf, Harrow-road, to 9, North Wharf-road, Paddington, have now on sale Sifted Garden and Screened Gravel. For terms, &c. apply at the Wharf.

Contractors supplied to any extent.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA-COTTA to M. H. BLANCHARD, late of Caude's Original Works, and successor to them in the manufacture of this invaluable material, has been so successfully adopted for nearly a century in this country, by our eminent architects and others, in the adornment of our noblest buildings, and as the only one material capable to stand the ravages of time unimpaired. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition. Large and small Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

BLASHFIELD'S PATENT TERRA-COTTA, Manufactured at Mill-wall, Isle of Dogs.—Capitals Consoles, Tracery for Parapets, Balusters, String Courses, Friezes, Bas-reliefs, Vases, Statues, Chimney-shafts, and all other Architectural Ornaments modelled, finished, and burnt, in the best manner, and warranted to stand heat and frost, either in Buff or Red-coloured Terra-cotta. A great variety and large stock may be seen at BLASHFIELD'S Warehouse and Show-rooms, No. 1, Praed-street, Paddington.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous vapours or any other impurities or emanations from gas, and is therefore unobjectionable and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold as and for Pure Oxide of Zinc. If any admixture has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by those purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. R. HORLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street, City; and by the Manufacturing and Painting Agent, Mr FREDK. BRABY, Fitzroy Works, New-road. In Manchester and Liverpool by R. CLAY, 5, Mersey-street, who is the acknowledged Agent for the Company for Zinc Paints, and introducing painting ships, warehouses, dwelling-houses, &c. in Leith, by Messrs. R. ANDERSON and CO. Timber-bush; and in Southampton by Mr. J. BUCHER. ZINC OXIDES and PAINTS, in kegs of 14, 21 and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

ROYAL POLYTECHNIC.—Astronomy, illustrated by a magnificent Dissolving Orrery and Diagrams, with appropriate Music from Haydn and Handel. Lectures on the above, Tuesday evening, every Wednesday and Friday, mornings, at two; evenings, at eight. N.B. The Lecture and Diagrams of Friday are entirely different from those of Wednesday. 102.	BBBB ditto ditto.
M medium.	

Sold by all the principal Stationers in town or country.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

An illustrated price-list will be immediately forwarded, free, on application.
N.B. A few New and Second-hand Levels and Theodolites always for Sale.

MONUMENTAL BRASSES, in MODERN and MEDIÆVAL STYLES. MORING, Engraver, Die Sinker, and Heraldic Artist, 44, High Holborn.—Designs and Estimates supplied.

TO ENGINEERS, MACHINE MAKERS, and OTHERS.
CHARLES MACINTOSH and CO. Patentees and Manufacturers of the VULCANIZED INDIA-RUBBER in all its forms of manufacture, recommend this material as capable of sustaining the action of hot or cold water, gas, steam, acids and grease. It is used extensively for valves in marine and land engines, railway buffers and springs, washers for pipe joints, hose and belting, also for packings, acid pumps, chemical castings, &c. &c. Articles moulded or otherwise, made to any size or figure.—Address, Cannon-street West, London; and Cambridge-street, Manchester.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—PROM SIR WILLIAM MOLESWORTH, Bart., WEST-YORK, ISLE of WIGHT.—Second Testimonial.—"March 10th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I have much pleasure in stating that it answers perfectly. Many Builders, and other persons I have lately examined, and there is not the least apparent difference since the first laying down, one seven years ago. I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD LONDON

TO ENGINEERS, MILL OWNERS &c.
N. Woolwich Elastic Steam-pipe Mill Canvas and India-rubber).
at 1s. 6d. per yard.

The hose is Burnettized at an extra charge of 3d. per yard. Union Joints, Branch Pipes, and Jets, are also supplied.

TARPAULINS for COVERING ROOFS during Repairs, SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 113, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

The Builder.

VOL. XIV.—No. 683.

WE gave last week some particulars of the arrangements made by the London Necropolis Company for funerals at their Cemetery at Woking, and took the opportunity to offer some remarks on the state of the burial question. After speaking of the station in the Westminster-bridge-road, we took the reader to one of the stations in the cemetery itself. We will now pursue our notice and comments.

The estate of the Necropolis Company considerably exceeds in size what is at present laid out, or is thought likely to be ever required for burial purposes. The quantities purchased amounted to over 2,100 acres, the estate reaching, though in straggling pieces, to a length of four miles along the railway, which runs through it. It may be viewed as divided, in the other direction, into two principal portions,—one at the Woking Station of the main line, and the other about two miles farther westward, towards Farnborough and Pirbright. The cost of the ground was about 25*l.* an acre; the land of the old suburban cemeteries being said to have averaged 480*l.* an acre. The eastward portion contains about 400 acres, wholly surrounding the Woking Station; the Staines, Woking, and Wokingham Railway, now in course of construction, also passing through it. Of the westward portion (1,700 acres), 1,000 acres south of the main line, were at first reserved for cemetery purposes, but this quantity must have been increased by the purchase lately of a few small holdings, which were scattered about the general ground. Of the 1,000 acres or more, 400 acres are at present laid out, and prepared for use. The land about the Woking Station, and a portion of that westward (north of the line, and in great part also north of the Basingstoke Canal), called the Hermitage, the committee have just obtained power to let for building upon. It is presumed that the park-like appearance, which may ultimately be got in the cemetery, will render the neighbourhood attractive, whilst the improved practice of interments to which the company are bound by the terms of their Act, would render the usual noxious results imperceptible. The portion of the estate now appropriated for interments, though not deficient in pleasing prospects, and though undulating and varied in many parts, is chiefly heathy moorland, which it will take some few years of "top-dressing" and cultivation, to make as beautiful as—with what has been done, or is doing, in the way of planting—it will no doubt eventually become. The compensating advantage, however, is the perfect suitableness of the soil, for interments. The soil consists of a dry sand; and it is so compact, that graves can be dug to almost any depth, of perfect shape, and without shoring.

The average mortality of London is set down by the company as 60,000; and it is stated to be the opinion of Dr. Sutherland, that the quantity of ground reserved at Woking would, with the proper interval between interments, suffice for the whole metropolis for five or six centuries to come. Looking at published calculations, Mr. Chadwick, on the scale proposed by Riecke, and taking the deaths of the metropolis about the year 1838 as averaging 50,000, found that 444 acres, or a space a little more than a fourth over the area of the Regent's-park, would suffice in perpetuity for the amount of mortality. The 600 acres or more, of reserve at Woking, therefore afford a considerable margin for increase of population, and perhaps even for some interments which are calculated upon from Southampton, Portsmouth, and other towns.

The total area of the London suburban cemeteries is stated to be 282 acres; a quantity which will obviously become inadequate shortly after the practice of "pit-burial," maintained in them, is put a stop to. The graves at Woking, in ordinary cases, are dug to a depth of 6 feet, in "grave spaces" measuring 9 feet by 4 feet. A greater depth, however, is provided when called for: though, of course, according to the opinions which now obtain, great depth is not desirable,—the access of the air, and consequent speedy decomposition, being retarded by it.

The consecrated and the unconsecrated ground are separated from each other by the Pirbright road,—each being enclosed by park fencing. We may here mention that a recent discussion in the House of Lords, with reference to the difficulty made about consecrating the Carlisle ground, in consequence of the absence of what was deemed a proper fence, would show the necessity of proceeding cautiously in future cases.

The stations of the two divisions of the Woking ground are precisely similar to each other,—consisting of temporary buildings round three sides of a quadrangle, of one story in height, and painted in drab and white stripes. A portion of the roof projects a few feet, on iron cantilevers, and is ornamented along the edge. In the permanent buildings better means of shelter would be desirable. The decorative part of the design in the present case, has no distinctive character, and too much resembles an ordinary railway station. The chapels, also similar to each other, take the form of small cross churches with towers and slated spires, and are built of half-timbered brickwork, "rough-cast" externally. The interiors, with stained woodwork and white interspaces, are successful, though plain; but the cross form, which required us to sit almost facing some of the mourners, seems to be open to objections in this class of buildings.* The service at the pauper funerals, which are what we are able to speak to, was impressively conducted. It is, as usual in such cases, and necessarily so, read over several bodies at one time. In this case, two coffins rested on the same bier. No other difference is made between the funerals of different classes. The bier is a light carriage, drawn by horse or by hand, as may be required. It seemed to us of greater height than would be desirable; and the pall was short, and did not hang well. If the latter were cut more to the shape of the mediæval palls, and with heavily-weighted fringe, it would be better, considering how much it is exposed to the wind, on the ground.

Time will be indispensable to develope the sylvan beauty which may characterise the place, and which appears to have been prepared for by planting. Vegetation is not merely desirable for the obvious reasons in cemeteries; but it is, as we need not now say, the best disinfectant and absorbent of the putrescence of the ground. Except in the Abney-park Cemetery, however, little attention is paid to it in London, compared with what is desirable. Far too little space is left for walks, or kept free from graves; and thus, the effect which the monuments might otherwise produce does not result. It would, be worthy of the consideration of the Necropolis Company, how far with advantage, more attention might be given to the matter of monuments than they would seem to be giving, were we to judge only by the few headstones that there are. Half-a-dozen of these are reproduced from old designs, but are clumsily detailed; and the general number have no character whatever, except what may be derived from the segmentally-cut top. For the company to set that forth as "statuary" is clearly what people call "a mockery, a delusion, and a snare." It were much to be desired that an architect were more frequently engaged on subjects of this sort. At most cemeteries, we see ideas, originally good, twisted to hopeless caricature by the mason who has pitched his tent hard by the gates: the sarcophagus, the urn, and the broken column have been "done to death;" and in one cemetery at least, there is a broken *cross*,—the climax of absurdity.

The demeanour of the mourners on the day of our visit was all that could be desired. Indeed, it has occurred that mourners of the pauper class, and some of a much higher grade, respectively have presented appearances and manners which would have justified exchange of places. Still we are compelled to think that cases are not unfrequent, when the solemnity of the occasion is not duly regarded. We make no attempt to understand the peculiar custom of the Irish, or to discover what may have been the exact nature of practices spoken of as obtaining even amongst the early Christians. We can regard it only as a foul stain upon the character of a large section of the people, that a funeral is made an occasion for some sort of excess in dram-drinking. Perchance, the evil may have orginated in the idea that spirituous liquor was required by the bearers of the corpse,—who are not always free from danger. That, however, would not describe or explain the whole case, as it is presented to us from circumstances which come to our knowledge. Indulgence in drink clings to the English character, as its bane and degradation,—we fear, in *fact*, as much it undoubtedly does in the eyes of foreigners. At the funerals by the Necropolis Company, we are told that not unusually, mourners have carried drink with them, of which, on the return journey, they had partaken to such an extent, that they have been found dancing about the carriage, by the ticket-collector. On one morning, at the Westminster-road station, two "mourners" arrived so *drunk*, that the superintendent could not allow them to proceed by the train. We admit that these incidents may be exceptional, and we repeat, that on the day of our visit, though it was the principal day for pauper funerals, not an unseemly act or gesture was to be observed; but even as exceptions, the facts we speak of, and are assured of, are grievous and melancholy, and call for the utmost attention from all who concern themselves with the welfare of the working classes. Feeling thus strongly, we were indeed sorry to see "a pint of rum" and other liquors set down in the list at the refreshment-room at Woking. Restrictions may be hard upon those who do not require them: but some men are infants where drink is concerned, and must be protected against themselves, till (if ever) they arrive at years of discretion: and in this case, we fear, some must suffer, if need be, for the faults of others. We hope that the principle of the arrangements to secure privacy, is so fully observed, that such incidents as we refer to could hardly be witnessed by mourners of other parties, whether belonging to the first or the intermediate classes.—Several persons, of some position in society, have already provided themselves with graves at the cemetery; and there seems to us every argument why others should prefer the same locality,—especially, as it is fairly shown, since the old suburban cemeteries are likely to be closed at no very distant time. Amongst all

* It is due to Mr. S. Smirke, their architect, to say that both the chapels and the stations were *required* by the directors to be erected in as *temporary* and *inexpensive* a manner as could be devised; and that he literally fulfilled their wish is evident from the smallness of the expense incurred for these. Their intention is, we believe, to build something more suitable and handsome, as well as to greatly increase the amount of accommodation, whenever the concern may be productive enough to justify their so doing.

classes, it is found that there is a growing disposition to dispense with much of the useless expenditure on funerals. The company itself will act as undertakers, and certainly are practically carrying out what had been long felt, that funerals could be conducted at half, or a third of the usual rates. Their charge for a first-class funeral, with grave in perpetuity in the consecrated ground, and head and foot stone; with the service, and conveyance for four mourners, is 21*l.* 14s. 2d. They put forth the charges as considerably below what were contemplated by the Board of Health. If they carry out the object of reduction in expenditure on funerals, they may effect as much good in that way as in a sanitary point of view, and perhaps more than that. A good idea has been lately entertained,—that of forming burial insurance clubs; the interments to take place at Woking. But, so many objectionable results have followed on the establishment of similar societies,—sometimes from the entire want of all calculations—sometimes from defalcation by the treasurer, and sometimes in a manner far worse—that difficulty has, we believe, been felt in working the idea. Mr. P. H. Holland, one of the medical inspectors to the Home Office, however, suggests that the difficulty might be got over by the company, were they to stipulate on not making any *money* payment, but that they should perform the funeral merely,—also that there should be no liability from the company in any case where a death occurred within six months, or some similar period, after the commencement of a subscription.

From a report which has just been issued, we learn a few useful particulars of cost. Land, compensation and interest, cost 59,648*l.* 17s. 10d.; and the recent purchases, under the Act of 1855, cost, in addition, 2,452*l.* 2s. 4d. The Woking Branch Line, cost 1,419*l.* 17s. 6d.

The cost of the cemetery itself, so far as laid out, is comprised under the following heads:—

Woking Station ...	£10,627	16	8
Planting and road-making	3,048	14	10
Draining...	8,802	19	10
Fencing	2,958	14	8
Whence it would appear that the cost of the whole works was	£25,438	6	0

The cost of the London station is set down as 23,293*l.* 19s. 8d. Besides these items, however, expenses were incurred for professional advice and superintendence; and the geological survey, by Mr. Prestwich, is set down at 52*l.* 10s. Capt. Moorsom; Sir Wm. Cubitt; Mr. Abraham; Mr. Sydney Smirke, on the Woking buildings; and Mr. Tite, on the London station, were at different times employed. Besides the refreshment-rooms and churches at Woking, there are stables and cottages, and a house for the clergyman, all which, we are told, are included in the items above.

The idea of providing a joint cemetery for several parishes, has been several times mooted. It was long since suggested in our own pages; and the disadvantage of arrangements left in the hands of numerous small parochial boards, was clearly shown by Mr. Chadwick. Both the extramural system, and the union of parishes, formed part of the proposal by Sir Christopher Wren—when he prepared that plan for the rebuilding of the City, which, if carried out, would have preserved London from evils felt to the present hour. The same great architect preceded us in the recommendation that the "dimensions" of monuments "should be regulated by an architect, and not left to the fancy of every mason;" and also thought of a form of hearse, with "two wheels and one horse," which appears to resemble what is used by the Necropolis Company. Extramural sepulture was, however, the ancient custom; and the words of one of the twelve tables, "*Hominem mortuum in urbe ne sepelito neve urito*," are well known. It cannot be too generally understood, that neither deep burial, nor the use of leaden coffins, will do more than retard the ultimate decomposition,—which cannot go on without poisonous exhalation; but which, proper choice of site and soil, and proper manner of burial; and provision for vegetation may reduce to the minimum of result. Lead coffins not only do not—as we think—from the first (and the experiments of Dr. Waller Lewis not forgotten), secure the advantages which appear to be expected under the present Home Office regulations; but the speedy decay of the outer casing, and consequent sinking and breaking of the lead, are events which are too familiar in the practice of architects, to need our producing them as evidence. It is, perhaps, the idea that injurious exhalations can never be wholly prevented, that has led sometimes to the proposal to revive the practice of cremation. Not long since some notice of a society, formed with such an object, appeared in the *Builder*; and a letter from a correspondent, signing himself "W. B." has been some time before us, in which the question is argued with considerable ability. We doubt, however, the possibility of a change—where the sensibilities of relatives, and feelings which it is desirable to foster, and which are not mere prejudices, are so deeply concerned. We believe that the Woking Cemetery, that of the City of London, and perhaps that which is proposed on the Great Northern Railway—with some further attention to the subject by the Government—may be made the means of completing the change from the various sanitary and moral evils which have been connected with the burial of the dead.

All must hope that when that mortal frame which now concentrates all the power of mechanics, the subtilty of chemistry, and the wonder and beauty of nature and art, shall resolve itself into new forms,—parted from the mysterious agency of *life*,—the indestructible elements from their grave, may convey no poison to the living. Surely, if a man strives to *live* not wholly in vain, he should provide against the injury which his body may occasion to his survivors,—so that, like the physician of Paris, "*vir pius, et probus*," he might be made to say on his tombstone, that he had wished to be buried under the free air,—

> "Ne mortuus cuiquam noceret,
> Qui vivus omnibus profuerat."

or, like one buried at Louvain, that,—

> "Partem sui materialem
> Hic in cœmeterio condi voluit,
> Ne templum dehonestaret,
> Aut nocivis halitibus inficeret."

Those who have the like sense of duty, may find some quiet resting-place in the dry sand of a Woking grave.

THE TREATMENT OF MODERN STAINED GLASS.

THERE are some passages in the paper by Mr. Winston on Stained Glass* which ought not, I think, to be allowed to go unquestioned. I think so, because, owing to Mr. Winston's very laborious and valuable inquiries into the history and manufacture of stained glass, his opinions on other points,—*ex. gr.* on matters of taste,—may possibly be received with more deference than they are entitled to. It is no new thing to find a zealous antiquary unable to grasp the true principles which govern all art: it is, indeed, so common, that it would be a real matter of surprise were Mr. Winston to afford an exception to the rule. I take it that the application of all the faculties to one department of antiquities has a natural tendency to blunt the power of regarding each art as forming a portion only of the whole effect which it is the business of the perfect artist to strive after. It makes men rather regard the elaboration of one detail than the perfect harmony of all the parts, and tends therefore to an unsatisfactory result. This is especially true of stained glass, which, so far as it forms an enrichment of architecture, ought to be treated specially in reference to its fitness for its purpose, and in regard to the general effect of the buildings in which it is introduced, as well as with regard to its own perfection as a work of art. This is what, beyond all doubt, the best of the old artists did with great success. I think, therefore, that I, and others who agree with me, are not the "foolish zealots" Mr. Winston seems to think us, when we see in this, as well as in the nature of the material, some restriction in the style of design applicable to modern works in glass.

About four years since I advocated what I still believe to be true views on this subject in the "Ecclesiologist," and since then, in a note to the second volume of the "Stones of Venice," Mr. Ruskin has given the result of his consideration of the subject. The views we have advocated will find, I am afraid, no favour with Mr. Winston; but I shall ask you, nevertheless, to allow me to quote Mr. Ruskin's words, as containing the best possible corrective to the views which Mr. Winston has propounded. He writes as follows: "Next in the case of windows, the points we have to insist upon are, the transparency of the glass, and its susceptibility of the most brilliant colours, and therefore the attempt to turn painted windows into pretty pictures is one of the most gross and ridiculous barbarisms of this pre-eminently barbarous century. It originated, I suppose, with the Germans, who seem for the present distinguished among European nations by the loss of the sense of colour; but it appears of late to have considerable chance of establishing itself in England: and it is a two-edged error, striking in two directions; first, at the healthy appreciation of painting, and then at the healthy appreciation of glass. Colour, ground with oil, and laid on a solid opaque ground, furnishes to the human hand the most exquisite means of expression which the human sight and invention can find or require. By its two opposite qualities, each naturally and easily attainable, of transparency in shadow and opacity in light, it complies with the conditions of nature; and by its perfect governableness it permits the utmost possible fulness and subtlety in the harmonies of colour, as well as the utmost perfection in the drawing. Glass, considered as a material for a picture, is exactly as bad as oil paint is good. It sets out by reversing the conditions of nature, by making the lights transparent and the shadows opaque; and the ungovernableness of its colour (changing in the furnace), and its violence (being always in a high key, because produced by actual light), render it so disadvantageous in every way, that the result of working in it for pictorial effect would infallibly be the destruction of all the appreciation of the noble qualities of pictorial colour. In the second place, this modern barbarism destroys the true appreciation of the qualities of glass. It denies, and endeavours as far as possible to conceal, the transparency, which is not only its great virtue in a merely utilitarian point of view, but its great spiritual character," and "the true perfection of a painted window is to be serene, intense, brilliant, like flaming jewellery; full of easily legible and quaint subjects, and exquisitely subtle, yet simple, in its harmonies. In a word, this perfection has been consummated in the designs, never to be surpassed, if ever again to be approached by human art, of the French windows of the twelfth and thirteenth centuries."

I have never seen these arguments met; and, as I am sure that they require no support of mine to commend them to the sympathy of your readers, I shall leave them to produce their proper effect.

Mr. Winston's main dogma, that receding backgrounds, and therefore "pretty pictures," are admissible in glass, being sufficiently controverted, I must beg you to allow me to go on to refute his other proposition, that, because he and many persons "are unable to perceive the ill effect of a subject cut through by a mullion," therefore there is no objection to it. Just consider for an instant what this would involve us in. First he would have us work up

* See pp. 71, 97, *ante*.

our glass into imitations of pictures, and then, disregarding the solid obstruction presented by the mullions, carry these "pretty pictures" all across our windows. Pray, if Mr. Winston had to introduce a painted tryptich into a church, may I ask whether he would beg Hunt or Dyce to paint it, and then cut up their painting with lines of tracery carved in oak? Would they be satisfied that "the eye passes across the mullion without being sensible of any interruption of the design?" or would they not rather beseech their employer to let them paint between the mullions of his next tryptich, and not behind them also? And wherein lies the difference? For if, as Mr. Winston wishes, we are to treat our glass as we do our pictures, then why not treat our windows as we do our picture-frames, carefully taking out the mullions and tracery, to leave room for the desired development.

The truth is, that there is ample variety afforded us in the old style of glass painting, if we choose to work it out properly. I grant it is more difficult, and requires more training to attain success than it does in the "pretty picture" line; but this I do not think a disadvantage. And the reason which actuates "our mediævalists" in desiring to revive this early style rather than the work of the sixteenth century, is their conviction that it was carried out with far more regard to true principles, and with far more success; just as in the same days architecture was also so much nobler than afterwards.

What is now required seems to be, that we should consider whether Mr. Winston's dicta on a matter of taste, are to be followed implicitly or not; and though, as I have said, I am always ready to give him my most hearty acknowledgments for what he has done in some respects, I cannot feel that I am bound to do this. He seems to me, if I may say so without offence (and I am specially anxious not to introduce any acrimonious matter into this discussion), to be warped and prejudiced to some extent by a consciousness of his considerable knowledge of the *history* of the art, and to forget that this knowledge is not enough without some of that feeling for general effect upon which artists are bound to depend for success in their work.

There is one other statement which I notice with some regret, because I can hardly suppose it to be the result of more than a moment's reflection. Mr. Winston's belief in the invariable partial success of a modern classic school is singular. Wherein consists it? In false construction, flat roofs, paint, whitewash, or cracked window-heads? Nor less singular is his assertion of the invariable absolute absence of any good in the work of the Mediæval school. If they have done no more, they deserve surely some encouragement for their revival of true principles in ornamentation and construction, for their earnest fighting against the sham architecture of the last few years, for their constant assertion of the paramount necessity of truthfulness in all that we design, and for their appreciation of the advantages of colour on our walls and our floors, as well as in our windows.

It comes, after all, to be a question of individual taste; and then I say that, if we are to trust in men, I, and I suppose most men, would a thousandfold rather follow Mr. Ruskin than Mr. Winston; and that, at any rate, before we give up the attempt to rival the glories of the noblest school of artists on glass the world has yet seen, we must have some visible proofs, of the strongest kind, of the success of Mr. Winston's efforts in the path he has chalked out for himself.

I fear he will give me the credit for being a too determined mediævalist; but I am so on no light grounds, and not without much consideration.

GEORGE EDWARD STREET.

I would have requested your leave to notice Mr. Winston's late lecture at the Architectural Exhibition, as reported in your paper of the 9th ult. but for the words, "to be continued," showing it was not complete. The *Builder* of Saturday supplies the conclusion, which, however, differs so little from the first part, that I almost regret having waited for its appearance. Mr. Winston's argument has a 'wormy property which does not suffer from being divided, but has as much appearance of head and tail, dissevered as entire, and seems to suffer as little. The lecture, indeed, is very little more than a jumble of misstatements and "passages that lead to nothing." The title, "Application of Painted Glass to Architecture," is a mere delusion, for no rule of application is given, nor is any relative utility or benefit pointed out; and when we have accompanied the lecturer in and out, up and down, over and over, through all his convolutions, we find ourselves at last exactly at our original standing-point, and everything as it was before.

Mr. Winston sets out by noticing the differences of opinion which prevail on the subject of glass-painting, yet believes all are agreed as to the badness of modern windows. He retains niches in his Temple of Fame for less (how many less we cannot say) than half a dozen glass-painters; but, alas! does not leave this dubious half-dozen so much as one production apiece to justify their fame; for in spite of the manifest superiority of foreign glass-painting, as proved in the Hyde-park Exhibition, in spite of "the enormous sums expended on painted windows within the last twenty years," Mr. Winston believes that we can scarcely boast of *one* window, and questions really if more than *two* could be named, which could bear comparison with the modern windows of Munich or Cologne, inferior as Mr. Winston thinks these are, and little to be followed. But let us admit the low standard of acquirement usually to be found among "practitioners" of this art: let us leave the odd collocation of mediævalists, glaziers, and architects' clerks, to settle their own accounts with Mr. Winston; and what are we to get from this argument? On what grounds are we called upon to accept this gentleman as our self-elected teacher, or to submit to the sweeping and somewhat spiteful censure, which is not balanced by a morsel of instruction upon the other side? Is the west window of Norwich Cathedral (one of the most expensive works on which "enormous sums have been expended") one of the only two specimens of English glass-painting, which may be compared with the defective glass of Munich and Cologne? And is the window in the ante-chapel of the Temple the *one par excellence?* Either it must be so, or Mr. Winston is in no position to judge others, being himself included in his own verdict of condemnation. The Norwich west window, so far as my judgment goes, is a coarse and ambitious failure. I examined it by evening sunshine and morning quiet, and could come to no other conclusion; and that this opinion was widely shared, will be in the memory of many: so much so, indeed, that its removal was hinted at within a year of its erection, even among those active in getting it up. For the specimen in the Temple, I can only say, that turning from a careful inspection of it to the windows in the east end of the same church, I felt that the person most benefited by its erection was our veteran Willement, whose windows looked by its side as much in advance of it, as they did to my eyes of most modern glass at the time they were put up. I am sorry to differ from "the judgment of those best qualified to form an opinion," yet these are my impressions. Is it upon these two windows that Mr. Winston stakes the reputation of the art?

The history of painted and coloured glass which follows may be very well as a proof of the erudition which nobody impugned, otherwise it will not much enlighten any reader; and we are scarcely clear of the *stiff* patterns, mosaics, and colours (and surely this word means more to the lecturer than it does to ordinary mortals), when we fall upon a startling proposition which would speedily bring ease to Mr. Winston's troubled spirit, and set at rest our smaller tribulations, were it made into fact and reality. "In the application of painted glass to architecture," says Mr. Winston, "much of the difficulty with which the subject is beset would vanish if all the buildings intended to be so decorated were of one character." How true! how wise! But, unfortunately, there are such a myriad of ifs, which could change this fighting-world into a paradise. If all men were of one mind, for example, there would be no controversies about painted windows, so Mr. Winston has to come down from this simple revelation to the under platform of the "*as it is*," which compels us to *select* glass paintings "fit for buildings possessing every variety of character." And here is again brought forward the oft-repeated accusation, that the lovers and promoters of Gothic architecture demand, as a *sine qui non*, at least as much ill-drawing in painted glass as prevailed at the birth and growth of its various styles—an accusation both hurtful and untrue—denied over and over again by those accused who were best able to make the denial. Reiteration of an old charge is, however, a safe mode of argument, and a fashionable, not disdained by greater critics than Mr. Winston.

The second part of this lecture, as given in the *Builder*, begins with much laudation of the glass manufactured by Messrs. Powell and Sons. It may be as well to dismiss this, by simply stating the fact, that the successes achieved by Mr. Winston's scientific friends, in the revived manufacture, have received, at various times, and in various quarters, their full meed of honour; and in the present very considerable demand for their glass, I trust the manufacturers are receiving their fair meed of profit; but it must also be said that there are colours and qualities of glass necessary to the glass-painter, which Messrs. Powell cannot, or at least do not, make. * * * *

Now, Mr. Winston professes to give us an account of the progress of glass-painting, from the twelfth to the sixteenth century, which must be satisfactory, being managed after this manner. "We need not trouble ourselves with any intermediate types, but confine our attention to the remains of painted glass belonging to the twelfth, thirteenth, and sixteenth centuries," — that is, passing disdainfully over the fourteenth century, the manhood and strength of the art, of which more anon. This is a pleasant way enough of dealing with difficulties, but it is by no means an instructive one. The Temple Church, Mr. Winston's own experiment, and the Greek excellence which he recommends, come in between these three favoured centuries, and the fourteenth, to which we reach at last. Mr. Winston admits the powerful colour of the time, but questions its propriety as confusing the mullions and tracery, though the all but universal use of the border and clear margin during this period ought to relieve him from his concern on this point; while his objection to canopies, from their want of positive projection, will be shared by few who truly appreciate glass painting, as the art it really was, and is, or should be. As for the sea-green white pattern windows, they are a delusion. I have numbers of specimens of decorated glass, and none of the whites are sea-green: some of them are as white and satiny as the glass of the end of the fifteenth century. Occasionally they appear green from excessive thickness, but such a thing is by no means a distinctive characteristic of the period.

Again, Mr. Winston says—"The Gothic architecture of the fifteenth and sixteenth centuries is so much alike, that it is not surprising to find the sixteenth century glass paintings that have happened to be placed in buildings of the fifteenth century agree so completely with the architecture. Indeed, the glass-painting of both periods are alike in principle; the development of this principle in the sixteenth century constituting the chief difference between them." How strange is this manner of stating a clear and evident natural process. Why not have said that the principles of the fifteenth century continued to prevail for a short time after the commencement of the sixteenth, till it was submerged by the paint and barbarism of the new method? As for claiming on behalf of the Cinque Cento the beautiful pearly lustre of perpendicular glass, the works themselves, even the S. Gudule's windows, on which Mr. Winston hangs his shield, would sullenly disown it.

In discussing the works of the sixteenth century, it is observable that Mr. Winston expands a little on his former prelections. Formerly, if I am not deceived, he professed to hold by the first *quarter* of the century; now it is the first *half*: doubtless St. Gudule's compels the extension.

We come at last to a part which I confess I had waited for with some little expectation, viz. the suggestions for "glass-paintings most likely to harmonize with buildings in the Classic styles." The first portion of this is dismissed as swiftly as pleasantly:—

"With regard to Palladian buildings, we have the Cinque Cento style, ready-made to our hands, the various designs of which, more or less rich in colour, light or deep in tint, flat or receding in their design, would supply ample hints for meeting any exigency of local position or character of the surrounding architecture."

Glass-painters of the nineteenth century! behold yourselves here fully equipped for an assault on all Palladian churches or palaces. It is wonderful what a stroke of the pen can do. When he carries us forward to Greek, the lecturer, to our great disappointment, declines offering an opinion. At most, with an "If I *must*," he gives us a something nothing. And so, with a few remarks settling nothing, upon receding pictures and pictures intersected with mullions, the lecture is finished. We have all been brought to the bar—judged, condemned, and made an end of. If we submit to so summary an overthrowal, we should have, at least, a reward for our humility: and we again ask, what have we gained?

FRAS. W. OLIPHANT.

WAGES OF MASONS AND PLASTERERS. — The *Forres Gazette* states that the masons of Elgin have intimated to their employers that they must have their wages raised to 21s. a week; and the plasterers have made a demand for 20s. if employed in town, and 21s. if sent to the country. Both classes of workmen have at present only 18s. per week.

CLASSIC AND MEDIÆVAL.

It is not my intention to embark in a long correspondence upon the relative merits of classic and mediæval architecture, as applicable to churches, although it might not be difficult to add other reasons to those so well advanced by my friend, Mr. G. G. Scott, in favour of the latter style, at least for ecclesiastical purposes. I would, however, ask all intelligent people to judge by practical results, and not be led away by ingenious and plausible arguments, many of them tending rather to puzzle and confuse than elucidate the subject.

It is certainly amusing to hear the cool way in which many now hold forth upon the duty of adopting a style suited to the requirements of the day, instead of employing known systems of architecture, who never in their own practice have shown the least attempt at progress.

For the want, then, of any other style at present which may satisfy the cravings of theorists, we must fall back upon classic or mediæval architecture; and I ask those not blinded by prejudice, and capable of common observation, whether any comparison can be instituted between the modern churches of classic design, and those built in the mediæval styles? Whether there is not a tone and character imported through the latter style, which it is impossible to obtain by the means of classic composition? I feel satisfied that all true artists, whatever may be their predilections, will admit this: indeed, few persons deny it; and hence, by almost universal consent, mediæval architecture has been so much employed for church purposes. But then exceptions are taken to the forms and arrangement of Gothic churches, as being unsuitable for our Reformed Anglican Ritual, and reference is made to those erected by Sir Christopher Wren, as types of excellence.

Now, no one can be a greater admirer of Wren's works than I am, for they exhibit great genius, and his aim in the designs of his churches seems to be a desire to assimilate classic forms to mediæval composition. The limited spaces allowed to him for the City churches would not admit of chancel arrangements; but in his towers and spires there is the most evident aim at mediæval treatment. It is impossible to doubt Wren's appreciation of Gothic architecture.

If the essential requirements for a church are simply that everybody shall hear, see, and be seen, there must be an abandonment of all internal composition, and we need only copy Fra. Giovanni's great hall at Padua, or other large assembly-rooms, to obtain all that is required.

I contend that the subdivision of our churches by pillars and arches is not objectionable, and that such structural arrangements assist the voice, and prevent the reverberation and blending of sound, incident to vast, unbroken spaces. As to some people not seeing the preacher, this ought not to be a matter of any moment, provided they can hear properly.

In regard to galleries, I could hardly have supposed that anybody in these days would have seriously recognised such erections as fit to be perpetuated in a church; and I cannot but regret that so well-informed and able a man as Mr. Petit should have given the sanction of his name to the use of these deformities by even suggesting "that the Italian style is perhaps better adapted for a church than Gothic, where it is necessary to enclose a wide area under a single roof, or to have two tiers of windows on account of galleries," &c. But as that gentleman admits that his views have changed since the publication of his first work on "Church Architecture," it is to be hoped that his opinion upon this point may lately have undergone some modification.

Mr. Scott has so completely refuted the charge of servile copyism, that I shall not say a word on that head.

It is a somewhat singular coincidence, that at the very time when we are warned against the applicability of mediæval architecture for Protestant churches, the Nonconformists suddenly find its entire fitness for their chapels; and many of their edifices lately erected possess the exact features of churches with arcades, clerestories, aisles, transepts, towers, and spires; and yet these buildings are avowedly auditoriums, and built expressly to secure the desiderata in which our Gothic churches are said by some to be deficient; so that it is difficult to believe the columnar arrangement internally can present any serious impediment to sight or sound. I agree with Mr. Scott in regretting, that when Gothic architecture is beginning to be rightly understood, both in principle and detail, we are to hear its study and practice spoken of in disparagement.

I believe that if the practice of mediæval architecture be persevered in, gradual modifications will follow, and new forms by degrees be evolved. Hitherto attention has been almost exclusively given to English and French Gothic, but the more recent study of Venetian and Lombardic Gothic will at least teach us the true value of colour, and induce us to avail ourselves more freely of local products by using coloured marble and stone, which the facilities of railway communication may place within our reach, even if it does not guide us to new structural combinations.

I would only again say, let any unbiassed person inspect the churches erected in the Classic styles within the last few years, and those built recently in the Gothic style, and I have no doubt of his opinion as to the most suitable architecture for churches. This, after all, is the true test. Nobody will deny that fitness constitutes great excellence in architecture; but those who impugn Gothic as inapplicable to modern wants are singularly inconsistent in praising many Classic buildings recently erected; for though I admit their superiority over buildings of the Georgian era, it surely cannot be a correct expression of design to make large warerooms and storehouses assume the character of Florentine palaces; and yet this seems to be the aim in present street architecture: a hint may well be taken from Mr. Scott's remarks upon this point.

It appears to me that, instead of launching out in derogation of the study of mediæval art, much more good would be effected by urging upon all students the necessity of making themselves masters of the true principles and details of any style in which they may be called upon to practice, rather than by exciting their prejudices against systems which have produced some of the finest buildings in the world.

Benj. Ferrey.

LONDON AND MIDDLESEX ARCHÆOLOGICAL SOCIETY.

At the meeting of this society on the 26th ult. already mentioned, the chairman, Mr. Alexander Beresford Hope, introduced the business of the evening with some very appropriate remarks on the labours of early topographers and London antiquaries.

The Rev. T. Hugo then read the first paper, the subject of which was the Primeval History of London and Middlesex. The state of the metropolis and the adjacent county of Middlesex were, prior to, and at the time of, the Roman invasion, very little known; and although the subject was confessedly obscure, it was not the less interesting, and he hoped to be able to throw a little more light upon it. It appeared that the southern coasts from Kent to Cornwall were those most generally resorted to by foreign traders; and Herodotus spoke of Britain as a place from whence tin was obtained, and the inhabitants were represented as being in a wild state, but to be simple in their manners, not addicting themselves to any luxuries, and being free from vices. The country was stated to be fertile. Strabo also gave a similar description of the inhabitants of Britain, and said that they had large herds of cattle and had plenty of milk, but were unable, notwithstanding, to make cheese. The paper referred to the invasion of Julius Cæsar, but expressed an opinion that, although it appeared very probable that the Roman legions had been encamped near the metropolis, London as a city was at this time utterly unknown; and if it existed at all, it must have been a very insignificant place. Cassivelornus, who was then king, made a most desperate resistance to the attacks of the various Roman generals who succeeded Cæsar, and when he was impelled to do so, he retreated with his armies to a wood, where he entrenched himself, and, from the appearances that presented themselves on Wimbledon-common, the writer of the paper expressed an opinion that this was very probably the spot to which he retreated. At length the island was, after a desperate struggle, made tributary to the Roman power; but Boadicea, the Queen of the British tribes, revolted, and resolved to resist the invaders. Suetonius, a Roman general, was sent to repress the rebellion, and it was at this period that the name of London was first mentioned, and there could be no doubt that it was a place of some importance.

Mr. Henry Mogford read some notes on the "Later History of London and Westminster." The two most important buildings in connection with this subject, he said, were Westminster Hall and Westminster Abbey, and he gave some interesting details in connection with the ancient and interesting buildings. The last of these, it must be a source of gratification to all to know, was still perfect, but it was much to be regretted that various alterations had been made in the beautiful hall, without even an opportunity being afforded of taking a copy, and of thus handing it down to posterity in its original shape. Reference was made to various interesting relics that had been removed during the building of the new Houses of Parliament, and in particular to two large circular pillars, bearing the arms of the Earl of Stafford, and of the date of 1444, which had formerly stood at the entrance of the old Houses of Parliament, and which were a beautiful specimen of ancient architecture; and the paper expressed a hope that Sir C. Barry would have them replaced in some portion of the new building, as from their recent removal they were no doubt in existence. A proposition had, it appeared, been made to raise the ancient roof of the hall, and thus entirely destroy the original building; but Mr. Mogford said he hoped that all the lovers of mediæval architecture would combine to resist the commission of such an act, and he said he believed that, under the present arrangement in which these buildings were placed, such a proceeding would not be sanctioned.

The Rev. Charles Boutell contributed a paper on "The Royal and other Early Monuments of Westminster Abbey." Mr. Boutell said he considered it would ill become the London and Middlesex Archæological Society to hold their first meeting within the city of Westminster without some special notice being taken of these most interesting and most precious relics. He would accordingly invite to them the thoughtful attention of the society, and with that view would briefly enumerate and describe the more remarkable of these national memorials. After having given such a general description of the Westminster monuments, Mr. Boutell adverted to the suggestions which had been made for the *restoration* of those examples which have suffered the most from the effects of time and of wanton injury: he pointed out the difference between *restoration*, as the term is now understood, and *preservation*; and, while he earnestly deprecated such treatment as could only *restore* these memorials by reconstructing them, he with no less earnestness urged the necessity for the adoption of measures which would save them from actually crumbling away. The architect of the abbey, Mr. G. G. Scott, had already in contemplation a plan of strictly conservative preservation for the royal and early monuments. Mr. Boutell trusted that Mr. Scott would be encouraged to carry out this plan with full effect, and he concluded with suggesting the importance of having drawings and copies of all monumental works and inscriptions in London and Middlesex taken without delay, and carefully preserved as one of the distinctive features in the practical working of the society.

Mr. G. G. Scott read the next paper, the subject of which was "The Chapter-house at Westminster." He said it was well known that this building was the receptacle for the most valuable and ancient records and documents connected with the history of the country, but he regretted to say that it was in a most dilapidated and deplorable condition. The Chapter-house, as they were aware, was the old ruinous half-mouldering building near Poet's Corner, and any one who saw it now would hardly think it possible that it contained any object of interest. In point of fact, however, it was a building of most extraordinary beauty. It was erected in the reign of Henry III. about the year 1250, and at the same period as the Abbey, and it was spoken of at that time as the "incomparable Chapter-house of Westminster," and was used as a chapter-house by the monks of the Abbey. The building was then used for the purposes of the House of Commons, until the time of Edward VI. when that monarch gave up to them St. Stephen's Chapel, and from this time it was used as a receptacle for the records of the kingdom, until 1714, when it was "repaired," as it was called. The Surveyor-General of that time refused to sanction the repairs, and they were placed in other hands, and the result was, that the splendid building was entirely destroyed. The roof was taken off: the vaulting was all destroyed: the beautiful original windows were all blocked up, and round-headed ones placed in their room: the original entrance was blocked up and a miserable door placed in its stead, and the place was

in fact mutilated in every possible manner. It was a work of extreme difficulty, therefore, to be enabled to get at the original building, and it was only after great exertions and labour that he had been enabled to make drawings. Among the discoveries that were made were, one of a whole-length figure, apparently of the Virgin; and also a picture of a female saint, crowned, and having in her hand a gridiron, and at her feet a monk kneeling. Upon one of the doors there were found portions of skins nailed, and, according to an old manuscript that was found in the Chapter-house, these skins were stated to be those of Danes. They had been submitted to the examination of an eminent member of the College of Surgeons, and he had pronounced an opinion that they were undoubtedly those of human beings. In another part of the building he found a long passage which appeared to spring under his feet; and, upon attentive examination, it was found that the floor was nothing but a mass of parchment, consisting of writs, seals, and records which had been wedged down into a solid mass. The whole of these had, it appeared, been removed to the library and were now in proper custody.

Mr. Sydney Smirke afterwards introduced to the company a number of ancient relics, which, he said, were mostly collected by himself or under his own eyes. From Westminster Hall he exhibited the leather sheath of a knife, stamped with fleur-de-lis and with lions passant, and found in a crevice of the masonry of the old walls, together with a quantity of bones, &c. remnants of the royal feasts held in the hall, and which had probably, together with the sheath, been dragged into the holes and crevices by rats and mice. From the Temple Church he exhibited a piece of the sackcloth which enveloped the body of one of the Crusaders, which, he said, resembled some cloth found enclosing two bodies met with when excavating the Chapel Royal, St. James's. Also some iron and wooden wedges used by the masons in levelling the stones of the main pillars of the Round Church. The thickness of the wedges proved the coarseness of the joints of that masonry—a peculiarity often observable in Norman work. Mr. Smirke also exhibited specimens of carved work from this church, from Westminster Hall, and St. Stephen's Chapel, making various remarks thereon, and suggesting that it should be one of the earliest duties of this new local society to endeavour to obtain a safe, permanent, and honourable resting-place for the "old materials" of the extinct monuments of London. He further exhibited a specimen of some fibrous composition used for ornamental ceilings at Wolsey's House at Ipswich, and at Hampton Court, remarking that plaster was not common for decorative purposes early in the sixteenth century in Italy, and still less so in England, of which further proof existed in the leaden ornaments used in the ceiling of the Chapel Royal, St. James's, which he conceived to be a specimen of Holbein's architecture. He further exhibited a plug or dowel of lead used in the vaulting of York Cathedral, and a wrought-iron cramp from the stall of the Chapter-house there, which cramp had, by exfoliation, ruined the masonry. Mr. Smirke, in conclusion, urged antiquaries generally, but especially his professional brethren, not to allow the consideration of the larger features of architecture to cause them to overlook these minor contrivances of our forefathers, which, if not always fraught with instruction, would never fail to be found interesting.

"AQUA PURA."

In the Notices to Correspondents, in the number for Feb. 9th, appears a request, under the above *nom de plume*, "to know how best and most economically to arrange for the filtering of rain-water while in the cistern, * * so as to be able at option to draw off the water, either filtered or unfiltered.

Leaving it to "A. P." to judge as to the eligibility for his purpose of the following expedient, which I have contrived, as regards its economy and otherwise, I beg to place it at his service, and that of the readers of the *Builder* generally:—

Holding, as I do, rain-water in high estimation, and the opinion that, if properly managed, the rain-fall on the roofs of a country house will come little short of the supply wanted for a family,—I am in the habit of providing a cistern capable of containing at least say 100 cubic feet of water, or (100 × 6·25) 625 gallons. In one corner of it I part off, with a movable partition set on the splay, a portion measuring, say 2 feet each way from the corner: this triangular space is the pure water division of the cistern, and the partition is the filter, and is constructed thus:—Form, of a durable wood, three frames of equal size, viz.—that of the intended partition, and of stuff about $1\frac{1}{2} \times \frac{5}{8}$ inch, so that the three are barely 2 inches thick; and to two of these affix closely-perforated zinc, of a stout gauge. Lay one frame flat, with the zinc uppermost, and upon it, two or three plies of blanket stuff: on the latter, lay the open frame, and the inside of that fill up, solid and flush, with coarsely-ground charcoal: then lay on two or three plies of the blanket, and finish with the remaining frame, turned with the zinc downwards: adjust the edges of the frame exactly, and screw the whole firmly together all round.

Supposing the cistern to be a lead-lined wooden one; before lining, affix stout groove-pieces, so as, when finished, to receive the partition freely: for this purpose, those on the sides have to be splayed at back to an angle of 45 deg. in order that the groove in them and the bottom piece may be in one plane. The outer angles of the groove-pieces may be chamfered or rounded: their height should a little exceed that of the overflow. Now line the cistern, carefully dressing the lead into and about the grooves, and lead into the main body of it all the influx pipes; but, from the pure-water division, all the services: slide the filtering partition into its grooves, and caulk carefully round the edges with tow, which is readily removed with a hooked instrument when the partition is to be withdrawn.

Such a filter is very easily cleansed: after brushing well the mud from the outer side, it will generally suffice to subject it to a good *douching* at the pump; but if that be thought insufficient, it will not be found very troublesome to undo, for the ablution of its separate parts. Where its cost has been hesitated at, I have had the cistern prepared for its reception, and itself left for subsequent consideration.

James Wylson.

PROVINCIAL NEWS.

Wisbech.—At a recent meeting of the Local Board of Health, the surveyor reported that he estimated the cost of executing the sewerage works at 6,767*l.* and the annual expense of repairs at 169*l.*; and that it would be best to contract for the execution of the works, and the keeping in repair for twelve months. He also reported as to the waterworks, which were estimated at 17,170*l.* including 1,000*l.* the estimated purchase of land and compensation: these works were also recommended to be put out to contract. It was resolved that the consent of the General Board of Health to the loan of 17,170*l.* be requested.

Dartford.—A transept of glass has just been erected in connection with the Bull Hotel, Dartford. The farmers and others attending Dartford had long suffered for the want of a convenient covered place. The increased accommodation has been obtained by roofing over with glass the inn yard, no longer thronged with coach and post horses, &c. This new market-place was lately opened. The building may also be used for public meetings, concerts, &c. the want of accommodation for which has been long felt in Dartford.

Cowes.—At a meeting of the Local Burial Board last week, Mr. G. Wheeler's tender for the building of two chapels, lodge, and dead-house, with the whole of the front walls and palisading of the new cemetery, was accepted for the sum of 1,150*l.* The following tenders were also given in:—

W. Wheeler	£1,665	0	0
J. Chinchin	1,630	0	0
E. Sherry, London	1,575	0	0
C. Sibbick	1,573	0	0
Grove, Brothers	1,285	10	0
T. Wheeler, Winchester	1,230	0	0

The Board wished the contract to be completed in six months, but the contractor wanted time.

Birmingham.—The foundation-stone of the Edgbaston new vestry hall, which is about to be erected in New Bridge-street, was to be laid on Monday last. The hall, for which plans have been prepared by Mr. Fiddian, will be the only public meeting-place in Edgbaston.

Stoke.—A requisition has been in course of signature to the Chief Bailiff of Stoke-upon-Trent, desiring him to call a public meeting, to express the public appreciation of the offer of Mr. Herbert Minton, to give 500*l.* towards the erection of baths and washhouses, and to consider the best means for securing the early realization of the project.

Evesham.—The new bridge is about to be opened for traffic, as the contractor wants the temporary wooden bridge elsewhere. The approaches, however, will not be completed for some time.

Gloucester.—The laying of the pipes for an additional supply of water from the brook at Witcomb has been completed. Mr. Bateman, of Manchester, the engineer of the Board of Health, has inspected the works. One of the fire-plugs at the Cross was opened, and it was found that the pressure of water was sufficient to throw a stream over the Tolsey.

Liverpool.—The undermentioned contracts for sewering have been accepted by the Local Board of Health:—Netherfield-road North, Mount-street, South-street, St. George's-street, McGregor-street and passages, Owens and Roberts, 623*l.* 7s. 1d.; Portland-place, Portland-square, Portland-buildings and passage, Owens and Roberts, 35*l.* 11s. 9d.; Anderson-street, Aughton-street, and passages, William Tomkinson, 163*l.* 9s.; Anne-street, Salisbury-street, and William-terrace, George Ravenscroft, 87*l.* 10s; Westbourne-street and Alma-street, Richard Smith, 461*l.* 7s.; Lord-street, Raglan-street, Speke-land-street, and a street north of it in West Derby, Isaac Dickson and Co. 271*l.* 10s.; Park-street, Mersey View-street, Vaughan-street, Tamworth-street, Napier-street, and passages, in Toxteth-park, Richard Smith, 708*l.* 14s. 6d.; Wood-street, Penrith-street, Melbourne-street, Carlton-street and passages, Isaac Dixon and Co. 215*l.* 15s.; Llewellyn-street and passages, Richard Smith, 5,241*l.* 6s.

Cheadle.—The *Gardeners' Chronicle* gives an account of some improvements at Abney Hall, near Stockport, the seat of Mr. James Watts, who has built here a mansion and formed gardens. The latter were designed and laid out in the first instance by Mr. Skirving, of Liverpool, but were afterwards greatly altered by Mr. Bigland, of Manchester. The conservatory forms, as it were, part of the south side of the mansion, and is so arranged that a view of the plants is obtained from a picture-gallery which adjoins it on the north side, and also from many parts of the ground-floor. When lighted up at nights it is thrown open to the drawing-room. It is, however, unfortunately ill adapted for plants, owing to want of proper ventilation. The south fronts, which rise one above the other after the manner of the Crystal Palace, are altogether some 20 feet in height, and are glazed with large squares of plate glass: the roofs are ridge and furrow, and are glazed with large panes of sheet glass.

Bradford.—Designs for the interior decoration of St. George's Hall here have been prepared by Mr. J. W. Ingram, the decorator of the Birmingham Townhall, and are under the consideration of the directors of the Hall Company. The ceiling in this design is divided into four compartments, each having its centre flower, gilded, upon a carmine centre, toned down into the neutral tint, from which radiates a circle divided into eight compartments, forming panels, with a gilded ground, on which are emblasoned arms, trophies, and arabesques composed of fruit, flowers, and ornament. The details of the ceiling will be in colours and gold. The cove or segment of a circle, which rises in a span from the cornice to the flat of the ceiling, is divided into a series of panels by a broad band of plaster modelling, consisting of flowers and fruit, tied together by ribbons. These are gilded with different tinted golds, upon a pale purple ground. The panels are a series of arabesques, trophies of flowers and fruit, and musical trophies, on a ground of cerulean blue. The beams of the building, which are ornamented with plaster, are decorated with gold and colours. The rest of the interior is in harmony with the ceiling. The walls will be a pale maize, with an inlaid ornament. The cornice will be in white dead enamel, but profusely gilded.

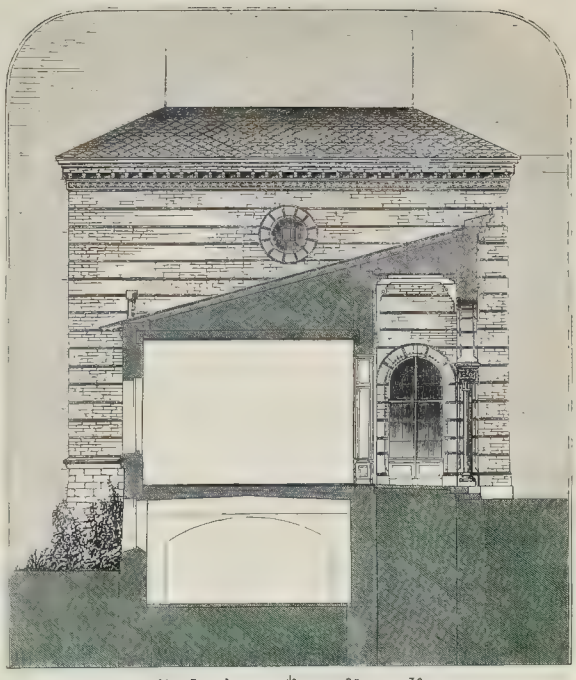
Leeds.—At a special meeting of the Townhall Committee of the Leeds Town-council, held for considering a new design for a tower

or the Townhall, by Mr. Brodrick, the ventilation of the building, and other matters, the committee, by a majority of eight to four, according to the local *Intelligencer*, have decided to recommend its adoption to the council. The cost is estimated at something like 5,500*l.* which is considerably less than the sum estimated for the design some time ago under discussion in the council. The committee also decided to recommend the council to grant 4,000*l.* for ventilating the building, and 1,500*l.* for fixtures; making a total of some 11,000*l.*——A meeting of the committee for rebuilding the National Schools in Kirkgate, has been held, and 900*l.* subscribed. The estimated cost is 4,000*l.*

Grantham.—At a recent meeting of the Town-council of Grantham, attention was called to the arrangements for the erection of a statue to the late Sir Isaac Newton; and it was stated that there was no definite answer from Government as to granting metal for the statue, although metal would be supplied; but at present Government had none to spare. If peace were established they would soon have metal. The cost of the statue would be 400*l.* or 500*l.*

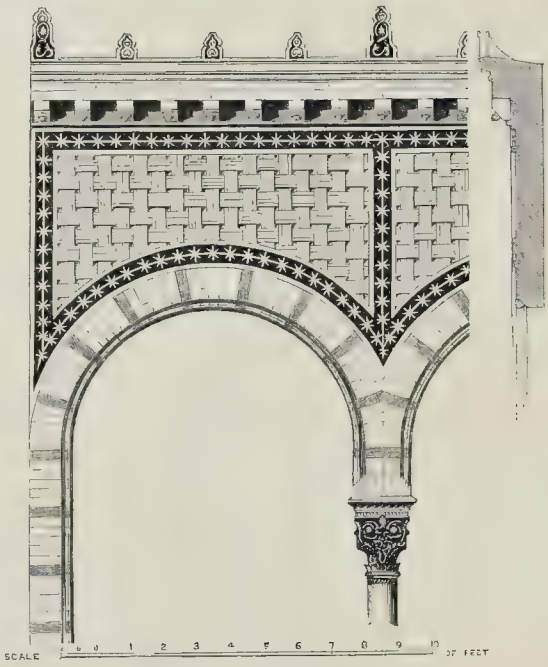
Crook, near Darlington.—Substantial schools have been erected at Crook, at the expense of the owners of Pease's West Collieries (Messrs. Richardson and Ross, architects), and were opened with considerable *éclat*. The schools are to accommodate about 250 children. The buildings comprise a school-room, 65 feet by 28 feet; boys' class-room, 16 feet by 13 feet; girls' class-room, 16 feet by 12 feet, with separate porches. A commodious residence for the master is attached to the school, comprising parlour, kitchen, scullery, and three bed-rooms; the whole being supplied with convenient water-closets and other outbuildings. The materials are rubble stone for walls, with Brusselton stone dressings; the roofs being slated. The school-room and class-rooms are heated with hot water, by Longbottom and Co. The whole cost of the buildings, with boundary walls and fittings in the school-room, will amount to about 1,300*l.*

Leighton Buzzard.—Tenders have been received for an ornamental shop-front for Mr. Sharman, of Leighton Buzzard (Mr. W. C. Reed, architect), ranging from 580*l.* (T. Piper and Son), to 512*l.* (W. Brass and Son). The tender from Bunnett and Co. for revolving shutters and iron columns was 145*l.*



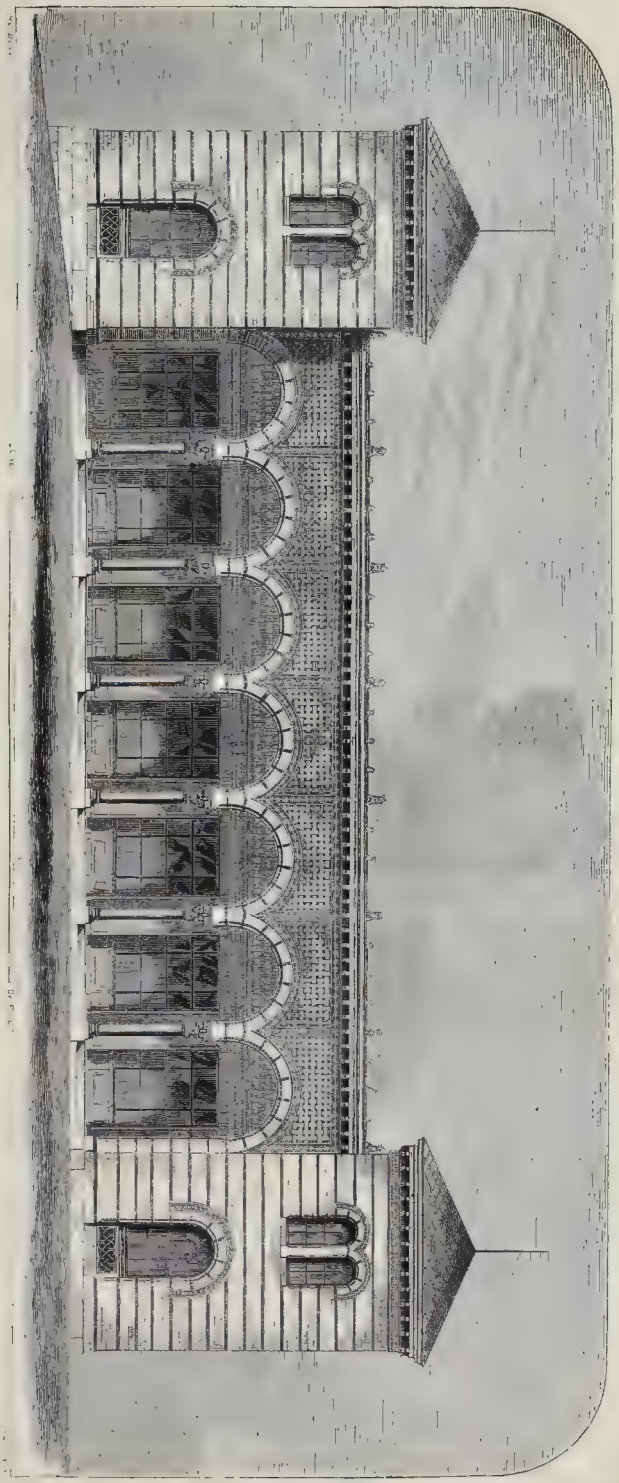
Dunfermline.—It having been satisfactorily proved, says a Scottish contemporary, that Dunfermline was a city in years long past, the Ordnance maps are to have it marked out as a city. Thirty years since and upwards, we happen to recollect, Dunfermline was very commonly known to be a city, and spoken of as such in ordinary talk.

Dublin.—In reply to a deputation from the Royal Dublin Society, who waited upon the Lord Lieutenant, at Dublin Castle, to request his Excellency to appoint a time for laying the first stone of the new Museum of the Society, the first week in March was named for the performance of the ceremony.



GALLERY OF SHOPS AT VOESLAU, AUSTRIA.

FOR some time past the architects of Germany, in designing their buildings, have striven for truthfulness, and they have sought to let the system of construction employed show itself, and to graft on to this, or rather obtain from it, elegance and beauty. The set of small shops, illustrated by the accompanying engravings, have been built at Vöslau, from the designs of Ludwig Förster, the editor of the well-known and very valuable work, the "Allgemeine Bauzeitung," wherein the view was published. M. Daly then gave it in his "Revue," and we have re-engraved it from that source. The object of the building is to afford accommodation during the bathing season, for the dealers in various articles produced on the spot, or of general utility. The arrangement is simple and honest, and the general effect good. The columns are of cut stone: the walls are of brick, varied in colour: the decorative fillings-in are of plaster of Paris; and the salient decorations are of stone, or of pottery.



GALLERY OF SHOPS AT VOESLAU, IN AUSTRIA.

Part of Arcade at Large.

GALLERY OF SHOPS AT VOESLAU, IN AUSTRIA.—M. LUDWIG FÖRSTER, ARCHITECT.

CHURCH-BUILDING NEWS.

Swansea.—The committee for the erection of St. Peter's chapel of ease to the mother church of St. Mary's, Swansea, met on Monday before last to receive tenders for the building of the chapel, when the lowest was declared to be that of Mr. Joseph Richards, builder, of this town, and was unanimously accepted. The sum yet to be raised to complete the building is 750*l.* A burial-ground is attached to the chapel of ease.

Taunton.—The consecration of the cemetery for the parishes of Taunton St. Mary Magdalene, and Bishop's Hull, took place on Tuesday before last. The cemetery, of about eight acres, occupies a field at Mountway. It is divided so as to allot about three-fifths—*i. e.* the eastern portion—to the Church of England, and the remaining two-fifths to the Dissenters. Besides the principal gateway there is an entrance—cast-iron gates—from the Bishop's Hull-road. The lodge contains a board-room, 17 feet by 12 feet, and residence for the keeper. The lodge is entered by a half-timbered porch. The buildings are in the Early Decorated style of old English architecture. The chapels are similar in design and in dimensions, being 31 feet 6 inches by 18 feet. They are roofed at a high pitch with stained pine, having arched braces moulded, and springing from angel corbels, carved in Bath stone. The fittings (to seat forty persons in each chapel) and reading-desks are of wainscot, of ornamental character. The windows, of varied design in their tracery, and having carved heads to their hood moulds, are of Bath stone; also the copings and dressings of turrets in the gables. The buttresses and quoins are of Westleigh limestone, and the facing of coursed Blagdon flint. Each chapel has a vestry. The contractor was Mr. W. Shewbrooks, of Taunton; the architect Mr. Ashworth, of Exeter, who also planned the laying out the ground, &c. Mr. Robert C. White, of Taunton, was clerk of the works; the contractor for the iron railing, Mr. Joseph Savery, of this town; and for roads, Mr. William Badcock. The outlay, according to the *Taunton Courier*, from which we quote, has been about 1,850*l.*; fences, about 800*l.*; and roads, 400*l.*

Cheltenham.—In addition to the work of re-roofing the nave of the parish church here, it is now proposed (but not yet decided on) to remove all the pews on the ground-floor and to put in low seats, similar to those in the two new churches of St. Peter and St. Luke, in the same town.

Bath.—The Bathwick cemetery was recently consecrated. The spot selected is one of the most secluded near the city: it is in a vale under Smallcombe Wood. The land consists of about two acres and a half, a portion of which, according to the *Bath Chronicle*, was granted by Lord William Powlett, the remainder by the rector. In the centre of the ground is a mortuary chapel, in the Early English style of architecture, designed by Mr. Thomas Fuller, of this city, architect to the Bathwick estate, and built by Mr. G. Mann, also of Bath. Above the doorway rises the campanile. The height of this portion of the structure is 45 feet, not including the cross by which it is surmounted, while that of the body is 26 feet, with an extreme length of 44 feet, and a breadth, including the buttresses, of 27 feet. It is lighted by a large window on the east and three small windows on either side, fitted with stained glass. The ground has been laid out by Mr. D. Butler, of Widcombe. On the south side of the ground a sloping bank has been constructed, which will admit of catacombs being constructed in the hill-side, and monuments being erected on the upper terrace. There is at present no lodge at the entrance, but merely a simple gateway: it is intended, however, as soon as sufficient funds can be obtained, to construct a lodge in the same style of architecture as the chapel.

Sandon.—According to the *Chelmsford Chronicle*, Sandon Church has been restored at a cost of about 300*l.* The old pews have been replaced by uniform seats, 2 feet 10 inches high, and 2 feet 8 inches wide, with inclined backs, and without doors. By this rearrangement the number of seats is greatly increased. The floor is raised 8 inches, and repaved with red, white, and black tiles. The paint has been taken off the ancient carved oak pulpit, which has been restored by Messrs. Ringham, of Ipswich. A new reading-desk has been provided. Two new stalls have been obtained in the chancel, with carved ends (by Ringham), the ancient wood carving of the chancel pews having been worked into the stalls. The altar rail, which is new, is supported by iron standards, and the floor within is laid with Minton's tiles. The communion-table has been restored. The whole work has been completed by Mr. Sorrell, of Great Baddow. In pulling down the old pews, an ancient piscina was brought to light, and some fragments of ancient encaustic tiles were also found.

Newark.—The ceremony of laying the foundation-stone of the consecrated chapel connected with the new cemetery, took place on Saturday before last. The architects are Messrs. Bellamy and Hardy, of Lincoln; and the contractor, Mr. Whitworth.

Lincoln.—The Dean and Chapter have restored the oriel window in the north great transept of the cathedral. The stone-work, which had become much injured by time, has been made good. The glass has been re-set, and the damaged portions replaced by new pieces.

Crowle.—It is proposed to add a chancel to St. Stephen's Church, Crowle, Lincolnshire, with open roof and Decorated window. The pillars on each side the communion-table will be gilded. The seats are to be of carved English oak. The east window is to be filled with stained glass. Mr. J. Owen is the architect.

St. Bees.—The ancient abbey church of St. Bees was lately reopened, after various improvements and alterations.

Newcastle-upon-Tyne.—The foundation-stone in connection with the necessary buildings and ground of All Saints' cemetery, at the Minories, has been laid. Mr. John Green is the architect, and Mr. James Gibson the contractor.

Gateshead.—A chapel was lately opened for divine worship at Mount Pleasant, Gateshead, belonging to the Methodist New Connexion. It is built in the Gothic style, with windows of stained glass. The architect was Mr. M. Thompson.——The congregation of the Blackett-street Presbyterian Church some time since appointed a building committee, and resolved that so soon as the treasurer had 1,000*l.* in hand, the committee should proceed to obtain plans for a new place of worship. Since then, the committee, says the local *Observer*, having obtained nearly 200*l.* more than the specified sum, gave notice to some architects of their readiness to receive designs for the proposed new chapel. Four architects complied with the invitation, and, on the recommendation of the committee, the congregation have approved of the design of Mr. Thompson, and awarded him the offered premium. The new edifice will be in the Decorated style.

STAINED GLASS.

Ilam.—Two stained-glass windows—an eastern triplet and a south aisle three-light—are to be executed from the designs of Mr. J. R. Clayton, of Albany-street, Regent's-park, and erected in Ilam Church, Staffordshire.

Regent's-park.—The same artist has also just completed the designs and cartoons for the large window which is to be erected to the memory of the late Mr. R. C. Carpenter, architect, in the Church of St. Mary Magdalene, Munster-street, Regent's-park.

Chelmsford.—Holy Trinity Church has just received the addition of a stained-glass window, encased in new Caen stone work, at the eastern end of the chancel. The subjects are in three compartments, the centre window representing the Saviour on the Cross, and St. Mary and St. John on either side. In the right window is the Saviour bearing his Cross to Calvary, followed by two soldiers, and near him is a kneeling female figure in tears. In the left window the Saviour is appearing to St. Mary Magdelene. The lower parts of the three lights are filled with angels in different attitudes, and across runs a scroll, on which is inscribed the name of the lady in memory of whom the window is dedicated. In the canopies are angels bearing a spear, and sponge on a reed. The upper tracery has four figures of angels and symbols, chiefly referring to the Trinity. The glass was supplied by Mr. Warrington. The stonework of the window and the exterior wall of the chancel was executed by Mr. Bremer, mason, at the almost sole expense of the rector.

Braintree.—Two painted windows have been erected in Bocking Church, on the south side of the Dean's Chancel, at the expense of the dean. They are the production of Mr. George Austin, of Canterbury, who has in all erected eighteen windows in the cathedral of that city.

Glasgow Cathedral.—Stained-glass windows are to be placed in this ancient edifice, the cost being borne chiefly by private individuals. The *Herald* says, the public bodies and individuals, or rather families after named, will each take one of the windows of our venerable minster under their care:—1. The Lord Provost. 2. The Government. 3. Messrs. Baird, of Gartsherrie. 4. The Corporation. 5. The Trades' House. 6. Messrs. John Tennant and Co. 7. William Ewing, esq. 8. James Stirling, esq. of Cordale. 9. Robert Monteith, esq. of Carstairs. 10. Messrs. Campbell and Co. 11. The Houldsworths. 12. The Dennistouns. 13. The Crums. 14. The Faculty of Procurators. 15. The Merchants' House.

THE COMPETITION FOR CHURCH AT LILLE.

About forty sets of designs, we learn, have been sent in for the church of *Notre Dame de la Treille;* some of them executed with an immense amount of care. The exhibition of them will be opened on the 13th inst. in the upper part of the *Halle au Blé*, a large corn-market, built by M. Benvignat, of Lille, and it will close on the 25th. No place could have been found better suited for the purpose to which the *Halle* will now be applied. The drawings from France alone, we are told, will cover about 1,000 square yards. The decision is promised at the end of the month.

DESTRUCTION OF COVENT-GARDEN THEATRE.

Covent-garden Theatre was destroyed by fire on the morning of Wednesday last. Within a few minutes after the discovery, a little before 5 a.m. the flames had obtained possession of the whole interior,—thus once more illustrating the remarks which we made last year, and previously, on the necessity of proper means of exit from places of public entertainment. In the present instance, though no lives appear to be lost, many of those who were present at the *bal masqué*, then terminating, had narrow escapes. Indeed, independent of the defects of plan which are so general, the materials used and the method of construction in the London theatres render them—sooner or later—we might say, inevitably—the prey of fire. We shall have better opportunity, before our next number, of ascertaining what was the exact origin of the conflagration in this instance. At present the bare walls, and the columns and pediment of the portico are alone standing. Bond timber seems to have been introduced, or been left in the walls, at the last alterations, to a greater extent than was supposed; and this having been burnt out, the walls appear at this moment in a dangerous condition. The present, or rather late, building was the third erected on the site. It was originally designed by Sir Robert Smirke, and replaced the theatre burnt down on the 20th September, 1808, and designed by Henry Holland, also the architect of Drury-lane Theatre, which, too, was destroyed in a similar manner. Of both these buildings, last named, and their architect, some particulars will be found in the papers on the Recent History of Architecture, in our last volume. Of Sir Robert Smirke's building, the first stone was laid on the 31st of December, in the year of the fire, or with an interval of little more than three months, and the building was opened on the 18th September in the next year, 1809. The portico was one of the earliest examples of the revival of the Grecian Doric order; though we need not tell our readers that it was not a copy of the portico of the Parthenon, as we are told by

one newspaper writer. The interior of the building was remodelled or rebuilt, within the recollection of our readers, by Mr. Albans, and was described in our volume for 1847, where a view will be found.

All must lament the dreadful disaster which has occurred, not merely for the sake of Mr. Gye, but of the public.

DESTRUCTION OF THE NEW CHURCH AT OVER-TABLEY.

ST. PAUL'S, at Over-Tabley, near Knutsford, completed in March, last year, at a cost of about 1,500*l.* has been gutted by fire, caused, it is supposed, by the overheating of the hot-air apparatus, or some defect in it. The *Macclesfield Courier* says:—"On an inspection of the interior of the hot-air chamber, it appeared that the smoke flue of the furnace, after rising about half a yard, was carried at right angles into the brick flue, built in the wall, entering immediately below the brick-arched covering of the air chamber. This flue rising perpendicularly about 2 feet was then carried obliquely into the chimney, in the corner of the vestry, entering it on the square of the building. This flue, at the point where it entered the chimney, was covered by a flagstone, above which were two courses of bricks, on which rested the wall plate. This flag was found to have been cracked in two places, and showed, as also did the iron bar and rod on which it rested, that it had been sometimes red hot; and from this circumstance it was at first supposed that there having been a lodgment of soot at this point, the fire had originated here. But it was stated, by a person living near the church, that the flue had taken fire some time in November last, and that the flames on that occasion had risen two yards above the top of the chimney: it is, therefore, not improbable that the mischief shown here might have been caused at that time. The flue was eight inches square, and its course upwards had been brought within a brick's width of the joists and floor of the vestry—and it is supposed that the bricks here would become red hot. The flooring of this part of the vestry, it had been frequently remarked, was exceedingly hot. The opinion of the gentlemen assembled appeared to be that the fire had originated at the bottom of the flue, but that it was uncertain whether ignition had first taken place there, which would be in the flooring, or at the top, near the wall plate: circumstances were, however, rather in favour of the former supposition."

We need scarcely say that our object, in chronicling such disasters, is not to give pain or attach blame, but to awaken the attention of builders, clerks of works, and architects, to the paramount necessity for care in the construction of flues.

FALL OF THE SHIRE-HALL STAIRCASE, CHELMSFORD.

THIS sad accident has caused great consternation, as might have been expected, and should lead to the examination of other staircases elsewhere. The *Chelmsford Chronicle* gives particulars of the inquiry which has been made, and quotes a paragraph from its own pages, of January, 1792, showing that the architect of the building was Mr. John Johnson, and that he received a piece of plate, of the value of 100 guineas, "as a public testimony of his integrity and professional abilities in the execution of the said Shire House, as architect and surveyor of the county of Essex."

The steps were of stone, and had been often chipped and repaired. They were tailed into the partition wall at one end. The balusters first gave way, and then the steps broke off, leaving the ends in the wall.

WHITE-LEAD AND ITS ADULTERATION.

IN the *Builder* of Feb. 16th, I observe some remarks on the adulteration of white-lead. As this subject is quite within the province of an analytical chemist, I beg to offer tests for all the substances I can think of likely to be mixed with the above metallic oxide for fraudulent purposes. Of course, the amount of such adulteration can only be ascertained by a complete analysis,* but, for the determination of the kind of admixture, I flatter myself the following rules may be of service:—

1. *Carbonate of Lime* (any form of *chalk, whiting, &c.*)—To detect this substance in *commercial white-lead*, about 40 or 50 grains of the latter must be introduced into a *beaker*, a bottle of white glass, or other suitable vessel, and 3 fluid ounces of dilute hydrochloric acid (otherwise *muriatic acid* or *spirit of sea-salt*,—1 part of the strong acid to 4 or 5 of *distilled water*) added with agitation: then allow the whole to remain for an hour or so, unless means are at hand for boiling it, when this operation, and the use of a clean Florence flask, will expedite the operation. To the clear liquid, poured off, or if necessary, filtered through blotting-paper, add a little *solution of ammonia*, until it smells strongly of the latter, when the addition of some *oxalic acid*, dissolved in water, will cause a white precipitate, or *milkiness*, if there is any carbonate of lime in the sample tested.

2. *Sulphate of Lime* (*gypsum, selenite, plaster of Paris*).—An equal quantity of the *white-lead* should be *boiled* with dilute *nitric acid* (about the same quantity and of the same strength as the hydrochloric acid used in the last experiment), until the addition of more causes no effervescence or other action. Then filter the whole, and throw away the solution; but if anything undissolved remains upon the filter, wash it well with water, and afterwards put in a bottle a large quantity of the same fluid: after some time pour off a little of it (clear), and add ammonia and oxalic acid as before. In this case, a milkiness would mean presence of sulphate of lime.

3. *Carbonate of Baryta* (*witherite, heavy spar*).—Treat with hydrochloric acid as in No. 1. Add solution of *sulphuret of ammonium*, until the liquid has acquired its characteristic odour of rotten eggs: boil until it emits no smell, and filter from the black powder, which is thrown down. To the clear solution, add a saturated one of *sulphate of lime*, when *sulphate of baryta* will be precipitated, if the carbonate of that base is present in the original *white-lead*.

4. *Sulphate of Baryta* (*sulphate of barytes*—native).—To determine the presence or absence of this substance, the pigment under consideration may be boiled with dilute nitric acid, in the manner directed in the exp. No. 2: if a residue is obtained quite insoluble in acid or water, it will most probably be *sulphate of baryta*, which will give a *green tint* to a flame, if introduced into one on the point of a *perfectly clean* wire.

5. *Clay* (any kind of *pipe-clay, porcelain clay, &c.*)—If the residue from the *nitric acid* ebullition has an unctuous, plastic feel in the fingers, it is *clay*. Enough of it being obtained, it may be mixed with a sand, kneaded with water, and baked (*at a red heat*): its texture will then reveal its composition.

6. *Starch* (*flour*, &c.) may be detected by boiling with water, and adding to the filtered liquid a little solution of *iodine* (1 *grain to* 1 *ounce of water*), which will strike a beautiful blue colour if any starch is present.

The *salts* and *reagents* mentioned may be obtained at any respectable operative chemist's. I would especially recommend Messrs. Jackson and Townson, 89, Bishopsgate-street, City.

A few Florence flasks, two dozen test-tubes, and a *washing-bottle* (for directing a stream of water upon a precipitate), will be all the apparatus necessary. In the preceding experiments, I have supposed that the *white lead* is dry,—in powder,—as, when mixed with *oil* or *turpentine*, a novice cannot detect adulterations without great difficulty: however, *generally* these oleaginous substances may be got rid of by repeated digestion in *strong alcohol and ether*, until the *colour* no longer refuses to mix with water; or the oil, &c. may be burnt off in a crucible. Of course starch cannot afterwards be detected. I shall be happy to give any further information, if required.

WENTWORTH L. SCOTT.

* A sample forwarded to me (Care of the College of Chemistry, London) for this purpose, would receive immediate attention.

MENTAL CALCULATION.

INSTITUTION OF CIVIL ENGINEERS.

ON February 19th, Mr. Robert Stephenson, M.P. President, in the chair, Mr. Bidder, referring to the great advantages he had derived from the power of mental calculation, which had given him a rare and unusual facility in dealing with numbers, proceeded to lay before the meeting his general views on the subject.

He was convinced that mental calculation could be taught to children, and be acquired with greater facility and less irksomeness than ordinary arithmetic; although, of course, a child in whom there existed a predilection for calculation would even then be as remarkable, and take as prominent a position as in the acquisition of any other subject.

Before entering more minutely into the subject, it was necessary to enunciate, as a principle, that there was not any Royal or short road to mental calculation: the processes were, like all others in arithmetical computation, to be performed *seriatim*; as, whatever might be the number of figures employed in a calculation, they were only so many symbols, to be dealt with precisely as they would be exhibited in algebraic formulæ, with which the calculations might be considered as identical. In point of fact, many of the processes of mental computation, if produced on paper, would appear most prolix and complicated: they could, however, be accomplished mentally, in consequence of the faculty of occupying the mind simultaneously with the double task of "computing" and of "registering." The first, computing, was executive, or reasoning, and was that portion of the process which, whilst it was the most active, was not that which caused the greatest strain on the mind. When it became necessary to record the result, the second faculty, registering, was called into play. Now it was this latter occupation of registering that was the real strain upon the mind, and by which alone the power of mental computation was limited.

Experience had shown, that up to a certain point, the power of registering was as rapid as that of thought; but the difficulty increased in a very high ratio, in reference to the number and extent of impressions to be registered, until a point was reached where registration in the mind and by writing were exactly balanced: below that point mental registration was preferable: above it, that by writing would be as quick and be more certain. Therefore, the mental process, as compared with the operation of writing, was as the speed of lightning to that of an express train; and if the power of registration could be maintained at all times upon a par with the executive faculty, there would be no difficulty in computing, with immense rapidity, a table of logarithms up to 10 places of figures.

His earliest recollection was that of counting up to ten; then up to 100, and afterwards to 1,000; then, by intuitive process, he taught himself the method of abbreviating the labour of counting; arriving, in fact, at the natural multiplication of numbers into each other, attributing to each a separate and individual value.

In this manner, the actual value of every number, up to 1,000, was impressed on the memory, and he then proceeded onwards *seriatim* up to a million. It was his practice to count numbers practically with peas, marbles, or shots, to compose rectangles of various values, and by counting them the multiplication table was ultimately the result of actual experience and test, and he attained an intimate acquaintance with numbers multiplied with each other, by a tangible process, divested of that formidable character under which it was generally brought before the young student.

Multiplying 173 × 397, the following process was performed mentally:—

100 by 397 = 39,700
70 by 300 = 21,000 = 60,700
70 by 90 .. .. = 6,300 = 67,000
70 by 7 .. .. .. = 490=67,490
3 by 300 .. .. .. = 900=68,390
3 by 90 .. .. = 270=68,660
3 by 7 .. .. = 21 = 68,681

The last result in each operation being alone registered by the memory, all previous results being obliterated.

To show the aptitude of the mind by practice, he would know, at a glance, that 400 × 173 = 69,200
and then ..... 3 × 173 = 519

the difference being..... 68,681 as above.

On the 26th ult. Mr. Bidder resumed his exposition.

With regard to addition and subtraction, it would be perceived, that the same principle, as already explained for multiplication, was adhered to, viz.; that of commencing with the left-hand side, or the large numbers, and adding successively, keeping one result only in the mind. This had the further advantage, that the moment the large figures were operated upon, the mind was no longer charged with them, and they might be dismissed, as it was no longer incumbent to register them. Now, the mere getting rid of this feeling, of its being necessary to charge the memory with them, set the mind free to continue the rest of the operation: it did not follow that he did forget the sums, or figures to be dealt with, still, getting rid of the feeling of the necessity of accurately recollecting them was of manifest advantage. Some examples, both of addition and subtraction, were then given.

Division was, as in ordinary arithmetic, much more difficult than multiplication, as it must be a tentative process, and was only carried out by a series, more or less, of guesses; but no doubt, in this respect, the training arrived at by mental arithmetic gave the power of guessing, to a greater extent than was usually attained, and afforded a corresponding facility in the process. Supposing, for instance, it was necessary to divide 25,696 by 176, the following would be the process:—100 must be the first figure of the factor: 100 times 176 were known at once to be 17,600: subtracting that, from 25,696 there remained 8,096: it was perceived that 40 was the next number in the factor: 40 times 176 = 7,040: there then remained 1,056—that it was immediately perceived gave a remaining factor of 6, making in all 146. Thus only one result was retained in the mind at a time; but as contrasted with multiplication it was necessary to keep registered in the mind two results which were always changing, viz.,—the re-

mainder of the number to be divided, and the numbers of the factor, as they were determined; but if it was known, as was the case in the present instance, that 176 was the exact factor, without any remainder; having got the first factor—100—which was perceived at a glance,—it was known, that there were only four numbers which, multiplied by 76, could produce a result terminating in 96, viz.: 21—46—71—and 96; and, therefore, the immediate inference was, that it must be 46, as 121 must be too little, and 171 must be too much, therefore 146 must be the factor. Thus, as before observed, the only facility afforded by mental calculation was the greater power of guessing at every step towards the result.

Square and Cube Roots.—Perhaps there was nothing in which the mental process caused greater astonishment than in resolving the square and cube roots, more particularly the latter; and perhaps in none was it less entitled to occasion wonder, because it partook more of "sleight of art," than of any real power of mind, or of any real useful application of means, as would be apparent on considering them. It was at about the age of somewhat less than twelve that Mr. Bidder was first asked to extract the square root; but before he could comply with the requisition, it was necessary to explain to him what the square root meant, and this was explained by showing that 400 was the square of 20, and that 20 was the square root of 400. As might be expected, all who tested his powers were generally prepared with the means of ascertaining the accuracy of the answers. Now it was well known that the easiest application of multiplication was in squaring numbers, and that it was much more easy than extracting the roots: the consequence was, that those who propounded the questions squared, or cubed, a number, and then gave the result, whence to extract the root; and, if the answer agreed with the number they started with, they were satisfied. The consequence was that nearly every example proposed was a true square or cube; hence the following expedient was hit upon. It appeared, on reflection, that whatever might be the two last figures of a true square, as, for instance, 61, could only be produced by the square of four numbers, viz,—19, 31, 69, 81; hence, if called upon to extract the square root of 337,561, Mr. Bidder knew instantly that 500 must be the first part of the root, because 10,000 was the square of 100; hence that the hundreds in the square roots of 330,000 would correspond with the digits in the square root of 33, viz.,—5, or 500 in the larger denomination. Having ascertained this, he had to choose between the four other numbers to ascertain the remaining term of the square root; and he was enabled at a glance to perceive that it must be the larger number, 81, from the fact that 81 was to 100 (the difference between 500 and 600), nearly in the proportion of 87,000 to 110,000 (the difference between the square of 500 and 600). As regarded the terminal 25, the square of all numbers ending in 5 terminated in 25; hence it would seem that the choice lay between all the numbers ending in 5 up to 95; as, for instance, in extracting the square root of 442,225, of course, as before, it would be known that the first term was 600, but although the square of all numbers ending in 5 would always terminate in 25; yet there was this guide, that numbers ending in 5, 45, 55, and 95, had no hundreds interposed after the thousands, as, for instance, the square of 155 was 24,025;—then the square of numbers euding in 15, 35, 65, and 85, terminated in 225; as, for instance, the square of 185 was 34,225; and, again, numbers ending in 25 and 75 terminated in 625; as, for instance, the square of 125 was 15,625; therefore with regard to the root of the proposed number, it must lie between the numbers 15, 35, 65, and 85, and from the proportion of the excess of the proposed number over the square of 600, it was evident that it must be 65, therefore it was concluded that the root was 665.

Mr. Bidder went through a number of processes, but we are unable to follow him further. He contended justly, from his own experience, that a facility in using mental arithmetic, combined with an intimate knowledge of the laws of mechanics, must necessarily prove of great utility to the civil engineer: so far as regards himself, it had materially aided his individual career—it had aided him in times past, in suggesting matter for cross-examination, and, as might be imagined, had proved very embarrassing to the witness.

TRISECTION OF AN ANGLE.—In reply to a request, some time ago, for the means of effecting this, we have received several attempts to solve the difficulty, but none which would stand examination. Those of our readers who are desirous of accurate information upon the subject may find it by referring to the article thereon in the *Penny Cyclopædia*. They will there see that it is a problem of the same class as the "Quadrature of the Circle."

COMPETITIONS.

Liverpool Free Public Library and Museum.—Our readers have doubtless observed the advertisement offering premiums for the best designs for the intended building on the north side of Shaw's Brow, Liverpool. The institution will be divided into two departments, the library and the museum, and these are to be kept so far distinct that they can be separated if necessary. The reference library must contain space for at least 100,000 volumes, with accommodation for 500 readers at one time. The lending library must contain space for about 20,000 volumes. As to the museum, the present collection will require about 1,350 lineal feet of wall space. The cost of the building is not to exceed 20,000*l.* There is this peculiarity about the case, that the chairman of the committee is an architect, Mr. J. A. Picton, and one anxious to aid in improving the conduct of competitions, so that the profession may feel assured of fair play. When we last heard, there had been above *three hundred applications* for particulars and plans; above 100 from London alone! It has been suggested in Liverpool that the competing architects themselves should be the committee to make the selection.

ELY SANITARY WORKS.

THE tubular system of sewerage and drainage has now been in operation in the city of Ely for the last sixteen months; and although the low-level sewer has only a *fall of one in a thousand*, it has proved, we are informed, successful. There are upwards of nine miles of public sewerage pipes, and the largest is 12 inches in diameter.

The water-supply is obtained from the river Ouse: it is drawn from the river into a filter-bed, from which it is pumped by a 12-horse high-pressure steam-engine (through 1,400 yards of 8-inch main) into a malleable iron tank, placed on the top of a brick tower, and surrounded by a brick screen, and roofed over with wood covered with asphalte. The tank is 65 feet diameter, by 16 feet deep, and contains 330,881 gallons of water. The total weight of the tank is 45 tons, and it contains 1,485 tons of water.

There is only one main pipe, which enters the bottom of the tank, and answers both for conveying the ascending water into the tank, and the descending water for supplying the town.

There are upwards of nine miles of water-pipes laid down, and the total cost of the works, according to our informant, is 14,000*l.* Mr. William Burns was the engineer.

OXFORD ARCHITECTURAL SOCIETY.

AT the third ordinary meeting, held on the 13th ult. Mr. James Parker delivered a lecture "On the Style of the Thirteenth Century." He took as the groundwork of his lecture the differences which Gervase enumerates between the old Canterbury choir which existed before the fire, and the new choir, which is the one now standing, and is a good specimen of the Early English style. The "elongation of the pillars," he contended, exhibited a new and important principle, and he showed how it was observable, not only in the general design, but even in the sculpture. The second difference mentioned by Gervase, viz. "the capitals were now carved with a chisel, not with an axe," explained the origin of the other great principle, namely, that of *undercutting*, which was shown to pervade all the sculpture and mouldings of the period. The lecturer then explained the changes which Gervase mentions with regard to vaulting, and this led to the consideration of the origin of the pointed arch, which was not mentioned by Mr. Monk in the enumeration of the striking and important changes which he noticed. Mr. Parker did not consider the pointed arch as any new principle in design: it was simply a convenience in construction, and was a most fallacious guide in fixing the dates of buildings, as it was found much earlier than the thirteenth century, and this was the reason why he would never employ the terms first, second, and third pointed, as they expressed no principle, and, instead of assisting the student, were calculated to confuse and mislead him.

Mr. Willis agreed with all Mr. Parker had said: he wished, however, he had laid more stress on the pointed arch, which he thought was the very essence of the Pointed style. He believed there were five theories. 1. That Mr. Parker had explained, which arose from the necessities of saxpartite vaulting. 2. That the pointed arch was suggested by the effect of the intersections of the two round arches in quadripartite vaulting. 3. That the idea had been taken from the intersecting arches which were in such common use. 4. That it was brought into England by the Crusaders. 5. (A very fanciful one) that it was suggested by the figure called Vesica piscis. Mr. Willis did not know to which to give the preference, but thought that, perhaps, all contributed in a degree to the discovery.

On the 20th of February (we are availing ourselves of the local *Herald*), Mr. Parker gave the third of the series of elementary lectures. He began by pointing out that the change from the Early English to the Decorated Style began in the latter part of the thirteenth century, although it was not fully established until the fourteenth. He defended Rickman's name of Decorated as good and appropriate,—window tracery, from which it is named, being more essentially part of the structure than the decorations of any other style; and however plain a building may be, this distinguishing mark of tracery is never wanting. He then gave a slight sketch of the origin and development of tracery, illustrated by a selection of engravings, and referred the members for more full information to Mr. Freeman's work on Window Tracery. He described the peculiar character of Decorated foliage and ornament, its truthfulness and fidelity to nature, and the absence of the conventionalism and the deep undercutting of the Early English style. He also mentioned the ornamenting the flat surface of the wall with Diaper patterns, and showed specimens from the Eleanor crosses at Geddington, of which there are casts in the Society's collection. He also referred to Mackenzie's work on St. Stephen's Chapel, Westminster, which was placed on the table, and expressed his regret that the English Royal Chapel should have been entirely destroyed at the very time that the French Royal Chapel (La Sainte Chapelle in Paris) was being beautifully restored.

BUILDING NEWS FROM CANADA.

A NEW Baptist church has been erected at Woodstock, from a design in the early English style of pointed architecture, furnished by Mr. David Murray, of Hamilton, architect. The building is 65 feet long and 42 feet wide, and has a basement room 9 feet high, under the whole church, which stands north and south, with steeple at the south end. It has been ventilated and warmed on a plan said to be invented by Sheriff Rutland, of Coburg, C.W.; but merely consisting of the introduction of warmed air from a ventilating and warming stove in the basement, and the withdrawal of air under the floor through two air chimneys in the north wall, which thus ventilate the whole, while drawing the warm air down from the ceiling to circulate among the feet of the sitters. The same system has been applied to the new jail of the county of Oxford, and the Hamilton jail, and other buildings. The Welland county jail is also about to be warmed and ventilated in the same way, as also the Merritsville jail and a large church at Guelph. The Woodstock Baptist Church is built of white bricks produced at Woodstock. The courses, buttress caps, and dropstones are of Ohio freestone, varying slightly from the colour of the bricks. The spire was left unfinished for the season. The basement is to be occupied as school-room, and for lectures, &c. The windows of the chapel are of diamond pattern, with outer borders of stained glass.

SOLID SWISS PARQUETERIE.

The Solid Swiss Parqueterie, which is gradually becoming known in England, promises to supply a want. It is made solid throughout, and every portion of the ornamental woods forming the patterns is grooved and tongued together, and jointed with marine glue. It can thus be fixed immediately upon the joists when applied for flooring, rendering under flooring unnecessary. This Parqueterie has also the advantage of being much lower in price than the ordinary veneered work which has hitherto been in use. Being manufactured by machinery, and in large quantities, a great reduction in its cost has been obtained, and it can be supplied in London at prices commencing from 1s. per foot super. It is now being laid at the house of the Turkish ambassador, amongst other places. It seems only right that we should make it known to our readers.

ARCHITECTS' BILLS.

ASHPITEL AND WHICHCORD *v.* THOMSON.

THIS action in the Court of Common Pleas, Guildhall, February 19, was brought to recover the sum of 39*l.* 5s. 5d. for professional services rendered, and for money paid by the plaintiffs. The defendant is a draper in the Edgware-road. Mr. Laxton appeared for the plaintiffs, and Mr. Collier, Q.C. for the defendant.

The defendant's house having settled, the plaintiffs were called in to give their opinion, and afterwards superintended the works for the repair of the settlement, and checked the account of Mr. Stopher, the builder. The defendant, in January, 1853, being desirous of having the premises re-erected, consulted

the plaintiffs, stating that he wished his business interrupted as little as possible. The plaintiffs suggested an iron house, lined with slate: the defendant approved of this, and the designs were prepared, and arrangements made that the old premises should be pulled down, and the new building erected in five days. The defendant determined on having the designs submitted to the official referees. The old Metropolitan Buildings Act not providing for a building of this description, the case was ultimately referred to the Treasury, who granted permission for the erection of the building. The defendant, however, altered his mind, and would not have it erected.

The defence was, the plaintiffs had been called in by the builder, and that they were acting on his behalf, and not for the defendant, and that they undertook to prepare the designs for the iron house for costs out of pocket in event of the house not being erected. The jury, after retiring to consider their verdict, came into court, and gave a verdict for the plaintiffs for 28*l.* 5s. 5d.

PRINTS.

Fruit, after Lance.—Messrs. M. and N. Hanhart have just produced, in chromolithography, a fac-simile of one of Mr. Lance's gorgeous fruit pieces, including a melon, grapes, currants, and plums, on a piece of matting. It is a very successful and beautiful specimen of the art, and we are not surprised to hear that Mr. Lance has passed a most favourable opinion upon it. The many touches that go to produce the varied surface of the melon are admirably rendered. The same firm has also issued a "View of Paris," after Mr. T. Boys—a view comprising the Louvre, the Seine, and the bridges.

Messrs. Rowney have now on view a collection of chromolithographs which deserve attention.

Portrait of Professor Edward Forbes.—The friends of the late Edward Forbes (who was taken from the world too soon) will find the portrait of him which has been published by Mr. Claudet, at his Gallery in Regent-street, an excellent memorial of him. It is engraved by Mr. Charles Cook, from a daguerreotype by Mr. Claudet, who has done much good service in his art.

RECENT PATENTS.

AMONGST the specifications of patents recently granted are the following, extracted from lists reported in the *Mechanics' Magazine*:—

Page, J. "Improvements in moulding or shaping metals." In this invention, in casting such articles as pipes, core-bars, "capable of expanding and collapsing in diametrical dimensions," are employed. These core-bars are each composed of longitudinal pieces of segmental metal plates, so combined as to be capable of forming bars of various diameters, and are adjusted by means of a central spindle, carrying on its projecting end a metal disc furnished with suitable inclined pieces.

Poole, M. "An improvement in sculpturing surfaces of marble and stone," (a communication). This invention consists in rolling or rocking an engraved or embossed metallic surface in contact with a surface of marble or wood, sand or other suitable cutting material being interposed between.

Brant, J. C. "Improvements in laying rails, chairs, and sleepers for the permanent way of railways." This invention consists in the application of cork in various ways to the permanent way of railways; also in using longitudinal and transverse sleepers tied together so as to form a continuous line of way on a solid and equal bearing.

The following is amongst those for which provisional protection has been granted:—

François Coignet, of Rue Hauteville, Paris, France. "Certain improvements in the use and preparation of plastic materials or composition to be used as artificial stone, or as concrete or cement for building and other purposes."

AMERICAN PATENTS.

THE following are selected from lists of recent patents, reported in the Journal of the Franklin Institute of Pennsylvania:—

For an Improvement in Roofing Compositions: James West, Syracuse, N. Y.

Claim.—"The use of lime, in combination with the rubber, gutta percha, and shellac solutions."

For an Improved Mode of Hanging Window Sashes: J. W. Ross, Zanesville, O.

Claim.—"Attaching the straps to the sashes, said straps passing in reverse direction, around pulleys, on a shaft in the style of the casing, the pulley being attached permanently to the shaft, and the pulley placed loosely upon it, and the pulleys being connected and disconnected when desired, the pulley having a pulley attached to it, to which pulley an elastic band is attached, said band being also attached to the sash."

For a Mortising Machine: Loomis E. Payne and Orris Pier, Stowe, Vermont.

Claim.—"A double semi-circular mortise bit, or gauge, arranged so as to clear itself thoroughly in its action; and this, in combination with the double eccentric plate, to regulate the motion to and fro of said mortise bit."

For a Machine for Cutting Double Tenons: C. P. S. Wardwell, Lake Village, New Hampshire.

Claim.—"The combination and arrangement of the intermediate obliquely set or drunken saw, with the clearing or finishing true circular saw for operation together, and whereby the drunken saw not only serves to largely reduce the wood between the tenons, as required, for the completion of the tenons, but to form a wider kerf or pathway for the axle of the finishing saw to admit of the deep insertion of the latter into the wood, and of its operation as a clearer between the double tenons during the continuous progress or feed of the timbers."

Notices of Books.

VARIORUM.

"Lessons in General Knowledge" is an elementary reading-book, by Dr. R. J. Mann (Longman and Co. publishers), intended to serve as a familiar and attractive introduction to the principles of natural science. Special attention has been given to style as well as matter, and the whole is occasionally illustrated by engravings. This appears to be a very good book indeed of its kind, and suitable, not only for children, but for young persons generally, and for not a few who have got beyond juvenility.——Another pamphlet on "Sunday Trading in London, its Causes and its Remedies," has been published by Mr. Rivington, of Waterloo-place, an old advocate of this good cause. In the present effort "the case of the tradesmen" is briefly stated. "A London employer," as the author is, deserves to be heard on this subject.——Two very interesting shilling parts of Longman's "Travellers Library" have just been issued. They are titled, "Sketches of Nature in the Alps," and are translated from the German of Frederick Von Tschudi. The special subjects comprise of course both vegetable and animal as well as mineral existence in the Alps. The firs or pines are a prominent feature in Alpine scenery. The Wettertanne, or Weather-fir, is a very picturesque and well-known element in the landscape, towering upwards in a pyramidal form, and spreading forth its lower arms like umbrellas, made as if for shelter to the Alpine tourist. The Wettertanne grows not unfrequently to a height of 100 or 130 feet, and measures from 4 to 5 feet in diameter at 2 feet from the ground. It lives to a venerable age and grows very slowly. The staple growth of the Alps are the trees of the pine and fir species. The fir (*Fichte*) and red spruce fir (*Rothtanne*) are the chief constituents of the regular forests in the northern and western parts. The larch grows in the lower portion of the Alpine zone, and the *Pinus Cembra* in the upper. The larch is the tree which yields the best turpentine of all the coniferæ.

Reading for the Million.—The recent sale of the copyrights of the well-known collection of works known as *Bentley's Standard Novels*, have afforded Messrs. Routledge an opportunity of carrying out their scheme for issuing the best productions of modern writers at a cheap rate. We go out of our way to mention it. The Bulwer novels, which have been, and are so deservedly popular, will be immediately followed by a succession of able fictions. For this purpose, the copyrights of the sea stories of Captain Marryat and J. F. Cooper have been secured, and those of some of the best works of Albert Smith, G. R. Gleig, Ingoldsby, Maxwell, Mrs. Gore, Lady Scott, and Thomas Hood. The sale, we learn, realised nearly 7,000*l.* and the works to which we have referred are the cream of the collection. The Bulwer Lytton speculation having been carried out with great spirit and gratifying results to public, publisher, and author, we are glad to hear of the extension of the scheme.

Miscellanea.

ARCHITECTURAL INSTITUTE OF SCOTLAND.—The eighth meeting for the session of this Institute was held in George-street Hall, on Monday night last—Mr. Kirk in the chair. The secretary read a paper by Mr. Thomson, of Banchory, on "The Egyptian Obelisks now in Rome," which traced the history of these monuments, and entered into details regarding particular obelisks.

NATIONAL PORTRAIT GALLERY.—Earl Stanhope's motion, "That a humble address be presented to her Majesty, that her Majesty would be graciously pleased to take into her Royal consideration, in connection with the site of the present National Gallery, the practicability and expediency of forming by degrees a gallery of original portraits, such portraits to consist as far as possible of those persons who are most honourably commemorated in British history as warriors or as statesmen, or in arts, in literature, or in science," was agreed to, the words "such portraits to consist as far as possible of the most eminent persons in British history," being subsituted for "those persons who are most honourably commemorated in British history."

INSTITUTION OF CIVIL ENGINEERS OF IRELAND.—The ordinary general meeting of this institution was held on the 12th ult. at their rooms, 41, Upper Sackville-street, Dublin, Mr. Richard Griffith, president, in the chair, when Mr. John Hill, county surveyor, read a paper "On the Maintenance of Macadamised Roads, as exemplified by his Management of the Central District of Roads in Ireland under the Commissioners of Public Works." The charge of the commissioners over the roads in question, and all of a similar class in Ireland, having ceased on the 1st July, 1854, Mr. Hill took occasion to bring forward, among other detail connected with the management pursued, statistical information of the cost of maintenance under that system during each year from 1843 to 1853 inclusive, and contrasted it with the rates at which the contracts had been since let, for five years, under the ordinary operation of the Grand Jury Laws, by which it appeared that an increase of expense had now taken place which varied from 20 to 75 per cent. while the condition of the roads had been seriously deteriorated. In reference to the general question of road maintenance, he attached the greatest importance to timely and energetic work in the early part of winter, and asserted the principle that the object in view should always be attained by measures of a precautionary rather than of a remedial nature. The same principles applied with even greater force to the roadways of greatest traffic, such as those in cities and large towns. A long discussion followed, in which the president and most of the members present took part; and amongst other matters referred to, the relative advantages of pavements and of Macadamised roads for the streets of cities received attention, very varying opinions being expressed. The meeting then adjourned.—*Saunders's Newsletter.*

GAS.—The Liverpool United Gas Company have declared their usual dividend of 5 per cent. for the *half*-year; and the directors have been empowered to borrow 31,400*l.* under the provisions of the Act. ——At the half-yearly meeting of the York Gas Company, a dividend of 6 per cent. free from income-tax, was declared; and the directors were empowered to expend from 8,000*l.* to 10,000*l.* in providing a new gasholder, the business of the company having of late greatly increased.——The town of Honley has been supplied with gasworks, and nearly all the houses are lighted but not the streets as yet.——The works of the Churwell Gas-light Company, which have cost nearly 1,500*l.* are now in full operation, and a dividend of 5 per cent. has been declared, leaving a handsome surplus to be carried over to the next account.

RAILWAY TO PORTSMOUTH DOCKYARD.—Government has at last granted a sum of 70,000*l.* for the construction of a railway, commencing at the terminus of the London and South-Western, and the South Coast, Railways, in Landport, and ending in Portsmouth Dockyard.

THE THAMES AND THE CROWN.—In the latter part of the article on "The Condition of the Thames," page 106, the authorised report of the discussion which you quote contains an attack on the Crown, which is not just. The land between high and low water round the British Islands is the property of the Crown, except in cases where a grant has been made of it, of which there are many instances. This right was confirmed by a decision of the twelve judges, some years since, in the case of the Hull and Selby Railway. The Corporation of London have not, as yet, been able to produce a grant of the land on the shores of the Thames, from any sovereign; so that in this case to which the reporter refers, the Crown really is supporting the rights of the people against the usurpation of the Corporation.

A CONSTANT READER.

THE RELATIONS BETWEEN MASTERS AND WORKMEN.—Mr. Mackinnon lately moved in the House of Commons, for the appointment of a select committee to consider the inconvenience now felt from the want of equitable tribunals by means of which any difference between masters and operatives might be satisfactorily adjusted; and also to ascertain whether the *conseils des prud'hommes* in France had answered the purpose for which they were established. He was not anxious for any particular form of tribunal, nor did he seek to give it power to fix maximum or minimum rates of wages: all he sought was the establishment of equitable tribunals, which should be able to reconcile masters and workmen, and to prevent the recurrence of so tremendous a misfortune as a strike. Sir G. Grey said he thought it desirable that tribunals of the kind suggested should be established, but such tribunals should not regulate wages. The motion was agreed to.

NEWGATE JAIL.—At a meeting of the Court of Aldermen of the City of London last week, Alderman Cubitt brought up the report of the committee on the state of Newgate Jail, and its improvement or removal. The report, after some preliminary remarks, in which it was stated that till some important alteration was made in the physical structure of the interior of the building, Newgate must continue to be a standing reproach to the City of London, proceeded to intimate that a plan was under consideration which would give 120 separate cells at a cost estimated by the City architect at 10,000*l.*; that they had in view another plan of a comprehensive nature for the entire demolition of the courts and of the jail, and the reconstruction of the courts and such a portion of the jail as might suffice for the custody of prisoners while trials were going on, the objects of this plan being to dispense with Newgate as a prison, except only as above stated. A plan had also been submitted to the committee for such additions to the prison at Holloway as would enable it to receive the prisoners now kept at Newgate. The cost of these combined operations, that is, the reconstruction of the Criminal Courts and a portion of Newgate, was estimated by the City architect at 87,000*l.* less the value of a piece of land at the Old Bailey set free, and estimated at 9,000*l.* In working out these plans, the City architect had so arranged as to permit the smaller one to form an integral part of the larger. The report, after some discussion, was received, and referred back to the committee to act therein as they should think fit.

THE "PATHOLOGY OF ENGLISH ART."—At the Liverpool Philomathic Society's, on Wednesday evening in last week, a lecture was delivered by Mr. J. T. Foard, on "The Pathology of English Art; its diseases, —chronic, epidemic, and hereditary." One of the chief pathological states of high art was described, according to the local *Journal*, as "an eruptive disease, recurrent like the measles or small-pox, attacking with fearful violence almost every painter in every stage of national history—its ravages being of the most painful kind." It made its first appearance in this country during the life of Sir Joshua Reynolds, and Sir Joshua himself was attacked by it at the first exhibition of the Royal Academy in 1769, where it broke out in the shape of "Lady Blake as Juno receiving the Cestus from Penus,"—"Miss Morris, as Hope, nursing Love," &c. &c. At present the symptoms assume in general a somewhat milder form, as in "Nymphs Bathing,"—"Nymphs Reclining,"—"Nymphs Surprised," &c. A description of one would serve for all. To convert "Nymphs Bathing" into the "Sirens," or "Venus and her Nymphs," would be merely a matter of repletion. "But if the Choice of Paris were required, the recipe would be as follows:—Take the same three figures: turn the green sea into green fields, the sea-weed into ditches, the shells into sheep, &c.; add an adolescent male figure nude; garnish with extra blue sky and a rocky foreground; serve. Repeat this *ad nauseam*, and you have modern English or nineteenth century classic art." The paper next referred to the "manufacturing" of pictures, which "impaired the function and paralysed the action of one-half of the body corporate of art." A denunciation of the Pre-Raffaellite school concluded the whole. A discussion ensued, and the thanks of the society were awarded to Mr. Foard.

VALUE OF LAND IN THE CITY.—The following tenders were received by the City Commissioners of Sewers, last week, for a plot of ground in Chancery-lane. Frontage, 38 feet; depth, 24 feet:—

	Per Annum.
Haynes and Eyre	£40
Palmer	70
Pursnell	100
Marsh, for the Law Union Assurance	125
Reserved price	140

At which price it was taken by Mr. Marsh, making the price for freehold, at thirty-three years' purchase, 4,620*l.*

STOPPING TRAINS.—It would be a great desideratum in railway travelling if, with the stopping trains, some arrangement could be contrived by which the loss in speed in pulling up to stop, and the loss in speed in starting, could be reduced to a minimum; in other words, if the act of stopping a train should not cause much more loss of time than the mere delay for passengers to alight; and this is now the more necessary since there is such a large body of daily travellers on the metropolitan lines, who are both accommodated and incommoded by a frequent stoppage of trains, and where, from the distribution of passengers at different points, it is necessary that most trains should stop frequently. To a certain extent the arrangement to be proposed is adopted, namely, that of laying the line on an elevation whenever it approaches a station—that each line of rail should have a continuous rise for some distance on both sides of the station, and should arrive at an apex at the proper stopping point. It may be said that an arrangement of the kind would be very inconvenient for fast trains, and would cause delay; but since it is always a desideratum to ensure moderation of speed in passing a station, this is necessarily secured by such an arrangement as is proposed, and with the ordinary stopping trains. The pace is rapidly curtailed by the steep incline in stopping, while the start is accelerated by the descending incline, thereby attaining both the ends desired. To a certain extent this has been adopted, but not regularly, and not sufficiently to prove of general service. You can always detect its existence by the rapid and easy way in which you stop, and equally so start. We have only to wish to have it general, when the permanent way requires alteration, and also in new construction it is worthy of consideration.—H. C.

LONDON BRIDGE.—On reading Mr. Collinson's motion respecting the Southwark and London Bridge Improvements, it occurred to me how easy it would be to alter the present bridge to meet the demands of the increasing traffic, adding but little extra weight and at a trifling cost, compared with the advantages gained. I would remove the present footpath and parapets each side, and erect two rows of iron columns at a sufficient width to allow the heavy portion of traffic, and a foot-path for the drivers, say two feet wide, which would leave sufficient room for two other lines for carriages and the lighter portion of traffic each side of centre line of bridge, thus making six distinct lines of traffic instead of four, and by dividing the different ways by raising one course of stones three inches above the others would prevent confusion, by each entering its proper line. The above-mentioned columns should stand about twenty feet apart, to support the trussed girders longitudinally, which would carry an elevated platform for foot passengers, a sufficient height, say eighteen or twenty feet, to allow for the traffic underneath to be reached by four flights of steps from the present foot-paths, communicating with each other at the ends of the bridge, to allow persons to ascend either side, take their proper side in crossing, and descend the side they may require. The weight of stone removed would nearly equal the weight added, and bear part of the expense: one side could be done at a time, without causing much delay to the traffic, and if skilfully designed would make a useful, ornamental, and noble construction worthy of the name of an—ENGLISHMAN.

FORGING IRON.—Mr. W. Clay has recently patented a method of manufacturing forged iron so as to economize the metal. His claim is for making shafts or other articles, of wrought iron, by piling together suitable lengths, and the employment of a core of sand or charcoal dust, &c., as described.

DESTRUCTION OF BLACK-BEETLES.—Some fifteen years ago, I had the ill-luck to import into my house (I believe from Brighton) a sort of long-bodied beetles, which bred rapidly, and infested for years my kitchen, scullery, bakehouse, &c., and every now and then made their appearance in the better apartments; a nimble gentleman, of near an inch and half long, meeting one occasionally on the stairs or in the passages. I have heard them called "cock-roaches," but whether properly or not, I know not: at all events, they were a serious annoyance. A year or so ago, I saw advertised "Chase's Beetle Poison," at one shilling the box; and as I thought the trial worth making, I got my grocer to procure me four boxes. The contents of two of them I distributed, with an interval of a week or two, in the chief haunts of the beetles. The other two boxes I have still; but a beetle I have not seen now for many months, and I believe them to be totally destroyed. It is right to mention that four young chickens, which had access to the scullery when the poison was there, died, and were thought to have been killed by it; but dogs and cats took no harm—probably did not eat it. As this is a *bonâ fide* communication, intended solely for the benefit of others who may be similiarly annoyed, I inclose you my name and address, which you are at perfect liberty to give to any *bonâ fide* inquirer.—W.

ARCHITECT'S "CLERK."—Your correspondent who has deigned to notice my communication, and whose modesty would not allow him to be "guilty of the rudeness" of punning upon my remarks, must surely know that, though literally the appellation of "clerk" is applicable to a clergyman and a man of letters, yet in modern phraseology this sense of it is obsolete, except indeed a very few instances, such as law-deeds, &c. Who ever hears now-a-days of the use of the term in that sense? for, if so applied, the parson of the parish would be the "parish clerk," and the mayor of a town in the same sense would be the "town clerk!" Let us for a moment suppose this. 1. A clergyman is a clerk: by usage, the man who sits under him and says "Amen" is a clerk. 2. A man of learning and letters: a lawyer must be one; and his boy who copies his letters and runs errands is so designated. 3. One who writes for another, whom *Johnson* also calls a "secretary," and which is the present understood term for such a man. 4. Officers of various boards. Surely your correspondent must know that the various capacities of the last-mentioned qualify their positions, and we know at once by the term what they are—as the "town clerk," "clerk of the peace," "clerk of the Crown," or "clerk of the House of Commons," &c. &c. By these examples we see that the degrees of comparison, and, indeed, the etiquette of modern usage, would not sanction this multifarious term to be applied in its abstract sense; so we use other phrases better adapted to the understanding, and hence the general term "clerk," in its ordinary acceptation, is, "clerk, *s.* a secretary or bookkeeper" (Johnson). The distinguishing feature of this term of my thesis, from its misapplication, is so assimilated with the word "clerk" in its commonest sense; that, there the difficulty lies. Thus we say—an "architect's assistant," who, in no small degree, contributes to the fame of his employer, by his talent and ability, is by usage a clerk; so also is the man who keeps his accounts, and the boy who dusts the office; and, therefore, Mr. Brown or Mr. Jones, head-assistant, who, like myself, may have pretensions to a higher grade, has no word in this huge language of ours with its upwards of *twenty-six thousand* words, to distinguish him from the errand boy. If your correspondent's knowledge of the matter had been greater, he would have attempted, with less indignation, to give an answer to my original question definitely, as to "when the cognomen was first applied," and why? "to one who is neither Clerk of the Peace, Town Clerk, Clerk of the Crown, Clerk of the House of Commons," nor any of "the hundreds of other Clerks" who would look down with —— upon one who is

"*Only* AN ARCHITECT'S ASSISTANT."

TENDERS

For pulling down the old and rebuilding a new branch bank at Leighton Buzzard, Beds, for the London and County Banking Company. Mr. A. Parnell, architect. Quantities supplied:—

Myers	£2,830 15 0
Nash, Leighton Buzzard	2,611 2 3
Brass and Son	2,583 0 0
M'Kenzie	2,510 0 0
Clark, Leighton Buzzard	2,421 2 2
Wilson	2,268 0 4
Woodruff	2,229 15 0
Greig (accepted)	2,170 18 0

For schools and residences, Crosby. Mr. J. P. Jones, architect:—

Thomas	£2,780 0 0
Williams	2,756 0 0
Jones and Co.	2,600 0 0
Harrison (accepted)	2,526 0 0

For two detached houses, Seaforth; same architect—

Cottingham	£1,820 0 0
Williams	1,250 0 0
Harris (accepted)	1,180 0 0

E." (Mr. Albano).—"F. F. W."—"G. G." St. Helen's.—"G. S."—"W. H. N."—"W. A."—"Sub." (why not hang the doors in four or more leaves?).—"L. N. S."—"A. S."—"E. A. C."—"B. H."

"Books and Addresses."—We are forced to decline pointing out books or finding addresses.

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

NOTICE.

FROM and after the 1st January, 1856, the *entire postage* upon all newspapers sent to France, and Foreign countries *viâ* France, must be prepaid: the stamped copy of the paper is of no avail.

ADVERTISEMENTS.

METROPOLIS LOCAL MANAGEMENT ACT.—SAINT LEONARD, SHOREDITCH, Middlesex. The Vestrymen of the Parish of St. Leonard, Shoreditch, in the county of Middlesex, in pursuance of the Act of Parliament 18 and 19 Vic. cap. 120, "For the better Local Management of the Metropolis," will meet in the School-room of the New Tabernacle, Old-street-road, in the said parish, on THURSDAY, the 20th day of MARCH, 1856, at SIX o'clock in the evening, to elect the undermentioned officers, viz.:—

A MEDICAL OFFICER of HEALTH, at a salary of 300*l.* per annum.

A CHIEF SURVEYOR, at a salary of 300*l.* per annum.

An ASSISTANT SURVEYOR, at a salary of 120*l.* per annum, to act under the orders of the Chief Surveyor.

TWO INSPECTORS of NUISANCES, at a salary of 100*l.* each per annum; and

A MESSENGER, at a salary of 1*l.* 5*s.* per week.

The above officers will be required to devote their whole time to the duties of their office, which will be as defined by the Act of Parliament, and from time to time by the orders of the Vestry, except the medical officer, who will be allowed private practice, but must hold no other public appointment in the parish. Candidates are required to send in their applications and testimonials addressed to the Vestry, at the Offices, 37, Hoxton-square, on or before WEDNESDAY, the 19th inst.; and they must also attend the Committee (personally) at the School-room, adjoining the New Tabernacle, in Old-street-road, on THURSDAY, the 13th of MARCH, 1856, at ELEVEN o'clock in the morning. They will also be required to attend a special meeting of the Vestry, to be held at the School-room of the New Tabernacle, in Old-street-road, on WEDNESDAY, the 26th day of MARCH, 1856, at ELEVEN o'clock in the morning. The applications and testimonials of the candidates for the medical officer will be forwarded to the General Board of Health for examination, and if the report from the Board of Health should not be received by the 20th inst. the election of such officer will be deferred, of which due notice will be given. Any further particulars or information may be obtained by application to

Clerk pro tem. to the Vestry.

Offices, 37, Hoxton-square, 6th March, 1856.

THE MERTHYR TYDFIL LOCAL BOARD of HEALTH are desirous of receiving applications for the appointment of SURVEYOR to the said Board. He will be required to give the whole of his time to the Board, receive plans for building, inspect and measure all work done by the Board and their contractors, make out the accounts, and perform the duties required by the Public Health Act. Salary, 150*l.* per annum.—Applications to be addressed to **Mr. JAMES WARD RUSSELL**, Clerk to the said Local Board, on or before SATURDAY, the 15th day of MARCH next.

Merthyr Tydfil, February 28, 1856.

VESTRY of ST. MARY, NEWINGTON, SURREY.—Notice is hereby given, that this Vestry will meet on WEDNESDAY the 12th MARCH next, at SEVEN o'clock in the evening, at the Infant School-room, Queen's Head-row, Newington, to proceed to ELECT a ROAD FOREMAN, to act under and assist the Surveyor of Roads, at wages of 1*l.* 1*s.* per week. Applicants for the office must have a practical knowledge of the making and repair of roads and footpaths, and of paving; the qualities of stone and other materials; and must produce testimonials as to their conduct and efficiency; such testimonials must be sent to the undersigned on or before MONDAY, the 10th MARCH next, and the applicants must personally attend the Board and Paving Committee of the Vestry, at SEVEN o'clock in the evening of that day, at the Vestry room of the parish church, Newington.—Dated 27th February, 1856.

H. and F. CHESTER, Clerks to the Vestry,
1, Church-row, Newington-butts.

WANTED, for a Builder and Contractor's establishment in Liverpool, a FOREMAN, to take the out-door department. No one need apply who is not fully competent to undertake such a situation.—Address, stating wages required and references as to character and ability, to BUILDER care of Mr. H. Greenwood, 16, Cumma-place, Liverpool.

TO PLUMBERS AND GLAZIERS.

WANTED, in a country town, a good PLUMBER and GLAZIER for a constancy.—Apply to WILDER and TANNER, Chelmsford, Essex.

TO ARCHITECTS' ASSISTANTS AND DRAUGHTSMEN.

WANTED, immediately, a good ARCHITECTURAL DRAUGHTSMAN, who is capable of taking off quantities, estimating and measuring off works, has a practical knowledge of business generally, writes a good hand, and of steady habits. Applicants to state the salary.—Apply to Mr JOHN GREEN, Architect, 30 Grey-street, Newcastle-on-Tyne.

Mr. GREEN also has a VACANCY for a respectable Youth as PUPIL.

TO BUILDERS' CLERKS.

WANTED, in a Builder and Contractor's Office, a CLERK, fully qualified for making finished and working drawings, taking out quantities, estimating, measuring up works, and the general routine of a builder's office, and practically acquainted with the building business.—Apply by letter, with full particulars, salary, &c. to A. X. office of "The Builder."

WANTED, a CLERK of WORKS.—Apply to G. H. STOKES, Esq. Solicitor, 18, New-street, Spring gardens

WANTED, a CLERK of the WORKS, to Superintend the Restoration of a Church. Satisfactory references from architects will be required. Apply to Mr. WILLIAM SLATER, 4, Carlton-chambers, Regent-street.

TO BUILDERS.

WANTED, a SITUATION, in a Builder's Office, by a Young Man, who is fully capable of taking out quantities, measuring up works, and the general routine of the office. References unexceptionable.—Address, S. S. 47, Essex-street, Strand.

TO WHARFINGERS AND OTHERS

WANTED, by an intelligent and respectable Young Man, active and confidential EMPLOYMENT, who has a knowledge of bookkeeping, and of the Building and Wharfage businesses. Principals will meet with prompt attention by directing to A. B. Mr. D. White's, 3, Winchester-place, Pentonville-hill.

TO MASTER PAINTERS, BUILDERS, AND OTHERS.

WANTED, by a Young Man, aged 29, EMPLOYMENT as GRAINER, PAINTER, &c. or to superintend work. Has had first rate experience. Specimens on hand. Wages moderate. References given. Address, T. LLOYD, 26, Henry-street, Hampstead-road.

TO CARPENTERS AND BUILDERS.

WANTED, to APPRENTICE a strong, healthy Lad, for about TWO YEARS, where he will have an opportunity of improving himself in the practical part of the business, having followed the same about five years.—Address, J. KERRY, Southgate, Middlesex

TO BUILDERS, CONTRACTORS, &c.

WANTED, a SITUATION, by the Advertiser, who is about to leave a firm of high standing, where he has been engaged in the counting-house above eight years.—Address, T. HORNE, office of "The Builder."

WANTED, by the Advertiser, a SITUATION as SHOP FOREMAN of JOINERS. Has filled a similar situation with one of the principal builders in London for the last twelve years; cause of leaving being the proprietor is retiring from business. Unexceptionable references for character and ability.—Address, A. K. Mr. Grimsdell's, Bell-lane, Spitalfields.

TRAVELLER WANTED.—TIMBER TRADE.—Any person having a thorough knowledge of his business, of industrious habits, and if any connection at command the better, will be liberally treated with. Letters can be addressed in the first instance, stating age, previous employment, &c. to X. Y. Z. Messrs. Reynolds and Falconer, 15, Old Broad-street, City.

TO ARCHITECTS.

THE Advertiser, who is a first-rate Draughtsman, and has a thorough knowledge of detail and constructs is open to an ENGAGEMENT. Address, G. G. No 39, Michael's-place, Brompton.

TO BUILDERS AND SURVEYORS.

THE Advertiser is OPEN to a SITUATION in Town or Country, as WALKING FOREMAN, or ASSISTANT in the Office. Is well acquainted with the duties of an office, and can prepare fair and working drawings. If a place of trust be required, security can be given.—Address, J. C. care of Mr. Herman, the Square, High-street, Winchester.

THE FUNNEL FIRE-LIGHTER. — To OWNERS of MACHINERY, FIREWOOD DEALERS, and OTHERS.—WANTED, a person to MANUFACTURE the "FUNNEL FIRE-LIGHTER," for the Patentee. The article is made of firewood, and the chief operations to be performed are sawing, chopping, piercing, and threading. Securing a thorough draft of air through the mass of fuel to be lighted, with sufficient lateral expansion of flame, it is an unfailing fire lighter, needing no tell-tale and requiring no attention after being lighted. It also possesses the valuable property of concentrating the flame which is projected beyond the stove, and thereby making it useful for cookery, &c. the moment the article is lighted. It is also especially safe for children to use, as it throws out no sparks in front; and being cleanly, fashionable, and even elegant to look upon, and capable of being cheaply produced, it promises to light a good proportion of the half-million of fires daily made in London. The patentee is willing to contract with a manufacturer for such a supply of the article as he may need for the consumption of London, and all other places to which he may send the article from London.—Further particulars, specimens of the article, and the method of manufacture, will be shown to bona fide inquirers by Mr. W. H. NEWMAN, 43, Cannon-street-road, Commercial-road East.

TO ARCHITECTS.

THE Advertiser, who has had fifteen years' experience, is desirous of a RE-ENGAGEMENT, in a London Office. Is well acquainted with colouring, perspective, mediæval, and Italian details, and is considered a good draughtsman. References good. Salary moderate.—Address, Q. E. D. 3, Bloomfield-terrace, Pimlico.

TO ARCHITECTS AND SURVEYORS.

THE Advertiser is desirous of a SITUATION in either of the above Offices; is a good plain and perspective draughtsman, and accustomed to assist generally in taking out quantities.—Address, to the care of R. M. 34, Windsor-terrace, City-road.

TO WAREHOUSEMEN, WHARFINGERS, AND OTHERS.

THE Advertiser wishes for a SITUATION in any firm, as FOREMAN, or CLERK, to take orders, and attend to the delivery of goods, or any situation where trust is required. Can write a good hand, and keep accounts. Can have a character for honesty, sobriety, and attention to business.—A letter addressed to F. S. No. 4, King's-terrace, Hammersmith, will be immediately attended to.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

THE Advertiser, aged 33, is desirous of an ENGAGEMENT. Has had considerable experience in preparing working and finished drawings, estimating, measuring, and superintending works, and can take out the routine generally.—Address, J. K. Mr. Webster's, 8, Sandwich-street, Brunswick-square

TO BUILDERS

THE Advertiser, who is about leaving his situation, wishes for an ENGAGEMENT as SHOP FOREMAN, and well understands setting out hards, and is capable of undertaking any job. Good references given as to ability and sobriety.—Address, J. H. No. 8, York street, Hackney-road.

PLUMBING. — EMPLOYMENT Wanted, by a respectable experienced Man. Does not profess painting and glazing, but willing to make himself useful. Respectable reference.—Address, W. T. No. 4, Warwick-row, Pimlico.

DISCHARGE of DUTIES FAITHFULLY.

Any Builder or Contractor requiring a persevering Young Man of thorough business habits, as TIMEKEEPER or GENERAL FOREMAN, and who understands the executing and measuring of builders' work, will please address EDENDEN, 76, Harley-street.

TO ARCHITECTS.

AN experienced CLERK of WORKS is now at liberty for ENGAGEMENT with any gentleman in the profession.—Address, A. B. care of Mr. D. Carter, No. 1, Providence-place Clarence-road, Kentish-town, London

A YOUTH (16 years old), who can map and copy drawings, put plans on linen, write a good hand, and is accustomed to office business generally, wishes for a SITUATION. Salary, 12*s.* a week.—Address, prepaid, J. COOPER, Post-office, Mount-street, Lambeth.

TO ENGINEERS AND IRON FOUNDERS.

A THOROUGH practical experienced MOULDER in loam and sand castings of every description, wishes an ENGAGEMENT as FOREMAN. He is a good accountant, and quite capable of conducting a foundry on the most approved economical principles. Good reference can be given. Would have no object on to piecework.—Address, MOULDER, Office of "The Builder."

TO BUILDERS AND OTHERS.

A YOUNG MAN, 24 years of age, a competent Builder's Clerk, is open to an ENGAGEMENT. He was brought up to the trade, and has had six years' experience in the office of a great building establishment in London.—Address, Mr. SPENCER, Mr. Beddon, stationer, Worcester-street, Wolverhampton.

TO ARCHITECTS, &c.

AN ASSISTANT, accustomed to prepare finished working and detail drawings, and superintending works, wishes for an ENGAGEMENT, in town, either temporary or permanent.—Address, F. W. No. 8, Farringdon-street.

TO ARCHITECTS, SURVEYORS, &c.

A YOUNG MAN wishes for a RE-ENGAGEMENT in either of the above professional offices. Can draw out plans, elevations, and sections; has a slight knowledge of construction. Is a good penman, and a fair hand at accounts. Address, C. H. Office of "The Builder."

TO BUILDERS, &c.

AN experienced CLERK wishes EMPLOYMENT in an OFFICE, to make finished or working plans, take out quantities, or make estimates; is well acquainted with the general routine of office duties. Salary moderate. Good references.—Address, A. Y. No. 5, Gloucester-street, Regent's-park.

A GOOD THREE-BRANCH HAND wants a constant SITUATION. Understands general repairs in all its branches. First-rate references as to ability, &c.—Address, W. B. S. 33, Victoria-terrace, High-street, St. John's-wood.

TO ENGINEERS AND ARCHITECTS.

A YOUNG MAN, who has had much experience in PLAN DRAWING, is open to an ENGAGEMENT. Has a knowledge of French. For information as to ability and character, apply to F. H. ROUS, Wigton, Cumberland

TO ARCHITECTS.

A GOOD DRAUGHTSMAN, competent to make working, finished, and coloured perspective drawings, desires a RE-ENGAGEMENT, at a moderate salary.—Address, W. W. Office of "The Builder."

AN ARCHITECTURAL DRAUGHTSMAN is desirous of a RE-ENGAGEMENT in Town accustomed to the getting out of perspective, finished, working and detail drawings. Salary moderate.—Address, A. B. 9, Elizabeth-street south, Pimlico.

TO ARCHITECTS, &c.

A YOUNG MAN, with three years' experience in the Office of an Architect, Builder, and Surveyor, in a cathedral town, is desirous of ENGAGING in a similar SITUATION. Can produce satisfactory testimonials of character, with specimens of drawing and writing.—Address, F. S. Office of "The Builder."

TO ARCHITECTS.

AN ARCHITECTURAL COLOURIST of considerable experience, ENGAGES to COLOUR COMPETITION and OTHER DRAWINGS on reasonable terms. Perspective and other drawings put in outline. Lithographs, &c. &c. Drawings coloured, and transmitted to the country. Specimens produced.—Address, B. C. Mrs. Plummer's Library, Theobald's-road, Bedford-row.

A FIRST-RATE and expeditious PLAN DRAUGHTSMAN, ORNAMENTAL WRITER, and COLOURIST, is open to an ENGAGEMENT to make finished plans of town improvements, estates, railways, docks, mines, canals, roads, and progress of every kind. Has been employed by the most eminent engineers, architects, surveyors, and the Government for 18 years.—Apply by letter to R. THEODORE, 4, Trafalgar-square.

A YOUNG MAN, aged 20, from the country, who has had four years' practice at the carpentering and joinery trades in PLACE IS DESIRED IN SOME BUILDER for one or two years, for further INSTRUCTIONS. Can give the highest references.—Apply by letter to J. HURLEY, Beaumont Lodge, near Old Windsor, Berks.

AS CARPENTER.—WANTED, by the Advertiser, aged 40, a SITUATION, as CARPENTER and JOINER, on a gentleman's estate, or in any large establishment.—Can have sixteen years' unexceptionable character.—Address, post-paid, J. W. 5 a, Belvedere-road, Lambeth

PARTNERSHIP.—Capital required, about £2,000.—Any party having this amount at command, and who is either a good draughtsman, &c. or practical builder, may join the advertiser, carrying on business in the Midland counties, wherein a certain independence can be made. Testimonials as to character and general capabilities, will be required.—Address, by letter, to X. Y. H., Bolt-court, Fleet-street, London.

TO the ARCHITECTS of ENGLAND and SCOTLAND.—PARTNERSHIP.—A Married Gentleman, aged 30, who for 16 years has laboriously applied himself to the study of architecture in connection with eminent men and works, and has travelled much abroad, as well as all over England and Wales, and has acquired such facility for designs and rapid means of expressing them, by artistical and practical drawings, as never to have failed in success, is desirous of JOINING his SERVICES to an architect whose practice may be increasing, as to require a Partner to develope it. An enthusiastic admiration of his profession, with great application to the same, would be brought to bear on the services here offered. A library of architectural works, a large household of rich antique furniture, and a collection of photographs and pictures, would be brought to assist in retaining his position as that of a gentleman. Architects replying, to state terms and what works generally comprise their practice. Address, A. B. Z. Wade's Library, 13, High-street, Kensington.

GEORGE CUMMING, Manager.

N.B.—Agents are still wanted for some vacant localities.

SIXTH DIVISION OF PROFITS.

CLERICAL, MEDICAL, and GENERAL LIFE ASSURANCE SOCIETY, 99, Great Russell street, Bloomsbury, London.

SPECIAL NOTICE.

All persons who assure on the Participating Scale before June 30th, 1856, will be entitled to a Share of the SIXTH BONUS, which will be declared in the January following

Proposals should be forwarded to the office before June 1st next. The Thirty-first Annual Report just issued can be obtained of the Society's Agents, or of

GEO. H. PINCKARD, Resident Secretary.

SIXTH BONUS

UNION ASSURANCE SOCIETY.—(FIRE—LIFE—ANNUITIES).

Instituted in the reign of Queen Anne, A.D. 1714.

Cornhill, and 70, Baker street, London

Chairman—J. Remington Mills, esq

Deputy-Chairman—Henry Aldwin Soames, esq

James Bodley, esq.	John Paynter, esq.
Thomas Bodley, esq.	John Rogers, esq.
Daniell Britten, esq.	Henry Rutt, esq.
Nicholas Charrington, esq.	George Spencer Smith, esq.
S. Preston Child, esq.	Richd Hor-man Solly, esq.
William Gilpin, esq.	W. Foster White, esq.
Thomas Mills, esq. M.P.	Samuel Wilson, esq. Ald.
John Morley, esq.	Stephen Wilson, esq.

The LIFE BONUS of the year 1853, of four-fifths of the profits of the LIFE DEPARTMENT, has been just declared, and (with the exception of a reserve of nearly 50,000l. to accumulate towards the next Bonus of 1862), is payable upon and with the sum insured, being at the rate of 1l. 6s. per cent for the last seven years, on Policies effected in Great Britain upon the Profit System.

THIS BONUS MAY BE APPLIED EITHER

By having annual premiums reduced for the next seven years, which will in many cases extinguish the same for that period;

Or by adding the amount to the sum insured;

Or the value thereof may be received immediately in money.

The Directors beg to state that, by a recent change in the regulations of the Society, the assured realize the advantages of MUTUAL OFFICES by sharing the entire profits, less one fifth as a small compensation for the necessary guaranteed, and are free from the liabilities incurred by the members of such Societies.

The accumulated invested capital now amounts to upwards of ONE MILLION sterling

THOMAS LEWIS, } Joint Secretaries.
WM. B. LEWIS, }

THE PERMANENT WAY COMPANY, 26, Great George street, Westminster, have now published a Second Edition of their CIRCULAR, which may be had post free upon application. Among other recent important Inventions, the Company beg to call particular attention to Prosser's Patent for Casting Railway Chairs, Pole's Patent Improved Fish Joint, and Dr. Boucherie's improved Process for Preserving Sleepers, Fencing, Telegraph Posts, &c. from decay.—Every information may be had upon application to CHARLES MAY, F.R.S. the Manager; or to WILLIAM HOWDEN, Secretary.

Coarse	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED his Establishment on the Surrey side of the Thames, and that articles of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Pread-street, Paddington.

BATH, PORTLAND, and ROMAN CEMENTS GROUND and LUMP HYDRAULIC BLUE LIAS LIME.

The LONDON and WEST of ENGLAND CEMENT COMPANY can offer to the trade the best Hydraulic Cements, at reduced prices, the material being excavated in its pure and unadulterated state, from quarries on their own property. The Company particularly recommend a trial of their XXXX Bath Cement, as far superior to any article now in the market. These cements can be sent by rail or shipped from their wharf, direct to all parts.—Agents required, and a liberal discount allowed. Orders received by Mr. KIALLMARK, 80, Old Broad-street, City, or by RICHARD WINTER, Cement Works, Dunball, Bridgewater.

BATH CEMENT.
CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

PORTLAND CEMENT.
CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.
11, George-yard, Lombard-street, City.

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. This internal stucco may be painted or papered within a few hours of its application, and rooms be thus made dry and habitable immediately.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.

These cements set under water in a few minutes, and are not affected by extreme heat or cold.

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

HUBBUCK'S PATENT WHITE ZINC PAINT,
The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be altogether avoided. The Powdered White Zinc can be had for grinding in Oil; also for Plaster Decorations, and may be used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK LONDON PATENT. And when so marked, the quality is guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London
N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and 1 Seel street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that it can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

DOVERCOURT CEMENT WORKS, HARWICH, ESSEX.

JOHN PATTRICK being now the only ROMAN CEMENT Manufacturer at Harwich, hereby informs the public that he continues to carry on a Wholesale Business, and offers to Contractors, Builders, &c. by the freight or half freight, ROMAN CEMENT of the quality usually made at this works.—Applicd a either at Harwich or to the Agent, GEORGE MORRIS, 20, New Ormond street, Queen-square, London.

P.S. Inland London trade will in future be supplied from Messrs. ROBINS and CO. Scotland-yard, Westminster, instead of Whitefriars.

TO BUILDERS, CONTRACTORS, SHIPPERS, and Others.

G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster.
DAVIES and NORMAN, Agents.
Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.
IN EVERY VARIETY.

NOTICE.—BLUE LIAS LIME.—L. B. PEARSE and CO beg to inform Architects, Engineers, Builders, and Contractors generally, that they have now accepted the AGENCY for the above valuable HYDRAULIC LIME, from the original quarries, Stockton, Warwickshire, and are now supplying direct from the works in their own boats, at a reduced rate.

L. B. PEARSE and CO. beg further to give notice to consumers, that they have erected, at a considerable expense, large buildings and machinery for grinding lime and cement, so as to insure genuine quality and large supply, at their extensive premises, situate on the Great Northern Railway, York-road, King's-cross.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 9d. per ton.
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, generally to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

GIBBS, CANNING, and CO.'S BLUE VITRIFIED BRICKS, PIPES, JUNCTIONS, BENDS, and FIRE GOODS.
ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.
SECONDS, PAVIORS', STOCKS, and other BRICKS.

GREAVES'S BLUE LIAS LIME.
CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

NOTICE.

SOUTHAM HYDRAULIC BLUE LIAS LIME.

WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump lime boats at the Works—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants Builders, contractors, and others supplied with every description of building material at the lowest market prices.

JOHNS and CO.'s PATENT PERMANENT STUCCO WASH (perfectly non absorbent) STUCCO CEMENT, STUCCO PAINT.—CLARK and BENGOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road. Office, 4, George-yard, Lombard-street.

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c.—Messrs. MEESON and CO. supply stocks, pickings, rough stocks, place, red kiln bricks, paviors, &c. &c. on low terms, to any part of the Thames, the various canals, the River Lea, &c. or by rail to any station on the Eastern Counties line, or any railway connected with it. Also, flints for building boundary walls, stables, cottages, &c. by using which one-third of the expense may be saved. Also, lime, chalk, chalk rubbish, gravel, loam for foundries, &c. &c. Whiting of the best quality, lime, both white and flare, bricks, fire-goods, &c. can be obtained at Messrs. MEESON'S Wharf Kilns at Bow-bridge, Stratford, Essex; or from the Works at Gray's, Essex.—Orders, by letter, to Messrs. MEESON and CO. Gray's, Essex, executed with despatch.

IMPORTANT to BUILDERS.—GREAT REDUCTION in the PRICE of BRICKS.—BRICKS delivered to any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey Stocks, 26s. per thousand; Grizzles, 29s. per thousand; Rough Stocks, 30s.; Place, 13s. to 15s. per thousand.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable to external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

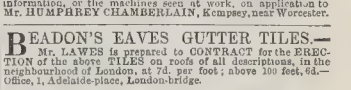
N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

THE BEST HERTFORDSHIRE MALM SECONDS;
THE BEST WHITE SUFFOLK and RED FACINGS:
DEEP-RED RUBBING BRICKS.
Also COWLEY and KENT STOCKS, in any quantity.
J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY
(Within a short distance of the five bridges)
THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.
Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

WHITE SUFFOLK PERFORATED BRICKS.—Messrs. J. EASTWOOD and SONS take this opportunity of informing their customers and the trade, that they have made arrangements for the Manufacture of White Suffolk Perforated Bricks. In curing defects common to bricks of this description, care has been bestowed to produce them of a true and perfect shape, of an even and beautiful surface, and free from fire-flaws.—J. EASTWOOD and SONS, Belvedere-road, Lambeth.

WHITE SUFFOLK and RED FACING BRICKS,
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters, Paviors, Slippers, &c.
KENTISH RAG-STONE of the FINEST QUALITY.
MILLS and PRICE, 5, ADELAIDE-PLACE, London-bridge.



REMOVED FROM CRITCHILL-PLACE, NEW NORTH-ROAD, HOXTON.

BRICK MOULDS (improved), Steel-face Stocks and Plates, with Screw Stock Pegs, used four seasons. Various sizes kept on hand. References where in use. Brick Mill Work and Implements.—J. LEACH, Millwright and Engineer, 9, St. Peter's-square, Hackney-road, London.

THE PATENT BRICK-MACHINE COMPANY invite orders for their IMPROVED MACHINES, the only ones that manufacture solid bricks equal to hand-made, will shortly be at work in a field near London, accessible by railway, where it may now be seen with bricks of last season.
H. C. MOUNT, Secretary.
17, King William-street, City, February, 1856.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 solid bricks per day, of far superior quality to hand-made, with 3-horse power; one man to feed the machine with clay, and boy to remove the bricks. For a plate and description, see "Practical Mechanic's Journal," for January 1st, 1856. Any further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 1, Adelaide-place, London-bridge. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvefoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 6d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 91, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "Errors of the Times," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Tilleries," Tunstall, Staffordshire, as the first of the kind in the world.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Baloonies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Covings for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had, in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

WARNER'S PATENT VIBRATING STANDARD PUMPS.

—PATENT CANTON PUMPS, for the use of farms, cottages, manure-tanks, and wells of a depth not exceeding 30 feet.

Diameter of Barrel.	Length of Barrel.		£ s. d.
2½ in.	short 1 ft. 7 in.	Fitted for lead, or gutta percha or cast iron flanged pipe, as required.	1 10 0
2½ „	long 3 3		1 14 0
3 „	ditto 3 6		2 8 0
3½ „	ditto 3 6		2 12 0
4 „	ditto 3 6		3 3 0
2½ „	short, with 15 feet of lead pipe attached, ready for fixing		2 14 0
2½ in.	long ditto ditto		2 18 0

The short-barrel Pump is very convenient for fixing in situations of limited height and space, for the supply of coppers and sinks in washhouses with soft water from underground tanks, or in hot-houses, forcing, and plant houses; they may be fixed, when desired, under the stage.—May be obtained of any Ironmonger or Plumber in town or country, at the above prices, or of the Patentees and Manufacturers, JOHN WARNER and SONS, No. 8, Crescent, Jewin-street, London.—Every description of Machinery for Raising Water, by means of wheels, rams, deep well pumps, &c. Also, Fire and Garden Engines, &c. &c.—Engravings sent on application.

R. RICHARDS and CO. PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 18-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 3s. per doz. painted.
Ditto .... 4s. per doz. galvanized

Upper Ground-street, Blackfriars Bridge, Surrey Side.

B. FOWLER & CO.'S PORTABLE PUMPS,

3-inch to 9-inch Barrels.

Plain or Sliding Telescope Suction,

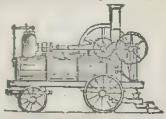
ON HIRE.

SINGLE AND DOUBLE PUMPS, all sizes, to any depth, for Hand or Steam Power.

Patent Double-action and General Pump-makers, Builders' Smiths, &c.

WHITEFRIARS-STREET, Fleet-street.

PORTABLE STEAM-ENGINES and PUMPS



kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

PUMPING and WINDING ENGINE.—

TO BE LET on HIRE, or for SALE, a nearly new strong and simple PUMPING and WINDING STEAM ENGINE, of 10-horse power, by Medway and Hall, with a pair of 10-inch pumps and all the driving gear complete. The contractor for whom it was fitted up will make a considerable sacrifice on the cost price, or let the whole on hire.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, 22, Blackfriars-road.

STEAM PUMPING ENGINES.—

PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

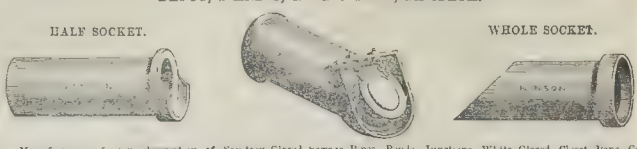
JAMES BURTON & SONS, Engineers and Contractors, John's-place, Holland-street, Southwark, London.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process of metal therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has hereto fore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, ready or in reels.

TUNED BY MACHINERY.



Stocked and unhelved ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system which gives superior tone and facility for ringing.

KINSON POTTERY AND CLAY WORKS, POOLE, DORSET.

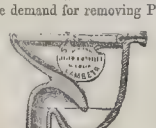
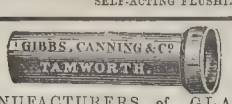
GREAT REDUCTION IN GLAZED STONEWARE PIPES.



STEPHEN GREEN,

IMPERIAL POTTERIES, LAMBETH.



S. G. wishes to call attention to his WHOLE and HALF-SOCKET PIPES, made on the principle of PILBROW'S IMPROVED REBATED SOCKET-END, which fully secures a joint free from obstructions, and meets the demand for removing Pipes at any point.

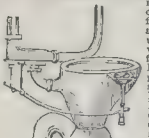
5s. 6d. each; if fitted with PATENT AIR-TIGHT VALVES, 1s. 6d. each extra.

Also to his IMPROVED REGISTERED CLOSET-PAN, with an impervious White Glaze inside, and formed to insure a Flush of Water over the entire Internal Surface. Made with or without STEPHEN GREEN'S PATENT AIR-TIGHT VALVE on the top of the Trap.

N.B. Prospectuses, with Prices and Terms, forwarded post-free, as also Prospectuses of STEPHEN GREEN'S PATENT SELF-ACTING FLUSHING CLOSET, complete, with Seat and Riser, &c.

MANUFACTURERS of GLAZED STONEWARE PIPES, Bends, Junctions, &c.; also FIRE BRICKS, Vitrified Blue Bricks as used by her Majesty's Commissioners of Sewers, White Fire Clay, Facing Bricks, &c. &c. Agents, CHARLES RICHARDSON, No. 6, South Wharf, Paddington, London.

LYTCHETT POTTERY.—For SALE by PRIVATE CONTRACT, the LEASE and PLANT of the above Premises. The lease consists of about fourteen acres of land and a good cottage. The land contains a large quantity of very superior clay for pottery and fire-goods. The drain-pipes made from the clay are equal, if not superior, to any yet in the market; and the fire-goods will bear comparison with any yet made. The plant comprises three pottery kilns and two brick kilns, with pipe machines, pug-mills, and all other necessary appliances. Lytchett Pottery is 1½ miles from the South-Western Railway, and 3 miles from the port of Poole.—For further particulars, and to view, apply to H. F. FISHER, Blandford.



PATENT DRAIN-PIPES, UNGLAZED, manufactured by ARTHUR C. FRANCIS and CO. Grays, Essex, sold by them, and by FRANCIS, BROTHERS, Nine Elms, London, and at all their Warehouses.

PRICES.

3 inch bore, in 2 ft. 6 in. lengths, at				3d. per foot.	
4	"	"	"	4d.	"
6	"	"	"	6d.	"
9	"	"	"	9d.	"
12	"	"	"	1s. 3d.	"
15	"	"	"	2s. 6d.	

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture, and it is well known that good earthenware, UNGLAZED, is the oldest material discovered in the perfect state in Rome, Babylon, Nineveh, &c. &c.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 22, Old Fish street, near St. Paul's, London.—Price for Closet and Apparatus complete, from 25s. and perfect action guaranteed.

GREAT REDUCTION in the PRICE of STONEWARE POTTERY from this date.

VICTORIA POTTERY, LEIGH, near SOUTHEND; London Establishment,—Falcon Wharf, 80 Bankside.—DAVID MOUNTAGUE, Manufacturer of every article of Lambeth POTTERY, having now further reduced the prices, begs to offer to consumers and others, STONEWARE PIPES, &c. &c. on the most advantageous terms. The new lists of prices will be forwarded on application as above.—Feb 11, 1856

TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES

ARROWSMITH and CO. 30, New Bond-street.

SALES BY AUCTION.

TO LAND and BUILDING SOCIETIES and OTHERS.—Votes for the County of Kent.—Eligible Freehold Building Land, land-tax redeemed, near to the entrance-gates of the Royal Arsenal Woolwich.

MESSRS. CHURCH and SON are favoured with instructions to OFFER FOR SALE, by PUBLIC AUCTION, at the BROWN-HALL, William-street, Woolwich, on THURSDAY, MARCH 13, 1856, at THREE for FOUR o'clock in the afternoon, SEVENTY-SEVEN PLOTS of Valuable FREEHOLD BUILDING LAND, land-tax redeemed, most eligibly situated on the high-road, Plumstead, within five minutes' walk of the lower entrance-gates of the Royal Arsenal, and immediately adjoining the level crossing of the North-Kent Railway. This land offers advantages to large and small capitalists rarely to be met with. It forms part of the Goldie farm and orchard, is in a high state of cultivation, and is planted with luxuriant fruit-trees. Each lot will have a frontage on an excellent new road, which it is proposed to extend to Plumstead-common, with a direct communication from Plumstead-road, and I will entitle the purchaser to a vote for the county of Kent. Plans, with particulars and conditions of sale, may be had of Messrs. Wilson and Stevens, 18, London-street, Fenchurch-street; of H. J. Parker, Esq. 16, Austin-friars; at the Mart; and of Messrs. Bruton and Sons, 23, Gresham-street

ESSEX.

MESSRS. BEADEL and SONS are instructed to SELL by AUCTION, at the MART, on TUESDAY, MARCH 25, EIGHT brick-built and tiled COTTAGES, situate on Chadwell-heath, in close proximity to the high-road from London to Romford, let at rents amounting to 73l. 4s. per annum. The benefit of Interest rising from the House Sites and Premises, known as 1, High-street, Whitechapel, held from the Mercers' Company, at 2l. per annum, and let to a most respectable tenant at 80l. per annum; a Policy of Assurance in the Equitable Office, for the sum of 1,000l., effected in the year 1838, upon the life of a healthy aged party.—Particulars and conditions of sale may be obtained of Messrs. Wilson and Stevens, 18, London-street, Fenchurch-street; of H. J. Parker, Esq. 16, Austin-friars; at the Mart; and of Messrs. Bruton and Sons, 23, Gresham street

ESSEX land MIDDLESEX.—Paulatim Lodge, Dagenham.—Valuable Detached Enclosure of Arable Land, and Five Houses in the Baronga-wells road Clerkenwell.

MESSRS. BEADEL and SONS have received instructions to SELL by AUCTION, at the MART, London, on TUESDAY, MARCH 25, at TWELVE, a very desirable VILLA RESIDENCE, known as Paulatim Lodge, with conservatories, excellent out-buildings, and tastefully laid-out grounds, together with a small pasture adjoining, pleasantly situate on Chadwell-heath, within three miles of the village of Dagenham, two miles from Romford, and three from Ilford, at both of which are stations on the Eastern Counties Railway; a valuable detached enclosure of productive Arable Land, known as Mill Field, containing 5a. 3r. 8p. in the occupation of Mr. Thomas Wane, at 14l. per annum; also, a desirable Leasehold Property, comprising five houses in Oldbarg-gardens, Baronga-wells-road, Clerkenwell, let to respectable tenants at rents amounting to 94l. 10s. per annum. Possession of the residence can be had upon completion of the purchase.—Particulars and conditions may be obtained of Messrs. Paterson and Brandbury, Solicitors, 18, Basinghall-street; at the Auction Mart; and of Messrs. Beadel and Sons, 23, Gresham-street.

Sixth Sale of the Surplus Property belonging to the North London Railway Company, with Votes for the County of Middlesex.

MESSRS. BEADEL and SONS have received instructions from the Directors of the above Company, to SELL by AUCTION, at the MART, on TUESDAY, MARCH 11, at TWO o'clock, in FIVE LOTS, the Valuable Portion of the valuable FREEHOLD SURPLUS PROPERTY adjoining the Railway, Camden-town, comprising several freehold Houses, let on rents amounting to 72l. per annum, and the valuable secured ground rents arising from houses in Brecknock-place, Great and Little Randolph-streets, Grange-street, and Frederick-place. Also Shepherd House, Homerton, and a plot of valuable leasehold building land at Dalston. Particulars may be obtained of Messrs. Tarry, Pearse, and Tarry, Solicitors, Gail-hall-yard, off Messrs. Kenyon and Bonnin, Norwich-road, Camden-town; at the Auction Mart; and of Messrs. Beadel and Sons, 23, Gresham street

Valuable Building Materials of Aberdeen Cottage, Balham, Surrey.

MESSRS. NORTON, HOGGART, and TRIST have received instructions from the Crystal Palace Railway Company to offer for SALE, on the PREMISES, on TUESDAY, MARCH 11, at TWELVE, in lots, with all the slightest reserve, the valuable BUILDING MATERIAL of a spacious residence, offices, &c. situate at Balham, within a few doors of Balham-hill Chapel, with walls and other fences; consisting of good sound timber, slated roofing, boarding, joists, joists, girders, glazed sashes, panelled doors, marble chimney-pieces, lead flats and cisterns, copper hips, ridges, pipes, pumps, and the whole of the valuable fixtures, and a variety of useful materials. A more detailed advertisement will appear early next week.—Catalogues are in preparation, and may shortly be had at the Plough, Clapham; Castle, Tooting; Spread Eagle, Wandsworth; on the Premises; and of Messrs. Norton, Hoggart, and Trist, 69, Old Broad street, Royal Exchange.

HALL has been favoured with instructions to SELL by AUCTION, on the PREMISES, on THURSDAY, MARCH 13, at TWELVE for ONE, the essential portion of the valuable MATERIALS of Her Majesty's Stationery Offices, Great James-street, Westminster; comprising massive timbers of scantlings, the joists of which are well seasoned, internal and external doors; forty pairs of sashes and frames; clean flooring boards and battens; register and other stoves; wainscoting and partitions; frames, principals, and trusses; girders, stone-paving steps, and landings; a large quantity of excellent brickwood, and various other useful materials and fixtures. May be viewed, and catalogues had on the Premises; and at the Auctioneer's Offices, Chester-street, Kennington.

IN BANKRUPTCY WITHOUT RESERVE TO TIMBER MERCHANTS, SHIP-BUILDERS, BUILDERS, CARPENTERS, &c. &c.

MR. FREEMAN is instructed by the assignee of Messrs. Pearson and Steel (bankrupts), to SELL by AUCTION, on the PREMISES, Norway Wharf, Millwall, Poplar, on TUESDAY, MARCH 11th, at ELEVEN o'clock precisely, all the extensive and valuable STOCK-IN-TRADE, comprising every variety of British and foreign timbers, planks, and cut stuff, Norway and other spruce and pine logs, yellow pine and white spruce deals, boards, battens, battens prepared yellow and white flooring boards, Baltic lath-wood, laths, &c. &c.; also a four wheel phaeton, timber carts, carriages, and other trade implements, cutting-house fittings, &c. &c.—May be viewed two days previous to, and morning of sale, and catalogues had on the Premises, and of the Auctioneer, 3, Crooked-lane, London-bridge.

FREEHOLD GROUND for Building on.—TO BE LET, upon BUILDING LEASES, PLOTS of GROUND, in that healthy locality, Holloway, two or three minutes' walk from the Archway Tavern. Omnibuses every four or five minutes to all parts of London. Situate in St. John's road, where houses let as fast as built.—For particulars, apply to Mr. H. WITHERS, 9, Poultry; or Mr. WILLS, 2, Esplanade, Ealing. The leases direct from the freeholder.

LAND TO BE LET, on Building Leases for 100 years, at the Kilburn-park Estate, Paddington, for the erection of upwards of eighty semi-detached moderate and compact villa residences. Advances of money to parties of respectability if required.—Apply to Mr. J. BLORE, Architect and Surveyor, 8, Michael's-place, Brompton.

FREEHOLD GROUND, Fetter-lane.—The Commissioners of Sewers for the City of London hereby give Notice that they will meet in the GUILDHALL of the said City, on TUESDAY, the 22nd day of APRIL next, at TWELVE o'clock at noon precisely, to receive PROPOSALS for taking on BUILDING LEASE for eighty years, certain PLOTS of GROUND, situate at the south-east end of Fetter-lane. Further particulars may be had, and a plan seen, on application to Mr. HAWKSLEY, Engineer to the Commissioners at their Offices in the Guildhall. The Commissioners will not be required to accept any proposal unless they shall approve the plan and elevation of the Premises proposed to be built to be submitted to them for approval; and do not bind themselves to accept any proposal unless they shall approve thereof. JOSEPH DAW.

Sewers-office, Guildhall, March 4th, 1856.

SUPERIOR BUILDING LAND TO LET, near Carlton-hill, St. John's Wood, and Kilburn-gate; 110 feet above the Thames: commanding views of Hampstead and Richmond; adapted for detached and semi-detached villas of 60l. to 100l. yearly rental. Leasehold for ninety-five years. Rent, 5s. per foot frontage; average depth, 95 feet.—Address, Mr. BALL, 44, Regent-street, Piccadilly.

STRATFORD, ESSEX.—FREEHOLD LAND within three miles of London, exceptionally free land tax, and free of tithe, TO BE LET on lease for a long term of years, in large or small pieces, suitable for manufactories or building purposes. Apply to Mr. W. H. DEAN, Auctioneer and Surveyor, Stratford; or to Mr. GEORGE POWNALL, Surveyor, 37, Bloomsbury square, London.

TO BUILDERS

STOKE, next GUILDFORD.—Parties desirous of TENDERING for the ERECTION of SCHOOLS and MASTER'S RESIDENCE, for the above parish, can inspect the plans and specification, and obtain bills of quantities upon the usual terms, at my Office, Guildford, on and after MONDAY, the 10th instant, where said Tenders will be received up to FIVE o'clock, on THURSDAY, the 20th instant. The Committee to act and themselves to accept the lowest or any Tender.

March, 1856. THOS. GOODCHILD, Architect.

TO WHARFINGERS, COAL-MERCHANTS, and OTHERS requiring WATERSIDE PREMISES.—TO BE LET, BEAUFORT WHARF, Carting-lane, Strand. There is water way for craft of large burden, and premises for twenty horses, with roomy lofts, and other out-buildings. There is also a neat dwelling-house and counting-house.—Inquire of Mr. PRESTON, Jun. 10, Wych-street, Drury-lane.

BUILDING LAND TO BE LET, at

HALLSVILLE	Term	1,000 years,	for small cottages.
CANNING TOWN	"	1,000	" for small cottages.
NORWOOD	"	1,000	" for villa residences
STRATFORD	"	100	" for small cottages.
POPLAR	"	98	" for four-rate houses.

Advances 70l. to 100l. at 5 per cent. on each cottage.
Apply to Mr. Wm. ELLISON, Architect, Stainsby-road, Poplar.

Guildhall, London, 28th February, 1856.

THE COMMITTEE for LETTING the BRIDGE-HOUSE ESTATES will meet at Guildhall on FRIDAY, the 14th day of MARCH next, at ONE o'clock precisely, to receive TENDERS for a BUILDING LEASE for Eighty Years of a Plot of Ground on the west side of Old Change, in the City of London. A plan of the ground and conditions for letting may be seen at the Architect's Office, Guildhall.

FERDINAND BRAND, Comptroller.

TO BUILDERS and OTHERS. — An excellent SITE TO BE LET or SOLD, for BUILDING PURPOSES, with a good frontage to Kingsland-road, in a thoroughfare, and in an established neighbourhood, well adapted for shops and dwelling-houses, and workshops. The materials of the present detached premises, if sound, are adapted for any new buildings that may be approved. Money will be advanced if required by the purchaser, or taken to carry out the undertaking, upon a satisfactory arrangement.—Inquire of Messrs. HOWARD and DOLLMAN, Solicitors, 141, Fenchurch-street; Mr. EDWARD LOWTHER, 28, Red Lion-street, Clerkenwell; or of Mr. MURRELL, Auctioneer, 1, Walbrook, City.

TO BUILDERS and OTHERS.—TO BE LET, a most eligible PLOT of FREEHOLD LAND, land-tax redeemed, near Clapham-park, on most advantageous terms, sufficient for about forty-two houses, suitable for fourth-rate houses and shops, with a good corner for a public-house; or the Freehold to be Sold.—For particulars, apply to R. G. care of Mr. Doyle, 4, Maze-pond, Borough.

HARROW.—FREEHOLD LAND.—TO BE SOLD, 100 ACRES, in a ring fence, and several other eligible plots of FREEHOLD LAND, at a moderate price, contiguous to the Harrow Railway Station, surrounded and intersected by capital roads. Residents are entitled to the privileges of the Harrow School, and the London and North-Western Railway Company offer to persons building houses of approved character, worth 25l. per year each, a free first-class pass to and from Harrow station and Euston square, for eleven years. There is an abundant supply of excellent water, and very superior beer is sold on the land.—Apply to WILLIAM B. COOPER, Esq. Solicitor, 8, Vernham buildings, Gray's-inn

TO BUILDERS.

LEE, near BLACKHEATH.—FRONTAGES TO BE LET, for detached or semi-detached villas, on the Belmont Estate. This estate contains the finest sites for building purposes in the neighbourhood, and a villa on it will meet a ready demand, on account of the situation being lofty, dry, well drained, and exceedingly healthy. Assistance will be afforded to responsible parties. For further particulars, apply to Messrs. J. and C. W. Todd, Milner-street, Brompton, Land Surveyors, Lee, Kent; or Messrs. NELSON and INNES, 5, Whitehall.

ALDERSHOTT CAMP.—PLOTS of LAND TO LET on Building Leases, commanding good frontages and admirable sites, for the permanent barracks now erecting, and near the Queen's pavilion. For particulars apply to Mr. THOMAS WHITE, Jun. near the Alliance Hotel, and opposite the permanent barracks, Aldershott, Hants.

NEW BOND-STREET.—TO BE LET on LEASE, CAPITAL PREMISES, 60 feet deep, in perfect repair, suitable for a Public Institution, Club, Bank, &c. containing elegant suites of rooms on the ground and first floors, and cellarage, with area above.—Apply to Messrs. RUSHWORTH and JARVIS, Auctioneers, Saville row, Regent-street; and 19, Change-alley, Cornhill.

FOUNDLING HOSPITAL.—The Committee of Governors will meet at the Hospital on SATURDAY, the 15th instant, at TEN o'clock, to receive PROPOSALS for a LEASE of PREMISES in Sugar-loaf-court, Gartlick-hill, Upper Thames-street. Plans of the property may be seen, and further particulars obtained, at Mr HENRY CURREY'S Office No. 4, Lancaster-place, Strand.—By order of the Committee,

March, 1856. J. BROWNLOW, Secretary.

FREEHOLD SITE, fit for a PUBLIC BUILDING, about eight miles from London, on the road to Kingston, near two railways. A most healthy spot, with finest views, to secure its extent, with frontage of nearly 1,100 feet. Apply to Mr. ASHPITEL, 5, Crown-court, Old Broad-street, City.

TO BUILDERS and OTHERS. — Some CARCASSES, at HAMMERSMITH, TO BE SOLD, very cheap. A portion of the money for finishing may be had if required. Apply at S. W. JOHNSON'S, Esq. 8, Gray's-inn-square.

TO BE LET, a PLOT of GROUND, averaging about 37 feet by 54 feet, at the rear of Nos 32, 33, and 34, Marker-street, Borough-road, Surrey, suitable for the erection of builders' workshops thereon, or for other purposes.—For particulars apply to Messrs. WILLSHIRE and PARRIS, Architects and Surveyors, 4, Newcastle-place, Lambeth.

WATERSIDE PREMISES, Chancellor-wharf, near the Suggenson-bridge, Hammersmith. TO BE LET, or LEASE TO BE DISPOSED OF.—For terms, apply on the Premises

FREEHOLD LAND TO LET, on Building Leases. The Rev. WILLIAM FORD and Mr. HENRY WEBBER, executors of Richard Barford, Esq. late of Tollington-park, have to offer two valuable PLOTS of FREEHOLD LAND, for building purposes, for a long term of years, in Barford-street, Liverpool-road, Islington. The land-tax is redeemed, and the sewer is made.—For particulars, apply to Mr. HENRY WEBBER, Timber Merchant, 31, Old-street, St. Luke's

FREEHOLD LAND, SHEPHERD'S-BUSH.—TO BE LET, or SOLD, by Private Contract, about THIRTY-SIX ACRES of valuable FREEHOLD BUILDING LAND, land-tax redeemed; most desirably situate, three miles from Hyde-park.—Plans and terms of Mr PETER BROAD, 29, Poultry.

TO BUILDERS, CARPENTERS, AND OTHERS.

TO BE SOLD, the GOODWILL of an old-established BUILDER'S BUSINESS, a few miles from town. The stock may be taken at a valuation. The premises comprise convenient eight-roomed house, yard and workshops, &c. On the most reasonable and liberal terms. Bond fide only. For further particulars and terms, apply to Mr. W. R. GLASIER, Auctioneer, &c. 41, Charing-cross.

PAPER-HANGINGS.—TO BUILDERS, PAINTERS, and the TRADE generally.—THUMBLE and CO Manufacturers, Leeds, beg to call the attention of the trade to their immense STOCK of PAPER-HANGINGS, at No. 3, Oxford-street, London, consisting of Gold, Flock, Satins, Oaks, Bustles, Granites, and Machine Goods. The whole being their own manufacture, can supply on the very best terms.

PAPER-HANGINGS. — JEFFREY, ALLEN, and CO. beg to inform the trade, they have a large selection of Paper-Hangings of their own manufacture, of all qualities, and at very low prices. They confidently invite attention to their Patent Flock Paper, as it is the most effective, are equal to any that can be manufactured.—J. A. and CO. are the sole proprietors of the Gutta Percha Paper, an efficient remedy for damp walls.—Factory, 115, Whitechapel; Show-room, 509, Oxford-street.

TO BUILDERS AND OTHERS.

CHEAP PAPER-HANGINGS. — Builders and Contractors having a quantity of Paper-hanging and Painting to do, are requested to find it advantageous to them, by applying to J. BALDWIN, as he would have no objection in taking house property in payment for the same.—J. BALDWIN and SON, House Painters and Decorators, 72, St. John-street, Clerkenwell.

PAPER HANGINGS! PAPER HANGINGS!! PAPER HANGINGS!!!—Builders, the Trade, Country Dealers, and others, will find an immense STOCK and endless variety of all classes of PAPER HANGINGS, at W. CROSBY'S MANUFACTORY, 29, Lowther Arcade, Charing-cross, London. Splendid new designs, both in machine and block printing, not to be surpassed by any house in England. Patterns sent for approval in town or country. Cheapest house for panel decorations. Terms, Cash.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSS'S WHOLESALE WAREHOUSE, 24, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX, Brothers & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, March 8, 1856.

ROYAL INSTITUTE of BRITISH ARCHITECTS

Incorporated 7th William IV.

16, Grosvenor-street, Grosvenor square, London, Feb. 1856.

Her Majesty having been pleased to grant her gracious permission that the ROYAL MEDAL be conferred on such distinguished architect or man of Science, of any country, as may have designed or executed any building of high merit, or produced a work tending to promote or facilitate the knowledge of Architecture, or the various branches of Science connected therewith, the Council of this Institute will, on 13th January, 1857, to take into consideration the appropriation of the Royal Medal.

Gentlemen desirous to compete for the SILVER MEDALS of the Institute, and the SOANE MEDALIONS, with its travelling fund, to be awarded for Essays, Illustrations, and Designs, may obtain the necessary information on application to the Honorary Secretaries, by letter, prepaid, at the above address.

ROYAL ACADEMY of ARTS, Trafalgar-square.

NOTICE to ARTISTS.—All Works of Painting, Sculpture, Architecture, or Engraving, intended for the ensuing EXHIBITION at the ROYAL ACADEMY, must be sent in on MONDAY, the 7th, or TUESDAY, the 8th of APRIL next, after which time no Work can possibly be received, nor can any Work be received which have already been publicly exhibited.

FRAMES.—All Pictures and Drawings must be in gilt frames. Oil Paintings under glass, and Drawings with wide margins are indispensable. Excessive breadth in frames as well as projecting mouldings may prevent Pictures obtaining the situation they otherwise merit. The other regulations necessary to be observed may be obtained at the Royal Academy.

JOHN PRESCOTT KNIGHT, R.A. Sec.

Every possible care will be taken of Works sent for exhibition, but the Royal Academy will not hold itself accountable in any case of injury or loss, nor can it undertake to pay the carriage of any package.

The prices of Works to be disposed of may be communicated to the Secretary.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART.

TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL-MALL, LONDON.

Art-Superintendent—RICHARD REDGRAVE, Esq. R.A.

Head-Master—R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful Art-education, to develope its relation to the requirements of trade and manufacture, and its application to the common uses of life. Special courses are arranged in order to qualify School-masters of Parochial and other Schools to teach Elementary Drawing as a part of General Education encurrently with Writing.

The Instruction comprehends the following subjects:—Free-hand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of Still-life, &c., the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the technical processes of China and Enamel Painting, Drawing and Engraving on Wood, and Lithography in Chalk and Colour. The two last classes for female students only.

Hours of Study—Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees 4l. per session, or part of the session. For Evening Classes only, 2l. per session.

The Class for Practical Geometry and Perspective, or that for Moulding and Casting, may be attended separately on payment of a fee of 1l. per session.

Students have full access to the valuable collections of the museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students not in training, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. M'Ian. Fees for Session,—Advanced Class, 2l. and 4l.; Elementary Class, 1l. Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall-mall, London.

COMPETITIONS.

TO ARCHITECTS.

MIDDLESEX INDUSTRIAL SCHOOL.—The Committee of Visitors appointed under an Act of the 17th and 18th Vict. cap. clxxix. to provide an Industrial School for the Juvenile Offenders of the County of Middlesex, invite Architects and Others, by PUBLIC COMPETITION, to furnish PLANS and ESTIMATES for such building, to be forwarded, sealed up, and addressed to the Chairman of the said Committee, at the Sessions-House, Clerkenwell, on or before SATURDAY, the 26th day of APRIL, 1856. Each set of plans is to be marked with a motto or device, and the name of the author is not to appear, but to be put in a separate sealed letter, bearing on the outside a corresponding motto or device. A premium of 150l. will be paid for the plan which shall be considered the best, 100l. for the next, and 75l. for the third.—Particulars as to the site, with a printed copy of instructions, and the conditions on which the premiums are offered, may be had upon application to me, at the Sessions House, any day between the hours of ELEVEN and FIVE o'clock.—Dated this 8th March, 1856

CHARLES WRIGHT, Clerk to the Visitors

GRANTHAM BURIAL BOARD.—EXTENSION of TIME for PLANS, &c.—The period for sending in Plans for Chapels, Lodge, and Entrance Gates, is EXTENDED to SATURDAY, 22nd MARCH. Plans are also requested for PLANTING the GROUND and LAYING OUT the ROADS and WALKS therein, two thirds as consecrated, one-third unconsecrated, to be sent in by the same time, for which an additional premium of 5l. is offered. The ground is an oblong square of 220 yards by 131 yards. Entrance west.—By order of the Board,

ROBT. HY. JOHNSTON, Clerk.

Grantham, February 20th, 1856.

GARSTON, near LIVERPOOL.—To ENGINEERS, SURVEYORS, &c.—The Survey for the District of Garston, to which the Public Health Act, 1848, is applied, being now ready, the Local Board of Health for that district are desirous of obtaining PLANS, SPECIFICATIONS, and ESTIMATES, for a system of SEWERAGE for effectually draining the district. Premiums of 70l. and 30l. respectively will be given to the Authors of the Two Plans, &c. &c. most approved of, which Plans, &c. &c. will become the property of the Board. The specification must contain all information regarding materials, expense &c. necessary to practically working of the drainage, and must include, so far as practicable, a scheme for preserving the sewage matter for agricultural or other purposes. Mr. HOPKINS'S Plans of the Parish, on the scale prescribed by the General Board of Health, are in the custody of the Surveyor, Mr. JAMES STANNING, and may be inspected at his house, Mount-pleasant, Aisburth, on application to him. Full information as to the required copies of the general plan, on a scale of two feet to a mile, may be had from the Surveyor. Architects' or contractors will be allowed to be taken from the original plans. Four plans, at least, from as many different bona fide competitors, must be sent in, otherwise the premiums will not be awarded.—The plans, specifications, &c. signed with a motto or device, and accompanied by a letter marked with a similar motto or device, enclosing the name and address of the Author, must be sent (carriage free) to the Office of Mr. J. B. LLOYD, Solicitor, 8, Exchange-alley, Liverpool, on or before the 15th day of MAY next

Dated the 5th day of March, 1856.

TO ARCHITECTS, BUILDERS, and OTHERS.—PREMIUM of 20l. for PLANS of OFFICES. The Directors of the Manchester, Sheffield, and Lincolnshire Railway Company offer a PREMIUM of 20l. for the best PLANS and SPECIFICATIONS for a STACK of OFFICES, to be erected near their docks, at Great Grimsby. The proposed site has a frontage of 100 feet to the Cleethorpes-road, and a depth of 120 feet. The offices are intended to be let, in suites of two or more rooms, to separate firms; and the object in view being to secure economic and convenient accommodation by THE MOST ECONOMICAL EXPENDITURE OF CAPITAL, the Directors will give a preference to the plans which best answer this object. The plans and specifications must be forwarded, under sealed covers, marked "Plans for Offices," to the undersigned, on or before the 7th APRIL next.—Any further information may be obtained, on application to ADAM SMITH, Esq. C.E. Great Grimsby.—By order,

EDWARD ROSS, Secretary.

Manchester, March 11, 1856.

THE BURIAL BOARD of the PARISH of BITCHIN, in the county of Hertford, are desirous of receiving PLANS, DESIGNS, and ESTIMATES, comprising ground-plans, sections, and elevations, for laying out, planting, and fencing a new BURIAL GROUND, with suitable entrance-gates to each end, and for building Two Chapels and a Lodge. The ground is nearly square and level, and contains five acres. The chapels it is proposed to have in the centre, and in one building: the area of the nave of each chapel to be 24 feet by 17 feet, and the chapels to be separated by a wall. The cost of the chapels and cottage not to exceed 1500l. The party whose plans are approved, and with the approval of the Board, to land the ground at 5l. the superintendence of the works. The plans and estimates must be delivered, free of expense, at the Office of the Clerk to the Board, situate at Hitchin aforesaid, on or before the 7th day of April next. Each plan is to be distinguished by a motto and a sealed letter similarly enclosed, containing the author's name and address, to be sent therewith. The Plans to be so delivered themselves to accept any plan, and all those not approved will be returned upon application. CHARLES TIMES, Clerk to the Board.

Hitchin, 14th March, 1856.

CONTRACTS.

TO BUILDERS.

TENDERS WANTED for the BUILDING of TEN HOUSES in Hart's-buildings, Bridge-street, Warrington, on the premises lately occupied by Mr. Joseph Chrimes. Cooper, and Mr. Thomas Leadbetter, Brewer. Plans and specifications to be seen at Mr. JOHN PIERPOINT'S, 27, Horse Market-street, Warrington, and Tenders to be sent, free of expense, to THEOPHILUS TUNSTALL, 27, Rederos-st eet, Liverpool, on or before 20th MARCH.—T. T. will not be bound to accept of the lowest Tender.

CONTRACTS.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London District hereby gives notice that sealed TENDERS, addressed to the Director-General of Contracts, will be received at the War Department, Pall-mall, on or before the 20th MARCH next, for the REPAIR of FIRE-PLACES, BUCKETS, and for executing the WORKS and REPAIRS of the Royal Engineer Department in the London District, viz.: LONDON, WINDSOR, CROYDON and CARSHALTON, HOUNSLOW and HAMPTON-COURT; for a period of three years from the 1st of APRIL, 1856, to the 31st MARCH, 1859. Printed schedules and forms of TENDER may be obtained at the Royal Engineers' Office, 11, James street, Pimlico, between the hours of TEN and THREE o'clock from the 1st to the 19th MARCH inclusive. The War Department reserves to itself the right of rejecting the whole or any of the Tenders.

Royal Engineers' Office, London District,
February 27, 1856.

TO BUILDERS.

PERSONS desirous of TENDERING for ADDITIONS and ALTERATIONS to the FARMHOUSE in the occupation of Mr. W. PARSONS: and new FARM BUILDINGS, at Elsfield, near Oxford, on the estate of Colonel North, M.P., may see the plans and specifications at Mr. W. PARSONS's, Elsfield. The Tenders are to be delivered at the Office of Mr. J. F. CLARK, Architect, Newmarket, on or before SATURDAY, the 22nd day of MARCH; and the lowest or any Tender will not necessarily be accepted.

TO GENERAL CONTRACTORS.

NORTH-COATS INCLOSURE, LINCOLNSHIRE. CONTRACT, No. 1.—The Valuer acting in the matter of the Inclosure of the Fifties or Outmarsh, at North-Coats, in the County of Lincoln, is desirous of receiving TENDERS for the ERECTION of the following WORKS, viz.:—For the FORMATION of about two miles in length of NEW SEA BANK, the EXCAVATION of about three quarters of a mile in length of NEW DRAIN, and the ERECTION of a NEW SEA SLUICE, of brick and stone, with land and sea doors, and all necessary piling and timber breastwork thereto. Plans and specifications of the said works have been prepared by Messrs. MAUGHAN and FOWLER, Architects and Surveyors, Louth, and may be inspected by Contractors, from the 17th to the 22nd day of MARCH, 1856, at their Offices, where all necessary information may be obtained.—Tenders for the whole of the works are to be delivered to them, before TWELVE o'clock on WEDNESDAY, the 26th day of MARCH, 1856, endorsed "Tender for North Coats Sea Work," and addressed to me.

CHARLES NORTH, Valuer.

South Moreby, March 5, 1856.

A good security will be required, and the Valuer will not be required to accept the lowest or any Tender submitted.

SURVEY of TIPTON PARISH.—The Tipton Local Board of Health are prepared to receive TENDERS for the SURVEY and LEVELS of the Parish, the whole of the work to be done in conformity with the requirements of the General Board of Health in London. Conditions may be seen at the Board's Offices, Church-lane, Tipton, on MONDAYS, WEDNESDAYS, and FRIDAYS, between the hours of NINE and ELEVEN a.m. No Tender will be received after MONDAY, the 24th day of MARCH, 1856. The Board do not bind themselves to accept the lowest or any Tender.

GEO. M. WARING, Clerk.

Church-lane, Tipton, Feb. 29, 1856.

SKIRWITH CHURCH.—To BUILDERS. Such persons as may be desirous of TENDERING for the ERECTION of the NEW CHURCH and PARSONAGE HOUSE, at Skirwith, near Penrith, in the county of Cumberland, are informed that the drawings and specifications may be seen at Skirwith Abbey, on application to the Rev. C. PARKER. Bills of quantities and forms of Tender will be furnished to Builders by the Architects, Messrs. FRANCIS, 38, Upper Bedford-place, Russell-square, London, who will also give any further information. The Trustees will not be bound to accept the lowest Tender, and no estimate will be received except up in the Printed Tender supplied by the Architects.—Tenders to be sent in, enclosed "Tender for Works, Skirwith Church, &c." and addressed to Messrs. FRANCIS, 38, Upper Bedford-place, Russell-square, London, on or before SATURDAY, the 29th of MARCH inst.

BOARD of WORKS, POPLAR DISTRICT. The STONE MERCHANTS, MASONS, SCAVENGERS, CARMEN, and OTHERS. The Board of Works for the above district will meet at the Town hall, Poplar, on TUESDAY, the 18th of MARCH instant, at SIX o'clock in the evening precisely, to receive TENDERS, and to CONTRACT.

FIRST.—For the Supply of Aberdeen, Haytor, or Guernsey Granite, Edge-Splayed Kerb, Granite Pitchers dressed for channels and for crossings, for Wooden York, and Broken Stone for Metal.

SECONDLY.—For Masons' Work.

THIRDLY.—For the Supply of Gravel and Flints.

FOURTHLY.—For Horses and Cart Hire.

FIFTHLY.—For the Collection of Dust, Ashes, Rubbish, &c. &c.

The several Contracts are to commence at Lady-day next, and to terminate at Lady-day, 1857. The Contractors will be required to furnish the names of two responsible persons who will be required to enter into bond with them, in the sum of 300l. for the due performance of their Contract, and to pay four per cent. on 5l. on the acceptance of their Tender, for the expense of Contract and bond to be prepared by the said Board. The Board do not bind themselves to accept the lowest or any Tender, and the parties Tendering will be required to be in attendance. Tenders must be delivered (sealed up) upon the forms prepared for that purpose (and none other will be received), on or before the 18th instant, at TWELVE o'clock, after which none will be received.—Further particulars and forms of Tenders can be had on application at the Town hall, Poplar, any day between the hours of TEN, a.m. and FOUR, p.m.

CHARLES C. CEELY, Clerk to the Board.

Town-hall, Poplar, March 7, 1856.

[For remainder of Contracts see next page.

CONTRACTS.

NEWPORT DOCKS.—NOTICE to CONTRACTORS.—The Directors of the Newport Dock Company are desirous of receiving TENDERS for the EXECUTION of the following WORKS:—An EXTENSION of the existing DOCK, ALTERATIONS and ADDITIONS to the present LOCK and ENTRANCE, and the CONSTRUCTION of an AQUEDUCT from the river Ebbw. The plans, sections, specifications, and conditions of the above-named works, and others connected with them, may be seen at the office of JAMES ABERNETHY, Esq., 3, Parliament-street, Westminster, Engineer to the Company, and at the Dock Office, Newport, Monmouthshire, on and after MONDAY, the 10th inst. of whom forms of Tender may be obtained. Sealed Tenders, addressed to the Secretary to the Newport Dock Company, Dock Office, Newport, Monmouthshire, to be sent in or delivered on WEDNESDAY, the 2d of APRIL next.

HENRY R. FORTE, Secretary.

Dock Office, Newport, Monmouthshire, 6th March, 1856.

THE BOARD of WORKS for the LIME-HOUSE DISTRICT: comprising the Parish of St. Anne, Limehouse, the Hamlet of Ratcliff, and the Parishes of St. Paul, Shadwell, and St. John, Wapping, Middlesex—TO PAVIORS and MASONS.—Notice is hereby given, that the Committee for Paving, Lighting, &c. will meet at the Offices of the Board, White Horse-street, Commercial-road East, on MONDAY, the 31st MARCH, 1856, at THREE o'clock in the afternoon, to receive TENDERS from persons willing to CONTRACT for the GENERAL WORKS and REPAIRS to the FOOT and CARRIAGE WAYS of the several streets, courts, alleys, and other places, under the jurisdiction of the said Board, for three years from 4th APRIL next. Further particulars may be known, and printed conditions, schedules of works, and forms of Tender obtained, by parties desiring to Tender for the Works, upon application at the said Offices after the 14th inst. between the hours of TEN and FOUR, upon payment of twenty shillings, which will be returned to each person sending in a Tender. Tenders, sealed up, and endorsed "Tender for Paviors' and Masons' Works," must be delivered at the said Offices not later than ONE o'clock on the said day of MARCH, 1856. The Board do not bind themselves to accept the lowest or any Tender. The security of two responsible persons will be required. No Tender will be received after the time specified, and unless upon the printed form.

By order, THOS. W. RATCLIFF, Clerk to the Board.

7th March, 1856.

THE BOARD of WORKS for the LIME-HOUSE DISTRICT, comprising the Parish of St. Anne, Limehouse, the Hamlet of Ratcliff, and the Parishes of St. Paul, Shadwell, and St. John, Wapping, Middlesex—TO PAVIORS and MASONS.—Notice is hereby given, that the Committee for Paving, Lighting, &c. will meet at the Offices of the Board, White Horse-street, Commercial-road East, on MONDAY, the 31st MARCH, 1856, at THREE o'clock in the afternoon, to receive TENDERS from persons willing to CONTRACT for the GENERAL WORKS and REPAIRS to the FOOT and CARRIAGE WAYS of the several streets, courts, alleys, and other places, under the jurisdiction of the said Board, for three years from 4th APRIL next. Further particulars may be known, and printed conditions, schedules of works, and forms of Tender obtained, by parties desiring to Tender for the Works, upon application at the said Offices after the 14th inst. between the hours of TEN and FOUR, upon payment of twenty shillings, which will be returned to each person sending in a Tender. Tenders, sealed up, and endorsed "Tender for Paviors' and Masons' Works," must be delivered at the said Offices not later than ONE o'clock on the said day of MARCH, 1856. The Board do not bind themselves to accept the lowest or any Tender. The security of two responsible persons will be required. No Tender will be received after the time specified, and unless strictly in accordance with the printed instructions to Tenderers.

THOS. W. RATCLIFF, Clerk to the Board.

7th March, 1856.

TO CONTRACTORS.

THE LOCAL BOARD of HEALTH for the City of BATH, hereby give Notice that they are ready to receive TENDERS from competent Persons who may be willing to undertake all, or any, or either of the following CONTRACTS.

TYERMAN'S PATENT HOOP-IRON BOND.

Adopted by the Honourable Board of Ordnance, the Commissioners of Parks, Palaces, and Public Buildings, &c. &c. &c.

TARIFF OF PRICES.

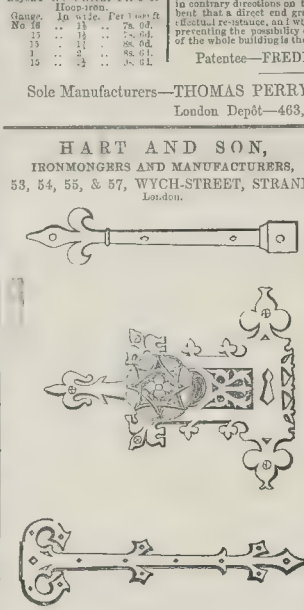
Beyond the current Prices of Hoop-iron.

Gauge.	In wide.	Per ton of 2240 lbs.
No 16	.. 1½ ..	78. 0d.
15 ..	1½ ..	78. 6d.
15 ..	2 ..	78. 6d.
1 ..	2 ..	88. 6d.
15 ..	2½ ..	98. 6d.

THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 1½ inches on both sides alternately, and turning one side of each notch in succession in contrary directions on the reverse sides of the iron, thus forming reversed claws, which are so bent that a direct end grain of the iron is presented longitudinally, offering most powerful and effectual resistance, and which become, when built into the brickwork, embedded in the structure, preventing the possibility of longitudinal escape, and a complete and permanent bonding together of the whole building is thereby obtained.

Patentee—FREDERICK TYERMAN, Architect, 44, Weymouth-street.

Sole Manufacturers—THOMAS PERRY and SONS, Government Contractors, Bilston.



London Depôt—463, OXFORD-STREET.

HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy it is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully entreated to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION, as THE ONLY WORKS in Great Britain where the above roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S BUILDINGS, BUNHILL-ROW, E.C. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

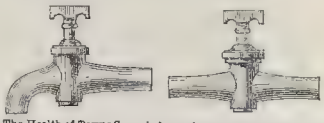
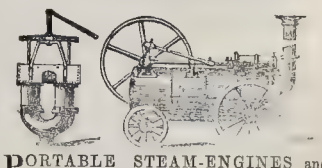
London Depôt—ESNOUF and MANGER, 141, Minories, City.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an



EXTERNAL WALL.



With single pulley, from 6s. each; with leading pulley, from 8s. 6d.
These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.
LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Cresceut, Jewin-street, London.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

PUMPING and WINDING ENGINE.—TO BE LET on HIRE, or for SALE, a nearly new strong and simple PUMPING and WINDING STEAM ENGINE, of 10-horse power, by Medwin and Hall, with a pair of 10-inch pumps and all the driving gear complete. The contractor for whom it was fitted up will make a considerable sacrifice on the cost price, or let the whole on hire.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, 92, Blackfriars-road.

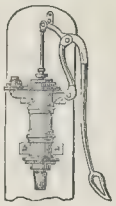
R. RICHARDS and CO. PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.
PUMPS ON HIRE.
Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 28s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.



B. FOWLER & CO.'S PORTABLE PUMPS,
3-inch to 9-inch Barrels,
Plain or Sliding Telescope Suction,
ON HIRE.

SINGLE AND DOUBLE PUMPS,
all sizes,
to any depth, for Hand or Steam Power.

Patent Double-action and General Pump-makers, Builders' Smiths, &c.
WHITEFRIARS-STREET,
Fleet-street.

TO BUILDERS AND PLUMBERS.
The attention of the Trade is called to JOHN WARNER & SONS'
PATENT VIBRATING STANDARD PUMP,
which is recommended for the simplicity of its construction, and the ease with which it works.
By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and gui es are unnecessary, rendering the price considerably less than Pumps made on the old plan.
Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.
JOHN WARNER & SONS,
8, Cresc nt, Jewin-street, London,
Manufacturers and Patentees.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

SUPERIOR LAND DRAINAGE.—AGRICULTURAL DRAIN-PIPES of all sizes, and in any quantities, can be SUPPLIED, either by water or land carriage, at a reduced rate, by applying to L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.—This ware, allowed by all to be of the best manufacture, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and CO. Great Northern wharf, York-road, King's-cross.

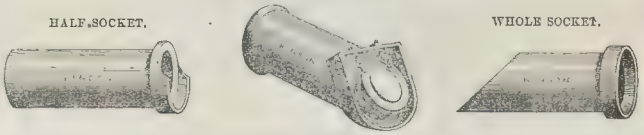
CLOSET BASINS, WHITE and BLUE URINALS, &c.
MANUFACTORY—MILLWALL.
DEPOT:
ARTHUR-STREET, NEW OXFORD-STREET.

PATENT DRAIN-PIPES, UNGLAZED, manufactured by ARTHUR C. FRANCIS and CO. Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Nine Elms, London, and at all their Warehouses.

PRICES.

3 inch bore, in 2 ft. 6 in. lengths, at					3d. per foot.
4	"	"	"	"	4d. "
6	"	"	"	"	6d. "
9	"	"	"	"	9d. "
12	"	"	"	"	1s. 6d. "
15	"	"	"	"	2s. 6d. "

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The projection round red-ware is over-come by this manufacture, and it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c &c.



PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 23, Old Fish-street, near St. Paul's, London. Price for Closet and Apparatus complete, from 23s. and perfect action guaranteed.

AND 4 WHARF, SOUTH WHARF-ROAD, PADDINGTON.

PARIS EXHIBITION.—ENAMELLED SLATE—TWO FIRST CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions receive this double honour; also the Prize Medal of the Great Exhibition of 1851, and the Medal of the Society of Arts, 1854. The beautiful, material, handsomer and more durable than marble is now adapted in any inches, and the mansion of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is unnecessarily below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the list of the chimney-pieces and ornaments stores for all apartments; plain and exquisitely decorated slabs for the tops of lavatories, washstands, consoles, &c.; baths, toilet tables, pilasters, columns, vases, pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and dairies. Price lists sent free by post on application to Mr. MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

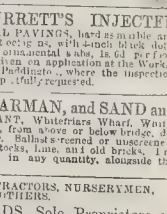
Country Builders supplied with Asphalte for footings and hearthstones, with instructions for use.
Apply to JOHN PHILLIPSON, Poloneeau and Limmer Asphalte Office, Monument chambers, 14, Fish-street-hill, London.
N.B. Importer of the PURE ROCK ASPHALTE, from the LEMMER Mines in Hanover.



CROGGON and COMPANY,
Manufacturers of
PATENT ASPHALTE ROOFING,
BOILER, RAILWAY, SHEATHING and INODOROUS FELT,
For Damp Walls, and Lining Iron Houses,
2, DOWGATE-HILL, LONDON.

PAVINGS.—BURRETT'S INJECTED STONE ORNAMENTAL PAVINGS, hard as marble and impervious to damp. Price of footing, with 4-inch block dots, 1s. 6d. per foot; 3s. 6 square ornamental slabs, 1s. 6d. per foot. Other prices and information given on application at the Works, 46, Berkeley-place, Harrow-road, Paddington, where the inspection of architects and builders is respectfully requested.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.
W. and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS have removed from No. 21 Wharf, Harrow-road, to 9, North Wharf-road, Paddington, have now on sale good Garden and Screened Gravel. For terms, &c. apply at the Wharf.
Contractors supplied to any extent.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.
J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, single or in peals.
TUNED BY MACHINERY.
Stocked and wheels built for hanging. Old Bells recast or taken in exchange.
MUSICAL HAND BELLS tuned to the Chromatic Scale with improved Clappers, &c., of good and new system, which gives superior tone and facility for ringing.

HON. MR. JUSTICE VAUGHAN WILLIAMS
SAMUEL WILSON, ESQ. ALDERMAN.

THE LISTS WILL CLOSE ON THE 31st INSTANT.

PLAN FOR THE CURRENT YEAR.

EVERY SUBSCRIBER OF ONE GUINEA WILL BE ENTITLED TO—

I. An Impression of a Plate, by J. T. WILLMORE, A.R.A. from the original important and well-known picture by Sir EDWIN LANDSEER, R.A. and Sir AUGUSTUS CALLCOTT, R.A. "HARVEST IN THE HIGHLANDS;" and

II. The chance of obtaining one of the Prizes to be allotted at the general meeting in April, which will include—

THE RIGHT TO SELECT FOR HIMSELF A VALUABLE WORK OF ART FROM ONE OF THE PUBLIC EXHIBITIONS.

STATUETTES IN BRONZE OF HER MAJESTY ON HORSEBACK, by T. THORNEYCROFT.

COPIES IN BRONZE, from an original Model in relief by R. JEFFERSON, of "The Entry of the Duke of Wellington into Madrid."

STATUETTES IN PORCELAIN OR PARIAN.

PROOF IMPRESSIONS OF A LARGE LITHOGRAPH, by T. H. MAGUIRE, after the original Picture by W. P. FRITH, R.A. "The Supper Scene," from Molière's "*Bourgeois Gentilhomme.*"

The Print of "Harvest in the Highlands" is now ready for delivery.

444, West Strand, Feb. 22, 1856.

GEORGE GODWIN, } *Honorary*
LEWIS POCOCK, } *Secretaries.*

THE GRAMMAR OF ORNAMENT,

By OWEN JONES.

BEING A SERIES OF THREE THOUSAND EXAMPLES, FROM VARIOUS STYLES, EXHIBITING THE FUNDAMENTAL PRINCIPLES WHICH APPEAR TO BEIGN IN THE COMPOSITION OF ORNAMENT OF EVERY PERIOD.

ONE HUNDRED IMPERIAL FOLIO PLATES.

DRAWN ON STONE BY F. BEDFORD. PRINTED IN COLOURS BY DAY and SON.

To be published in Twenty-five Numbers of Four Plates each, price 10s. The First Number will appear on the First of February, and the subsequent Numbers be continued Fortnightly.—The Work when complete will consist of

Chapter	I.	The Ornament of various Savage Tribes	3 Plates.
"	II.	" Egypt	8 "
"	III.	" Nineveh and Persia	3 "
"	IV.	" Greece	8 "
"	V.	" Pompeii	4 "
"	VI.	" Rome	3 "
"	VII.	" Byzantium	3 "
"	VIII.	" the Arabs	3 "
"	IX.	" the Turks	3 "
"	X.	" the Moors	5 "
"	XI.	Ornaments from Persian MSS.	5 "
			48

		Brought forward	48 Plates.
Chapter	XII.	Ornaments from the Indian Exhibitions of 1851 and 1855	7 "
"	XIII.	The Ornament of the Hindoos	3 "
"	XIV.	" the Chinese	4 "
"	XV.	" the Celtic races	3 "
"	XVI.	" the Middle Ages	7 "
"	XVII.	" the Period of the Renaissance	10 "
"	XVIII.	" the Elizabethan period	3 "
"	XIX.	" the Italians	5 "
"	XX.	A series of Leaves drawn from Nature as Models of Ornament	10 "
			100

The Author will endeavour in the several chapters to define the apparent origin, and trace the development of the several styles of Ornament. He will proceed to ascertain the laws which govern their composition; both those which are general to all styles and those which are peculiar to each. He will further attempt in the 20th chapter to show how, bearing in mind those general laws which he finds also to pervade the works of nature, we may yet go forward, and, whilst availing ourselves of the experience of all time, may be enabled to produce works in harmony with our own times, instead of blindly following in the footsteps of the past.

The collection of this vast amount of material has been the labour of many years. On the eve of giving it forth to the world the Author fully feels the difficulty of the task he has undertaken; he trusts, nevertheless, that with this collection, artists, and all others engaged in any way with the decorative arts, will have before them an amount of material which does not elsewhere exist in any such convenient form, and in the use of which it will be his endeavour to serve them as a guide.

N.B. The Letterpress will appear at intervals during the progress of the Work. Size, 8vo. royal.

Published by DAY and SON, LITHOGRAPHERS to the QUEEN, 6, GATE-STREET, LINCOLN'S-INN-FIELDS.

THE FREEMASONS' MAGAZINE and MASONIC MIRROR for March, 1856, is now ready. Price 1s.
London: HENRY GEO. WARREN, 2, Red lion court, Fleet-street; and GEORGE ROUTLEDGE and CO. Farringdon-street.

Neatly bound, price 4s.
A HANDBOOK of ARCHITECTURE for the UNLEARNED: in a Series of Letters to a Lady, embodying a Popular Sketch of the History of Architecture, and the Characteristics of the various Styles which have prevailed.
By GEORGE GOLWIN, F.R.S. &c.
With Illustrations.
By the same Author, price 1s.
LONDON SHADOWS; or, a Glance at the Homes of the Thousands. With Illustrations.
Office of "The Builder," 1, York-street, Covent Garden; and from any Bookseller.

1 Vol. Handsomely Bound, 21s.
BUILDINGS and MONUMENTS, Modern and Mediæval; being Illustrations of the Edifices of the Nineteenth Century, and of some of the Architectural Works of the Middle Ages.
By GEORGE GODWIN, F.R.S.
Fellow of the Royal Institute of Architects, &c. Editor of "The Builder," and Corresponding Member of several Societies.
With numerous Engravings.
Published at the Office of "The Builder," 1, York-street, Covent-garden.

Price 12s. imperial 8vo. with Ten Plates, &c. of Plans and Specifications,
MUSEUMS, LIBRARIES, and PICTURE-GALLERIES. Public and Private: their establishment, construction, and architectural construction. To which is appended, Remarks on Scientific and Mechanics' Institutions.
By J. W. and W. PAPWORTH, Architects.
CHAPMAN and HALL, 193, Piccadilly.

Third Edition.
THE BUILDER'S FRIEND,
Price One Shilling.
Office of "The Builder," and of all Booksellers.

Now published, the March Number of
THE IRISH REPORTER
in New Journal for the Architect, Engineer, Archæologist, Builder, &c., containing—Leading Articles, relative to Schools of Design, their Management and History—Dublin Mechanics' Institute—Proceedings of Public Companies—Notes of Building Works—Two handsome Wood Engravings of "New Offices in Cannon-street, London," and "Protestant Orphan Hall, Limerick"—Reviews—Artistic and Engineering Intelligence—Miscellaneous Scraps, &c. &c.
Single Copy, by post, 4d.; Yearly Subscription, 3s 6d.
Proprietor and Editor, JOHN J. LYONS, F.R.I.A.I.
Architect, &c. 13, D'Olier-street, Dublin.
*** For advertisements intended to reach engineers connected with the Building Profession in Ireland, the "Irish Reporter" is an unquestionable medium.

The Builder.

VOL. XIV.—No. 684.

TO PARIS at this moment all eyes are directed. The world waits on tip-toe to hear the result of the conferences now going on there. Earnest must be the hope of all who have at heart the welfare of their fellow-creatures, that a substantial peace, honourable and remunerative to the allies, may be achieved. Even the probabilities, however, are at present shrouded in mystery; and all the arrangements which have been made give the notion of an elaborate scheme for stock-jobbing purposes. Who will assess the value of one single hour's exclusive knowledge of the decisions of the curtained and guarded conference chamber?

It would be instructive to trace, hereafter, the real names of the large dealers in Government securities, both in England and France, immediately preceding the announcements of the plenipotentiaries. With this, however, beyond the passing remark, we need not interfere. It is not Paris political that immediately concerns us, but Paris monumental, artistic, and sanitary: and our present object is to add to our series of views illustrative of that capital—a view of the east end and south side of the cathedral of Notre Dame.*

We have already referred briefly to the history of Notre Dame.† The chapels about the choir were finished at the end of the thirteenth century or the beginning of the fourteenth. Between the south side of the cathedral and the Seine stood the episcopal palace, a structure of great antiquity. All that remained of it, together with the modern building which had taken the place of the old work, was sacked and destroyed in 1831, and at the present time the new sacristy of the cathedral (shown in our view) and a public garden occupy the site. M. Guilhermy, in his "Itinéraire," from which we are quoting, gives a graphic account of the destruction of the palace. The building, invaded, he says, by a countless and furious mob, was nothing more than a ruin in a few minutes. At one and the same moment they rooted up the railings and the flights of steps, they undermined the walls, they tore off the roof, they threw out of the windows the marbles, woodwork, and furniture of the apartments. A troop of barbarians formed a chain from the library of the palace down to the parapet of the quay: the books and precious MSS. were passed from hand to hand, each tearing them as he would, and the last man pitched them into the river. And all this was done accompanied by fierce songs and frightful howlings!

The enclosure of the choir and absis of the cathedral was reconstructed at intervals between the years 1257 and 1310. The trefoiled niches in the face of the flying buttresses contained statues which all showed traces of colour, and belonged to the fourteenth century. The flying buttresses themselves (rebuilt when the chapels were constructed) are to our eyes heavy and ugly, and seem to want pinnacles at the top. Their ugliness was less observable when they were in their ancient dark coat.

The new works at the cathedral were begun about 1845, in which year the Government were roused to the necessity of maintaining the ancient monuments of the State, and voted a sum of money for the purpose. The superintendence of the restoration was placed in the hands of M. Lassus and M. Viollet-le-Duc, by whom it has been carried out with unremitting attention. The building had been greatly damaged by the men of the preceding century.

The choir of Notre Dame is one of, if not the, earliest specimen of what we should here call Early English. The first stone was laid in the year of the completion of St. Germain des Prés, 1163, and in 1182 the high altar was consecrated.

The general uniformity of style in a building so vast as Notre Dame of Paris, is very striking to an eye accustomed to the varieties observable in most of our cathedrals. Although its erection occupied a considerable period of time, there is a remarkable correspondence in character throughout. The stone of which the building is constructed is from the quarries in the neighbourhood of Paris, the possession of which has tended so much to the elegance of the city. The enormous wooden roof, of oak, which crowns the building, 356 feet (French) in length, is covered, according to M. Guilhermy, with 1,236 sheets of lead, each 10 feet long and 3 feet wide. At the point where the transept crosses the nave there was anciently a spire, also covered with lead, 104 feet high from the ridge of the roof. It fell into decay in 1792, and was removed soon afterwards.

The magnificent rose window in the south transept, seen in the view, is filled with the original stained glass. This is the case, too, with the window in the north transept and the rose window in the west front. The glass is beautiful in colour, and exhibits a multitude of subjects.

The Hôtel de Cluny, on the other side of the Seine, but not far off, contains some of the vestiges of earlier buildings which were found on the site of Notre Dame. The Palais des Thermes, which adjoins the Hôtel de Cluny, is the most ancient monument in Paris, being at least as old as the beginning of the fourth century. Together, they contain a collection of national antiquities of the deepest interest, comprising about 2,600 objects,—sculpture, carving, pictures, glass, jewellery, ivories, decorations, enamels, porcelain, and metal work.

There is nothing more instructive in Paris than this museum, and it is a heavy reproach to those who have the power, that in England, where the number of such works in private hands is so great as it is, there is no similar collection open to the public.

The Hôtel de Cluny is itself a quaint fifteenth-century building, displaying many curious bits, especially the chapel, with its central column, its range of canopied niches, and the staircase in the angle with pierced stone screen around it.

If there had been a national institution of this kind in England, we should probably have retained here the singularly fine gold *retable*, which was given by the Emperor Henry, in 1019, to the cathedral of Basle, and is now in the Hôtel de Cluny. It was hidden in the vault of the cathedral for safety, when the people of Basle adopted the reformed religion, and was afterwards sold for the benefit of the canton. A year or so ago the owner of it sought to sell it to some public institution, and the French Government obtained possession of it. It is an extraordinary relic, whether considered with regard to its date or its intrinsic beauty. The principal feature is an arcade of five openings, the centre higher than the others, with a figure in each. The whole is in low relief, executed in *repoussé* work, sharpened by the graver. The citizens of Basle, who have been spending much money in the restoration of their cathedral, must regret their loss.

Wandering here in the Palace of the Baths, where the Roman emperor Julian resided, and through the museum of the Hôtel de Cluny, the manners, progress, and the achievements in art of the French people, during at least fifteen centuries, are brought vividly before the eyes and mind of the observer.

PARIS NEWS.

Construction of Granaries.—Amongst the practical results of the Paris Universal Exhibition, the introduction of M. Fluent's granaries is not the meanest. Their object is to preserve the corn sound, even in great masses. They are constructed so as to form a division of compartments (*Silos*), all on one line, and occupying the whole height of a building. The grain is passed through hoppers, each being regulated by an especial trap. Towards the end of the silo, the grain does not descend perpendicularly, but is prevented by a number of diaphragms, placed one above another, at an angle of 45 degrees, and extending all the length of the silo. In consequence of this division in small and vertical compartments, the mass of grain becomes divided, and has to glide down in a diagonal line. The interval and the dimensions are thus distributed so as to allow the passing of the grain upon the whole length of the compartment, which passage takes place at a rate made uniform by the equality of friction. At the issue from the vertical silo, the grain is conducted through a spout, when it is seized by an Archimedian screw, at each winding of which there is a little palette, which turns the grain as would a shovel. It is thus conducted into a small reservoir, whence it is reconducted to the top of the granary, above the upper orifice of the vertical silos. Here it is taken hold of by a sieve, which agitates it again, and makes it descend in a sort of rain on the lower mass.

A Marble Company.—There has been formed at Paris a company for working the extensive marble quarries of the Departement de la Sarthe. The value of marble used in Paris for sepulchral monuments, is six millions; while that of the marble used in the whole of France, reaches thirty millions.

Aluminium.—The Annuaire of the Bureau de Longitude, Paris, states the specific gravity of the new metal, as follows:—At the temperature of water of 4 degrees Réaumur, the specific gravity of melted aluminium is 2·56, that of forged (malleated), 2·67; whereas that of gold is 19·36; and that of platinum, 21·53.

Chatelain, Atlas. — *Chronological Atlas of Railroads. Paris,* 1856.—In this deserving work the different periods of French railway construction during the last thirty-two years, are made visible in a series of maps. The first chart depicts the embryo state of French railroads from 1823 to 1839; the second, the state of infancy to the year 1841; and thus successively every period of expansion is laid down. Chart eighth shows the different railways, which, from 1823 to 1856, have been constructed by the different Governments. A general historical Atlas of all the railways in the world will become, by and bye, a desideratum.

INQUIRY INTO THE DESTRUCTION OF COVENT-GARDEN THEATRE.

LITTLE progress has been made towards discovering the cause of the destruction of Covent-garden Theatre. On Tuesday last an inquest was opened before Mr. Bedford, the coroner for Westminster, at the instance of the churchwardens of the parish of St. Paul, Covent-garden, who instructed their vestry-clerk, Mr. Mosley Tayler, to take the requisite steps in the matter. The duties of the coroner in old times included inquiry into the origin of fires; and the revival of this portion of the office (originally made by Mr. Payne, the coroner for the City) has very properly been carried forward in the present most important instance. The walls of the theatre—some of them reaching to the height of 70 or 80 feet—the north wall bounding a thoroughfare, and all the walls endangering the adjacent premises—have become even less secure than when we noticed them last week. If we refer to that immediate evidence—as to *one* of the bearings of inquiries like this which

is being conducted at the Piazza Hotel—it is because such evidence happens to be just now very conclusive to any one who will walk to Bow-street. The provisions of the Building Act were promptly put in force by the police, after an order granted at Bow-street the day after the fire; and Messrs. Holland (under the direction of the surveyor to the commissioners) have now erected scaffolding to the principal walls, and are actively engaged in the work of demolition. Part of Hart-street is covered over by scaffold boards, laid on poles resting at one end on the opposite houses; but as the walls extend to a considerable height above, and are exposed to all the risks of March winds, the work is necessarily conducted under considerable danger, both to the labourers and to the public; and it would seem scarcely possible to get through it without accident.

A paragraph also has appeared in some of the journals, referring to the discovery of a fire in some part of Drury-lane Theatre. It will be recollected that the former theatre of Drury-lane was burnt on February 24, 1809, five months after the loss of Covent-garden, and that the shortness of the interval, with no very conclusive reason as to the origin of the fire in either case, led many to favour the idea of incendiarism. The course of the present inquiry may, perhaps, show that there is no reason for the similar explanation which has been offered, as to the origin of the late fire at Covent-garden. The jury must, however, have better means than are at present afforded them, of comprehending the plan and construction of one of a class of buildings, more than usually difficult to be understood by persons not conversant with matters of a technical and professional description. Mr. Smirke, who was present on Tuesday, with plans, seems disposed to render every assistance in his power: Mr. Albano would, doubtless, do the like; and we venture respectfully to urge, that at the next sitting, every means should be taken in what seems *preliminary* to the consideration of the evidence of those who were at the fire. The expense of a few large diagrams,—showing the plan of the building, the arrangement of the roof, together with the boarded ceiling of the auditory, and that of the chandelier and ventilating shaft—would be well laid out. Also, we may say there are models of the "auditory" obtainable; which, with others—showing the usual position of "flies" and scenery—which might be got, it could not but be useful to have on the table.

We agree, therefore, on general grounds, with the coroner, that such inquiries as that which he is conducting should be commonly made. There can be no doubt that were they so invariably, the number of fires would be at length much diminished. In the case of houses,—materials chosen and put together as though *designed* for burning, and against the use of which it seems at present vain to argue—would be less generally adopted.

The inquest, barely opened on Tuesday, now stands adjourned to Saturday in this week. It can hardly be concluded then, if all important points are entered upon. The witnesses already examined have been three of the four firemen attached to the theatre; Mr. Palmer, the gas-fitter; and Mr. Sloman, the carpenter. The evidence is, as might be expected, in some points conflicting; and, without our making any imputation on that score, evidences the desire of each department of the establishment to throw blame off its own particular shoulders. The firemen considered that the fire must have been the work of an incendiary; though it did not appear that they had sufficient ground for saying so, beyond the absence of other discoverable cause: Mr. Palmer's evidence testified to the management of his own concerns, and the general arrangement of the gas fittings; whilst Mr. Sloman contradicted the other witnesses as to the fact of dangerous escape of gas,—saying that he had been continually drawing the attention of the proprietors to it, and even as recently as the morning of the day on which the ball commenced. It is clear that this point should be narrowly gone through. The firemen will admit that there was no escape beyond what would inevitably be noticed in such cases. Gas in the carpenters' shop had not been in use since the time of preparing for the pantomime at Christmas, when the fittings were first put up: but it did not seem to be left conclusive, whether the connection with the painting-room was broken off subsequently, whether the gas could be turned on by others than Mr. Palmer's men, who ordinarily were called upon to take the duty, and whether if at any time turned on, and afterwards turned off at the stage, enough gas might not remain in the pipes to burn a considerable time if lighted. Besides inquiring a little further into such points, the jury might also desire definite particulars as to the currents of air which it was said would render any accumulation of gas impossible. Scientific evidence, also, as to the circumstances under which explosions of gas take place when mixed with air, would be useful, as well as with regard to the results of an explosion could one occur. It may be only by knowing what *could not* have led to the fire, that the desired result of the inquiry may be got to, or the proper precautions taken in other buildings of the like character.

As regards the idea that the origin of the fire was in some manner connected with the length of time during which the chandelier had been burning, the evidence was contradictory as to the hour at which it was lighted, Mr. Palmer saying that the chandelier was lit at a quarter to twelve at mid-day on the Monday, and not afterwards put completely out, whilst James Castle, the fireman, said that he attended the gas-man who lighted the chandelier between seven and eight o'clock on the night (Tuesday) before the fire. We may state that the reports of the inquest in the daily papers do not tally with each other; and certainly do not agree with our own careful notes on several important points; and this—in addition to the fact that actual discrepancies have not been noticed elsewhere, and require to be cleared up—it is which induces us, even before the termination of the inquiry, to go through the evidence, although points may at first appear to be noticed by us not *immediately* bearing upon construction.

James Castle deposed that he had been in the theatre since one p.m. on the Monday, with the exception of a short interval, up to the time when he first noticed the fire, between four and five o'clock on the Wednesday morning. At the time last mentioned, he and his fellow-servants were on the stage. They had remained below because there they could see all the lights in the house, and danger was apprehended from the number of persons who were smoking. None of the firemen had been into the carpenters' shop for some hours; though at three a.m. on the Wednesday, Wm. Butler had gone up to the "flies." There, no smell of smoke was then discoverable.

The duty of the firemen seems to have been left in great measure to their own discretion, except after the conclusion of performances, when they were expected to go through the house once in every hour. It seems doubtful, however, whether they considered this requirement to extend to the carpenters' shop. To this place any one might have obtained access on the night of the fire. The fire was first discovered by Mr. Palmer, who, on being asked by Castle what "battens" he would have kept burning for the workmen who would shortly arrive, looked up from where he was standing on the stage, a little behind the proscenium, and saw a light through the holes in the floor of the shop above.

It should be understood by those not familiar with the plan of theatres, that the carpenters' shop is a room in the roof, floored on the tie-beams, and that it extends over the whole building,—excepting that one small portion at the stage end is parted off, forming the painting-room. The access to the shop is by stairs from the upper "flies,"—the "flies" being galleries used in working the scenery. The floor of the shop is necessarily ceiled under, in the portion of the house in front of the curtain,—boarding being adopted in the case of the Covent-garden theatre,—whilst over the stage, the flooring is exposed, and is cut through in many places for the passage of ropes and other purposes. Over the chandelier there is an aperture, with a shaft above for ventilation, and through the aperture the chandelier is lighted by a rod, with a long wire at the end, on which a piece of wool soaked in spirits of wine can be fixed.

It had been the practice at Covent-garden—when the 800 burners of the chandelier were lighted,—to extinguish the wool, by plunging it into the spirit, which was contained in a vessel that the gasman carried with him; and then the rod was left hanging down, or resting in the basin of the chandelier,—that is to say, below the ceiling of the house. It seems necessary to ascertain exactly what was done in the present instance. Besides the discrepancy in the evidence, as to the hour of lighting, it has been stated in one account subsequent to the fire, that *naphtha* was used, and that some of this spirit was *poured* over the wool to extinguish it, or try whether it had been extinguished,—one of the men holding his hand beneath. The more concentrated forms of naphtha are so inflammable, that disasters have occurred from the mere opening a bottle in the vicinity of a light. It is quite possible, that further inquiry into the facts might show that any suggestion grounded upon points here referred to, could not be received; but where there is so much difficulty, we should prefer that every view of the case should be looked at, if only to be dismissed.

To return to the evidence of the firemen,—it appeared that when Castle had *his* attention called to the light appearing through the cracks of the floor, he rushed up-stairs, followed by other firemen. The door of the shop was found open,—though Castle speaks positively to having closed it when he was up some hours before,—he supposing himself to have been the last person there. The two first men were met by a gush of dense black smoke. By crawling on their hands and knees, Castle and Butler got in some distance, but not near enough to reach the fire-cock: they were then forced to return. All the men agreed that the focus of the fire, as first seen, was situated at a point on the stage side of the proscenium, and a little to the left of the centre. Here, what was burning was a heap of wood, which had been some time lying thereabouts, and the fire was being communicated to other pieces lying around. Mr. Sloman subsequently contended that any waste pieces and shavings were regularly removed, and could hardly have been in the position indicated; though materials and properties were necessarily in the shop,—but chiefly along the sides. A smell, of a character distinct from that of burning wood, was spoken of by the firemen, who considered it as resembling the smell of charcoal. Perhaps not much importance will be attached to the nicety of definition under such circumstances. It, however seems, that the fire, *as first discovered*, was at a considerable distance from the position of the chandelier. Whether peculiar smell could be caused by anything coming under the head of "properties," or by other matters in the shop, or by the marine glue with which the boarded ceiling was originally put together, might be ascertained. The witnesses agreed that there were *no* flues from the shop, though a contrary statement would be inferred from the reports of the evidence. The glue was heated by means of steam-pipes. There were indeed about seventy flues in the external wall, some of which were in use on the night of the fire: some of these occasionally got on fire, but had not done so recently. That may be one slight ground for inferring that they may have done so in the case in question. The cases which we are continually reporting of fires from flues, at least would show the importance of care in a large building where timber enters so much into the construction.

Castle, proceeding with his evidence, states that he got down to the upper "flies." The flakes of fire then were falling thickly from the floor above him. He charged one of the mains, and the water flowed. There were two of these mains on each floor, supplied from a cistern in or upon the roof; and this there seems no reason to doubt was always kept charged with 18 tons of water. By this time, people below were saving their lives. Castle passed to the next "flies," undid some of the straps of the scene barrels, that the scenes might fall clear of the fire; next had to make for the stage,—where he assisted at the main there, as long as pos-

sible—and when he got outside, the engines in the street were at work.

It may be inferred from the evidence that the period which elapsed from the first discovery of the fire, to the time when the flames obtained complete possession of the building, could not have exceeded half an hour. It has been stated that there was much difficulty in getting some of the 200 people safely out. What would have occurred at an earlier hour of the night, even with the comparatively ample provision for egress which there was at this theatre; and what might be the lamentable extent of a disaster any night at other London theatres? But we ought to have said enough on this head, echoed as our warning has been by others. We merely again allude to the arrangements at Drury-lane, perhaps still the best provided theatre; but where the doors of exit first thought necessary have been reduced in number, and where the paying-places seem to be so devised as to produce the very results which occurred from the same cause in the disastrous case at Glasgow. It is to be recollected that no unusual escape of gas or smell of fire was noticed prior to the discovery of the fire. Wm. Butler speaks positively to there being none at the upper "flies" at three o'clock. Could any escape have taken place in the upper part of the theatre, it is considered that it would unquestionably have been prevented from accumulating in the shop, by the draught which there always was through it, and through the ventilating shaft. The escape which Sloman speaks of, seems to refer to what pervaded the house—the carpenter's shop included. It does not appear that he considered it to proceed in the first instance from the shop. Upon the balance between the statements as to the amount of escape, and scientific questions as to currents of air, the nature of gas-combustion, and the causes and results of explosions, the issue may be found to turn. The ceiling of the auditory, it is affirmed both by Castle and Palmer, could not get greatly heated. The lights were not nearer to it than 10 or 11 feet; the flame could not be turned on to a greater height than about 2½ inches; the chandelier had been kept burning during a greater number of hours than on this occasion; and at certain entertainments, twelve smaller chandeliers of eighty fish-tailed burners each, had been suspended round the large chandelier, and still without overheating. The chandelier, as stated by Palmer, could not be raised or lowered. It was fixed to iron bars, and these could not have got overheated.

We have thus gone through the most important particulars, because we believe it will be found that the branch of the question in which we are more particularly interested—the structural one—will be found to have had some connection with the cause of the fire. It should not be assumed, as some have done, that the want of proper watching by the firemen was, as it were, the cause.

Whether it may be possible to adopt methods of construction less liable to communicate fire,—arising from gas, or whatever else,—we have no immediate means of deciding. No one, however, who saw the building at the time at which we wrote last week, could avoid being struck with the remarkable appearance of the walls, arising from a method of building—now fortunately not in use in the metropolis. In all the walls of the original building, bond timber occurred at distances of nine to twelve courses,—sometimes in pieces of large scantling, at both sides of the wall, bolted through to each other. In some places the timber was burning a week after the date of the fire; and may be, yet. Mr. Albano, on the occasion of the important works which he carried out in 1846-7, found at 13 feet from the foundation, a tier of Memel bond timber,—scantling, twelve by six inches,—introduced in the main walls all round. Externally, there was merely the appearance of shrinkage; but on examination, the timber was found to be quite decayed. Not only this, but four other such tiers,—amounting to above 2,000 feet,—as well as the lintels, which had become decayed, were removed. The bond timber was indeed removed wherever the works then undertaken admitted of it: brick and cement being inserted in short lengths, and stone lintels being laid. Having in 1847, given credit to Mr. Albano for his efforts in this particular, and for the general works carried out under him, we are much surprised that we should be held to have *insinuated* anything to his disparagement, at the very moment when we were really lamenting that more had not been possible to be done for the general security of the building from defects of timber construction. Mr. Albano's work, we need hardly repeat, within the main walls, was, as it were, an entirely new building. New fire-proof staircases were erected; extensive alterations and additions were made in entrances, saloons, offices, and apartments; three tiers of boxes were replaced by six tiers; and a great number of minor improvements were carried out. Although, however, the internal space of the auditory, as well as the width of the proscenium were increased, the original quadrangle encasing this space, if we may so speak, and a great number of the external and cross walls (which may be seen from Bow-street) remained; and these are at this moment, in the dangerous state to which we referred last week.—We believe that at the time the theatre was originally built, concrete was not used by Sir Robert Smirke; and it will be interesting to discover whether the timber substitutes are in the condition in which the other timber was found, which might have led to the ruin of the structure by an agency other than fire. In Mr. Albano's new foundations, stone landings were carefully substituted. A wall at the back of the auditory under the galleries, and the curved portions at the angles, remain,—exhibiting plainly their courses of bricks in cement.

The whole of the iron columns of the boxes are amongst the general wreck, and have been acted upon in extraordinary ways by the fire. The girders are generally cracked or broken.

ON THE MANUFACTURE OF CROWN AND SHEET GLASS.

THE admirable manner in which the curiosities of one great division of the glass manufacture, that of flint glass, have been recorded by an able chronicler,* induces me to confine myself to another and scarcely less interesting branch, the manufacture of blown window glass. The history of this glass is most scanty, when compared with the abundant proofs which Egypt, Greece, and Rome, have left behind, of their daily use of vessels and ornaments of glass, and of the skill of those who fashioned them. The general silence of the ancient writers, and the lack of all allusions to the subject, are sufficiently convincing of their ignorance; and even in the first century of the Christian era, the words of Seneca and Philo might bear a doubtful meaning, but for the evidence of an unimpeachable witness. Pompeii, awakened from a slumber of 1,700 years, has proved the existence of window glass in the days of the early emperors. In a small chamber, attached to the bathing-room of a private dwelling-house, excavated about the year 1763, was found "a window, closed by a movable frame of wood, which, though converted into charcoal, still held, when it was found, four panes of glass about 6 inches square." And, in 1824, in a room connected with the public baths, was discovered "a window 2 feet 6 inches high, and 3 feet wide, in the bronze frame of which were found set four very beautiful panes of glass, fastened by small nuts and screws, very ingeniously contrived, with a view to being able to remove the glass at pleasure." But this disclosure goes no further than to prove the then existence of such glass, and does not interfere with our belief that windows of that age were generally glazed with mica stone, or lapis specularis, obtained chiefly from Cyprus, Spain, and Cappadocia. In the fourth century, Lactantius and St. Jerome allude to window glass, and we hear of glass in churches and public buildings; but then, and long after, in these only. Nearly three centuries later, in 674, the Abbot Benedict, so saith the venerable Bede, sent for artists from beyond seas to glaze the church and monastery of Wearmouth, and York Cathedral was glazed about the same time. In the eleventh and twelfth centuries, glass was generally employed in the windows of the numerous religious edifices which the pious enthusiasm of that period called into existence; but the specimens handed down to us fall so far short of the products of to-day, that we can scarcely believe, what is undoubtedly the fact, that the two are results of processes substantially the same.

White glass, for house windows, was not introduced into England until the close of the twelfth century; but, even as late as the sixteenth century, it had not entirely displaced the imperfect method of transmitting light through oiled paper, linen cloths, and wooden lattices. In the minutes of a survey of Alnwick Castle, made in 1573, the following curious entry occurs:—"And because, throwe extream windes, the glasses of the windowes of this and other my lords castels and houses, here in the country, dooth decay and waste, yt were good the whole leightes of everie windowe, at the departure of his lordshippe from lyinge at anie of his sade castels and houses, and dowring the time of his lordshippes absence, or others lyinge in them, were taken downe and lade up in safetie, and at sooch tyme as other his lordshippe or anie other sholde lie at any of the sade places, the same might then be set up of newe with smale charges to his lordshippe; whereas now the decaye thereof shall be verie costlie and chargeable to be repayred."

Glass was, probably, not applied to the windows of English farm-houses before the reign of James I. It is mentioned, in 1615, in a lease in the parish of Suffolk; but as late as 1661, in Scotland, "the windows of the ordinary country houses were not glazed, and only the upper parts of those of even the king's palace had glass, the lower ones having two wooden shutters, to open at pleasure and admit fresh air."

These scanty supplies were chiefly imported from abroad. The manufacture of blown window glass in England existed in the fifteenth century, and, perhaps, even prior to that period; but the glass then produced was of a very inferior description, and the first works of note established in this country were those of Sir Matthew White Ridley and Co. on the river Tyne, at Newcastle, about the middle of the seventeenth century.

Crown and sheet glass are classed among the simple varieties, and are a compound of silica, soda, and lime, the result of the union of silicic acid with two separate bases. Let us regard, for a moment, each of these silicates apart. Silica and soda may be combined by water or by fire, either by the addition of silicic acid to a boiling solution of caustic alkali, or by mixing the two in a dry state and exposing them to the action of heat. In either case the resulting silicate is soluble, more or less so, according to the greater or less proportion of alkali, but still always soluble. The usefulness of this solubility has, of late years, been much developed. In 1844, Mr. Ransome patented the employment of this glass in the manufacture of artificial stone, by mixing it, when dissolved and evaporated to the consistence of a gum, with sand, limestone, and other substances. And quite recently, Mr. Gossage has substituted it for alkali in the manufacture of soap. Its application to the rendering of wood uninflammable is of much older date. But for window panes, it is of course quite useless. Nor is the simple silicate of lime more practicable. It is the result only of the most intense heat, and assumes the form more of a slag than a glass. But the union of these two silicates produces a hard, cheap, and transparent material, not indeed absolutely insoluble, but capable of resisting the action of water for a very long period.

The principle ingredient of this trio is silica—which, already distinguished as the chief element of the bricks with which we build our houses, is now no less distinguished as the chief element of the glass by which we furnish them with light.

The manufacturer employs silica in the shape of sand, selecting such as the microscope and analysis show to be most suitable for his purpose. Every country in which glass is manufactured abounds in this material. The finest English sands are from Alum Bay, in the Isle of Wight, and Lynn, on the coast of Norfolk. The French obtain a very superior sand from the Forest of

* See Mr. Apsley Pellatt's "Curiosities of Glass Making."

Fontainebleau, in the neighbourhood of Paris, and to the purity of this and their other materials the superior colour of their glass may be partially ascribed.

The next important element is soda, which is preferred for this kind of glass, as a cheaper ingredient, to potash. As the use of soda, in its present form, is a comparatively recent introduction, I was anxious to obtain information as to the steps which led to so important an improvement; and I have to thank M. Bontemps for a valuable communication on the subject. Not more than thirty years have elapsed since crown and sheet glass were manufactured from crude alkali obtained from the ashes of a certain sea-weed, and in this country known by the name of kelp. The preparation of kelp for this purpose employed a large population on the northern shores of Scotland and west of Ireland; and the abandonment of this material plunged whole districts into idleness and misery. This kelp was used in combination simply with sand —the kelp containing soda and potash, and furnishing the lime necessary for the composition of the glass. But the glass thus produced was of very variable character, arising from the uncertain quality of the kelp, and also of a very inferior colour, evidence of which is still to be found in the old windows of ancient houses that have escaped the ravages of improvement.

A similar crude alkali was employed in other countries, under the name of barilla, soda of Alicant, &c. and at Venice, and in the South of France, this was mixed with a natural product called the natron of Egypt, and containing carbonate, sulphate, and muriate of soda.

The discovery of Le Blanc, in 1792, which effected the conversion of common salt into carbonate of soda, was the commencement of a new epoch in the history of this glass. The manufacturers of soap at Marseilles ceased to import the soda of Alicant, and employed this new alkali in its place. Their example was followed by the manufacturers of plate glass; and before long, the employment of the old crude alkali was discontinued also in the preparation of blown window glass, and an improved quality and colour was the result.

The alkali thus substituted was the carbonate of soda of commerce, containing, besides carbonate, a considerable portion of undecomposed sulphate. The further improvement which followed, viz. the substitution of simple sulphate of soda for this carbonate of commerce, was due to the researches of the celebrated Gehlen; but some time elapsed before his ideas were carried out in Germany, and it was not until 1825 that the manufacturers of France, released, through the exertions of M. Clement Desormes, from the absurd veto which the government had pronounced on the sale of sulphate of soda, were enabled to turn their attention to the employment of this cheaper article. They proceeded with caution in the introduction of this new ingredient, first mixing a small quantity of sulphate of soda with a large proportion of carbonate, then half of each, and finally, excluding carbonate, they adopted the sole use of sulphate, to the injury doubtless of the colour of their glass, but gainers by the employment of a cheaper and more manageable material. Where colour, however, is an object, as in the manufacture of plate glass, the exclusive use of carbonate of soda is still retained.

The introduction of carbonate of soda, prepared from salt, into the glass manufacture of England, dates from the year 1831. Proceeding cautiously in the steps of their foreign brethren, the English glass-makers, after they had established the use of carbonate, made trial of the effect of a small quantity of sulphate of soda in a large quantity of carbonate. The carbonate gradually decreased, until at length, in the preparation of blown window glass, sulphate stood alone. But here, as abroad, the manufacturers of plate glass still adhere to the carbonate.

As the use, whether of carbonate or sulphate of soda, involves their preparation from common salt and sulphuric acid, attempts have been made to accomplish the direct union of silica and salt, in the manufacture of window glass, but have hitherto failed of success. The black bottles of Newcastle are made from common rock salt and sand from the bed of the river, with the carbonate of lime of the soap-works, and the tank waste of the alkali-makers; but for all better kinds of glass, the circuitous combination of silica and alkali is still found necessary.

The third element in the composition of this glass is lime, which may be introduced as lime, chalk, or limestone. This renders, as I have stated, the alkaline silicate insoluble; and when rightly balanced by the other ingredients, promotes the fusion of the whole, and improves the quality; but when added in excess, the glass becomes hard and difficult to work, and subject to devitrification.

The three sources, then, from which we obtain silica, soda, and lime, the three great elements of window glass, are sand, salt, and chalk or limestone, and of these nature has provided an exhaustless supply.

But besides these, several other ingredients, in much smaller quantities, enter into the composition of this glass. Alumina is sometimes purposely introduced, and is always accidentally present, brought there by the action of the materials upon the clay of the pots in which they are melted. Alumina, if present in any quantity, is always an undesirable element, as, by increasing the number of silicates, it renders the glass more liable to devitrification, it being well known that the more compound a glass is, the more does it display this tendency. Bottle glass, which contains a greater variety of bases than any other, is of all the most easily devitrified.

Another and an unwelcome element is iron, which is almost always present in the sand, sulphate of soda, and chalk, partly in the state of protoxide, the colourizing effect of which is partially destroyed by the introduction of manganese, the peroxide of manganese and the protoxide of iron each possessing colouring properties, but by their mutual action rendering each other comparatively harmless. The effect of manganese is, however, much interfered with by the carbon, which is necessarily introduced to decompose the sulphate of soda. This carbon, subtracting oxygen from the manganese, prevents its action on the iron.

A little arsenic promotes the decomposition of the other ingredients, and tends to dissipate carbonaceous impurities not otherwise disposed of; but, in excess, it produces a milkiness in the glass, which time will increase.

Lastly, to this farrago of sand, soda, chalk, charcoal, arsenic, and manganese, we add what is abundantly produced in every manufactory of glass, a quantity of waste glass, or cullet, which, being more fusible than the raw materials, facilitates the melting.

The ingredients are mixed in much the same proportions either for crown or sheet glass, with the exception of the lime, of which the nature of the crown glass manipulation requires a smaller quantity.

To lay down any standard proportions is almost impossible, as no two manufacturers use the same, and even in the same works the melting powers of the furnaces may so far differ as to render necessary, for the production of the same glass, variations in the proportions of its elements.

The ingredients, having been thoroughly incorporated together, are, without further preparation, introduced into the pots in which they are to be melted. During the period to which I have referred, when barilla, kelp, and other forms of crude alkali were in use, it was the custom to subject the materials to the preliminary operation of "fritting," or stirring them together under the heat of a reverberatory furnace, thereby effecting partial decomposition, and burning off any carbonaceous impurities; but the introduction of alkali prepared from salt has removed the necessity of this treatment.

The pots are made of the best Stourbridge clay, mixed with about one-fifth of ground potsherds, and are distinguished from flint-glass pots by their greater size, and by the absence of any hood or cover to protect their contents from the fire. Their size has been of late years considerably increased, both in width and height, and a pot whose dimensions would, a few years since, have excited wonder, is now in ordinary use.

These pots are made entirely by hand, no machinery having as yet been invented that can replace that process, slow but sure, by which, bit by bit, the pot is built up. A good pot-maker, with two assistants, can furnish three or four per week. After a careful drying of many months, they are made ready for the furnace by a previous heating in a kiln or pot-arch. Here a small lump of coal, thrown against its side, tests the soundness of the pot. If, when struck, it rings well, its future is promising; but if it returns a dull sound, it will probably be short-lived in the furnace, though now and then such a pot will disappoint the bad opinions formed of it, and turn out a respectable pot after all.

The terrible task of setting these pots in the furnace falls upon the glass-house crew, and the nicety with which these enormous vessels are adjusted in their place, in the teeth of a consuming fire, is, perhaps, that operation which in the many marvels of glass-making would most astonish a stranger to such scenes.

The average duration of the pots when thus fixed is about seven weeks. Some attain the age of ten or twelve, while others, as every manufacturer well knows, terminate their existence prematurely, either from the naturally defective constitution of the pot, or from bad treatment in the pot-arch, or, more frequently, from its having been "starved," exposed, that is, to a current of cold air, in the furnace, through the neglect of the attendant. "Misfortunes never come singly," is an adage applicable to the catastrophes of pots. It was truly remarked to a manufacturer, at a period when such calamities were frequent, "Your pots break, because they break."

The breakage of a pot often disturbs the furnace to such an extent that the breakage of others frequently follows, and many weeks will sometimes elapse before the disorganization thus produced can be rectified. The loss of the pot and the "metal" contained is nothing as compared with the injury which the glass in the surviving pots, and these pots themselves, are apt to sustain.

My limits compel me to forego any description of the furnace in which the pots are placed, or of the process by which the materials are transformed from their primary condition into a molten vitreous mass. Assuming, then, that our pots are full of melted glass, let us take a brief survey of the two methods by which this glass may be brought into the required form.

Crown glass, as the older of the two in this country, must first claim our attention. Upon the surface of the melted glass is a ring of fire-clay, which, when the materials were thrown in, lay at the bottom of the pot, and after the completion of the melting found its way upwards. This ring is of great service, for, floating in the centre of the pot, it prevents the exterior surface of the metal, or melted glass, which becomes stiff and stringy during the long period of working, from mingling with the interior or hotter surface, which thus remains throughout of a suitable consistency. The labour also of the skimmer, whose duty it is to clear the surface of the metal from any scum or dirt that may collect upon it, is considerably diminished by the ring, which, limiting the space from which the glass is drawn, limits also the space which it is necessary to cleanse, and any bubbles or impurities in the glass have a tendency to attach themselves to the ring.

The metal, or melted glass, having been brought by the gradual cooling of the furnace from a state of complete fluidity to a consistence capable of being worked, the gatherer dips the end of his pipe, or hollow rod of iron, into the pot inside the ring; and twirling it round its axis to equalize the thickness of the gathering, he collects upon the end, or nose, as it is technically called, a pear-shaped lump of glass. Resting his pipe upon a stand or horse, he turns it gently round, and allows the surface of the lump to cool, to fit it for a second gathering. The lump completed, the gatherer having cooled his pipe under a trough of water, that he may handle it at any point, proceeds to roll the glass upon a marver, or metallic bed, until it assumes a conical form, the apex of the cone forming the "bullion point." A boy now blows down the pipe while it is still being turned by the gatherer on the marver, and expands the glass into a small globe. Having been heated, it is blown again, and assumes the shape of a

Florence flask, and the future rim of the developed plate is prepared by rolling the piece, near the pipe nose, upon the edge of a marver. Again heated, it is now expanded by the blower into a large globe. During this expansion, it is important to keep the bullion point exactly in the position which it previously occupied, in a line with the axis of the pipe. To effect this, the blower rests his pipe upon an iron support, and while he blows down the pipe and turns it round at the same time, a boy holds against the bullion point a piece of iron terminating in a small cup. Again presented to the fire, by the peculiar manipulation of the workman and the peculiar direction of the flame upon it, the front of the globe is flattened, the possibility of the globe collapsing during this operation being prevented by its rapid revolution round its axis. The piece now resembles somewhat in shape an enormous decanter, with a very flat bottom and a very short neck. The bullion point is still to be seen in the centre of the flat bottom, and its use now becomes manifest. The pipe is laid horizontally upon an iron rest, and a man approaches having in his hand a large rod of iron called a ponty, tipped with a lump of molten glass. Pressing this lump upon an iron point, so as to give it the form of a little cup, he fits it, when thus shaped, on to the bullion point, to which it soon becomes firmly attached. The lump thus formed is called the bull's-eye, or bullion of the developed plate. The incision of a piece of cold iron in the glass round the nose of the pipe, and a smart blow, soon detaches the pipe, which here takes leave of the piece, and after having lain idle a few minutes, till the glass adhering to it has cracked off, it is warmed, and carried back to the pot to repeat its course.

The end of the piece which was next the now detached pipe is called the nose, and gives its name to the furnace or nosehole where this nose is, on account of its thickness, heated almost to melting, with a view to the comiug operation. The glass now undergoes its last and most dreadful torture in the hands of a man who, with a veil before his face, stands in front of a huge circle of flame, into which he thrusts his piece, rapidly meanwhile revolving his ponty. The action of heat and centrifugal force combined is soon visible. The nose of the piece expands, the parts round cannot resist the tendency—the opening grows larger and larger—for a moment, is caught a glimpse of a circle with a double rim; the next moment, before the eyes of the astonished spectator, is whirling a thin transparent circular plate of glass, which, but a few minutes before, was lying in the glass-pot, an undistinguishable portion of the molten mass. Still whirling, the table, as it is now called, is carried off, laid flat upon a support called a whimsey, detached by shears from the ponty, lifted into the annealing kiln upon a fork, and piled upon its edge against the preceding table. The weight of so many tables pressing one against another would cause the hindermost to bend, but this is prevented by the intervention of iron frames or drossers, which divide the tables into sets, the first drosser leaning against the wall of the kiln, the second against the first and so on, and thus rendering each set of tables independent of those behind it for support. As the bull's-eye or centre lump, which the ponty has left behind it, keeps each table from close contact with its neighbours, the air passes freely between them, and the annealing is accomplished with tolerable rapidity, varying from twenty-four to forty-eight hours, according to the number of tables in the kiln. From the kiln the tables are conveyed to the warehouse, having passed, since their first exit from the pot, through the hands of ten distinct workmen.

The above brief and vague description of a marvellous process will, I trust, be intelligible to those who have themselves seen it: to those who have not seen it, no description, however elaborate, no diagrams, however clear, can convey any idea of the perpetual change of form, size, and appearance which the glass exhibits during its growth.*

* The foregoing is a portion of a paper by Mr. Henry Chance, M.A. read at the Society of Arts, on the 13th ult. We shall give the remainder hereafter.

GEOMETRICAL PROPERTIES OF CONIC SECTIONS.

THE ELLIPSE.*

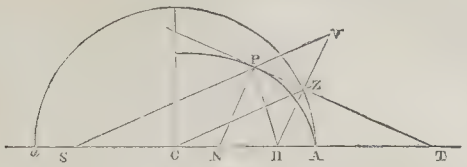

Fig. 4.

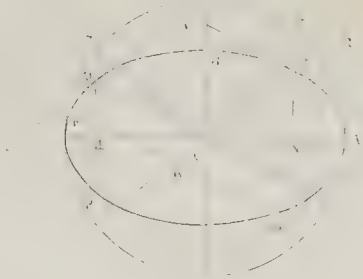

Fig. 5.

THE following is another method of drawing a tangent, and is introduced in order to explain some important properties of the ellipse:—

Let S and H (fig. 4) be the two *foci* of the ellipse, and P any point on the curve. Draw S P and H P, produce S P to V, and make P V = P H. Join V and H, and bisect the line V H in Z; then P Z is the tangent at point P, since it bisects the angle V P H, and one property of the ellipse is, that *the tangent bisects the external angle of the focal distances.* S P and H P are called the *focal distances*, and H P V is the external angle which they make with each other.

Since C S = C H, and H Z = V Z, it follows that, if we join C and Z, the line C Z will be parallel to S V, and will also be equal to half the length of S V, by the sixth book of Euclid. But S V = S P + H P = A*a* = twice C A; therefore C Z = C A, or C Z is a radius of the circumscribed circle; and thence it follows that *the perpendicular* H Z *from the focus* H *upon the tangent meets the tangent in the circumscribed circle.*

Since the tangent P T bisects the angle H P V, it follows that the *Normal* P N (or perpendicular upon the tangent at the point of contact) bisects the angle S P H; therefore the *focal distances make equal angles with the Normal*, at any point of the curve to which they are drawn. Hence it will be evident, that if we have a reflector in the form of an ellipse, and a light is placed at S, all the rays which fall upon the curve will be reflected to H, and *vice versâ* This is why S and H are called the *foci* of the ellipse.

We here presume the reader to be acquainted with the fundamental law of light, that the angle of reflexion equals the angle of incidence.

Hence it will be seen that the elliptic form is a bad one for the contour of a building intended for public speaking; since if a powerful speaker happened to be placed at or near to one focus, the part of the audience near the other focus would be deafened by the noise of the reflected voice.

In the circle, any straight line which passes across it from one point on the curve to another, but does not pass through the centre, is called a *chord*; and if the line passes through the centre, it is called a *diameter* of the circle. The same terms are applied to lines similarly drawn in the ellipse, but with this difference, that whereas the *diameters* of any one circle are all of equal length, those of an ellipse vary in length. The lines P *p* and Q *q* (fig. 5) are diameters of the ellipse.

The term *conjugate diameters* is applied to those which have the following relation to each other:—

Let P *p* be any diameter and P V the tangent at the point P. Draw the diameter Q *q* parallel to the tangent at P, then Q *q* is called the *conjugate diameter* to P *p*, and it has this peculiarity, that the tangent drawn at Q is parallel to the diameter P *p*, and therefore P *p* is the *conjugate diameter* to Q *q*. And since any diameter divides the ellipse into two equal and similar parts, it follows that the tangent at *q* will also be parallel to P *p*, and the tangent at *p* parallel to Q *q*. These diameters, therefore, possess this property, that *the tangents at the extremities of any diameter are parallel to the conjugate diameter.*

If we draw a *chord* F E parallel to Q *q*, we shall find that F E is bisected in K by the diameter P *p*; and if we draw a *chord* parallel to P *p*, it will be bisected by the conjugate diameter Q *q*; one of the properties of *conjugate diameters* being, *that each diameter bisects all the chords parallel to the other.* It will be evident that the major and minor axes are conjugate diameters.

If the tangents at P and Q are produced to meet at V, we have a parallelogram (C V) drawn upon the half conjugate diameters, and it has this remarkable property, that it is equal in area to the rectangle C R drawn upon the semi-axes. Therefore, if we draw the tangents at each extremity of the diameters, it follows that the parallelogram formed by them outside the ellipse is equal to the rectangle upon the major and minor axes. We have, then, this connection between all conjugate diameters of the same ellipse, that *the parallelograms formed by the tangents at the extremities of conjugate diameters are all equal to each other in area.*

There are other peculiarities connected with the conjugate diameters, of which we give the two following:—

If we draw the ordinates N P and M Q, and produce them to meet the circumscribed circle in Y and X, then the ordinate N Y will be equal to C M, and ordinate M X equal to C N.

Lastly, draw the radii C X and C Y: the angle X C Y will always be a right angle.

* See p. 106, *ante.*

THE IRON TRADE.—No change worth notice has taken place of late in this trade, except that there is talk of a probable reduction of price at quarter-day. At all events, there seems to be not the slightest idea of any rise in price being attempted on that occasion. Already, as we before noted, iron is sold considerably below the nominal prices of last quarter-day. Orders meanwhile are withheld in consequence of the rumours of an acknowledged reduction.

STYLE FOR MODERN BUILDINGS.

HAVING read with great interest the letters of Messrs. Petit, Tite, and Scott, I venture to add some remarks that have occurred to me. The subjects discussed are Utilitarianism. Classical and Gothic Architecture, and how far utility is combined with the two latter-named styles. That utility should form the first consideration in architecture no one will deny; but this must be only one point,—the art must be brought to bear upon it before it can be presented to us as a true piece of architecture.

In my walks through London I am continually on the watch to see how far the styles adopted in modern erections fulfil the purposes intended, and I know no recent building that so amply satisfies the utile as the present Palace of Westminster. Striking as the new façade is in Palace-yard, I am aware many objections may be urged against it; but what building is there in London where the windows afford such an abundance of light without detracting from the effect of the building? Let us turn to palaces coeval with it in Pall-mall, some by the same hand. What is the prominent defect in the Reform and Travellers' Clubs, but the size of the windows being too small for our dark climate? Again. Compare the new library at the Carlton with the library of the House of Commons. As to its utility or architectural effect, even descending to minor comforts in modern buildings, it is worth while to visit the smoking-rooms in the two buildings under comparison. Again, let us test these various buildings by originality. Have we never seen the Travellers' Club, the Reform, or Carlton, elsewhere? I recollect being summoned to a meeting at the Carlton, to consider the subject of the rebuilding of the club. On the chimney-piece was placed a print of Sansovino's library, to disarm criticism. The frieze of the Athenæum was designed before the birth of our Saviour: it can hardly be claimed as original or appropriate. But where do we find the new building at Westminster, or a similar façade to that which faces us as we enter Dean's-yard? There is a new club now building in Charles-street. Curiously enough, I opened Gwilt's "Encyclopædia of Architecture," and found the identical cornice at fig. 947. In this building, utility seems to have encumbered it; the bows in either front are disfigurements; and so the architect evidently feels them, more especially in Charles-street: the door also, following convenience, is not in the centre. How much do I feel might have been made of these irregularities in the Gothic style, while the necessary unity that must be observed in the Italian is destroyed! Utility has not altogether been met with at the Exchange: the shops, to serve that purpose, have cut away the granite bases of the columns, and I have been told that the western portico is a recollection of the Temple of Jupiter Stator. I also see the perforated iron gates are glazed.

Let us now turn to church architecture. A chancel is not necessary to a Gothic building, but is to a church, regardless, of style a matter of ecclesiastical propriety. The same may be said of a stone pulpit: it is neither classical nor mediæval; and, if utility is to govern the practice, I prefer a wooden one with the fewest points in contact with the floor, assisting the preacher's voice, as a sounding-board in a piano forte.

I will now turn to engineers' architecture, which is not encumbered with style, but where material may be supposed to be worked up in the most scientific and economical manner. Let us go no further than Camden-town Station. On the left-hand I observe a buttressed building, almost an Early Gothic church; and on the right a large Chapter-house; while, close to the carriage-door, I see a window designed by an architect much in favour of the classical, which I long to chamfer, to make it more useful and mediæval.

While on the subject of the useful, let me draw your attention to a modern application of science to our comforts, viz. gas-lighting. Walk through the Palace of Westminster, and compare the *gasiliers* there in the Gothic style with those in the Italian, in the Carlton Club: look at them with the eye of an artist or an utilitarian.

As to a class of buildings which are now becoming very prominent features in our great town of commerce,—a whole new street in the city is more or less devoted to examples of large warehouses. The architects of these vast houses have taken some pains to make these erections more than utilitarian. Wherein consists the beauty of these buildings, and where are the defects? The cornice forms the prominent feature (the non-essential part): the defect is the glare, if I may use the expression, of the windows, mounting story after story in equal sizes. These defects I attribute as much to the style adopted as the architect; but how easily had the Gothic style—a style so pliant in fenestration—been adopted, could the difficulties have been overcome: the real essential of the building would then have formed real architectural ornaments. It also occurred to me that the winding-staircase which all these buildings contain might be made a very valuable feature to the external wall, or a variety in the line of roof, a point very much wanted in the long, straight streets of modern formation.

Without dogmatising, let the two styles be thoroughly studied, as exhibiting the best means of erecting buildings suitable to our present requirements. I am sure that happier architectural results will be produced by seeking to adapt old forms under new combinations than all the struggling after a new style, which can never be the creation of one mind, but a succession of great minds struggling to mould right principled forms to existing circumstances. I think this the history of architecture teaches us. Though I appear as an advocate of the architecture of the Middle Ages, I strongly recommend all young architects to thoroughly study the Parthenon, should they intend to exclusively practice in the Mediæval style.

AN AMATEUR.

THE SELECTED DESIGNS FOR BARRACKS.

THE area proposed to be occupied by the design for a Cavalry Barrack, marked "Paritur Pax Bello," and submitted by Messrs. T. H. and M. D. Wyatt, is about twenty-two acres. It presents the following leading features:—

The whole barrack-yard is enclosed with a boundary-wall, 12 feet high, having only one principal entrance to the south. It has been thought very important, that for the purposes of inspection, ventilation, and security, no buildings of any kind should be allowed to abut upon the boundary-wall.

The quarters for married officers have been so arranged as to admit of as much privacy and separation from the ordinary working of a barrack as practicable.

The quarters for the unmarried officers have been placed in the two wings looking towards the barrack-parade, and approached only from that quarter.

A racket-court is provided for the use of the officers, immediately adjoining their quarters, with a bath-room and dressing-room.

The "sergeants' quarters" comprise a mess establishment, quarters for the band-master, and a band practice-room; with apartments for schoolmaster and schoolmistress, immediately adjoining the "chapel school."

Distinct accommodation is provided for the staff sergeants, in a central and important part of the barracks.

A powder-magazine and shifting-room are placed immediately in the rear of the sergeants' quarters, and surrounded by a wall, so as to form a magazine-yard.

No real objection is thought to exist to the practice of having the soldiers' dormitories over their stables; a fire-proof floor being constructed between them, impervious to smell, and materially deadening sound. The ventilation of the stables is so contrived as to prevent the vitiated air from passing to the dormitories through the windows. The men of each troop are accommodated in a distant wing over the immediate horses of that troop, and are divided into four dormitories of thirteen each,—a number which it is believed would be more agreeable to the men than if there were only two dormitories and twenty-six men in each: if, however, it shall be considered preferable to have the larger number, nothing will be easier than to have the rooms thus arranged. The ground space allotted to each man is not less than 7 feet by 5 feet. The rooms are all warmed by fireplaces, and average 13 feet 6 inches in height. The four rooms of each troop are approached by a separate stone staircase, and by a gallery or covered passage over the shed at back of stables. These galleries may be entirely enclosed, or only partially so, opposite the door leading into the dormitories, so as to prevent a draught of cold air into the rooms.

Distinct accommodation is provided in a separate part of the barrack for twenty married men; each couple having one room, 14 feet by 12 feet.

A washing establishment, a "drying-room," a ball-court and gymnasium, quoit and skittle grounds, are provided.

The kitchens are so arranged as to serve for dining-rooms, having abundant height and ventilation. The space appropriated to the actual cooking of the provisions is separated by a screen from the place where the men take their meals. One kitchen and dining-room combined is appropriated to each troop, and the tables are so arranged as to permit the men sleeping in each room to have a separate table permanently allotted to them. The kitchens are in buildings detached from those in which the men's sleeping-rooms are situated, but communicating with them all by covered passages.

The library and reading-room are placed in the most central part of the barrack.

The troop horses are arranged on three sides of a square (two troops on each side), and each troop divided into two stables by a broad archway, for facility of ingress and egress. The two stables for each troop contain fifty-four stalls, forty-five for troop horses, and nine for spare standings and utensils, being the proportion required by the report, and making in all 324 standings. Although this accommodation is practically divided into twelve separate stables, giving an average of twenty-seven horses to each, yet for all purposes of access and inspection, it may be said to be one stable. The stalls are 9 feet long by 5 feet 8 inches wide, the passage between the horses' heels being 12 feet.

The stables for the officers' horses are placed in a separate building, of easy access from the quarters of the officers, and sufficiently near the "horse infirmary." Accommodation is provided for fifty horses; with the same proportion of spare stalls and standings for utensils that is suggested in the report for the troop stables.

The establishment for sick horses is placed in the centre of the ground, at the back of the troop stables, and is so arranged that every troop horse can be taken into it under cover. It comprises six stables, with large stalls for sixteen horses, and twenty loose boxes. A surgery and boiler room are provided. It is proposed to cover in with glass a space of 140 feet by 35 feet, for the purpose of exercising the convalescent horses.

Water would be laid on at the door of every stable, in addition to the twelve stone troughs in the barrack-yard, against the walls of the stables.

A riding school, 60 yards by 20 yards, is placed in a position, central to the troop stables, and so arranged that every troop horse may be taken into it under cover. The school will be found abundantly lighted and ventilated, and will be an imposing feature in the establishment. Every soldier in the regiment can also approach it under cover.

Those portions of barrack accommodation devoted to the administration and discipline of the regiment have been placed in immediate contiguity to each other, adjoining the entrance to the barracks, near the officers' quarters, and those appointed to the staff sergeants. An orderly room, a clerk's office, and a court-martial room, are in immediate communication with each other.

The guard-house (adjoining the entrance archway) consists of a guard-room, two small lock-up rooms, one of which communicates with the court-martial room, and two cells for drunk or violent prisoners.

Those parts of a barrack relating to the supply of the regiment are placed adjoining the entrance to the barrack, and in the opposite wing to those just described. The quartermaster's stores and office are entirely distinct from the barrack-master's.

The barrack-serjeant has quarters immediately attached to his stores.

The barrack-master's house would be situated immediately outside the barrack wall, at the S. E. angle, and nearest to his office and stores.

The hospital is placed in the S.E. angle of the barrack-yard, in a cheerful and sunny situation, and away from the noise of the men's quarters. It has been thought better that the invalids should be taken to the hospital, than that the building should be placed in the neighbourhood of the more crowded part of the barrack.

The canteen is situated between the serjeants' quarters and the men's rooms, and it has been thought more likely to tend to cleanliness and order if this building was placed in a somewhat prominent situation rather than at the back of the barrack, and in some out-of-the-way place, as is found in many existing barracks. A covered way connects the men's tap-

room with the ball-court, skittle-ground, and gymnasium, and to all of which there are also entrances distinct from the canteen.

It is not proposed in this design to introduce any other system of warming than by open fire-places.

Of the infantry barrack (Mr. Morgan's design) we will give some particulars next week.

OXFORD ARCHITECTURAL SOCIETY.

At the fifth ordinary meeting of the Society, held on the 27th inst. the Rev. H. B. Walton read a paper on Merton College Chapel, preparatory to a visit of the members of the society to inspect the architectural features of Merton Chapel, as well as the other antiquities of that college. For the sake of illustrating the *historical* interest attaching to architectural studies, the first part of the paper furnished a sketch of the life of Walter de Merton. The effect of his untimely death upon the building of his chapel was next shown, and an architectural history and description of the present structure given. The several dates furnished, according to the report in the *Oxford Herald*, were, the choir 1277, the sacristy 1310 (from the bursars' rolls giving the wages of the workmen employed in that year for digging its foundations), the tower arches 1330, completion of the transepts 1424, when the church was re-dedicated. The architectural features of the chapel were severally alluded to, together with notices of the stained glass, the brasses, &c.

At the following and last meeting for the present term, held on Wednesday, March 5th, Mr. Hingeston, of Exeter College, gave a lecture "On the Perpendicular Style," of which the following is an abstract:—

"Towards the end of the fourteenth century a great change came over the architecture of this country. It began to decline. And this change first manifested itself, as, indeed was likely, in the feature which, more than any other, was characteristic of all styles—*the window*. The graceful, flowing lines of Decorated tracery began gradually to lose their elegance and freedom, and to become more and more rigid and stiff. And this stiffness was not confined to windows, but soon spread over every detail, waving lines being exchanged, whenever possible, for perpendicular ones; hence the very appropriate name assigned to the style by Rickman—'*Perpendicular*.' The date at which this style came into general use was the year 1377, or perhaps a little earlier; but as we have seen was the case with the previous styles, the sign of transition—in this case the Perpendicular line—had appeared some years before. The earliest instance known of a Transitional church is the very remarkable church of Edington, in Wilts, which was consecrated in 1361. It was built by William de Edington, Bishop of Winchester, and some have supposed that his successor in that see, the famous William of Wykeham, taking the idea from Edington's innovations, invented the Perpendicular style. Whether this theory be true or not, of this much at least we are certain, that Wykeham was the greatest architect of his day, and that his own foundation of New College is the earliest pure building of the style. It was begun in 1380, and finished in 1386. But to return to the church of Edington. It is transitional throughout,—not merely showing signs of a change here and there, but begun and finished within the period of transition,—in general design and effect, Decorated,—in detail a remarkable mixture of the two styles between which it stands midway. For instance, the west window, which is large, and of eight lights, appears at a distance to contain Decorated tracery, and the Perpendicular lines are scarcely noticed, though they occur at every opening. This is probably accounted for partly by the fact that not one of the mullions is carried up into the head of the window, and thus, the Perpendicular lines being broken and scattered, the idea of perpendicularity is only imperfectly expressed. The doorway beneath exhibits a still more singular mixture of styles. The arch is segmental, as in ordinary Decorated work, but the upper part, forming a kind of tympanum over two doors, is filled with Perpendicular panelling, and the whole is surmounted by a square hood-moulding, which is of very unusual occurrence in Decorated work, though a similar example occurs in the north aisle of Dorchester Abbey Church. William de Edington began, and Wykeham continued, the alteration of Winchester Cathedral; and although the new works are, of course, in the Perpendicular style, at least those of the former prelate are not wholly free from traces of the preceding style. In 1380, however, we find the new style thoroughly established, and the flowing line of the Decorated period utterly abandoned."

The lecturer then described windows, doorways, buttresses, towers, roofs, and other portions of buildings, and concluded as follows:—"During the sixteenth century, Gothic architecture gradually declined till it became almost extinct—and a semi-Grecian style took its place, in which, nevertheless, Gothic features were occasionally employed, as in the windows in the tower of All Saints' Church, in this city. Sir Christopher Wren's London churches are mostly of this description. The introduction of this debased style took place on the Continent earlier than in England; and, if it be true that the dissolution of the monasteries in this country checked church-building and church-restoration, there can be little doubt that fewer remains of the Middle Ages would have been handed down to us, had they remained. Church-restoration and church-building would have been prosecuted with all the old activity, but in the spirit which originated St. Peter's, at Rome, and replaced old St. Paul's with the present Italian structure. Now that architectural knowledge has attained a high standard among us,—while we rejoice at every new instance of correct and yet conservative restoration, some of us are occasionally heard to express regret that much was done before sufficient knowledge was attained. Had the present zeal for church-restoration sprung up 300 years ago, without doubt many of our great cathedrals would have been irreparably disfigured, and mediæval Oxford itself 'Italianized' throughout! It was remarked at a previous meeting that while the pseudo-classical styles were brought into general use first on the Continent, and afterwards in England, Gothic architecture lingered at Oxford. Wadham College was mentioned as a remarkable example, the chapel of which is well known for its apparently fifteenth century architecture,—and yet it was built in the reign of King James. The hall of Exeter College is of the same date, and equally good: the greater part of Jesus College and the Fellows' Quadrangle at Merton, were also built at a period when Gothic architecture was elsewhere a lost art. I believe the schools are of the same date, and Gothic of a kind, but not, I think, likely to be ever very much admired. I must not forget to mention the famous staircase to the hall at Christ Church, which was built in 1640, and though meagre in some of its details, all must admit that the design and effect are worthy of the fifteenth century."

IRELAND—ITS PROGRESS IN ARCHITECTURE.

To revisit this country after a lapse of twenty-five years is to see all things changed; for the arts of commerce and of agriculture revive under the auspicious influence of benignant government, and of happy vicissitudes. Whithersoever we turn in the counties, quietude reigns; an *improved system of farming* is widely spread, and domiciles of an amended, although perhaps of a more moderate and medium character, have replaced the halls of the old and departed squirearchy. As for the nobility, they rarely dwelt on their fues,—those who erst abode, still remain; but the proportion is too infinitesimal, and too uninfluential, to arrest the onward progress of a movement that is destined to change the tone and character of a whole nation.

Within the period specified a generation has nearly passed away, and with it, old prejudices and habitudes have also disappeared; religious tolerance takes the place of savage animosities; and the onward march of improvement nerves the hand of industry; making desolation productive, and "the wilderness to blossom as a rose."

In the metropolis the improvement is truly astounding: a population of 180,000 inhabitants has been nearly doubled, and the extension of the city increased beyond even the proportionate advance of London. Dublin, always distinguished for her splendid public buildings, unequalled by any other capital for the beauty of her vicinage, has been still further embellished; the churches (St. Patrick's and Christ Church) have been insulated and thrown open; the magnificent Custom-house, the noble courts of law, lately completed, and the Classic Bank need no commentary; the suburbs have been extended in miles of villas; two commodious, and even magnificent, harbours (Queenstown and Howth) have been constructed at convenient distances; the Phœnix-park and its approaches have been improved; the College-park thrown open, its wall replaced by a railing (like Kensington-gardens); and the narrows of streets (such as Holborn-bars and other straits of London) have been expanded to free commerce and daylight.

There exists now, and there must have been always hitherto, a public spirit in this comparatively poor place, far superior to that which condemns London to a filthy river without quays; and to an unembellished city, with all the wealth which boundless commerce can confer. The public buildings of old standing here are far superior (bating only the glorious St. Paul's and the venerable Abbey) to those of Great Britain's capital. There are seven bridges, and only one with a toll! There are two cathedrals with peerless choirs; there are railway stations of more than common pretensions, at fair proximity to the centre; and there have been erected churches of all persuasions, in style and character fully equal to the increase of population, as proportioned with other cities of the empire; but the most palpable improvement effected in Dublin within the period specified is the enlargement of the National University, and the erection of a noble quadrangle, in keeping with the fine façade presented to College-green.

Trinity College, the *alma mater* of Ireland, is now increased in extent, so as to be fully adequate to enrol 3,000 pupils; and the class of education, as now practised therein is such, that the graduates of the University are inferior to those of none other in the world; the curriculum has been enlarged, restrictions in a great measure removed, and the more useful arts are now inculcated,—those arts which fit men for the practice of science in the utilitarian walks. A school of geology has been of late established under the auspices of an able professor, the Rev. Samuel Houghton, and to him is committed the whole charge of that department, in which his acquirements are the more illustrious, for his youth.

To form lecture-rooms for swelling numbers of students, a magnificent structure has been just erected, and is now in progress of completion, in the park, at the rear of the college. This park, central in the town, contains, perhaps, about thirty English acres; it is planted, and is at the same time ornamental to the town, and useful to the college; not, perhaps, so much for the reserve of air which it retains, as for its object as a play-ground. An elevation of the longitudinal front was given in the *Builder*, some time back, as designed by Messrs. Deane, the architects.

This building occupies an area of 160 feet by 85 feet: it consists of a *pian' terreno*, and grand story; and is for effect of style, and for the beauty of finish, as well as for the polished marble columns, and enrichments of the interior, unequalled.

In a paper like the *Builder*, whose province it is to discover talent, and to exhibit it to the credit of the happy possessor, it may not be inadmissible to name the artists to whose skill and assiduity the peculiar excellence of sculptured workmanship is due, and without the knowledge of the individuals, whose names were asked and modestly given, while unconscious of the object of inquiry; the writer takes leave to mention that to one Englishman, Mr. Roe, of Lambeth, assisted by the native talent of three brothers, workmen, the O'Sheas, of Ballyhooly, county Cork, the whole of those most elaborate, and as yet unique, sculptures are owing.

The ornature is for the most part wreathed in foliage—the oak, the ivy, acanthus, shamrock; lilies, lotuses, birds, and, in fact, every variety of wreath—and these so diverse, so diffuse, so graceful, that the very diversity establishes its beauty.

Since this has been done (and it is the work of the last two years), one shop in Dublin has adopted the wreathed arch in the door and windows, and the style bids fair to become popular here—as it must obtain in England, as soon as it becomes known.

In this fine hall, now in course of being roofed in, Irish marble of varied colours, and polished, are used with great effect; although the disposition of the columns (as to colour) does not give complete satisfaction to the writer; nevertheless the lavish enrichments of sculpture within—capping every column, enwreathing every arch—and the commixture of rich colour in the crowning arches, which are groined in encaustic brick,

will present, when complete, an ensemble so gorgeous, as no other example of architecture in this country can approach.

At present the structure is finished to the top course, and the blocking is laid on, to receive the tasteful garniture from the chisels of our Ballyhooly sculptors. It is as yet blank, and it occurs to the writer, who saw a wooden block with the design for the upper cornice *painted thereon*, to suggest a change: that change would be, to substitute for, and instead of, the series of projecting angles, or diamonds (as sketched out), *a bold wreath of oak leaf*, with (if they like it) an acanthus over every blocking or cantilevre. This hint is given with great respect to the architects, and in all the humility of one who has sometimes uttered a crotchet on works in progress. The effect of the lower cornice with the acanthus, in moderate relief, is excellent; and the design would be more consistent with the whole series, by completing the crowning cornice in a foliated pattern.

As for the medallions between the windows in *pietra commessa*—being insertions of the various Irish marbles, polished, and set in Moorish patterns, these being placed on a plain granite paries, are wholly dependent on colour for effect; and it might be well to consider whether blocks of Portland, sculptured with heads (say of philosophers, or even of the senior Board) might not be more apposite. There is no variation in colour in any other part of the exterior: and here, too, wreathed or foliated borders would comport better with the rest.

Of Mr. J. McCurdy's share in the internal arrangement and adaptation of this fine structure, mention has been already made in these pages, though not by Quondam.

FORMS AND MUSICAL PROPERTIES OF BELLS.

During the discussion on the subject of bells at the Institute of British Architects, I have been adding to my stock of information by reading the remarks of those authors, both foreign and English, who have made this subject their especial study. At the discussion on the 11th inst. I fully expected that some one would have spoken more decidedly upon the musical properties of bells, because, as I shall presently show, their nature, to a considerable extent, has been known for centuries. Those who have the slighest ear for music will have observed, that when a bell is struck, a musical *chord* is produced, and not merely a single tone; or in other words, the fundamental tone, its octave, and either its major or minor third, will be distinctly heard. My attention was drawn to this phenomenon by reading Kreuser's "Christliche Kirchenbau," Bonn, 1851; and Heinrich Otte's "Kunst Archäologie" of Germany. Leipzic, 1854. Kreuser remarks that the art of casting bells, and the knowledge of their musical phenomena, were not in an advanced state until the prevalence of pointed architecture in Germany. He quotes the following passage from an old author named Vincent of Beauvais:—"Campana in tribus locis, si pulsetur, tres habere sonos inveniture, in fundo mediocrem, in extremitate subtiliorum, in medio graviorum." Otte remarks, under the article "Glocken," that there is at present very little known about the musical properties of the mediæval bells, although a more extensive knowledge would be of the greatest practical use and interest at the present time. After Otte's attention had been arrested by reading the quotation from Vincent of Beauvais, in Kreuser's book, he examined the tones of several bells of the fourteenth and fifteenth centuries, and found that there are two distinct orders of bells: they are either, according to the present system of musical notation, major or minor bells; that is, such whose middle tone between the octaves is the major third, or such whose middle tone is the minor third. The bellfounders of the present day, he thinks, make major bells only (being a saving of metal), whose proportions are as 5 to 4; whilst the proportions of the great bell at Erfurt, called "Maria Gloriosa," are as 6 to 5, and consequently it is, as Otte believes, a minor bell. The height of the bell is the least term in the proportion, and is always measured on an inclined straight line touching the upper and lower portions of the bell, and therefore not the vertical height. I measured the tenor bell of Holy Trinity Church, Coventry, a few days ago, and found its proportions to be nearly as 5 to 4: it was cast by Park, of London, in 1776. Otte further adds, that chimes composed of major bells, however well the fundamental tones may be in harmony, will nevertheless have a harsh effect on the ear. May not this partly account for the disagreeable effect produced by the Royal-Exchange chimes? Mr. Denison alluded to the great Erfurt bell, the exact dimensions of which I gave to him, as being, according to report, the finest bell in the world. May not its celebrity be owing in a great measure to its proportions, as well as to its material? or, in other words, are not bells which, when struck, produce minor chords to be preferred to those which produce major chords? If so, it follows that the customary proportions, being, I believe, nearly as 5 to 4, are not correct, and that the height should be increased $\frac{1}{5}$th of its entire dimension; that is, taking for granted the proportions given by Otte to be theoretically correct. However, there is still room for a considerable amount of investigation, theoretical as well as experimental, relative to the musical phenomena of bells.

The composition of bell-metal is also a subject not entirely exhausted: it is possible that three of copper and one of tin (the proportions common in Germany) may be the best compound; but there are, I think, reasons for questioning this, especially as regards the material. For instance; sound is not transmitted through all kinds of metals with the same degree of velocity. I learn from "Pouillet's Physics," that the ratios of the velocity of sound in tin, silver, copper, and steel, are as $7\frac{1}{2}$, 9, 12, and $16\frac{1}{2}$, respectively: may we not infer from this, that silver and copper will make a better alloy than tin and copper? if so, the tales we have heard and read about silver in bells must not be altogether neglected as purely mythic. I read in Otte's book, that Charlemagne caused 100lbs. of silver to be used instead of the customary amount of tin in a bronze bell which was made for him by a renowned bell-founder of that age. I think we have no right to suppose that silver was introduced in the alloy from mere fancy. The oldest bell known is that in the Cäcilienkirche, in Cologne: it is called the *Saufang*, and is made of three pieces of wrought-iron plate, rivetted together with copper nails: it is believed to be of the time of Archbishop Cunibert, who lived in the early part of the seventh century. In the first half of the ninth century, Walafried writes about two sorts of bells,—those made of wrought iron and those of cast bronze.

Mr. Denison has omitted in his list of large bells that of Olmütz Cathedral, in Moravia, said to be the largest bell in Germany: it is an old bell, and its weight, according to Otte, is 17 tons 18 cwt.

The question as to the best mode of hanging, which was discussed at length on the 11th instant, at the Institute, is also a knotty subject. Those who paid a tolerable degree of attention to what Mr. Baker and his mathematical friend said, must, I think, have felt very much inclined to adopt their notions: the mathematical formulæ, which were explained as resulting from an investigation of bells in motion under all imaginable conditions, I think fully established, in theory at least, the advantage of hanging large bells *high in the stock*. I fully expected, if there had been anything wrong in the formulæ, that Mr. Denison, with his well-known mathematical acumen, would not have failed to discover it; but all he said was, that there were some inscrutable laws of friction involved, which rendered the theory contradictory and nugatory. I do not think that this subject is so very difficult to settle, even if we throw theory out of the question altogether: for instance, let two bells of equal weight, say two tons each, be hung, one according to Mr. Denison's, or the old method, and one on Mr. Baker's improved principle, and let one man set *both* bells, allowing sufficient time for rest between the two operations, and note the length of time and quantity of exertion required for each: the result, I presume, will prove which is the best mode.

In conclusion, I think no one will for a moment question the fact, that when a bell is in motion, the strain on the bell-frame, and consequently on the tower walls, decreases in proportion, as the bell approaches to a state of equilibrium on its axis.

John Burlison.

INSTITUTION OF CIVIL ENGINEERS.

At the meeting on March 4, Mr. Robert Stephenson, M.P. president, in the chair, the paper read was "On the Causes of Explosions of Steam Boilers," by Mr. William Kemble Hall, United States (America). In the course of it, the writer said, it was reasonable to suppose that the tearing of the boiler into several pieces, which generally accompanied explosions, was caused by a sudden exertion of power, and electricity had been suggested as an agent. But though electrical phenomena might be exhibited by the expansion of a jet of steam, it could not be supposed that a boiler, with its many direct and metallic connections with the earth, could be converted into a reservoir of electricity. If any were generated, it would be instantly conducted away. It had been supposed that the plates exposed to the action of the fire by the falling of the water had become overheated and decomposed. The steam, the oxygen of which had combined with the iron, and the hydrogen formed a gas, that had caused the explosion. But hydrogen would not explode, unless largely mixed with atmospheric air, which could not enter the boiler, except in minute quantities, forced through the feed-pump, in combination with water; and although there was evidence of the absorption of oxygen, in the rusting of the stays and of the interior surface of old boilers, it was too insufficient in extent to warrant the deduction, that there had been an appreciable change in the chemical composition of the steam. It might be possible to produce an external explosion, but not an internal one.

In the explosion at the Consett Ironworks, Gateshead, early in November, it was in evidence that the boiler had been blown out a short time previous, and the valve was not closed. The plates had been heated red hot, and it was supposed that the attendant, who was killed, had discovered the deficiency of water, and had just opened the feed-valve at the instant when the explosion occurred. Now, heat did not lessen the strength of iron up to the temperature of 550 deg.; and had it exceeded that point, in this case, and thus weakened the boiler, the result would merely have been a collapse of the flue. Water was not resolved quickly into steam by a red-hot surface. The excessive heat repelled the particles, and they were slowly evaporated by the communication of heat through the intervening vapour. No great pressure, therefore, could have been generated directly from this source. When heat was applied to steam, the increase of its pressure was governed by the same law that applied to air and all other elastic gases,—an addition of 480 deg. only doubling its pressure. Experiments had conclusively proved the possibility of heating steam in contact with water without also increasing the temperature of the bulk of the water, the upper stratum of which alone became heated by the contact. If, therefore, it was supposed, for example, that the steam had been heated to 435 deg. Fahrenheit, and water suddenly injected into it, the pressure would have been instantly raised to that due to the presence of the water, —determined by the experiments of Arago and Dulong to be 360 lbs. per square inch at that temperature. Or, to use another illustration, while 1,000 deg. of heat applied to steam would but increase its pressure, or volume, about three-fold, the same amount would multiply that of water 1,700 times. This vast increase would certainly be modified by the latent heat absorbed by the water in its conversion into steam, but served to indicate a sudden and local generation of excessive pressure, which might result in explosion.

Experience had proved, that the fusible metal plug, enjoined by law in France, became encrusted by scale, and otherwise rendered inoperative by use, and did not answer the purpose for which it was intended. The softer portions of a compound metal were forced out by the

pressure to which it was subjected, and the remainder, becoming oxidised, did not fuse at the temperature intended. It, moreover, acted merely as a warning, and did not serve to obviate the impending catastrophe.

All the contrivances hitherto adopted for the purpose of providing against explosions were designed to supply water, when that in the boiler had fallen to too low a level, or to open the safety-valve by the pressure of steam, independent of other circumstances. As had been illustrated by the examples alluded to, either of these plans would induce, in many instances, the very accident designed to be avoided. For there seemed every reason to believe that the great majority of explosions were occasioned by the negligence of the attendant, in permitting the level of the water to fall below the flues, exposing the plates to a high temperature, and surcharging the steam with caloric, far exceeding that due to its pressure. In injecting an additional supply of water into the boiler, when in this dangerous condition, it was thrown over the heated plates and into the super-heated steam, and suddenly converted into steam of too high a tension for the boiler; and so instantaneously, moreover, that it operated with all the momentum of a blow.

These considerations led to the conclusion that safety was alone to be attained by opening a water blow-off valve, when the surface of the water had fallen to a perilous extent, for the purpose of first discharging from the boiler the water, which was the more dangerous element, and then the steam; operating, in fact, as a safety-valve, in a more useful but less objectionable position than the present steam-valve situated on the dome. This system had been subjected to trial under heavy pressure, and had been found very successful.

In the discussion it was argued, that Mr. Hall's system, if properly carried out, would be extremely useful, and almost prevent the possibility of danger from explosion; but that it would only be of use when an explosion was almost inevitable, and that as prevention was better than cure, the utmost should first be done to prevent boilers reaching that state, still retaining Mr. Hall's valuable apparatus, in cases of all other means of prevention proving ineffectual. The majority of explosions were stated to arise from the practice of constructing the boilers with the fire-places in the flues, contrary to the system used in Cornwall, where they always arranged to have abundant boiler-room and slow combustion; but where flue firing was used, the boiler surface was too frequently deficient, and the firing rapid and generally forced.

PARIS AND LONDON HOUSES.

THERE seems to be a tendency on the part of the public to decry everything English, as compared with foreign: our mode of government, our laws, habits, manufactures, and now our buildings are depreciated.

Many letters have appeared in the newspapers, principally written by men who, apparently, are not qualified to judge, lauding the Parisian buildings, and speaking of the London system in a tone the spirit of which may at a glance be inferred.

Now, the reason of the street architecture of Paris being so much finer than ours is simply because we don't *want* it, because it won't pay, owing to the difference in our national habits. In Paris, a number of families living in floors over each other, a larger house is required than with us, consequently exterior ornament may be indulged in, as forming a less proportionate part of the total cost of the building, and the greater height of the houses so built gives them a more commanding appearance.

The same difference in our national habits gives an ample compensation for this in our suburbs. A good deal of harmless pleasantry is used in speaking of the ridiculous names given to the cottages, &c. in the suburbs; nevertheless, nothing around Paris can compare with these suburbs. I have lived in *the flats* of Edinburgh and Paris, and my humble opinion is, that it is well for Londoners that their tastes and habits have not induced them to adopt this practice. Imagine the consequences that might arise were the two and a half millions of London cooped up in a space less by one-third than its present site.

The Parisians say our street houses are *très bas:* be it so. Railways and omnibuses are plentiful; and it is better, morally and physically, for the Londoner, or any other inhabitant of a large city, when he has done his day's work, to go to the country or the suburbs, where he escapes the noise and crowds and impure air of the town; and it is no small advantage to a man to have his family removed from the immediate neighbourhood of casinos, dancing saloons, and hells upon earth which I will not name.

Much is said of model lodging-houses for the working classes: the true model lodging-house for them is a cottage *out of* London. Mr. Pearson has shown this to be quite practicable; and I doubt not it will be carried into effect when the railway companies can be moved in the matter. In the City, where the different floors are used as offices, it *pays* to build high houses, and they *are* built in a way equal to or better than anything of the kind in Paris. No sanitary reform can make a town as healthy as the country; as, even were all other sources of danger destroyed or removed by thorough drainage and cleanliness, the air breathed becomes more or less impure, even from the numbers of human beings and cattle crowded together. Therefore, the English system of building is more rational than the French, inasmuch as the health of a man is of more importance than the aspect of his house. Surely those who advocate the system of living in flats forget that families living in Paris die out in the third generation.

But it will justly be answered, "Those suburban streets, cottages, and villas, which you commend so much, are not built in so substantial or tasteful a way as the Parisian houses, even allowing for the difference in size and height of the two styles." Very true; but who is to blame for this? neither the much-blamed speculative builder nor the architect.

As an illustration, allow me to give a case which has occurred several times lately in my experience. Two builders each took a plot of ground to build upon: one built properly: the other built almost entirely with place bricks: his mortar was principally road-sweepings and horse-dung: his timbers were about half the right thickness: everything that did not meet the eye was scamped: but the front of his house was compoed over; his timber was covered with showy decorations, so that his houses looked as well as those of his neighbour. Well, this man who had built his houses at 20 per cent. less than the other, sold them all at a profit; and the other man who was *obliged* to sell at the *same price*, lost money by every house he sold.

Is it not evident that if twenty men are building near each other, eighteen of them honest, and two not,—if those two men *sell* their houses, those who buy them virtually give a premium to dishonesty, and compel the eighteen to sell at too low a price. Had those purchasers gone to a respectable surveyor, and said, "We have been looking at some houses, and wish to purchase, but A wants so-and-so for each of his houses, and B 20 or 10 per cent. less; will you, Mr. C. examine them thoroughly, and see if B has built as well as A?" then, the surveyor would go and do his duty, and I need not add, to the great delight of the honest builder, and *not* of the other; and the purchasers would, by the expenditure of a few guineas, have saved themselves from constantly recurring expenses to keep their cheap houses in repair.

The public don't mind paying the lawyer, but won't pay a surveyor; whereas, the latter is the more important of the two to purchasers of houses, who, by acting so, literally *prevent* builders from building properly.

In short, our *public* buildings, in my opinion, are as good as those of Paris, our architects as talented, our builders know their business as well, and if our street architecture be not so good, it is simply because the public will not *pay* either the architect or builder for building houses to compete with the Parisian ones. It is a mere question of £. s. d.; and I am sorry to see some architects joining in the cry lately raised; and, with, I think, a great want of thought, throwing the censure from the shoulders of the "public" on to those of the architects and builders. I was going to enter further into the question as to *why* the "public" don't *pay*, and yet *grumble*, but will stop, as it is too important and extensive in its bearings to be treated lightly or shortly. J. P. W.

FIBROUS SLABS.

THE dome of the new reading-room at the British Museum, now in course of completion under the direction of Mr. Sydney Smirke, is being lined with slabs or sheets of a fibrous material, for which a patent has been obtained, and which, combining many of the properties of wood, is adapted to almost every purpose to which the various descriptions of wood are applied. It is also applicable to many purposes for which marble, slate, lath and plaster, or internal brickwork, are now used: and the price, we are told, will not average more than one-half the cost of woodwork or other materials now in use.

To render wood available for purposes where the ordinary width of boards (9 to 13 inches) is insufficient, it is requisite to join two or more boards together, by what is technically termed "glueing up," an operation involving much labour, expense, and loss of time, and attended with all the contingent risks of shrinking, expanding, splitting, winding, &c. as well as natural imperfections. This fibrous material can be manufactured in sheets or slabs of any required thickness, length, or width. They are now made in sizes of 13 feet by 7 feet; but these dimensions may be greatly increased.

It appears to be uninflammable; a non-conductor of heat or sound; free from dry-rot, shrinking, expanding, splitting, or winding; easily worked or bent; and is applicable for large panels, ceilings, floors, and partitions.

Each panel at the British Museum, composed of three pieces, is 22 feet long by 11 feet 6 inches wide: and these, in their spherical form, are raised from the ground to a height of 110 feet, and fixed in one piece to the roof.

We have probably said enough to show that this new material deserves the attention of all who are engaged in building operations.

CHURCH-BUILDING AND PROVINCIAL NEWS.

Norwich.—Another side of the tower of the cathedral is now under repair.——The free library is being roofed in, and will, it is expected, be completed in three or four months.——The new workhouse is still under consideration, and the guardians are talking about procuring plans. A site has been purchased, and the land is found to contain excellent brick-earth; but it is not expected, under any circumstances, that the building will be commenced this year.——The consecration of the new cemetery for this city took place on Wednesday in week before last. The new cemetery is situated, on a high table-land, between the Dereham and Earlham roads. The site comprises about thirty-five acres. The present cemetery, however, includes only twenty-three acres; the remainder being let till needed. The approach from the Earlham-road, at about three-quarters of a mile from the city, is by an entrance-gate, of a light and ornamental character, with two side gates; and immediately within the gate is a lodge for the superintendent. At the Dereham-road is another lodge and gates similar to the first. The east side is appropriated to the Established Church; the west to the Dissenting communities. The grounds are ornamented with a variety of trees, and clumps of shrubs. In the centre are two mortuary chapels, similar in design, with the exception of a belfry (not yet finished) to the Episcopal one. They are of red brick, with black brick strings and diapers, and moulded with white brick and Caen stone dressings. Their architectural character is Early English, with apsidal chancels, and lofty entrance-porches, beneath which a hearse can pass. The outside of the chapels, says the *Norfolk Chronicle*, referring to them, is by no means remarkable for beauty or dignity, the unusually steep pitch of the roof giving an

unpleasing effect. Each chapel in the interior is 86 feet long, and 24 wide, and is paved with York flags in the centre, with a 3-feet border of fancy red, white, and black paving-tiles on each side. There are pews, capable of accommodating 100 persons. Behind the reading-desk is a bay, lighted by nine long narrow and lancet-headed lights. The body of the chapel is lighted by ten windows, of a similar character, filled with tinted glass. The wood-work is deal, stained and varnished, and the roof is open, filled in with plaster between the rafters. A small chapel has also been erected on the ground appropriated for the Jews, which, with the lodge entrance-gates, are all built of similar materials to the larger chapels. The designs were furnished by Mr. Benest, the city surveyor, and the buildings were executed by Messrs. Ling and Balls, whose contract amounted to 1,990*l.*

Hempton (Norfolk).—A building, designed as the chancel of a future church, is being erected in this parish, under the superintendence of Mr. J. H. Hakewill, architect. It is in the latest style of Early English work, of faced flints, with Caen stone dressings for plinth, string-course, windows, and buttresses. The internal dimensions are 35 feet 6 inches by 16 feet 6 inches, and it will accommodate 100 persons. The parish, containing nearly 500 persons, has been left entirely unprovided for since the Reformation, when a priory church was demolished, in common with the other buildings of the establishment, and the tithes alienated. Consequently, the building, now in course of erection, will be licensed, in the first instance, for divine service, as it cannot be consecrated without endowment. It is expected that the works will be completed, and the church opened, in June or July.

Braintree.—The church of Braintree, in Essex, stands much in need of repair. Some time since an appeal was made to all disposed to aid in this good work, as it was impossible to raise more than a few hundred pounds in the parish itself. The fabric has been examined by an architect, and the estimated sum requisite amounts to 4,000*l.* Rather more than was anticipated seems to have been subscribed in the parish, where about 850*l.* were realized, and the patron has subscribed 100*l.* the Archbishop of Canterbury and the Bishop of London, 10*l.* each, &c.

Reading.—Finchampstead Church has been reopened, after having been restored and repewed, from designs and under the superintendence of Mr. J. B. Clacy, of Reading. The church now contains about 215 sittings, of which about 140 are free. The nave is open to the roof, showing the oak framing, and having the various arches decorated with scrolls of illuminated texts. The chancel, a circular apse, has an oak panelled ceiling, with carving. The open benches (those in the chancel with ornamented ends) are of a suitable character. The pulpit and reading-desk are of carved oak. The east and two of the north windows are glazed with coloured and ornamental glass.

Shepreth.—In consequence of the church here having been closed by the incumbent, on account of its dilapidation, an archdeacon's court was held, at which the churchwardens were cited to appear. Mr. Bradwell, architect, was examined, and stated that he had inspected the church: it was utterly unsafe for anybody to sit in. The judgment of the court was, that the churchwardens be directed to repair the church forthwith, and pay the expenses of the citation.

Dorchester.—Mr. H. Blaudford has obtained the contract for laying out the ground of the cemetery here, at the sum of 80*l.*

Birmingham.—The foundation-stone of the new vestry-hall for the parish of Edgbaston, about to be erected in New Bridge-street, was laid on Monday before last. The building, which is being erected by Mr. Cresswell, from the designs of Mr. Fiddian, will be of brick, ornamented with Chance's patent basalt dressings, and will comprise a room, 98 feet by 28 feet, in which it is intended to hold all public meetings in connection with the parish, and suitable provision will be made for the accommodation of the out-door poor.

Liverpool.—The consecration of All Souls' Church, Vauxhall-road, took place on Friday in last week. The church is cruciform, the greatest length being 110 feet, and the breadth of the body 42 feet. There are a tower and spire at the south-west corner, the entire height of which is 105 feet, the tower being 50 feet, and the spire 55 feet. There is a gallery at the end of the nave, and a smaller one at the end of each transept. The transept galleries are entered from the outside, by winding stone stairs in turrets. The chancel is lighted from the ceiling: the vestry is on one side of it, and the organ recess on the other. The walls are of rock-faced Woolton stone lined with brick; the tower and spire stone throughout. The general style is Decorated Gothic. The roof is formed of arched principals, covered with cross braids, on which are laid the slates. There are two opposite entrances—one through the tower, and one through the opposite porch. The entire accommodation is 950, of which 646 are free. The whole undertaking comprised the purchase of land, the erection of a church, the erection of suitable schools, and of separate residences for the master and mistress, and the erection of rooms for ragged schools, industrial classes, &c. The erection of the church has been completed, and of the industrial class-rooms underneath it; and the new schools and residences will be proceeded with at once. The outlay necessary for completing the whole undertaking, according to the local *Journal*, will fall very little short of 10,500*l.*——The "Catholic Apostolic," or Irvingite Church, which stood for some time partly erected in Canning-street, from a Gothic design by an amateur architect, who seems, according to the *Journal*, to have been also his own paymaster, has now been nearly completed, by Mr. Trevor Owen, of Birmingham, architect. The edifice is not being completed entirely according to the original intention, but so as to accommodate a larger congregation. The masonry is executed in freestone, from the Stourton-hill quarries. The western entrance has pinnacles, with carved crockets, finials, and bosses; and the southern side is enriched by a small tower in connection with the south transept, surmounted by a lantern and spiril, and four carved pinnacles, finished with stone finials and gilt cross. The tower rises over a baptistry, in which will be a stained window with baptismal subject. There are large traceried windows in each transept and over the west door, which, together with the smaller ones, and the building generally, are executed in the Flamboyant style of architecture, as nearly as circumstances would admit, in accordance with the more expensive richness of the eastern portion. The nave and transepts are covered by an open timber roof, stained and varnished; the windows glazed with mellow tinted glass. The length of the church is 121 feet; the width, 39 feet; and the height, 60 feet. The fittings will be of yellow deal, stained and varnished. The floor will be laid with red and blue hexagonal tiles, but not encaustic. The contractor is Mr. T. Hughes. Mr. B. Brierly executes the stonework. Mr. R. Grey is clerk of the works.——A mural monument in memory of the late Rev. John Johns, minister of the Liverpool Domestic Mission Society, has just been erected in the scene of his public ministrations, to commemorate his services. It is in the Tudor-Gothic style. The designer and sculptor was Mr. M'Bride, of Liverpool. To prevent the eye resting on bare columns, says the *Albion*, the lily is sculptured with the thorn intertwined around the one; the vine, and grape, and wheat around a rustic cross on the other. The epitaph is in old English ecclesiastical and illuminated characters tinted ultramarine blue, with the capitals vermilion.

Birkenhead.—At a public meeting of the ratepayers, recently held, it was unanimously resolved to adopt the Public Libraries' Act of 1855, for this district.

St. Helen's.—The St. Helen's Improvement Commissioners have increased the salary of their surveyor, Mr. McManus, from 150*l.* to 200*l.* per annum.——Baths and washhouses have been long spoken of as being required for St. Helen's. It is to be hoped that, with other sanitary improvements, so desirable a boon will not be long deferred.

Blackburn.—A new Roman Catholic school is to be erected at Over Darwen. The plans and specifications have been prepared by Mr. Birtwistle, of Blackburn, architect, and the contract will be let for immediate execution. The foundation-stone will be laid on Easter Monday. The edifice will be 72 feet long, by 28 feet wide, and will afford accommodation for 250 boys and girls. When completed it will be also used for divine service till a chapel has been erected on a plot of land adjacent.

Barnsley.—Mr. William Shaw, of Stanley-hall, near Wakefield, has given the stone and sand required for the erection of a new church in St. John's district, Barnsley. The stone will be obtained near the site chosen for the erection of the church, namely, on Barebones, and is said to be of durable quality, and the same as that used in building the Independent chapel now in course of erection in this town, to which Mr. Shaw, who is an Independent, contributed largely in material and money. The Ripon Diocesan Church-Building Society have also intimated their willingness to give 460*l.* towards the erection of St. John's church.

Wigan.—On Tuesday before last, Mr. Mangnall, the architect of the new workhouse, visited Wigan, and with Mr. Fairclough, the contractor, proceeded to mark out the ground (the purchase of which is now completed) for the erection of the building. Considerable progress has already been made with the excavations, and it is expected that in the course of a few weeks the foundations will be got in.

Methley.—We have from time to time during the past six years had occasion to notice the works of restoration which have been proceeding gradually (under the direction of Mr. Hugall, of Cheltenham) in Methley Church, Yorkshire. During the last week, according to the *Leeds Intelligencer*, two stained glass memorial windows, by Mr. Wailes, have been inserted in the north side of the nave. The westernmost one is an offering by Mr. Hollings, and contains, in the three lights, groups representing Our Lord's calming the tempest, His healing the blind, and raising the dead. The eastern one, inserted by Mr. Burnley, contains Our Lord's entry into Jerusalem, His purging the Temple, and Mary anointing His feet for His burying. In the tracery of the heads of the two windows are angels with memorial scrolls from the burial service.

Edinburgh.—Trinity College Church is at last, it appears, to rest its old stones at the Calton-hill, on the site of Burns's monument, which is to be removed, to make way for the re-erection of the church, whose numbered stones have been destined for so many different sites, year after year, since the railway authorities had it removed from its own original site, near the north bridge of the city. The Lord Provost has, it may be said, the sole responsibility of the recent rather strange decision, as it was by his casting vote the matter was decided. Why that precise spot on which Burns's monument stands, on the flank of the Calton-hill, should be selected, to the exclusion of all others, we do not know, but there seems to be an opinion in the city that it is *not* a suitable site for a church; and, at any rate, when the monument to a national celebrity, such as Burns, is once erected, there cannot be a greater contempt or insult to his memory than to pitchfork it out of its place, in order to make way for any other project. To talk of procuring a better site, under such circumstances, is a mere blind. Once taken to pieces, it is even a risk whether it ever be re-erected at all. How many years have the stones of Trinity College Church itself been seeking a site, and they are not re-erected even yet! And the difficulty is not likely, we hope, to be got rid of in this way, only by creating another of a similar kind. Mr. George Harvey, R.S.A. suggests a doubt as to the propriety of the site, by recommending the adoption of the Continental plan of indicating the bulk and proportions of the proposed re-erection by means of poles and canvass, or a wooden frame, that the effect may be judged of.

THE PROPOSED NATIONAL PORTRAIT GALLERY.—In reply to the address voted to her Majesty in the House of Lords, relative to the expediency of forming a gallery of national portraits, it has been intimated to their lordships that her Majesty will direct an inquiry to be made as to how the object in view may be best attained.

NOTRE DAME OF PARIS: SOUTH-EAST VIEW.

[See p. 137, in present number.

ARCHITECTS' BENEVOLENT SOCIETY.

THE annual general meeting of this society was held in the rooms of the Institute of Architects, on Wednesday, the 12th instant, when Mr. Sydney Smirke, A.R.A. presided. Mr. John Turner, the honorary secretary, read the report of the council.

"Our annual receipts," the report said, "have been larger; our number of members has become greater; and whilst the amount of relief afforded has been about the same as last year, the sum funded in the name of the society is materially increased. This latter circumstance is due to the great liberality of members during the year in donations, distinct from their annual subscriptions: Mr. Hardwick, Mr. Bryce, of Edinburgh, and Mr. Fuljames, of Gloucester, have each forwarded to us ten guineas. Our kind and zealous friend, and liberal benefactor, Mr. Cockerell, has presented to us five guineas, Sir Robert Smirke, five guineas and a half, both in addition to their former donations; and other donations have also been made to an amount exceeding any one year since the first year of our existence."

The Report further showed that in consequence of the resolution passed at the last meeting, applications had been made to gentlemen in all the largest cities and towns, requesting them to become corresponding members of council, and up to the present time the following twelve gentlemen had accepted the proposal, viz. Messrs. Banks, Wolverhampton; Dobson, Newcastle; Hine, Nottingham; Stevens, Derby; Williams, Liverpool; Holden, jun. Manchester; Lanyon, Belfast; Atkinson, York; Hill, Birmingham; Hayward, Exeter; Fuljames, Gloucester; and Kennedy, Glasgow. The subscriptions for the past year amounted to 147*l.* 17*s.*; the donations to 79*l.* 18*s.* 17*0l.* had been distributed in relief.

Mr. Thomas Little, Mr. Geo. Mair, Mr. Mocatta, Mr. C. C. Nelson, Mr. A. Poynter, Mr. David Moore, Mr. R. Brandon, Mr. W. Papworth, Mr. M. D. Wyatt, and others, were present, and took part in the proceedings.

ELECTION OF DISTRICT SURVEYORS.

AT a meeting of the Metropolitan Board of Works on the 7th inst. the following gentlemen were appointed district surveyors by show of hands; viz.—For Penge, Mr. Nash; Plumstead and Eltham, Mr. Williams; Putney and Roehampton, Mr. Sancton Wood.

The Board have confirmed the decision of the committee as to the district surveyors of Tottenham and Hornsey (p. 121, *ante*); thus justifying the opinion we expressed, on the passing of the Act, in opposition to some authorities.

THE RUINS OF LINDISFARNE, NORTHUMBERLAND.

FEW who have seen the fragment left of this beautiful structure will forget the symmetry of its proportions and its picturesque island situation. Looking at it across the calm sea, in the sunset, at early morning, or in the moonlight, we have often wondered at the skill of those of former times. When the raging storm beat against that dangerous coast, the pure forms of this choice piece of architecture were not less striking, and often have we regretted, that, piece by piece, this venerable ruin was allowed, without a helping hand, to fall to pieces. Even *wanton mischief* has at times been used to effect the destruction of "this thing of beauty." Besides, the island of Lindisfarne is rich in historical and other associations: so is the surrounding neighbourhood; and any of our readers travelling to the north, and who can spare a day, might well employ it by stopping at the station near Bamborough, to visit that grim stronghold of former days; the Farne Islands inhabited by immense flocks of various seabirds; the remains of ecclesiastical buildings, planted there long since, so that the beacon might be lighted to warn, and the band ready to help, the unfortunate mariner who might be here cast ashore. Here are also Grace Darling's lighthouse and the ruins just mentioned.

Those who know Lindisfarne will remember the large zig-zag arch which formed an important feature of the building. This was blown down about two years ago, and the attention of the Duke of Northumberland having been directed to this, we are very glad to learn, that with as little delay as possible, his Grace requested Mr. Salvin to see what could be done under the circumstances. For some time past Mr. Salvin has been at work. He has gathered together the fragments of the arch, and replaced them; strengthened other weak parts, searched the island for scattered fragments, replaced them when possible, and without destroying the appearance of the ruin which renders it so attractive to artists, made it so secure that it is likely to bear up against the fierce winds for some time to come. This is a creditable work, and we hear that it is not the only instance of the care which the duke has taken of the antiquities on his wide domains. Many places have been restored; and when this was not practicable, careful drawings have been made on the spot of such parts as were likely to perish. Mr. J. W. Archer, we understand, is still so engaged.

A MANUFACTORY OF ULTRAMARINE AT NUREMBERG.

THE manufactory belonging to Messrs. Zeltner and Heyne has acquired a European reputation, and sends its produce to all parts of the globe. Its exterior aspect is somewhat imposing, the whole being surrounded by a wall, and one of the buildings looks rather like a fortress, the entire space occupying an area of seven Bavarian acres (*Morgen*). The central building consists of a polygon of twenty-four sides, with ninety-six furnaces, arranged in twelve compartments with as many high chimneys. Thence issue twelve branches of rails to all parts of the manufactory, being provided at the intersecting points with turning platforms. From the upper stories similar rails of wood are laid; the iron rails being 4,500 feet long, the wooden ones a trifle less. If we enter the polygon, which has a diameter of 136 feet, and is surrounded by buildings 300 feet long, and two stories high,—the dim of twilight gives the idea of being in the pit of a mine. All these buildings are vaulted and bombproof. The departments of this manufactory are manifold. In the middle is a building for mechanical contrivances, with two steam-engines; to the east the above polygon; towards the west a high-pressure engine, with a mill and a washing apparatus. The mills have twenty-eight troughs, and are mostly of cast iron; of the two stores one is 300 feet long, and this alone can hold 3,000 to 4,000 cwts. of ultramarine. A swinging rail transfers the colours from one end of the building to the other. Covered passages connect the single buildings, and there are seven large roads and six courts, presenting everywhere a fine perspective. Towards the west is a long row of drying-houses, in which a constant tropical heat is to be maintained, so that winter loses its power in all the vicinity. The merit of the discovery of artificial ultramarine belongs to Professor Gmelin, who died in scanty circumstances. This manufactory arose in 1839, and the proprietors preserve yet the weather-boarded shed in which they began business. The manufactory employs 200 workmen, of whom 180 are married. They have established a sick fund, and a pension fund for widows, orphans, and invalids, as well as a singing chorus. The best blue artificial ultramarine has to pass eighty different processes until it is ready for use, and is now applied to the colouring of cotton and wool-stuffs, tapestry, paper, sealing-wax, &c.; besides its purely artistic use.

AUSTRALIAN NEWS.

AT Sydney, New South Wales, the opening of the Sydney and Parramatta Railway, on the 26th of September last, excited some attention. The principal works on the line were,—750,000 cubic yards of excavation; twenty-seven bridges and fifty culverts; one viaduct over Long Cove Creek, and tunnel at Chippendale; two terminal stations erected, and four intermediate ones, besides workshops and other buildings. The stations are chiefly constructed of timber. The present rolling stock of the line consists of four engines and tenders, from the manufactory of Messrs. Robert Stephenson and Co.

The total revenue at the disposal of the City Commissioners of Sydney for the last year has been 71,998*l.* and their total expenditure 66,538*l.* The commissioners report that during the year ninety streets, comprising a distance of seven miles, had received a share of their attention. Acting on the principle that no street can be properly formed until kerbing and guttering be laid down, they have expended a considerable sum for that purpose, having laid down 10,144 feet of dressed stone kerbing, and 30,030 square feet of draft and axed guttering. There are two inspectors of nuisances. During the year, 500 new buildings have been erected, and fifty-three buildings enlarged. The commissioners beg for a Paving Act, to compel each citizen to pave before his own door. In order to commence a system of sewerage on a sound basis, a trigonometrical survey of the city has been commenced, which will cost 3,000*l.* The commissioners have eked out the supply of water obtainable from the Lachlan Swamp; but they have also made preparations to secure a more permanent supply. They have contracted for 10,000*l.* worth of piping to be laid down in the streets of Sydney, and a quantity of 30-inch main to convey the water from Botany to Sydney. The commissioners have also sought the aid of Dr. Smith, the Professor at the Sydney University, who has reported on the quality of the water, and the action of water on iron. The drawings of the necessary steam-engines were prepared, and the plans and specifications for the work required nearly finished, so that before long the apparatus for supplying Sydney with water will be in working order.

At Melbourne, in Victoria, the golden times are fast becoming "copper" times. Three-roomed stone and brick cottages are now advertised to be let at 8*s.* per week, for which 4*l.* to 6*l.* was once demanded as the weekly rental.

At Adelaide, in South Australia, there is not much new in the building trades. Sawyers, according to the *Adelaide Observer*, have had a good field opened to them, in consequence of a large contract for the supply of red gum timber to the Gawler Town Railway Commissioners having been taken by the River Murray Navigation Company. In accordance with the stipulations, about 2,000 loads must be supplied within twelve months.——A plan of a proposed school-house for sixty children, in the Kondoparinga district, with schoolmaster's residence, drawn by the district chairman (Mr. Scown), was submitted to a meeting held on 17th September last, and being approved of, specifications were requested of the chairman, that tenders might be forthwith advertised for. ——A Wesleyan Chapel is in course of erection at North Adelaide. It is to be in the Gothic style of architecture, with open roof of carved and stained wood, and on the outside supported by flying buttresses. It is intended to contain 1,000 sittings, and, ultimately, by the erection of galleries, to accommodate many more persons. The first cost will be about 6,000*l.* Of this sum about 1,150*l.* had been collected, end of October last, and the foundations were already laid. ——Designs for St. Bartholomew's Church, Norwood, were submitted by Mr. Hargrave, at a meeting reported in the *Adelaide Observer* of 27th October last. It is to consist of a nave measuring 56 feet 6 inches, by 26 feet, with a side-aisle 45 feet by 17 feet, a chancel 16 feet square, and a porch 10 feet by 6 feet; the style to be early English, and the total cost 2,000*l.* At present he proposes to erect only the aisle, which will accommodate 144 persons, and cost, with the necessary fittings, about 450*l.* The designs were approved, and the Building Committee empowered to accept contracts for the erection of such portions of the building as it was proposed to raise, such contracts not to exceed the amount of funds actually subscribed.——A fund was being raised about same time to defray some expenses incurred in the erection of a gallery and an extension of the sittings in All Saints' Church, Hindmarsh. The total cost of the gallery was about 136*l.*

THE PROPOSED ROAD THROUGH ST. JAMES'S-PARK.

THE report of the committee appointed to consider the best means of improving the communication between those parts of the metropolis lying on the north, south, and south-west sides of St. James's-park, has been presented by Sir Benjamin Hall to the House of Commons. The committee report on the several plans,—1st, for opening a road from Pall-mall through the site of the German Chapel, and across the water in the park by a bridge to Birdcage-walk at Queen-square,—2nd, the line through Cleveland-row, and in front of Bridgewater House, into the Green-park, and curving thence by the front of Buckingham Palace to Buckingham-gate, near the Duchy of Cornwall office,—3rd, the road from Waterloo-place southwards to the mall near the Duke of York's Column, and to near Storey's-gate,—4th, the proposed opening from the site of the Globe Insurance Office, in Charing-cross. The committee do not think it desirable to intersect the ornamental gardens of the enclosure, as proposed by the first plan. The expense of the second they find would be no less than 163,250*l.* They therefore recommend, in order to effect a communication between Pall-mall and Pimlico, that so much of the road proposed in plan No. 1 as lies between the entrance to Marlborough House and the mall, be made, and that the line be continued along the road now used on the north side of the mall, to a point marked E at the western end of that road, and thence to Buckingham-gate. The road thus opened might be enclosed, as the drives in Hyde-park are. The probable cost of the opening from Pall-mall, and the necessary works including the taking down and rebuilding the German Chapel, exclusive of purchase of site for the new chapel, would be about 25,000*l.* The committee also recommend that a footbridge be thrown over the water in the enclosure. With regard to a road from Waterloo-place to Storey's-gate, they are of opinion that a line of communication should be made, and that the Duke of York's Column should be removed. The cost of

this line, including the removal and rebuilding of the column would be about 30,000*l.* As regards an opening from the park to Charing-cross, the committee state that they "are not prepared to recommend that such an opening be made at present, but they are of opinion that an opening for carriages should be made from Trafalgar-square to the park."

It thus appears that to a certain extent the plans long since urged in our pages are now likely to be carried out. As for the removal of the Duke of York's Column, we think it would be very desirable to avoid that if possible. Such an opening as that suggested would certainly be a great convenience, and if it could be accomplished by a suggested modification of the plan, without removing the column, good and well; but it seems to be overlooked that the view of the column and steps from the park forms one of the chief features of the locality. Building up and pulling down again, is a dear way of adorning the metropolis.

THE "BUILDER'S" SMOKELESS FIRE.

Your valuable notice of the new mode of making a fire in a common grate, which shall save coal, and consume a greater part of the smoke, only requires universal adoption to become one of the greatest blessings conferred upon us in this smoky—*ergo*, dirty—metropolis. Properly carried out, it would effect a perfect revolution in stoves, chimney-sweeping, fires from foul flues, price of coals and coke, safety from fire by shooting coals, smoky rooms, cinders and dust (the whole of which are nearly consumed), cleaner linen, brighter atmosphere, and sounder lungs. I have ever been a great advocate for giving due credit to Mr. Cutler for his admirable introduction of this principle more than thirty years since, when his patent was crushed by a combination of the trade, who dreaded the success of the patent. His more rational opponents afterwards acknowledged its value; and one stove-maker, who would not join the combination, a few years since, in a work on stoves and chimneys, eulogised the principle, and ignored the decision. His remarks on this crushed patent, the writer fully believes, first led Dr. Arnott to investigate the subject, and to produce the now-called Arnott's self-consuming, smokeless stove; but as simplicity is the greatest charm in all novelties, either patented or not, I conceive the suggested and successful process, applied to the common stove, and immediately at the service of all, without screws and levers, or an expensive smith's, ironmonger's, bricklayer's, or mason's bill, is a most valuable boon to society,—if society will only universally adopt it. I say *if*, for it is proverbial what an obstinate person John Bull is. I think insurance companies should especially request, or specify to this mode, as particularly safe, until some more stringent means be ordered and enforced. Furnace chimneys no longer are permitted to pollute the air, and vomit out their smoke; why, then, should, *in the aggregate, a far greater nuisance*, be for one day permitted to continue, when the public would infinitely gain, in every way, by the change. On seeing the notice in your journal, I at once resolved to try the new method, with, I must say, certain misgivings. With my own hands I adjusted everything, even to the paper at the bottom, and built up to the top bar with coals; then formed a sort of crows'-nest, of paper, shavings, and wood, and covered it lightly over with thin pieces of coal. Judge of my horror, on entering my room the next morning, and finding my servant had taken it all to pieces, and laid the fire in (I shall now call it) the antique way: fortunately, it was not lighted. I therefore had it again pulled to pieces, and replaced as I had laid it, and lighted. The next few minutes were most anxiously passed, fearing I might become the laughing-stock of family, servants, and all. What was my delight, however, when I saw the coals igniting one by one, and in half an hour, without bellows, or clouds of smoke, a most cheerful fire: it was lighted at nine, and by one o'clock it was so fierce, that I was obliged to pour water on it, to keep it down. This occurred after the paper at bottom had become burnt, the draught being greater. I may also add, that I have continued each day the new process, only substituting *sheet iron* at bottom, in place of *paper*. The comfort and cleanliness are beyond all conception, without considering the economy. Fire-irons are scarcely needed, it burning gradually downwards for hours, according to the depth of the stove. The deeper the stove the longer it burns. I have placed a fire-brick at the side of my stove—an ordinary parlour one,—owing to its being wider than its depth. I would strongly urge all persons not only to adopt the process, but to recommend it for general use. E. R.

Some of your readers have adopted with much interest the mode suggested in your publication "How to make a Fire in a common Grate which shall save Half the Coal and burn the Smoke." That mode, although valuable, has objections with some, which supplying a fire with coal under it may not have with others.

If any of your readers could, therefore, show a simple plan, which may be practical, thus to supply coal to a fire in an ordinary parlour-grate, it might furnish the most valuable means to the object suggested—namely, economy and cleanliness,—would prevent the nuisance from smoky chimneys,—as well as greatly oblige one desirous of adopting the best means of making and keeping up a fire. Colchester.

While on the subject of stoves, I may mention that too little attention is paid to the subject both by purchasers and makers. I maintain that no grate ought to be deeper than 5 inches from back to front: let the increase be in length: use nothing of metal but the bars: the covings, back, and sidings should be of fire-brick. Having turned a good deal of my attention to this subject, my experience has brought me to the conclusion that Nicholson's [Leslie's?*] form is the best, having no bottom. I have three of this sort in use, of different sizes. If bottom-grates are used, they should be made very fine. I humbly differ from Dr. Arnott about the height at which a grate should be set. About 4 inches from the ground, I venture to say, will be the most agreeable in use for many reasons which are too long to occupy the space in which valuable matter may be placed. All I add is, try the high grate and one set low.—A. Z.

In your impression of February 2nd you publish an account of a novel method of making fires, viz. by lighting them on the top, and making them burn downwards. Will you allow me to acquaint your readers with an improvement which I have recently effected in the antithetical art of making fires burn *upwards?* In lighting fires by the ordinary means, the wood is placed at or near the bottom of the grate, and the fuel to be lighted is placed upon it. By this means there cannot be a free passage for air through the fuel, and much trouble is occasioned in coaxing the fire to burn up; and frequently it has to be lighted over again. To remedy these evils, I have tied together sticks of wood, and given them the form of a hollow truncated cone or pyramid, five or six inches high. I place this in the fireplace on its broad end, and surround it with the coals and cinders to be lighted, *leaving the aperture at its top uncovered.* On lighting a piece of shaving placed within this simple form the effect is very striking. The air rushes in from below to feed the fire, driving a jet of flame upwards through the neck of the cone, which is immediately available for cooking, &c.; while other portions of flame are driven by the expanding air within the cone, laterally between the sticks, and made to light the coals, &c. W. H. N.

THE STYLE OF MODERN STAINED GLASS.

I trust Mr. Street will pardon my answering him and Mr. Oliphant together, as most conducive to brevity. I am afraid Mr. Street is himself an example of the prejudicial effect he deprecates, of a preponderating study of architecture, in his own case, else he would scarcely have quoted Mr. Ruskin against me. Does he not perceive that the "pretty pictures" Mr. Ruskin so properly condemns as unsuitable to glass are precisely the same which I have myself condemned, in the very discourse to which he takes exception? Mr. Ruskin was talking of the modern German school and its followers. Passing by certain inaccuracies in his statement, there does not seem to be any real difference of opinion between Mr. Ruskin and myself. I, too, quoted the twelfth and thirteenth century windows with admiration; but I moreover asserted that other windows were likewise most beautiful. And when I referred to a class, including such examples as those in the eastern part of Lichfield Cathedral, I am sure that Mr. Street will admit, in common candour, that I had in contemplation works widely different from the modern German; works, in short, which Mr. Ruskin has never condemned; nor, with his just appreciation of tone and colour, is ever, I apprehend, likely to condemn. If Mr. Street would condescend to *read* what I have written on the subject, and refer to the examples I have quoted, he might, perhaps, find the discrepancy between his own views and mine not so great as he imagines; but with that I am not at present concerned. It is true that I have advised the patrons of the art by no means to discard pictures in glass extending beyond the limits of a single light. But I have never advocated an exclusive preference for such designs. I have said, adverting to the great variety of designs in glass, that sometimes one, sometimes another, is preferable. And if I have expatiated at greater length on the merits of the more extended subjects, I have been compelled to do so by the dead set made against them. Mr. Street differs from me in opinion as to the effect of mullions cutting a design. But, when he attempts to undermine my opinion, I must repeat that it is by no means mine alone, but the opinion of a great many living men (to say nothing of antiquity) who have adopted it, certainly without any reference to me. Of these, some are professional artists; others are persons, who, from their attainments and knowledge of art, are quite as capable as any of forming a sound and consistent opinion on the matter. It is not my habit to drag the names of even casual acquaintances into a controversy, so Mr. Street must be content with my word. As for my remarks on Gothic architecture, which Mr. Street deplores, I but expressed my conviction. The old Gothic, which is grand and dignified, and honestly displays all the art of the period, I do admire. But the modern always appears to me more or less affected; to be invariably (I know not whether necessarily) associated with a degree of art far beneath what has been exacted during the last three centuries at the least; and to be apt to contrast but poorly with modern works in the "Pagan" style. The cricum-crankum small-windowed modern mediæval residences at the west end of the Abbey, though built of stone, are inferior, in effect as well as comfort, to the stuccoed mansions in Belgravia and Cubitopolis, which, by the way, shows that there must be something good in the "Pagan" style after all, for composed "Christian" architecture is admitted to be deplorable. Perhaps, if a higher tone is imparted to the painted glass and figure sculpture in Gothic architecture, I may relent; but an enormous reformation will be requisite in both. In conclusion, I assure Mr. Street that I applied the epithet he quotes to some persons who, no doubt, have annoyed him, as well as others, by their consummate ignorance and conceit.

Upon Mr. Oliphant I shall expend but few words. The style of man is shown by the style of his communication. He is unmasked by my having, in consequence of his employment as a draughtsman by some inferior glass painters, unavoidably condemned his own works in condemning theirs. He is moreover bound to endorse the current opinions of "the friends of the movement" whose patronage he is now soliciting on his own account. I am not in the least afraid of any of my arguments being shaken by criticism such as his: and if by attacking me he is likely to gain notoriety, he is quite welcome to do so as often and as fiercely as he likes. C. Winston.

* Mr. Nicholson holds a license from Mr. Leslie.

WORKS OF MODERN PAINTERS IN THE CRYSTAL PALACE.

Mr. Mogford has been engaged by the Crystal Palace Company to collect and superintend a gallery of Modern pictures of all the schools of Europe, to open in the month of May next, in the north wing of the palace, which will be constructed properly for the display of the works.

Five per cent. will be charged on all sales. Pictures previously exhibited are eligible, and every picture (from the space disposable) may be well placed for viewing.

Mr. Mogford will leave London next week for the continent, to collect the foreign pictures.

METROPOLITAN BUILDING ACT.

RUINOUS BUILDINGS IN THE CITY.

At Guildhall, on the 5th instant, Mr. Henry Ernest and Mr. William Miller were summoned before Aldermen Finnis and Cubitt, to show cause why the magistrates should not issue their order to pull down certain premises, situate at 98 and 99, Cheapside, the surveyor to the Commissioners of Sewers having surveyed both houses, and certified that they were in a dangerous condition, and required pulling down.

Mr. Tyrrell, the solicitor to the Commissioners of Sewers, stated that a complaint had been made by the inhabitants of Cheap Ward with regard to the nuisance arising from the hoarding which had been standing in front of the premises in question for the last three years, and the Commissioners had ordered their surveyor to survey the premises, and report thereon. The surveyor's report stated the houses were in a dangerous condition, and, upon the receipt of a certificate to that effect, the Commissioners directed the usual notices to be served upon the defendants, prior to their applying to the magistrates under the Metropolitan Building Act of 1855.

The solicitor who appeared for Mr. Ernest admitted the service of the notices, and said he was willing to consent to an order to pull down the premises in six weeks from the present time.

Mr. Miller admitted the receipt of the usual notices with regard to No. 98, Cheapside, but said he could not enter into any such arrangement as that proposed by Mr. Ernest. He was the occupier of 98, and Mr. Harwood, the freeholder, had promised to let him

have a lease if he would pull down and rebuild the house, which he agreed to do, and had gone to considerable expense in preparing to carry out the condition, when Mr. Ernest stepped in, and, as he supposed, outbid him, for Mr. Harwood granted him (Mr. Ernest) a lease over his (Mr. Miller's) head. Under these circumstances he must leave the Commissioners of Sewers to take what course they thought proper.

Alderman Finnis said it would have been better if Mr. Ernest had been prepared to answer this case as well as the first, for one house could not be taken down without the other, and the expense must eventually fall upon him in both instances.

Mr. Tyrrell suggested that the order should be made the same in both cases.

The magistrates accordingly ordered that the condemned houses should be pulled down, and the hoarding removed within six weeks from the present date.

METROPOLITAN IMPROVEMENTS.

It is rather singular, that while such a vast number of suggestions on the above subject has inundated the new Board of Works since its appointment, they have all had reference exclusively to the construction of additional thoroughfares between the *eastern* and *western* parts of the metropolis. But not a thought has been given to the wretched state of our communications between the *north* and *south*, which call loudly for a portion, at least, of the attention which the authorities have to bestow on metropolitan improvements.

The most urgent want of all, and at the same time the most easily remedied and at the smallest cost, is a good line of street from the broad part of the Strand to Holborn through Lincoln's-inn-fields. It is, in fact, already more than half made. Nothing more is required than the destruction of some worthless old houses in confined courts between the Strand and Carey-street, and the setting back of the few houses on one side of Great Turnstile, to complete the whole line as far as Holborn; and the site of this new street would be so valuable for offices and chambers, that the improved ground-rents would cover the interest of the outlay three times over! For more than thirty years this very opening has been projected by the inhabitants of the neighbourhood, and the public have constantly been led to believe that it was on the point of being carried out. Yet to this day that magnificent area of Lincoln's-inn-fields—the largest open space in the heart of London—is suffered to remain a perfect *cul de sac*, except for pedestrians! The only direct carriage-entrance is from Great Queen-street, and that by a narrow shabby street. From the north there is no approach whatever, except by two courts for foot-passengers. From the east there is only the private gate into Lincoln's-inn-square, which can be shut at pleasure! From the west (besides the narrow approach from Queen-street, already alluded to) there is only an entrance under a dark archway from the purlieus of Clare-market! And from the south there is literally no possibility of reaching the square in a vehicle of any description, except by a tortuous passage through market-sheds and cabbage-carts, surpassing in difficulty the Cretan labyrinth. All this would be in a great measure cured by the new street proposed, but this ought undoubtedly to be followed up by an opening on the north side of Holborn, with a branch to the right leading into Bedford-row, and another to the left into Red Lion-street. The former, by the removal of a very few old buildings to connect Millman-street and New Millman-street, would complete a direct thoroughfare from the Strand to Guildford-street, and thence through Mecklenburgh-square to the upper end of Gray's-inn-lane, and the railway station at King's-cross.

The next thing I would urge is so perfectly simple and easy of accomplishment, that it is a positive reproach to the commissioners who have hitherto had the control of public improvements that it has not been carried into effect long ago. I mean the setting back of some four or five houses at the lower end of St. Martin's-lane to the line of the adjoining buildings. Large sums have been expended to widen the upper end of St. Martin's-lane and form a broad street, crossing Holborn into Bedford-square, and thence in a direct line to the New-road and Euston-square station; but this well-designed plan is entirely spoilt at present by leaving the street quite narrow at the very point where it ought to be broadest, namely, where it approaches the National Gallery and the fine portico of St. Martin's Church.

Another great improvement, and at the same time involving but a very moderate outlay, would be a short street from the top of Bedford-street to the corner of Long-acre and St. Martin's-lane, which would cut through a beggarly neighbourhood, and would amply repay its cost. This street would lead directly into Cranbourn-street, and would soon become the main thoroughfare from the Strand to Coventry-street and Piccadilly, instead of the narrow and intricate passage by Hemming's-row and Green-street.

There is one other plan, which I have suggested on a former occasion, and which I am sure would be an immense improvement, not only as regards public convenience but also architectural effect, namely, a broad and handsome street from Somerset House to the British Museum, falling into the line of Drury-lane just beyond the Olympic Theatre, with a branch eastward into the south-west corner of Lincoln's-inn-fields, and the same branch extended westward into Wellington-street, connecting it with Waterloo-bridge. As this scheme, however, is of somewhat greater magnitude than the others I have pointed out, and is not so immediately pressing, I shall reserve the details for a future communication, in case I should be encouraged to pursue the subject.

A Middlesex Magistrate.

THE SCHOOLMASTER IN NOTTINGHAM.

In one of my peregrinations lately, I found myself in a street in the low part of the town of Nottingham, and my attention was attracted by a new building, apparently intended for scholastic purposes, which became more evident on a minute examination of certain hieroglyphical characters placed on the façade of the building, in encaustic tiles. After some spelling out, rendered a task by the redundance of flourishes, conceived, I suppose, to be "illumination," the following inscription was the result at which I arrived:—

"S. PVTVRS PEROCHIEL SCHOOLS."

Whether the attitude assumed by the unfortunate letters "A" in the second word, is to represent the modes of punishment intended to be inflicted on refractory children, I know not. If some "dame" were to place a card in her window, which stated "Bad spelling taught here," should we wonder at no infants being sent for the benefit of her instructions? Where is the difference between such an advertisement and the public announcement above alluded to? Simply that the one is gazed at and admired because the public cannot make it out, and the other is unfortunately written in too legible characters, and in English.

But seriously, is it not too bad to have such errors made, and those, too, after a party has been employed to see that all is properly executed? Either ignorance or carelessness is surely chargeable on those who superintended the buildings. In conclusion, I would beg most humbly to propose that, if a diploma is to be granted to architects, before they be allowed legally to practise, a printing lesson, in mediæval letters, at least once a week, be made to form a part of their studies.

An Antiquary.

RECENT BUILDING PATENTS.

The following particulars as to patents recently filed, are quoted from the *Engineer*, *Mechanics' Magazine*, and other sources:—

Tabourin, G. A. "A new system of metallic arch, proper for the construction of bridges, arcades, vaults, roofs, and all other such purposes." Patent dated July 4, 1855. (No. 1501). The fractional arches of this system are generally made of cast-iron united together by jointed under-lugs, somewhat like the legs of a pair of compasses, or the parts of a folding foot-rule: a central joint bolt is passed through the under-lugs. Each beam or girder forming a complete arch, is composed of as many fractional arches as may be required to form the total length of the whole beam or arch, the length of each fractional beam or arch having been previously determined. The beams or girders are laid up in parallel lines at a suitable distance from each other, so as to form bridges, vaults, or arcades of the required breadth. They are then united by single bolts passing through the centre of the lugs, which are separated by tubular transoms traversed by the same bolts. One of the principles of the invention is the hinge-like joint of two adjoining arches, which, it is urged, allows of the comparatively easy conveyance of the bridges, and of their being erected or repaired quickly, and with great facility. The system of jointed arches may also, it is said, be employed in construction for the beams of roofs of great length, by merely modifying one of the ends of the first and of the last fractional arches, which should then have a propping face at the lower end, and also a resting face or footing, butting and resting on the top of the wall.

Pym, J. "A new combination of materials suitable for building purposes." Application dated July 7, 1855. (No. 1525.) The patentee adds to five hundred weight of bitumen about five hundred weight of carbonate of lime powder, about one pound of sal-ammoniac, and as much coarse sand or grit as will mix freely with the former materials, when heated in a cauldron. To this is added, as the article may be required to be more or less solid or tenacious, resin, shellac, glue, or pitch, the proportions of which may vary according to the purposes to which the article is to be applied. To add strength to the combination, when used in the manufacture of railway sleepers, or other articles of like character, cocoa-nut fibre, wood shavings, or other fibrous substances, are mixed with it when heated. The material is cast in moulds of the form and size required.

Newton, A. V. "A new manufacture of fire and burglar-proof glass." (A communication.) Patent dated July 9, 1855. (No. 1,535.) The inventor manufactures plates or pieces of glass with a metallic wire cloth or grating contained within the body or thickness thereof, and so incorporated therewith that if the glass be shattered or broken into pieces, the mass will continue to be bound together by the wire-cloth or grating, thus presenting the toughness of an iron grating, with the impassable and transparent qualities of glass.

Flynn, H. E. "Improvements in preventing fire from the over-heating of hot-air flues." Application dated July 9, 1855. (No. 1,531.) This invention consists in "constructing parts, particularly the moveable wheels or slides or valves used to open and close the flues, or all or any part or parts of any safety-valves applied to the 'hot-air flues' or 'caliducts' of amalgams," which fusing at lower temperatures than the brass or other metals, or compounds of metals used in the fixed parts of the said hot-air flues, will melt before the heated air reaches a dangerous temperature.

Adams, J. "Improvements for indicating the time when persons commence and leave their work or calling." Patent dated July 11, 1855. (No. 1,554). According to this invention a series of cells or chambers are caused to revolve regularly by clock-work. These revolving cells are enclosed in a box, in the top of which is an aperture, from which descends a tube. The cells or chambers are by the motion of the clockwork brought successively under the end of the tube, so that a card or ticket put in at the aperture in the top of the box descends by the tube into one or other of the revolving cells or chambers, and thus registers the time at which it was put into the box.

Provisional protection has been granted (2,931) to James Edgar Cook, of Greenock, Renfrew, booking-clerk, for "an improved composition for preserving exposed surfaces, or surfaces liable to deterioration and decay."

THE FALL OF THE STAIRS AT CHELMSFORD SHIRE-HALL.

At the adjourned inquest, reported in the local *Chronicle*, Mr. Thomas Hopper, who has been the county surveyor since 1816, gave evidence, and was of opinion that the accident was caused by the dense pressure of a large mass of persons in motion against the outer rail: the pressure upon the rail acted as a lever upon the stairs. He had never reported to the magistrates that he thought the stairs insecure.

Mr. Seaton (a juryman).—We find the steps cut away 2 inches, and the stairs broke down at the very point where the facing to the steps had been done.

Witness.—It was done in a workmanlike and perfectly secure way: it did not weaken the stairs, as it was done in a scientific way—in a manner that was unexceptional. I give my opinion before God that what was done to these stairs tended rather to strengthen than to weaken them. Mr. Wray did it, and I was satisfied it was done in the most scientific and workmanlike manner.

Mr. James Fenton was examined. He said—I did not know the staircase before it fell, but I examined the ruins on Saturday morning, and I found the landing had separated from the stairs: the steps had been what we call rebated together in the original construction, but were not pinned. He attributed the accident to the landing being insufficient. The whole staircase was on an angle, and the whole of the weight depended on the outer corner of the landing. I have no doubt the landing gave way first, though a person looking on might not perceive it. I have put stairs up only 3 inches thick, and they are standing safe now.

A Juryman.—How was that part rendered weak?

Witness.—By piecing: one-fourth of the section of each step had been taken away. If you cut through the step originally there was an area of 66 inches: out of that there had been 16 inches taken away; but if the landing had not given way, I believe the steps would not have gone: each step in the original construction ought to have been pinned.

After some further evidence and an inspection, the jury returned the following verdict:—"Accidental death, occasioned by weakness in the original construction of the landing at the bottom of the third flight of stairs which fell."

Miscellanea.

Supply of Water to the Town of Neath.—The premium of twenty-five guineas offered some time since by Mr. Wm. Bullock Webster for the best plan of supplying the town of Neath with water, has been awarded to Mr. Egbert Moxham, of this town. Seven plans were sent in, and Mr. R. W. Mylne was selected to examine them and award the premium. In his report, Mr. Mylne says,—"Generally speaking, great care has been evinced by some of the competitors in the preparation of their plans, and in the examination of the capabilities of the sources, and in the detailed arrangements; while others have confined their schemes more to the general distribution in the town, and have omitted altogether provisions for filtration and service reservoirs. After due consideration, I have selected two designs, as in my opinion the best adapted to the requirements, and superior in their engineering character. One is from Mr. Newton, of Swansea, the other from Mr. Moxham, of Neath." After explaining the merits and deficiencies of each scheme, Mr. Mylne, in conclusion, considers Mr Moxham's design as the best of the two, but says there are several points on which improvements should be made before the scheme could be considered complete.

School of Art, Truro.—The ladies of the morning class have presented to the master, Mr. G. R. Gill, a silver-mounted dressing-case, as a mark of their esteem for his manner of conducting their studies. The progress of the class it refers to affords much satisfaction, we are told, to the promoters of the school.

Subtleties of Science in Samples of Sand.—A great impostor, of the name of Simonides, was lately unmasked by Professor Ehrenberg, of Berlin, the celebrated microscopic discoverer of the animalcular or shelly origin of chalk, who, on examining with his microscope a pretended ancient manuscript, "discovered" by Simonides, observed, that the "ancient" ink ran above, not beneath, other ink of professedly less ancient or more modern origin, also traced upon the parchment. The same acute professor has just succeeded in unkennelling a thief of gold coins, abstracted while on their way, in a barrel, by railway, to Berlin. When the specie was abstracted, the barrel was filled with common sand, and Professor Ehrenberg procured specimens of sand from the neighbourhood of every station on the line, and, on microscopically examining the samples, very soon identified the station whence the barrelled sand must have come: the hint was sufficient, and led to the identification of the thief amongst the few *employés* on duty at that particular place and time.

Newcastle-upon-Tyne Society of Antiquaries.—At a recent meeting of this society, a paper, by the Rev. D. H. Haigh, of Erdington, was read "On the inscribed Cross at Bewcastle, in Cumberland," which was declared to be the earliest that we have of Anglo-Saxon times. It is a four-sided column, about 14½ feet high, tapering gently from base to top. At same meeting Dr. Bruce submitted a sketch, by Mr. Dobson, of the proposed adaptation of railway arches and waste ground to the purposes of the museum, and also called attention to a notice of the forthcoming meeting in Edinburgh of the Archæological Institute.

Gas.—The directors of the Lincoln Gas Company are about to have constructed at their works machinery for testing the purity and illuminating power of the gas manufactured by them; and, when completed, a daily register will be kept of the condition of the gas, the accuracy of which, according to the local *Chronicle*, will be tested by one of the first scientific men of the day, to be brought specially to Lincoln for the purpose.——The Southampton company were about to raise the price of their gas from 5s. to 6s. per thousand cubic feet, but at the instance of a deputation of the local Chamber of Commerce, they have consented to take sixpence off the proposed advance in price, and have promised to "reduce still further" when "coals, &c." are reduced in price.——A gas company is about to be established at Gibraltar, under the auspices of the governor.——A prospectus has also been issued of a company for lighting Constantinople with gas. The capital is fixed at 100,000*l.* in 1*l.* shares. The directors, however, have not yet had any privilege conceded to them by the Sultan or his government; nevertheless, it promises well.

"Bolection Work."—In Browne Willis's survey of the Cathedral Church of St. Asaph, 1720. page 5, I find this passage:—"From beyond the stalls up to the altar, and also round the altar, the wall is cover'd with wainscoat, well finished with Bolection work, which is painted, as are also the halls, tho' but poorly." What is the meaning of *bolection* work: I can find it in no dictionary?—A Subscriber.

*** Mouldings which project beyond the surface of a piece of framing are called bolection or bolection mouldings.

The Volcanic Shell.—Although the vocation of your readers,—and it is a noble one,—is to raise up buildings for the comfort and convenience of their fellow-men,—to form princely palaces, with pinnacles standing out in proud relief against the sky,—and to rear cottages, which, in becoming the "homes of the thousands," are yet the grandest effort of their genius,—I trust they will read without impatience a few particulars of a projectile, before whose mighty force the erections of a century would be annihilated in an hour. The "volcanic shell," as many of your readers are probably aware, consists of a hollow sphere of iron furnished with an inner tube of the same metal (forming as it were, an axis to the globe), filled with the powder required to burst the whole, and fitted with an ordinary "fuse." The body of the shell contains a composition which I have designated the "annihilating fluid." Let us suppose this terrible missile to be sent on its errand of destruction against,—say a "man-of-war" of gigantic dimensions,—and as it whistles through the air, and true to the aim of a British gunner, strikes the middle of the quarter-deck,—a moment more, and a fiery shower sets sails, ropes, timbers, all in a blaze; and a few buckets of water are idly scattered about in the vain hope of putting it out. The rest may be imagined. Even if the sea is complaisant enough to extinguish the flames by half-drowning the ship, the crew must be provided with lungs of a very peculiar make if they can "stand" the poisonous vapour produced by the combustion of my "annihilating fluid." Such is the agent of destruction, upon which the "chemist to the Ordnance" has reported favourably, and with which the Board of Ordnance have granted an experiment, to take place at Woolwich, I hope, ere many weeks have passed. In order to test more fully the effect of water upon the *fluid*, the following expedient was devised and carried out, each drop of ignited *fluid* having to pass through from six to nine inches of cold water. I had heard of such a thing as a "storm in a tea-cup," and therefore concluded that there was no reason why a "volcanic shell" should not be exploded in a washing-tub! Accordingly, a good specimen of the above "domestic article" was half sunk in the ground, filled with water, and surrounded by a quantity of dry straw and shavings, and a model-shell, of glass, less than two inches in diameter, was then plunged six inches under the water in the tub. The "subaqueous fuse," communicating with the "bursting charge," was then fired: explosion took place, and a perfect fountain of "liquid fire" soon inflamed the straw, &c. in all places where the latter was not soaked by about 1¼ gallon of water, also dislodged. I fancy these facts require no comment. In conclusion, I beg most emphatically to claim the *priority* and *superiority* of my invention to all others of a professedly similar nature; also that (like the manufacturers of "patent perambulators"), I have no "connection with any other party."—Wentworth Lascelles Scott.

Cambridge Architectural Society.—The last meeting for the Lent Term was held on Wednesday, March 5th. The Rev. G. Williams, Vice-Provost of King's College, one of the vice-presidents, took the chair. A paper was read on the Eucharistic Vestments of the Church by the senior secretary, Mr. S. B. Gould, of Clare College. He described the alb, stole, maniple, dalmatic, tunicle, and chasuble, tracing their history and variations in form from the early period of the Church, and illustrating his remarks by copies of old illuminations and brasses, and by modern examples. A discussion followed, in which the Rev. G. Williams described the richness of the Greek and Russian saccos, and the Rev. W. M. Campion and the Rev. H. R. Bailey took part.

Settlement of Disputes as to Wages, &c.—A memorial has been laid before Sir George Grey, the Home Secretary, by a committee of the National Association of United Trades, for the protection of industry, praying that he would take into consideration the subject of appointing stipendiary magistrates (barristers of five years' standing) in all large towns in the manufacturing and mining districts, and cause all cases of dispute respecting wages, agreements, contracts, hours of labour, quality and quantity of work, and other matters and disputes between masters and workmen, to be brought before these magistrates for adjudication and settlement.

Sale of Navy Timber.—Messrs. Hobbs, of this city, on Friday last, sold some fine navy timber at Stifford's-bridge, to the extent of nearly 1,000*l.* There was a large attendance on the occasion. The oak was particularly fine, as a proof of which it may be stated that some years ago an offer of 100*l.* was made for one of the trees now sold. The choicest lots of oak sold at about 3*s.* per foot; best elm (of which there were some extraordinarily fine specimens), at 1*s.* 6*d.*; fir, about 1*s.* Higher prices would have been obtained but for the distance of the timber from market, and the consequent expense of haulage.—*Worcester Herald.*

The Leeds New Town-hall.—At a meeting of the Leeds town-council, on Wednesday before last, the subject of erecting a tower on the new Town-hall was discussed, and Alderman Hepper asked for a vote of 4,000*l.* for the purpose. Ultimately, upon the resolution going to a division, the numbers in favour of the tower were found to be twenty-seven, and those in opposition only eight. The motion was accordingly carried. No other design for the tower, besides that already illustrated in the *Builder*, has as yet been prepared, but it is said that a new design will be submitted to the council by the architect.

Marylebone Free Library.—We are glad to observe from the annual report just issued that the experience of the past year enables the committee to state that the advantages of the Marylebone Free Library continue to be sought with undiminished interest. The institution now consists of two branches, a library of reference, and a lending library. The number of visitors at the rooms of the institution since its opening, has been 59,531. Of these, somewhat less than half have attended during the past year. The reference department has received during the past year, from various sources, an accession of upwards of 1,000 volumes, rendering nearly 5,000 books now available in this department of the Library. From a list giving the avocations of persons frequenting the rooms during the year 1855, it is satisfactory to observe that among the working men who attended there were of carpenters, plumbers, painters, decorators, and others engaged in building trades, no less than 5,693; and of smiths, brass workers, &c. 1,092.

Bristol and Clifton Graphic Society.—This society gave its first *conversazione* for the present season at the Victoria-rooms, Clifton, on Tuesday evening in last week, when, as on former occasions, a numerous and fashionable company assembled. The exhibition occupied the committee-room, the corridors, and the small ball-room, while a part of the large ball-room was enclosed as a tent and appropriated for refreshments: all the rooms were decorated with foliage and groups of flowering plants in bloom. The octagon walls were covered with sketches by Mr. Eagles, whilst the centre contained a fountain, of large size, contributed by the Coalbrookdale Iron Company.

Geneva: Subalpine Railways.—The Lyonbourg section of the line connecting Geneva and Lyon being near its completion, the easterly portion has been begun, which presents many interesting features. From Seyssel to Bellegarde the line runs along the Rhone, on high earthbanks, through cuttings of mountains, &c. At Bellegarde the valley is arched over by a viaduct of eleven arches, which is a remarkable work. Equally so is the Credo-tunnel, which, when completed, will have a length of 3,912 mètres, being 7 m. high and 8·50 broad. The fusion between this Swiss line-company and the Mediterranean has been lately effected.

Alleged Defect in Reservoir at Malvern.—The alleged unsafe condition of the Wyche reservoir has become a matter of much anxiety to the local commissioners, and a committee was appointed to examine the structure. A report from Mr. Simpson, the engineer, was read at a meeting of the board, in which he pointed out certain alterations necessary to its security, but the commissioners resolved to take the opinion of Mr. Elmslie upon the subject. A communication from Mr. Elmslie was lately given to the effect that Mr. Simpson's proposed plan would weaken the lower part of the tank by throwing the weight of water upon it. Mr. Harper said the report merely told them that they had a reservoir which might be filled, but from which they must take no water or the sides would fall in. He had prepared a plan which he would guarantee would do. It was agreed to adjourn the subject for a week, and in the meantime the committee would take Mr. Harper's proposals into consideration.

Suicide of a Brickmaker.—Mr. William Rhodes, the well-known brickmaker, has committed suicide, after suffering severely from mental depression. An inquest has terminated in the usual verdict of temporary insanity.

Election of Surveyor, Hastings.—On the 7th inst. at Hastings, there were no less than sixty-two candidates for the office of surveyor as lately advertised in this paper. Mr. John Laing, late surveyor, of Great Yarmouth, was unanimously elected.

Scenery at the Haymarket Theatre.—For a very elegant comedy in three acts, by Mr. Bayle Bernard, recently produced at the Haymarket, under the title of "The Evil Genius," three very good scenes have been painted,—one, a room in a villa; another, the gardens before the villa; and a third, the park of a country mansion—the last by Mr. W. Callcott, whose very charming scenery for the introduction of the pantomime deserves even more praise than we have already given it. The comedy is exceedingly well acted, especially by Mr. Buckstone, Miss Reynolds, and Mr. Compton.

SCULPTURE COMPETITIONS.—We understand that the committee of the Baines Testimonial, at Leeds, invited six sculptors to submit, in competition, models for the design, and that three of the sculptors, viz. Mr. P. M'Dowell, R.A.; Mr. Calder Marshall, R.A.; and Mr. J. H. Foley, A.R.A. declined the invitation, informing the committee that the very unsatisfactory manner in which such trials of artistic skill were conducted, precluded their availing themselves of the opportunity offered for the exercise of their art.—— From Liverpool invitations have been sent to twelve eminent sculptors to send in models for a statue of Archdeacon Brooks, to be placed in St. George's Hall. The sum offered for the work is 1,750*l.*

BELLS AT ROTHERHAM.—The company of ringers ask us to say that on Monday, the 3rd inst. was rung for the first time a new peal of six bells, recently hung in the tower of Rawmarsh Church, near Rotherham, Yorkshire, and that they do credit to the founder, Mr. Mears. They were hung by Mr. Hurry.

PORPHYRY SARCOPHAGUS.—A letter from Stockholm says:—"The sarcophagus in porphyry which King Oscar ordered twelve years ago from the mines of Elfdahe, for the mortal remains of his father, Charles XIV. (John Bernadotte) has just been completed, and in a short time will arrive in this city. This magnificent work, not more remarkable for the beauty of the porphyry than for the execution of the *bassi relievi* which ornament it, weighs 75 shippunds (16,000 kilogrammes). The cost of its conveyance to Stockholm will amount to 30,000 f.

WORCESTER SOCIETY OF ARTS.—The members and friends of this society held their annual *soirée* at their rooms in Foregate-street, Worcester, on Thursday evening in last week. Mr. de Foix Durieux read a paper in course of the evening "On the Principles of Art as applied to Drawing, Painting, and incidentally to Architecture."

SLATER AND TALL'S WOOD-WORKING MACHINERY.—Mr. Thomas Slater, opti.ian, who is known for his inventions in connection with the mechanical arrangements of the electric light, and Mr. Joseph Tall, tool-maker, have recently combined their endeavours for the improvement of wood-workers' tools. The particular subject which they have taken in hand is the manufacture of joiners' and carpenters' planes, by the aid of set machinery, in such way that peculiar accuracy in the work is, it is said, secured, in conjunction with great rapidity of production. Messrs. Slater and Tall's invention comprehends, firstly, an arrangement of machinery for cutting the parallel sides of the blocks out of which the planes are to be formed; secondly, machinery for mortising the angular cavity into which the plane-iron is fitted; and thirdly, an improved form of plane-iron. The *Practical Mechanics' Journal*, in describing these inventions in detail, says,—"The whole of these details, and especially the mortising or slotting apparatus, are most ingeniously contrived; and they bear evidence of the bestowal of more than usual care in the perfection of every part."

NEW RIVER COMPANY.—The following is the official statement of the receipts and expenditure of this company during the past year:—Receipts—Water-rents from houses, trades, watering the streets, and water sold in bulk, 150,143*l.* 14s. 8d.; ground-rents and rents from land, &c. 9,123*l.* 1s. 8d.; miscellaneous receipts, 5,532*l.* 13s. 9d.; appropriation from money borrowed on bonds for new works, extensions, &c. 291,815*l.* 17s. 11d.; total, 457,445*l.* 8s. Expenditure—Ordinary expenses of repairing and maintaining the works and collection of revenue, 70,407*l.* 15s. 4d.; interest on money borrowed, 20,991*l.* 14s.; dividends to proprietors, being equal to about 4½ per cent. on the capital, as settled by the Act of 1852, 60,912*l.*; amount carried to contingency fund by way of reserve, 13,288*l.* 9s.; purchase of lands, &c. for new works, improvements on river, pipes, pipe-laying, and other outlay, 291,845*l.* 17s. 11d.; total expenditure, 457,445*l.* 8s. The capital of the company is stated to amount to, inclusive of the additions up to the end of 1853, 2,086,842*l.* 6s. 3d

SCULPTURE AND BUILDERS.—Permit me to draw attention to a great question connected with the progress of sculpture. Is it likely that the present school of carving will improve, as long as builders remain the disposers of it? If the two sister arts, architecture and sculpture, have to assist one another, how can that be done, when a builder stands betwixt them? Under the present system, the architect gives his orders to the builder, by whom the sculptor is employed and rarely or never comes in contact with the architect.—A SCULPTOR.

TENDERS

For the proposed Greyhound Inn, Brook-street, Holborn. Mr. E. Tanson, architect:—

Howard	£3,295 0 0
Holland	2,749 0 0
Thompson	2,630 0 0
Mackenzie	2,600 0 0
Young	2,564 0 0
Ryder (accepted)	2,478 0 0

TO CORRESPONDENTS.

"*Cleaning Boards.*"—"J. K. E." asks for a receipt for "cleaning and whitening boards," as nothing has such an unsightly appearance as dirty and bad coloured boards.

"M. O. H." from what is said as to crushing and grinding in the specification of the patent for black paint, the carbon used would appear to be simply the fine dust of charcoal not lamp nor ivory black. It is of course the process rather than the kind of carbon that is patented.—"M. O'K."—"D. M." (can we see any rough view?) "S. W."—"J. B."—"W. T." (we can get no precise information.)—"J. F."—"A. and Sons."—"Rev. C. D. M."—"Delta." (such a wash is to be purchased.—"Foreign Engineer" (unless precautions be observed, iron houses are open to the objections named)—"J. F."—"W. H. T." (no sufficient *external* view has been given)—"P. and D. C."—"S. B."—"Sonm Culque."

E. H."—"W. T." (the French newspapers)—"F. L." (the designs at Lille are, we believe, open to the public)—"H. A. H."—"T. G."—"J. G. S."—"H. H."—"J. G. W."—"Y. Z." (our informant was engaged upon it, and is no doubt correct).

"*Books and Addresses.*"—We are forced to decline pointing out books or finding addresses.

NOTICE.

FROM and after the 1st January, 1856, the *entire postage* upon all newspapers sent to France, and Foreign countries *via* France, must be prepaid: the stamped copy of the paper is of no avail.

ADVERTISEMENTS.

BUILDING LAND.—Some most eligibly situated LAND, TO BE LET on Building Leases, of ninety nine years, in that healthy and increasing locality, West Hum, Essex, four miles from London Bridge, and numerous running near to the place several times a day. The ground-rents very low; and respectable builders might be assisted with loans.—Inquire of Mr. WATSON, No. 14, Upton-row, West Ham, Essex.

FREEHOLD LAND TO BE LET, on Building Leases for ninety nine years. Money advanced to persons taking Freehold Land to be Sold for building purposes in eligible situations. Apply at the Offices of Messrs. MORGAN and PHIPSON, Architects, Chancery-lane.

BUILDING LAND, in the rear of, and with an entrance from REGENT-STREET, and HANOVER SQUARE.—Messrs. SMITH and CHAPMAN are instructed to LET or SELL, on and PLOTS of GROUND suitable for the erection of a banking house, insurance office, or public rooms.—Plans may be seen, and terms to suit purchasers or lessees obtained at their Auction and Land Agency Offices, 28, Regent-street.

FREEHOLD LAND for SALE.—Valuable LOT for twenty Fronts to Gas Houses for nine or ten shillings per foot, and Corner Houses for more. Roads and Sewers will be made and Houses built and will be included. The land will readily let at 2*l.* 10*s.* per house; money might be obtained on small leases. Lots of 200 feet. For further particulars, apply personally to Messrs. CHARLTON and WALKER, 18, Southampton street, Pentonville.

CAMDEN-TOWN CEMETERY BUILDING ESTATE.—TO BE LET, on Building Leases, for Ninety-nine years, or for eighty-five years upon the whole of the estate having good frontages into Camden-street and Byham street, and including ways to and into Adelaide-street, to wall in Bet Mary-place and mews approached from Pratt-street. There is a great demand for private houses in Camden-town, which is about to be rendered easy of access to the North Western and North London Railway stations, and the Hippodrome. Plans may be seen and particulars obtained upon application to H. E. KENDALL, Esq. Architect, 7, Suffolk-street, Pall Mall East; or of JOHN BANGHAM, Esq. Solicitor, 2, Canon-street, Charing-cross.

TO BUILDERS.

LEE, near BLACKHEATH.—FRONTAGES TO BE LET, for detached or semi-detached villas, on the Belmont Estate, close to the grounds of several gentlemen's residences, and within a few minutes' walk of Lee Station, and the Lee and Blackheath Stations on the North Kent Railway. The Lee Park Estate Company is liable to pay the ground-rents, and to make up the roads. For particulars, apply to Messrs. Jay and Tidy, Victoria Chambers, Regent-street, London; or on the Estate, Lee, Kent; or Messrs. NELSON and INNES, 6, Whitehall; and of Messrs. KIRKMAN and LINDSELL, 127, King William-street, City.

FREEHOLD GROUND.—WANTED to PURCHASE, about ONE ACRE of FREEHOLD GROUND in the neighbourhood of Lower Holloway road and Seven Sisters'-road. Mr. JOHN LAW, 141, Fenchurch-street, City.

BUILDING AGREEMENT TO BE SOLD. To BUILDERS, BUILDING SOCIETIES, and OTHERS. HAVERSTOCK-HILL, HAMPSTEAD-ROAD.—TO BE SOLD, a valuable Building Agreement for a PARCEL of FREEHOLD LAND, situate in one of the healthiest and most commanding positions in the neighbourhood of the above celebrated Tea Gardens, and within a few minutes' walk of the Chalk Farm Station, on the North London Railway, and the Omnibuses passing to and from the City every few minutes. The Land is well adapted for erecting the whole of the Houses. The Plans necessary for carrying on the works could be had with the Land, and a further portion, or the whole of the Land, would be disposed of on very low price to be agreed upon.—For particulars apply to Mr. SUTTER, Land Surveyor and Auctioneer, Prince of Wales-road, Haverstock-hill.

MAITLAND-PARK, HAVERSTOCK-HILL, HAMPSTEAD-ROAD, Land-tax redeemed.—TO BE LET, in one or more lots, for one or more terms of years, UNBUILT SITES on the above estate. The contractor is now at work in this locality, and the near position of the Railway Station, the grounds of the Original Workmen's Society, offer this a desirable opportunity for builders or gentlemen wishing to erect villas for themselves.—For plans and terms apply to the Secretary of the Orphan Working School, 23, Ludgate-hill; Messrs. TERRELL and CHAMBERLAIN, 30, Basinghall-street; the Architects, Messrs. WILKINS and ASHDOWN, 43, Charing-cross; or at the Lodge at the Land to the School.

POOLE HARBOUR, POTTERY CLAY DISTRICT, DORSETSHIRE.—TO BE LET, and entered upon immediately, CLAY LAND. A good site for erecting and establishing a Pottery Manufactory, being immediately contiguous to the Poole Junction of the Southampton and Dorchester railway.—For particulars apply to Mr. PYNE, Canford Manor, Wimborne, Dorset.

HATFIELD, HERTS.—TO BE LET, very eligible BUILDING LAND, at Hatfield, seventeen miles from town, on the Great Northern Railway, suitable for the erection of villa residences.—For particulars, apply to Messrs. GEO. NICHOLSON and SON, Solicitors, 4, Old Palace-yard, Westminster.

FREEHOLD LAND, SHEPHERD'S-BUSH.—TO BE LET, or SOLD, by Private Contract, about THIRTY-SIX ACRES of valuable FREEHOLD BUILDING LAND, land-tax redeemed; most desirably situate, three miles from Hyde-park. Plans and terms of Mr. PETER BROAD, 23, Poultry.

FREEHOLD GROUND, Fetter-lane.—The Commissioners of Sewers of the City of London hereby give Notice, that they will meet in the GUILDHALL of the said City, on TUESDAY, the 25th of APRIL next, at TWELVE o'clock at noon precisely, to receive PROPOSALS for taking an BUILDING LEASE for eighty years, certain PLOTS of GROUND, situate at the south end of Fetter-lane. Further particulars may be had, and a plan seen, on application to Mr. HAYWOOD, Engineer to the Commissioners, at these Offices in the Guildhall. The Commissioners will require a plan and elevation of the Premises proposed to be built to be submitted to them for approval; and do not bind themselves to accept any proposal unless deemed satisfactory. JOSEPH DAW

Sewers Office, Guildhall, March 4th, 1856.

TO BUILDERS AND OTHERS. — An excellent SITE TO BE LET or SOLD, for BUILDING PURPOSES, with a good double frontage, situate in a leading thoroughfare, and in an established neighbourhood, well adapted for shops and dwelling houses, and workshops. The materials of the present erections may be used if sound, in erecting any new buildings that may be approved. Money will be advanced if required by the purchaser, or taken to carry out the undertaking, upon a satisfactory arrangement.—Inquire of Messrs. HOWARD and DOLLMAN, Solicitors, 141, Fenchurch-street; Mr. EDWARD LAWTHER, 78, Red Lion-street, Clerkenwell; or of Mr. MURRELL, Auctioneer, 1, Walbrook, City.

STRATFORD, ESSEX.—FREEHOLD LAND within three miles of London, exonerated from land tax, and free of tithe, TO BE LET, on lease for a long term of years, in large or small plots, suitable for manufactories or building purposes.—Apply to Mr. W. H. DEAN, Auctioneer and Surveyor, Stratford; or to Mr. GEORGE POWNALL, Surveyor, 37, Bloomsbury-square, London.

HARROW.—FREEHOLD LAND.—TO BE SOLD, 100 ACRES, in a ring fence, and several other eligible plots of FREEHOLD LAND, at a moderate price, contiguous to the Harrow Railway Station, surrounded and intersected by capital roads. Residents are entitled to the privileges of the Harrow School, and the London and North Western Railway Company offer to persons erecting houses of approved elevation, worth 30*l.* per year each, a free first-class pass between Harrow station and Euston-square, for eleven years. There is an abundant supply of excellent water, and very superior brick-earth on the land.—Apply to WILLIAM B. COOPER, Esq. Solicitor, 3, Verulam-buildings, Gray's-inn.

FREEHOLD GROUND for Building on.—TO BE LET, upon BUILDING LEASES, PLOTS of GROUND, in that healthy locality, Holloway, two or three minutes' walk from the Archway Tavern, Upper Holloway. Four or five minutes to all parts of London. Situate in St. Johnland, which is being fast established. For particulars apply to Mr. H. WITHERS, 9, Poultry; or Mr. WILDS, 2, Esplanade, Ealing. The leases direct from the freeholder. Money advanced.

FOUNDLING HOSPITAL.—The Committee of Governors will meet at the Hospital on SATURDAY the 15th instant, at Seven o'clock, to receive PROPOSALS for a LEASE of PREMISES in Sugar-loaf court, Gerrard-hill, Upper Thames-street. Plans of the premises, and further particulars obtained at Mr. HENRY O. CLARK'S Office No. 1, Lime-house, Stand.—By order of the Court of Governors, March, 1856. J. BROWNLOW, Secretary.

MONEY on LOAN, at 3*l.* per Cent. per Annum.—ARNEWAY'S CHARITY.—NOTICE IS HEREBY GIVEN, that the Trustees of the above Charity, established by the Times Will, are prepared to lend money at 3 per cent. per annum to Freeholders resident within the City and Liberty of Westminster, that is to say, within the parishes of St. Margaret and St. John, Westminster, St. Anne, Soho, St. Clement Danes, St. George, Hanover-square, St. James's, St. Martin in the Fields, St. Mary le-bone, and St. Paul, Covent-garden, the amount of such loan not to exceed half the value thereof after the rate of one per cent. per annum, and that the same will be lent in sums not exceeding 200*l.* each. Applications, addressed to the Trustees, may be left with the Porter at the Vestry Room, St. Margaret's Church-yard, Westminster, between the hours of Ten and Four o'clock in the day, at the office of the Clerk and Solicitor to the Trustees, No. 14, Great Queen-street, St. James's Park.

By order, EDWARD PHILLIPSON, Clerk and Solicitor to the Trustees.

NOTE.—The Trustees meet on the second Wednesday in every month, to consider such applications for loans as have been sent to the Clerk or Solicitor at the latest on the first day of the month.—The sureties must be unexceptionable.

MONEY on MORTGAGE of UNFINISHED and other PROPERTY.—The Interests, &c. of Clients invested in large or small sums, at a moderate interest. Periods of repayment at the option of the borrower, and all charges included.—Apply (if personally from Nine to Eleven) to Mr. J. R. GOYER, Eagle Cottage, New Kent-road, London.

METROPOLITAN LOAN COMPANY, Established 1844.

1 CRAVEN-STREET, STRAND, LONDON.

Loans of 10*l.* and upwards are granted for 1 to 7 years, to be repaid by weekly or other payments, on the principal and interest at the rate of 12*l.* per cent. per annum, or at the rate of 6*l.* per cent. for half the term.—Forms may be had, price 2d.; if by post, three postage stamps, to be addressed.

ROBERT S. WATSON, Secretary.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of FLOORING is adapted to Public and other Rooms, Mansions, Villas, Cottages, Halls, Corridors, Staircases, Libraries, Dining-rooms, Drawing-rooms, Bedrooms, Conservatories, &c. and is manufactured from super-seasoned Swiss woods, and is to be obtained only at the Manufactory of Messrs. ARROWSMITH and CO. 61, New Bond-street.

H. DOULTON & CO'S.

TERRA-COTTA CHIMNEY-TOPS

Well withstand the action of the Weather, as it is Fire-proof, and are

QUITE IMPERISHABLE.

Prices not much higher than Cement.

DOULTON & CO.'S

TERRA-COTTA POTS, &c.

Erected in London upwards of 20 years since, are as sharp and perfect as when first manufactured.

Drawings on application to

H. DOULTON & CO. High-street, Lambeth.

ROYAL POLYTECHNIC.—Patron, H.R.H. Prince Albert. During Passion Week, viz. on the 17th, 18th, 19th, and 20th, Lectures on Astronomy, by J. H. Pepper, Esq. with a magnificent Dissolving Orrery and Diagrams, each morning at 3 30. In the evenings only at 8, Astronomy, with Haydn's sublime Creation, by a Band and Chorus of Fifty Performers, under Mr. Wallis, of the Royal Italian Opera. For names of the eminent vocalists, &c. see programmes.—N.B. The Price List will be entirely suspended. A Pension, 1s. Children and Schools half-price.

APPROVED WORKS
ON THE
USEFUL ARTS AND MANUFACTURES,
AND
TREATISES ON NATURAL PHILOSOPHY,
Price 3s. 6d. each Volume.

1

TREATISE on the MANUFACTURES in METAL.
By JOHN HOLLAND,
With Vignette Title and 120 Woodcuts. New and thoroughly revised edition, 2 vols. fcap. 8vo. price 10s. 6d.

LONDON:
LONGMAN, BROWN, GREEN, & LONGMANS.

In 1 vol. 8vo. with Plates and Woodcuts, price 15s. cloth,
USEFUL INFORMATION for ENGINEERS; being a Series of Lectures delivered to the Working Engineers of Yorkshire and Lancashire. With a series of Appendices, containing Results of Experiments bearing upon the Practice of Modern Mechanical Engineering.
By WILLIAM FAIRBAIRN, F.R.S. F.G.S.
"Mr. Fairbairn's name is a guarantee for the soundness of this work. It treats of steam fuel, and boilers—the working classes, as they will no doubt be called when the appellation is obsolete—with which we shall be called, when it may be, intimately acquainted. Though a professed work, it is so much adapted for the general reader as such as to be very *Athenæum*.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW AND ENLARGED EDITION OF SMEE'S ELECTRO-METALLURGY.
In One Volume, 8vo. with Illustrations and numerous Engravings on Wood, price 12s. cloth,
ELEMENTS of ELECTRO-METALLURGY.
By ALFRED SMEE, F.R.S. Surgeon of the Bank of England.
"Mr. Smee's work is, on the whole, a very satisfactory one."—*Athenæum*.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

A New Edition, in 8vo. price 7s. cloth,
THE CORRELATION of PHYSICAL FORCES.
By W. R. GROVE, Q.C. M.A. F.R.S.
Corresponding Member of the Academies of Rome, Turin, &c.
Third Edition, with Additions.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW VOLUME OF DE LA RIVE'S WORK ON ELECTRICITY.
Now ready, Vol. II. in 8vo. with Woodcuts, price 28s.
A TREATISE on ELECTRICITY, in Theory and Practice.
By A. DE LA RIVE, late Professor in the Academy of Geneva.
Vol. I. price 16s. may still be had.
"It is emphatically a treatise, containing both the theoretical and practical aspects of the science, and as the intellectual element will no doubt make it a favourite book with the most accomplished electrician will find it an invaluable summary. *Athenæum*.
"This will be a standard work on electricity when completed. . . . To all who desire to have an acquaintance with the recent ideas and experiments of electricians, and with the theory and practice of electricity generally, this is one of the most valuable works that recent science has produced." *Mechanic's Magazine*.
"From such a life we are entitled to expect noble results—from such a man we anticipate masterly works; and masterly indeed is the 'Treatise' now before us, in which is expounded the whole of what has been said and done by the illustrious author in the field of electrical science. It was De la Rive's original intention to complete the work in two volumes; but although the present volume contains upwards of 900 compact pages, a third has been found necessary to complete his design. . . . We will say enough to induce those who are not already acquainted with the work to procure it, and we regret this extension; for here we have a work which is extensive, not because the writer has padded, but because his knowledge is exhaustive—not because he ill understands the art of exposition, but because he is a master of exposition and his matter is abundant. The pages are not full of matter, as sausages are full of meat—they are not padded out with stock verbiage, irrelevant digressions, or unnecessary details. . . . Altogether, we can name a work so eminently adapted to the wants of the student, and to the instruction of the amateur."—*Saturday Review*.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

LESSONS in GENERAL KNOWLEDGE: An Elementary Reading-Book, intended to serve as a familiar and attractive Introduction to the Principles of Natural Science.
By R. J. MANN, M.D. F.R.A.S.
Author of "Guide to the Knowledge of the Heavens, the Book of Health," &c.
"An elementary reading-book, intended to combine the ordinary advantages of reading-lessons with the communication of useful knowledge. There is a pleasant intermingling of popular science, history, and biography, written with a simplicity to the level of juvenile comprehension, and rendered the more instructive by the etymological explanation of the words in each lesson, which might otherwise be difficult for young readers to understand correctly."—*Athenæum*.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

In Two Volumes, 8vo. with nearly 1,600 Woodcuts, price 60s.
DR. URE'S DICTIONARY of ARTS, MANUFACTURES, and MINES: containing a clear Exposition of their Principles and Practice. The Fourth Edition, much enlarged and corrected throughout.
"These volumes of Dr. Ure's consist chiefly of original and exact treatises, written with so much accuracy and care that they may be universally resorted to as authorities, as indeed the former editions have been, as well by artists and manufacturers as by British and foreign scientific writers. The author has throughout the entire work kept most seriously before his mind the principle of promoting the best and most economical developments of the arts and manufactures, and has produced a work which altogether surpasses every other of its kind with which we are acquainted." *Mechanics' Magazine*.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

A New Edition, in 8vo. price 12s. 6d.
HISTORY of the IRON TRADE, from the Earliest Records to the Present Period.
By HARRY SCRIVENOR, Esq. and Author of "The Railways of Great Britain and Ireland practically considered."

LETT'S WHARF PATENT SAWING, PLANING, and VENEER-CUTTING MILLS, Commercial-road, Lambeth.—The proprietors beg to announce to the trade that they have completed their extensive arrangements, and will be happy to execute all orders intrusted to their care with despatch and punctuality.

N.B. All goods sawn at these mills fetched and delivered free of charge.

FRENCH POLISH and SPIRIT VARNISHES made from Methylated Spirit, 60 over proof.
Best French Polish ..... 8s. 6d. per gallon.
Spirit Varnish ..... 6s. 6d. "
White French Polish ..... 10s. 6d. "
Medium Polish ..... 8s. 6d. "
By JAMES SKIPPER, 57, Leather-lane, and 14 and 15, Dorrington-street, Holborn, London.

CRYSTAL PALACE.—PICTURE GALLERY.—It is intended to construct in the north wing of the Crystal Palace (at present occupied by the new Nave) a GALLERY for the EXHIBITION and SALE of such PICTURES of all the schools of Europe. The gallery will open early in the ensuing summer. No charge will be made for exhibition: but it is proposed to observe a per cent on sales. Communications to be addressed to Mr. HENRY MOGFORD, F.S.A., at the Palace, in whose hands the Directors have placed the management of the gallery, and from whom full particulars may be had forward. The Directors reserve to themselves a right of selection.—By order.
G. GROVE, Secretary.

THE PHOTOGRAPHIC SOCIETY'S THIRD ANNUAL EXHIBITION is NOW OPEN, at the Gallery of the Society of Painters in Water Colours, Pall-mall East. Open daily from 10 to 6, Admission 1s. Evenings, from SEVEN to TEN o'clock, 6d. The Exhibition will be closed on 24th instant.

TO ARCHITECTS AND OTHERS.

MR. EDWARD L. PARAIRE is desirous of Meeting Gentlemen who require COLOURED ARCHITECTURAL DRAWINGS. External, Internal, Isometrical Perspectives; outlines of same neatly coloured, with background, on terms that will insure approval. Temporary assistance given in getting up Plans, Elevations, Sections, Detail, and Working Drawings.—Mr. E. L. P. makes a consideration in his charge where competition drawings are unsuccessful.
Address, 8, Rathbone-place.

TO ARCHITECTS

EXHIBITION and COMPETITION DRAWINGS, coloured or tinted, and superior LITHOGRAPHY, in its various branches, executed by Mr. J. RAWLINS, Author of Elementary Drawing Classes, adopted at Marlborough House, and Head of Sculpture and Modern Architecture, &c., University College, London.

Hydrometers, Sets of Box Instruments, Pocket Compasses, Tele-Prisms, Pocket Sextants, Prismatic Compasses, Tele-Prisms, Pocket Sextants, Prismatic Compasses, Tele-Prisms, Pocket Sextants, Prismatic

CRYSTAL WHITE SHEET GLASS,

FIRST, SECOND, AND THIRD QUALITY,

In Cases of 100, 200, and 300 feet, suitable for Pictures and superior Glazing, from 3d to 6d per foot; also in Cases of 100 and 200 feet, assorted sizes. Belgium Sheet Glass, in Cases 200 feet each, 3rds 38s.; 4ths, 30s. Squares, in Boxes of 100 feet each, 3 by 4, to 10 by 8, 1½ d. per foot Larger sizes up to 24 by 14, 2d. per foot. Ground Glass, in Cases, 2½ d. per foot. Crown and Sheet, British and Patent Plate, HARTLEY'S Patent Rolled Rough Plate, English and Foreign Fluted, Stained Glass, Glass Slates, &c. &c. Price Lists and Estimates forwarded on application to

ROBERT METTAM, 30, Princes-street, Leicester-square.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that **FOUR-FIFTHS** of the **ROUGH PLATE**, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by **HARTLEY'S PATENT**—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for **RIDGE and FURROW ROOFS**, giving a **SPAN** of **TWELVE FEET**, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders **BLINDS UNNECESSARY**, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

G. FARMILOE and SON, 113, St. John-street, West Smithfield.

11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the best quality, manufactured on the above works. Also STOCK and CLUNCH BRICKS, hand moulded and machine made, for sale or contract or otherwise. Apply to G. BOOTH, Agent, as above.

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. This material does away to panelled papered walls in a few hours of its application, and proves to be thus indeed a valuable ornament.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they can assure on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers

These cements set under water in a few minutes, and are not affected by extreme heat or cold.

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of their well-known quality for the home and Export trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it can be excels them in its cementitious properties; that it is not affected by frost, and does not crack in decomposing. Accurate COMPARATIVE EXPERIMENTS of the strength of this and other Cements tried at the Institute of Civil Engineers, to be obtained of the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

BATH, PORTLAND, and ROMAN CEMENTS GROUND and LUMP HYDRAULIC BLUE LIAS LIME.

The LONDON and WEST of ENGLAND CEMENT COMPANY can offer to the trade the best Hydraulic Cements, at reduced prices, the material being excavated from its private and unadulterated state, from quarries on their own property. The Company particularly recommend a trial of their XXXX Bath Cement, as far superior to any article now in the market. These cements can be sent by rail or shipped from their wharf, direct to all parts.—Agents required, and a liberal discount allowed. Orders received by Mr. KIALLMARK, 80, Old Broad-street, City, or by RICHARD WINTER, Cement Works, Dunball, Bridgwater.

BATH CEMENT.

CHARLES RICHARDSON,

☞ ADDRESS—THE MANAGER OF ST. PANCRAS IRON WORKS, OLD ST. PANCRAS-ROAD, LONDON.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original Inventors of the PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, to which they have made important additions, the main features of the same being explained in the following description and Engraving.

A represents the Patent Halter-guide and Collar-rein, the ball of which is taken to the back of the manger-works with freedom and ease up or down the guide-bar, and is noiseless in its operation, as also a sure preventative against the most restive horse being cast in the stall.

B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C. The Seed-box detached, made of galvanized sheet-iron, light and durable

D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and impervious to infection. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE-DRAIN, with safety covers; Sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Saddle and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-Iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

The New Illustrated Catalogue for 1856 gratis on application. Estimates and Designs.

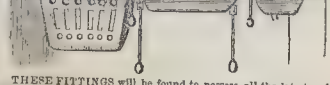
Superior Rolled Plate for Engravers, Cabinet-makers Fine and Common Brass, Gun Metal, &c. &c.

RICHARD EVERALD'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London



COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Of ornamental hinges, adapted for drawing rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and Jointed ring spring hinges, and superior gate fastenings, at moderate prices. Note, genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled
Castings Warehouse removed from 81 to 86, Upper Thames-street

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.

THESE FITTINGS will be found to possess all the latest and most important improvements, and are of the best manufacture. All kinds of Stable-furniture in stock. Iron Hurdles. Gates, Fencing, Tomb-railings, &c. New illustrated Catalogues forwarded on receipt of two postage stamps.—JAMES BARTON, Ironfounder, &c. 370, Oxford-street, London.

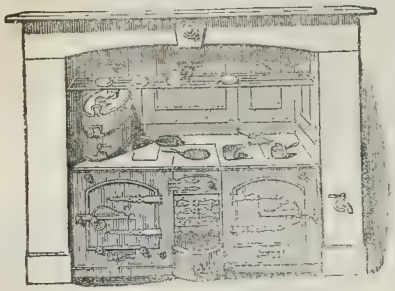
FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs or arches, the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.



Further information may be obtained of the Proprietor of the patent.—Mr BARRETT, 12 York buildings, Adelphi

CAST STEEL.—Messrs. NAYLOR, VICKERS, and CO. RIVER DON WORKS, SHEFFIELD, are now prepared to execute orders for CAST STEEL, from 4 lbs. to 6,000 lbs. each. Locomotive Crank Axles, Tyre Bars without welding, Shafts, Cranks, Axles, and every description of heavy Forgings in Steel, to pattern.—For further particulars, apply as above.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on hand.—Every article in plain brass, bronzed and lacquered, of the Manufacturers' Catalogue, Complete pattern-book and price list, 10s.—35 and 36, High Holborn.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:

BENHAM AND SONS,
19, WIGMORE-STREET, LONDON;
and at the Crystal Palace, Sydenham.

A

FIRST-CLASS MEDAL

WAS AWARDED TO

F. EDWARDS, SON, and CO.

AT THE

PARIS EXHIBITION,

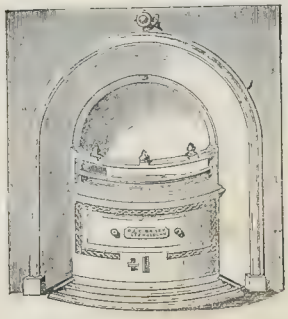
For the SPECIMENS they exhibited of

DR. ARNOTT'S

SMOKE-CONSUMING GRATE,
AND SMOKE-CONSUMING
COOKING APPARATUS.

F. EDWARDS, SON, and CO. beg to inform the public that their STOCK of GRATES is ENTIRELY REFORMED, and consists SOLELY of GRATES on the SMOKE-CONSUMING PRINCIPLE. A large variety in real Bronze, Ormolu, Steel, and Berlin Black, suitable for Drawing rooms, Dining-rooms, and Libraries, from 7*l.* to 30*l.*

The following are the prices of those for ordinary use:—



Black Grates, for Parlours, Offices, &c. from 4*l.* to 5*l.* 10*s.*; for Bed-rooms, Offices, &c. from 2*l.* 10*s.*

By the Grates on this principle, as properly constructed by F. Edwards, Son, and Co. smoky chimneys are avoided, an agreeable fire is maintained, with one-half the trouble attending the ordinary grate, and a saving of from forty to fifty per cent. is effected in the consumption of fuel.

PROSPECTUSES, WITH FULL PARTICULARS AND TESTIMONIALS, SENT ON APPLICATION.

To be seen in daily operation at the Show Rooms, 42, Poland-street, Oxford-street, London.

DR. ARNOTT'S SMOKELESS GRATES,

For the manufacture of which D. and E. BAILEY obtained the SILVER MEDAL at the PARIS EXHIBITION. The above excellent invention has been carefully modelled and manufactured by D. and E. BAILEY, 272, Holborn, who having experienced great difficulty in keeping pace with the increased demand for the above Stoves, have now made such arrangements as will enable them to supply their customers with the Smokeless Grates, of ordinary dimensions, from their stock on hand, which consists of various designs in black, bright, and polished steel, richly decorated with ormolu ornaments.

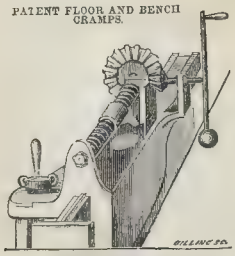
The great advantages of these Stoves over all others are—

1st. The entire absence of smoke.

2nd. An immense saving in fuel.

3rd. A cheerful fire, with simple means for regulating the heat.

4th. Will burn night and day, requiring only to be supplied with fuel twice in twenty-four hours.



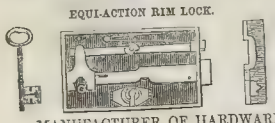
For invalids' bed-rooms, these stoves will be found invaluable.

Prices and Prospectuses may be obtained on application where the Smokeless Grates may be seen in daily use.

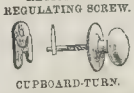
D. & E. BAILEY, IRONMONGERS,
272, HOLBORN, LONDON.

WILLIAM BISSELL,

PATENT FLOOR AND BENCH CRAMPS.



Patentee,



PATENT COMBINED LIFTING-JACK.

EQUI-ACTION RIM LOCK.

REGISTERED REGULATING SCREW.

CUPBOARD-TURN.

EQUI-ACTION MORTISE LOCK.

MANUFACTURER OF HARDWARE, WHOLESALE AND BUILDERS' IRONMONGER,
UNION-STREET, HORSLEY-FIELDS, WOLVERHAMPTON.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded if so by post.—DEANE, DRAY, and CO.'s premises to the Monument, London-bridge. Established A.D. 1700.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, and of the most extensive dimensions, can be effectually warmed by Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c. &c. where they have fixed their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails wrought and cut), Copper and Zinc, Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4*s.*; and the new registered Venetian Ventilator, so much admired, &c. 6*s.* 6*d.* each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 300 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

JOHN TANN'S new patent RELIANCE LOCK and FIREPROOF SAFES form the best and cheapest safe in the world against fire and robbery. Testimonials to be had of Messrs. WATERLOW, Birchin-lane; and at the Works, 1, Hope-street, Hackney-road, London. Iron Doors for strong rooms and party-walls.

JUDKIN'S IMPROVED GAS REGULATOR has the following advantages to recommend it to the consideration of all gas consumers:—

1st. It can be easily adjusted to supply gas at any required pressure below that of the street.

2nd. When once adjusted, it will admit of NO VARIATION in LIGHTS BURNING, whether they are few or many, whatever the fluctuation of pressure may be.

3rd. The light being purer by perfect combustion, the atmosphere is more healthy and agreeable.

4th. A saving of at least from 25 to 35 per cent. in the consumption of gas is obtained.

Its ADVANTAGES over other REGULATORS are as follow:—

1st. It is more simple in its construction.

2nd. It is more sensitive in its operation, having less friction, as it works only on two steel centres, which are immersed in quicksilver.

3rd. It is not liable to get out of repair, and requires less attention than a meter itself.

N.B. A Testing Apparatus has been fitted up on the premises of the Patentee, 33 and 35, Corporation-street, Manchester, and 98, Fleet-street, London, for the purpose of demonstrating the above-named facts.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 143, Regent-street, London.

CAST-IRON PIPES, IRON-WORK FOR OVENS, &c.

RAIN PIPES, &c.—F. A. TIDDEMAN and CO. St. Ann's Wharf, Earl-street, City, near Blackfriars-bridge, keep a large stock of Rain Pipes, Heads, Shoes, Elbows, &c. half-round and O-G Gutters, Socket Pipes for Water or Gas, Flange Pipes, Hot Water Pipes and Connexions, Sash Weights, and other castings; Iron-work for Bakers' Ovens of every description, fitted complete, to be had in sets or in parts.—Prices equal to all competition. Contracts taken to any extent. Goods landed. A powerful crane.

IRONMONGERY.—Builders and the Trade generally will effect a considerable saving by purchasing of CLUSE and ROSE, Victoria Iron Factory and Stove and Range Manufacturers, 35, City-road, corner of Tabernacle-row.

67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

JENNINGS'S PATENT DRAIN-PIPES.

The above Pipes offer every facility for examination IN CASE OF STOPPAGE, or for the introductions of Junctions, without in any way disturbing the invert or general drain. The Chairs above shown are very strong, with broad bearings, and when laid to the right fall and distance apart, the Rebates have only to be filled with cement or mortar, and the Pipes pressed down to the line of Chair.

It will be thus seen that the laying of the Pipes, and the making of the Joints, is done at once and without trouble: the space between each Pipe allowing the workman to strike up the Joint, and the Superintendent to see that every Pipe is accurately laid and fairly jointed.

A shows one of JENNINGS'S PATENT SADDLES, or COVERS, by means of which examinations of drains are effected. B shows one of the PATENT JUNCTION-COVERS, by which connections are made to finished lines of Pipes—it being only necessary to remove the Plain Cover, or Saddle A, and substitute a Cover or Saddle B, the Junction in it being suited to receive the Branch Pipe.

The Patent Saddles and Covers, A and B, are all MADE TO A GAUGE, suited to every sized Pipes; also with Junctions of any size, and at any angle.

Prices of JENNINGS'S DRAIN-PIPES per foot run, including the Patent Chair and Cover:—4-inch, 6d.; 6-inch, 8d.; 9-inch, 1s. 1½d.; 12-inch, 1s. 10d.; 15-inch, 3s.; 18-inch, 4s.

The favour with which these Pipes have been received will no doubt call forth many imitations. GEORGE JENNINGS would CAUTION those who may wish to make the attempt TO AVOID INFRINGING HIS PATENT, as they will NOT BE ALLOWED TO DO SO WITH IMPUNITY.

JENNINGS'S PATENT DOUBLE-SEATED VALVE-CLOSET.

Architects describing this Closet in their specifications will have a permanently good Valve Closet, noiseless, and free from complication. The Patentee has such confidence in its durability and efficiency, that he will guarantee every Closet for seven years.

JENNINGS'S IMPERISHABLE EARTHENWARE CLOSET AND TRAP.

This Closet has a large water surface, has no back to soil, is imperishable in its material, and the Trap and Closet is combined in one piece, suited alike for the palace or the cottage.

JENNINGS'S IMPROVEMENTS IN LIFT AND OTHER PUMPS.

These Pumps would well repay a visit to Jennings's factory, where may be seen Jennings's Lavatories, Urinals, Sluice Valves, Fire and Steam Cocks, of every size; Shop-Shutter Shoes; Gully, Area, and Sink Traps, and other sanitary goods.

Or Illustrations and Prices can be had free by post, if two stamps are enclosed to

GEORGE JENNINGS, SANITARY ENGINEER, 29, GREAT CHARLOTTE-STREET, BLACKFRIARS-ROAD, LONDON.

GREAT REDUCTION in the PRICE of STONEWARE POTTERY from this date.

VICTORIA POTTERY, LEIGH, near SOUTHEND; London Establishment, Falcon Wharf, 84, Bankside.—DAVID MOUNTAGUE, Manufacturer of every article of Lambeth POTTERY, having now further reduced the prices, begs to offer to consumers and others, STONEWARE PIPES, &c. &c. on the most advantageous terms. The new lists of prices will be forwarded on application as above.—Feb. 11, 1856.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE

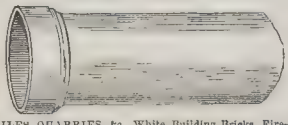
No. 7.

is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 10 to 200 feet: they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price complete, 13s. 6d. each.

SUPERIOR STONEWARE GLAZED PIPES of a quality not to be surpassed.—E. and W. STURGE respectfully invite attention to the very superior character of their stoneware pipes, which they are confident are such as must give great satisfaction, the price being also lower than many in the trade, viz. 25 per cent. discount off the list for cash. Junction Bends, Co. Pans and Traps of the first quality, Yorkshire Paving, Sinks, Sills, &c. all at low cash prices.—E. and W. STURGE, Bridge Wharf, City-road.



N.B. A small extra charge is made upon goods required to be delivered.—October 11, 1856.

TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES.

FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; well-sinking and boring; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

THE FARNLEY IRON COMPANY, WORTLEY, near LEEDS.

Manufacturers of FIRE BRICKS, TILES, QUARRIES, &c., White Building Bricks, Fire-clay CHIMNEY-TOPS, in Norman, Egyptian, Saxon, Tudor, Grecian, Gothic, and Elizabethan styles.

TERRA COTTA

Fountains, Vases, Pedestals, Capitals, Trusses, Brackets, &c., in great variety, which for beauty and elegance of design are unequalled. The designs of Architects modelled with the greatest exactness.

Also of PATENT GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, &c., well adapted for pressure, being made extra pressed under "Spencer's Patent." Superior White Glazed CLOSET PANS, TRAPS, &c.

The Works of the Company are situated in the immediate vicinity of the well known bed of WORTLEY FIRE-CLAY, and their manufacture of BRICKS, for the use of Forges, Gas Companies, Foundries, Potteries, and Glassworks, is confidently recommended for all purposes where extreme heat is required. Their GROUND CLAY is also particularly adapted for the manufacture of CRUCIBLES, MELTING POTS, &c.

Where a large stock is always kept on hand.

AYLESFORD POTTERY COMPANY,

BELVEDERE-ROAD, LAMBETH.

MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

The above Company having now been in existence for nearly six years, and having during the period supplied DRAIN PIPES, &c. to some of the largest Works in and near London, viz.: the New Cattle Market, Wellington and Chatham Barracks, Deptford Dockyard, Her Majesty's Commissioners of Works, &c. and in all instances parties using them expressing themselves satisfied therewith,—take this as a fair test of the quality of the articles supplied by them; and as they now feel themselves established as Potters, beg to offer their goods to Contractors, the Trade, &c. of a first-rate quality and manufacture, and at the lowest possible prices, NOT BEING IN ANY WAY CONNECTED WITH THE LONDON POTTERS' ASSOCIATION.

SALES BY AUCTION.

In the Western Suburbs of London and Parish of Kensington, singularly valuable Freehold Lands, offering very choice and beautiful Sites for Building

MESSRS. DANIEL SMITH and SON will (unless an acceptable offer shall be made for the entirety) submit to AUCTION, at the MART, near the Bank of England, on TUESDAY, the 8th of APRIL, 1856, at TWELVE o'clock, in lots of from three to four acres each, presenting beautiful sites for the erection of mansions or villas, about TWENTY ACRES of rich sound FREEHOLD PASTURE LAND, forming one fine undulating inclosure, within a few minutes' walk of the Harrow and Bayswater roads, near several churches, but situate perfectly detached from any houses or other buildings, and commanding some extensive and cheerful scenery. It would be a peculiarly fine spot for any public institution or establishment.—Particulars, with plans, may be had at the Auction Mart; of Messrs. R. M. and F. Lowe, Solicitors, Temple; of Mr. W. Sim, Architect, 39, Elgin-crescent, Notting-hill; and of Messrs. Daniel Smith and Son, Land Agents, in Waterloo-place, Pall-mall, who are fully authorised to treat for the whole or any part thereof. A valuable farm adjoining may be purchased if a large extent should be required.

BRIXTON-HILL.—Contractor's Plant and Effects, at the Reservoir of the Lambeth Waterworks.

MESSRS. EVERSFIELD and HORNE are instructed by the Executors of the late Mr. Neeham to SELL by AUCTION, on the PREMISES of the LAMBETH WATERWORKS COMPANY, Brixton-hill, on WEDNESDAY, MARCH 19th, at TEN for ELEVEN, in consequence of the completion of the contract, the valuable PLANT and EFFECTS, comprising about 3,500 24-inch battens, 2,000 feet of baulk timber, 250 navvie barrows, 50 wheeling planks, 400 scaffold boards, poles, and putlogs, screen pile-driving engine and monkey, pugmills, ladders, screens, brick and dobbin carts, a large quantity of centres, ribs, quartering, firewood, and other effects.—May be viewed two days' previous, and catalogues had on the Premises; also at the George the Fourth; and of the Auctioneers, 40, Parliament-street, or Coal Exchange.

BOROUGH-ROAD.—Remaining Stock of Artificial Stone Figures.

MESSRS. EVERSFIELD and HORNE are instructed by the Proprietor to SELL by AUCTION, on the PREMISES, 742, Borough-road Southwark, on WEDNESDAY, APRIL 2nd, at TEN for ELEVEN, the final portion of the extensive STOCK; comprising fountains, vases, figures, groups (including the large "Laocoon," the only one in existence), and numerous centre-flowers, &c. To be sold without reserve, and will be the last sale this season. May be viewed one week previous, and catalogues had on the Premises, and of the Auctioneers, 40, Parliament-street, or Coal Exchange.

THAMES BANK.—Extensive Sale of Marble Blocks and Slab at Lloyd's Wharf.

MESSRS. EVERSFIELD and HORNE have received instructions to SELL by AUCTION, on the PREMISES, Lloyd's Marble Wharf, foot of Vauxhall-bridge, Thames Bank, on TUESDAY, MARCH 18th, at ONE precisely, about 150 BLOCKS and 300 SLABS of MARBLE, comprising Statuary, Vein, Sicilian, Black and Gold, Dove, and Emperor's Red, of recent importation and choice quality.—May be viewed one week previous, and catalogues had on the Premises, and of the Auctioneers, 40, Parliament-street, or Coal Exchange.

N.B.—Approved bills at six months from purchasers above 30*l*.

EDGEWARE-ROAD.—The Stock of a Timber Dealer.

MR. COMPETITIONS.

TO ARCHITECTS.

MIDDLESEX INDUSTRIAL SCHOOL.—The Committee of Visitors appointed under an Act of the 17th and 18th Vict. cap. cix. to provide an Industrial School for the Juvenile Offenders of the County of Middlesex, invite Architects and Others, to PUBLIC COMPETITION, to furnish PLANS and ESTIMATES for such a building, to be forwarded, sealed up, and addressed to the Chairman of the said Committee, at the Sessions-House, Clerkenwell, on or before SATURDAY, the 26th day of APRIL, 1856. Each set of plans is to be marked with a motto or device, and the name of the author is not to appear, but to be put in a separate sealed letter, bearing on the outside a corresponding motto or device. A premium of £150 will be paid for the plan which shall be considered the best, £50 for the next, and £25 for the third.—Particulars as to the site, with a printed copy of instructions, and the conditions on which the premiums are offered, may be had upon application to me, at the Sessions House, any day between the hours of ELEVEN and FIVE o'clock.—Dated this 8th March, 1856.

CHARLES WRIGHT, Clerk to the Visitors

THE BURIAL BOARD of the PARISH of HITCHIN, in the county of Hertford, are desirous of receiving PLANS, DESIGNS, and ESTIMATES, comprising ground-plans, sections, and elevations, for laying out, planting, and fencing a new BURIAL GROUND, with suitable entrance gates at each end, and for building Two Chapels and a Lodge. The ground is nearly square and level, and contains five acres. The area of the interior of each chapel to be 31 feet by 17 feet, and the chapels to be separated by a wall. The cost of the chapels and cottage not to exceed 1,000*l*. The party whose plans are approved, will, at the option of the Board, be paid the sum of 20*l*. or have the superintendence of the works. The plans and estimates must be delivered, free of expense, at the Office of the Clerk to the Board, situate at Hitchin aforesaid, on or before the 7th day of April next. Each plan is to be distinguished by a motto and a sealed letter similarly endorsed, containing the author's name and address, to be sent therewith. The Board do not bind themselves to accept any plan, and all those not approved will be returned upon application. CHARLES TIMES, Clerk to the Board.

N.B. A plan of the ground may be seen, and further particulars obtained, at the Clerk's Office, Hitchin.

Hitchin, March 10th, 1856.

COMPETITIONS.

TO ARCHITECTS, BUILDERS, and OTHERS.—PREMIUM of 30*l*. for PLANS of OFFICES. The Directors of the Manchester, Sheffield, and Lincolnshire Railway Company offer a PREMIUM of 30*l*. for the best PLANS and SPECIFICATIONS for a STACK of OFFICES, to be erected near their docks, at Great Grimsby. The proposed site has a frontage of 160 feet to the Cleethorpe's-road, and a depth of 120 feet. The offices are intended to be let, in suites of two or more rooms, to separate firms: and the object in view being to secure ample and convenient accommodation by THE MOST ECONOMICAL EXPENDITURE OF CAPITAL, the Directors will give a preference to the plans which best answer this object. Each plan must be accompanied by an estimate of the cost. Plans and specifications, which must be accompanied by an estimate of the cost, must be forwarded, under sealed covers, marked "Plans for Offices," to the undersigned, on or before the 14th of APRIL next.—Any further information may be obtained, on application to ADAM SMITH, Esq., C.E. Great Grimsby.

By order,
Manchester, March 11, 1856. EDWARD ROSS, Secretary.

PROPOSED EXTENSION of the CENTRAL BEACH, BLACKPOOL.—To ENGINEERS and CONTRACTORS.—The sum of Ten Pounds is offered for the best approved PLANS and SECTIONS of the above Works, which are to be delivered for the approval of the Commissioners, R. BANKS, Esq., Blackpool, on or before WEDNESDAY, the 2nd of APRIL, 1856.—For particulars, apply to Mr. J. ROSSALL, Mr. W. M. BIRCH, Hotel-keepers, or to Mr. J. MOORE, Chemist, Blackpool.

GARSTON, near LIVERPOOL.—To ENGINEERS, SURVEYORS, &c.—The Survey for the District of Garston, to which the Public Health Act, 1848, is applied, being now ready, the Local Board of Health for that District are desirous of obtaining PLANS, SPECIFICATIONS, and ESTIMATES, for a supply of WATER and GAS for effectually draining the district. Premiums of 70*l*. and 30*l*. respectively will be given to the Authors of the Two Plans, &c. &c. as approved of, which Plans, &c. will become the property of the Board. The specification must contain all information regarding materials, expense &c. necessary to practically working of the drainage, and must include, so far as practicable, a scheme for preserving the Plans of the Parish, on the sale pre cribed by the General Board of Health, are in the custody of the Surveyor, Mr. JAMES ASHURTH, on application to him. But inasmuch as lithographed copies of the general plans, on a scale of two feet to a mile, may be had from the Surveyor, price 15*s*., no charge will be allowed to be taken from the original plans. Four plans, at least, from as many different to wide competitors, must be sent in, otherwise the premiums will not be awarded.—The plans, specifications, &c. signed with a motto or device, and accompanied by a letter similarly with a similar motto or device, enclosing the name and address of the Author, must be sent (carriage free) to the Office of Mr. J. B. LLOYD, Solicitor, 8, Exchange-alley, Liverpool, on or before the Dated the 5th day of March, 1856.

CONTRACTS.

EAST LANCASHIRE RAILWAY.—The Directors are prepared to receive TENDERS for the MAINTENANCE of the PERMANENT WAY and WORKS, also for the formation and laying down of a Second Line of Rails from Stubbins Junction to Rawtenstall, including all the works connected therewith. Specifications and plans may be seen on and after the 21st instant, at the Engineer's Office, Bury Station. Sealed Tenders endorsed "Tenders for Maintenance of Permanent Way and Works," to be addressed to the undersigned, before the 10th day of APRIL next.

By order,
Bury, Lancashire, March 12th, 1856. MYLES FENTON, Secretary.

M. BLASHFIELD, the Patentee and Sole Manufacturer of Terra-Cotta, at Millwall, Isle of Dogs; and sold at No. 1, Wharf, Praed-street, Paddington basin.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA-COTTA to W. H. BLANCHARD, late of Coade's Original Works, and successor to them in the manufacture of the Terra-Cotta Stone, that has been so successfully adopted for nearly a century in this country, by our eminent Public Buildings, architects and others, in the erection of our noblest buildings, and is the only material that is capable to stand the ravages of time unimpaired. Groups, statues, Vases, Fountains, and Architectural Embellishments, of every design and quality that will defy competition. A large Stock of newly designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface. It is unaffected by sulphureous or any other noxious or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in those apartments which it is use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the materials made use of to produce it, an imperfect mode of calcination, or by mixing with oxide certain substances calculated to give an increased weight, it then produces a very inferior paint, a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark on the casks, and by Messrs. BLUNDELL, SPENCE, and CO. in bags, ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES TURNER and CO. Wholesale Agents, 62, Rose Whitmore-street, City, as the Sole Manufacturing and Painting Agent, Mr. FREDK. BARBY, Pizzey Works, Newroad, in Manchester and Liverpool by R. CLAY, Mersey-street, road. In Manchester and Liverpool by R. CLAY, Mersey-street, which he has newly erected Paint Works, and undertakes painting ships, warehouses, dwelling-houses, &c. and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. ANDREW and Co. Timber-bush; and in Southampton, by Mr. H. J. BUCHAN. The OXIDES and PAINTS, in kegs of 14, 21 and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and Southampton; also in Dublin, the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester buildings, Westminster.

LOANS from 25l. to 1,000l. upon approved personal or other security, repayable by easy instalments, extending over a period from 6 months to 3 years, or readily realizable from the SURRENDER of LIFE ASSURANCE POLICIES, INSCRIPTION CERTIFICATES, &c. For specimens, reports, and LIFE ASSURANCE CLASSES. For specimens, reports, and every information it may be desirable to apply at the British Mutual Life Office, 16, New Bridge-street, Blackfriars. Rules 6d. each copy. CHARLES JAMES THICKE, Resident Secretary.

METROPOLITAN LOAN COMPANY, LIMITED, 1, CRAVEN-HILL, HYDE PARK, LONDON.

Loans are advanced in amounts varying from £5 to £50, repayable weekly or otherwise, as may be agreed upon, at a discount of 24 per cent for twenty-five weeks, and for 50 weeks at a discount of 24 per cent. Forms may be had, price 2d. by post, three postage stamps to be enclosed.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard
This Granite is selected for the New Westminster-bridge.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace.—Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

ANCASTER STONE, so remarkable for its free working quality, combined with colour and durability. Price, and cost of transit to any part, may be obtained, upon application at Mr. W. THOMPSON'S Office, Elmer-street, Grantham.

DARLEY DALE STONE.—This Stone, introduced by Sir Charles Barry at St. Edward's Grammar School, Birmingham, and well known as having been selected for
ST. GEORGE'S HALL, LIVERPOOL,
and numerous works, including the Railway Station, Birmingham; Borough Bank, Liverpool; Evesham-bridge; Mr. Beaufoy's Schools, Lambeth; and the Portico and Cornice of the Town-hall, Leeds: is kept in considerable quantity at the Darley Dale Stone Wharf, City Basin, London.—Apply to W. and J. FREEMAN, Millbank-street, Westminster; or GEORGE WALL, at the Quarries, near Matlock.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 246, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, and Co.), Caen-wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to supply from their Wharf, as above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE.

BATH STONE.—HENRY STONE, QUARRYMASTER, begs to inform Architects, Builders, and others, that he still continues to supply the best COMB DOWN, HAMPTON DOWN, and BOX GROUND WEATHER STONE. Delivered in the trucks at Box or Bath station on the most reasonable terms. H. S. begs to call particular attention to his Hampton Down Stone, it being of a very fine texture and rich colour, suited for either external or internal purposes. Ashlar and Sawn Range Stone cut to order. Cargoes shipped in Bristol, and delivered to any part round the coast. Residence, WIDCOMBE, Bath.

YORKSHIRE STONE.
GEO. VINT and BROTHERS, IDLE, near LEEDS,
Beg to inform Architects, Surveyors, Contractors, Builders, and Masons, that they can supply to any extent all kinds of YORK STONE, including Paving, Bramley Fall, Park Spring, Robin Hood, Harehill, &c. of the very best quality, direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms.

ROBERT DANIEL, STONE-MERCHANT, Victoria Wharf, Pimlico, London, and Island Wharf, Leeds, begs to inform Contractors, Builders, Masons, and others, that he still continues to supply every description of STONE to any extent at the lowest current prices, comprising Park Spring, Harehill, Potternewton, Robin Hood, Portland, and Caen, in block and slabs of any thickness, Bramley Fall, Yorkshire paving, landings, steps, coping sills, sinks, grindstones, headstones, ledgers, marble slab, granite curb, &c.
Any quantity sent direct by rail to all stations, or by vessel to any port in the kingdom.
A list of prices sent on application.—Address, Victoria Wharf, Pimlico, London.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED. RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOULES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

TO STONE MERCHANTS and QUARRYMEN WANTED, immediately, by the Corporation of the borough of Folkestone, 24,000 feet super 2½ inch selected YORK PAVING, 4,000 feet run 12 by 6 of granite curb, to be landed at the harbour of Folkestone.—Tenders to be delivered at the Office of Mr. R. S. BRUCKMAN, Town Clerk, Folkestone, to whom application for further particulars.
Folkestone, March 13, 1856. JAMES TOLPUTT, Mayor.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

PARIS EXHIBITION.—ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1848. This beautiful material, handsomer and more durable than marble, is now adapting its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stores for all apartments; plain and exquisitely decorated slabs for the tops of loo tables, chiffoniers, consoles, &c.; baths baptisteries, altar-tablets, pilasters, columns, vases, pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and dairies.—Price lists can be had on application to Mr MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

THE SEVRES GLASS COMPANY.
LEGENDRE, TURPIN, AND CLARK'S
Establishment for the supply of Crystal White Sheet Glass, First, Second, and Third Quality; Window Glass, Shades, Potiche, Lamp Glasses, Bottles, and other Articles in White Glass, at
131, UPPER THAMES-STREET.—WORKS: SEVRES, NEAR PARIS.

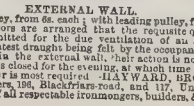
CHEAP, LIGHT, AND DURABLE ROOFING.
CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.
1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.
INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.
CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and
DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.
Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.
ENAMELLED SLATE CHIMNEY-PIECES, of elegant designs and superior workmanship, in great variety, at prices from 21s. to 10 guineas. Slate Cisterns made to any size.—J. HOWELL, Manufacturer, 5, Cook's-grounds, King's-road, Chelsea, Middlesex

FOR MACADAMIZING ROADS.—The HARDEST and most DURABLE STONE.—The Proprietor of an extensive Quarry at Duncannon Rock, containing Blue Elvin Granite, is open to contract for to supply any quantity of the above Stone, its durability having been tested, and proved to be 25 per cent. harder than Guernsey Granite.—For further particulars apply by letter to Mr. JOHN NEWTON, Norway-wharf, Hertford-road, Kingsland-basin.—Two Coal Waggons for Sale.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in damp situations.
FROM 3s. 9d. PER SQUARE YARD.
Country Builders supplied with Asphalte for footings and barn floors, with instructions for using it.
Apply to JOHN PILKINGTON, Poloneeau and Limmer Asphalte Office, Monument-chambers, 14, Fish-street-hill, London.
N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, White friars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.



NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.
W. and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, lately removed from No. 31 Wharf, Harrow-road, to 9, North Wharf-road, Paddington, have now on sale good Garden and Screened Gravel. For terms, &c. apply at the Wharf.
Contractors supplied to any extent.

THE BEST CURE FOR SMOKY CHIMNEYS.
PATRONISED BY HER MOST GRACIOUS MAJESTY.
KITE'S PATENT VENTILATING and SMOKE-CURING CHIMNEY CAPS.—Two hundred on Buckingham Palace; in use also on St. James's Palace, Claremont, Windsor Castle, Government Buildings, &c. Wrought Iron, 21s. Galvanised ditto, 30s.; Cast Iron, 35s. each; the latter as durable as the building itself. The merits of this invention are proved by practical experiments daily at the Royal Polytechnic, the Crystal Palace, and at the Manufactory. Illustrations and testimonials forwarded on receipt of two postage-stamps. Depôt HARTON'S Iron Works, and Manufactory for the Patent Stable Fittings and Enamelled Mangers. Address, JAMES BARTON, 370, Oxford-street, London.

SMOKY CHIMNEYS CURED EFFECTUALLY for FIFTEEN SHILLINGS, by SUTER'S PATENT WIND-GUARD.—This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.
To be had of Ironmongers and Builders; and of the Patentee, at his Office, 65, Fenchurch-street, London.

By Her Majesty's Royal Letters Patent.
DUPREE and CO.'S DEFIANCE WINDGUARD and VENTILATORS, &c. for the perfect cure of Down-draft Smoky Chimneys, suitable for Public and Private Buildings requiring a constant change of air.
Also
SHIP VENTILATORS, requiring no attention, imparting about six times the quantity of fresh air than any other in use.
Also,
VENTILATING ROOFLIGHTS, for Slate or Tile Roofing, without Paint or Putty.
Prospectuses sent on application.
London Depôt—ESNOUF and MANGER, 141, Minories, City.

VENTILATION.—PURE AIR.
Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.
With single pulley, from 6s. each; with leading pulley, from 6s. 6d.
These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draughts being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 126, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

By Her Majesty's Royal Letters Patent.
THE ROYAL PATENT DECORATIVE GLASS COMPANY, 21, Castle-street, Southwark-bridge-road.—NOTICE of REMOVAL.—REMOVED to No. 12a, CUMBERLAND-MARKET, REGENT'S-PARK, where machinery has been erected to carry on the manufacture of this most important branch of ornamental glass.

In One Volume, post 8vo with Electro-types and numerous Engravings on Wood, price 10s. 6d.

ELEMENTS of ELECTRO-METALLURGY.

By ALFRED SMEE, F.R.S. Surgeon to the Bank of England.

The Fifth Edition corrected, and considerably enlarged.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, in post 8vo price 10s. 6d. cloth,

THE FOOD of LONDON: a Sketch of the chief Varieties, Sources of Supply, probable Quantities, Modes of Arrival, Processes of Manufacture, suspected Adulteration, and Machinery of Distribution of the Food for a Community of Two Millions and a Half.

By GEORGE DODD, Author of "British Manufactures," &c.

"The book is, in fact, a capital one."—*Examiner.*

"As a contribution to the literature of social statistics, Mr. Dodd's book is at valuable."—*Weekly Dispatch.*

"Mr Dodd's labours have a very elevated aim. In all the 324 pages the interest never flags, and the abundance of research makes itself obvious in every page. The portion devoted to old London usages in regard to meals and various meals and manners, and to sociality generally, is particularly interesting."—*Builder*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

MOSELEY'S ENGINEERING AND MECHANICS.

Now in course of publication, with Woodcuts, price 2s.

THE MECHANICAL PRINCIPLES of ENGINEERING and ARCHITECTURE.

By the Rev. HENRY MOSELEY, M.A. F.R.S.

IRONMONGERY.

PFEIL AND STEDALL.

THE LARGEST STOCK AT

THE LOWEST PRICE,

5 AND 6, BROAD-STREET, BLOOMSBURY.

TYERMAN'S PATENT HOOP-IRON BOND,

FOR BUILDING PURPOSES.

Adopted by the Honourable Board of Ordnance, the Commissioners of Parks, Palaces, and Public Buildings, &c. &c. &c.

TARIFF OF PRICES Beyond the current Price of Hoop-iron.

Gauge.	In. wide.	Per 1,000 ft.
No. 16	.. 1¼ ..	7s. 6d.
15	.. 1½ ..	7s. 6d.
15	.. 1¾ ..	8s. 0d.
15	.. 2 ..	8s. 6d.
15	.. 2½ ..	9s. 6d.

THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it a intervals of 1¼ inches on both sides alternately, and turning one side of each notch in succession in contrary directions on the reverse sides of the iron, thus forming reversed claws, which are so bent that a direct end grain of the iron is presented longitudinally, offering most powerful and effectual resistance, and which become, when built into the brickwork, embedded in the structure, preventing the possibility of longitudinal escape, and a complete and permanent bonding together of the whole building is thereby obtained.

Patentee—FREDERICK TYERMAN, Architect, 44, Weymouth-street.

Sole Manufacturers—THOMAS PERRY and SONS, Government Contractors, Bilston.

London Depôt—463, OXFORD-STREET.

BATHS and HOT-WATER APPARATUS. J. TYLOR and SONS' ILLUSTRATED CATALOGUE of BATH WORK &c to be had on application. Estimates and Plans for Fixing given. J. TYLOR and SONS, Manufacturers, Warwick-lane, Newgate-street, London.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming in private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire. It ventilates at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 145, Regent-street, London.

CAST STEEL.—Messrs. NAYLOR, VICKERS, and CO. RIVER DON WORKS, SHEFFIELD, are now prepared to execute orders for CAST STEEL BELLS, from 40lbs. to 6,000lbs. each, Locomotive Crank Axles, Tyre Bars without welding, Shafts, Cranks, Axles, and every description of heavy forgings in Steel, to pattern.—For further particulars, apply as above.

CORRUGATED IRON.—FOR SALE, about ONE TON, suitable for roofing, &c. Will be sold a bargain to an immediate purchaser.—Address, C. C. Post-office, Charing-cross.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 10s.—55 and 58, High Holborn.

J. NAYLOR'S IRONMONGERY, NAIL, and METAL WAREHOUSE, 253, Oxford-street, near the Marble Arch—Builders, Carpenters, Cabinet-Makers, Locksmiths, and Bellhangers, supplied at the lowest prices.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr Arnott's Ventilator, 3s; and the new registered Venetian Ventilator, so much admired, &c. &c. 6d. each.

J. H. BOOBYER, late STURCH and BOOBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

JOHN TANN'S new patent RELIANCE LOCK and FIREPROOF SAFES form the best and cheapest safe in the world against fire and robbery. Testimonials to be had of Messrs. WATERLOW, Birchin-lane; and at the Works, 1, Hope-street, Hackney-road, London. Iron Doors for strong rooms and party-walls.

JUDKIN'S IMPROVED GAS REGULATOR has the following advantages to recommend it to the consideration of all gas consumers:—

1st. It can be easily adjusted to supply gas at any required pressure below that of the street.

2nd. When once adjusted, it will admit of NO VARIATION in LIGHT or BURNING, whether they are few or many, whatever the fluctuation of pressure may be.

3rd. The light being purer by perfect combustion, the atmosphere is more healthy and agreeable.

4th. A saving of at least from 25 to 35 per cent. in the consumption of gas is obtained.

Its ADVANTAGES over other REGULATORS are as follow:—

1st. It is more simple in its construction.

2nd. It is more sensitive in its operation, having less friction, as it works only on two steel centres, which are immersed in quicksilver.

3rd. It is not liable to get out of repair, and requires less attention than a meter itself.

N.B. A Testing Apparatus has been fitted up on the premises of the Patentee, 33 and 33, Corporation-street, Manchester, and 66, Fleet-street, London, for the purpose of demonstrating the above-named facts.

CHARLES BAKER, Builders' Ironmonger, Nail Factor, Stove and Range Manufacturer (Warehouses, 148 and 149, Borough), begs to offer his reduced List of Prices:—

BEST CUT CLASP NAILS.

1½ in.	1¾ in.	2 in.	2½ in.	3 in. and upwards.
16s. 6d.	16s.	15s.	14s. 6d.	14s. per cwt.

Best Cut Floor Brads, 14s. per cwt.
Best Sheet Floor Brads, 14s. per cwt.
Best Cut Lath Nails, 16s. „
Elliptic Stoves, double backs, 2½d. per inch, and upwards.
Register Stoves, from 7s 6d to 16l. per inch.
A good Stock of Berlin Black ditto.

SELF-ACTING COTTAGE RANGES, with CIRCULAR OVENS and BACK BOILERS.

20 in.	23 in.	34 in.	36 in.
32s.	30s.	31s.	31s. 6d.

SELF-ACTING COTTAGE RANGES, OVENS ONLY, 20 inch, 26s. 6d.

SELF-ACTING RANGES, BEST WROUGHT BARS and BRIGHT MOUNTINGS.

2 ft.	3 ft. 3 in.	3 ft. 4 in.	3 ft. 6 in.
56s.	58s.	60s.	60s.

6 in. Two Bolt Rive Locks, 18s. per dozen.
6 in. Brass Follower Mortise Locks, 40s. per dozen.
Baker's Improved Drawbacks, for Glass Doors, &c 3s. 6d. each.
A very extensive Stock of Cabinetmakers' and Builders' Ironmongery, Tools, &c. &c.

IRONMONGERY.—Builders and the Trade generally will effect a considerable saving by purchasing of CLUSE and BOSE, Wolverhampton Factors and Stove and Range Manufacturers, 35, City-road, corner of Tabernacle-row.

Present prices for cash:—

BEST CUT CLASP.

16s. 6d.	15s. 6d.	14s 6d.	14s. per cwt.
1½ in.	2 in.	2½ in.	3 in. and larger.

PATENT SASH LINE.

2s. 3d.	3s. 9d.	4s. 3d.	5s. 6d.	7s. 6d.	9s. per gross.
No. 1	2	3	4	5	6

5 in. Mortise Locks, best Brass Furniture Shifting Spindle 3s. 6d. each; 6 in. ditto, 3s each.
Strong Elliptic Stoves, double backs, 2½d. per inch.
Strong Register ditto „ ditto 5d. „
36 in. Self acting Oven and Boiler Cottage Ranges, complete, 34s each; 36 in. Self-acting Oven and Boiler Ranges, best wrought bars and wrought fittings, complete, 5os. each.
A large Stock kept of every description of builders' ironmongery; china, glass, and ebony lock furniture and finger-plates. List of prices forwarded by post on application.

ESTABLISHED 1817.

WILLIAM HARMER'S SMITHS' WORK, STOVE and RANGE MANUFACTORY, and IRONMONGERY, METAL, and ZINC WAREHOUSE, 19, Horseferry-road, and 1, New Peter-street, Westminster.—Contractors, Builders, &c. supplied with general Ironmongery at prices equal to all competition.

REDUCED LIST OF PRICES.

Best Cut Clasp and Rose Nails.

1¼ in.	1½ in.	2 in.	2½ in.	3 to 6 inch.
16s 6d.	16s.	15s.	14s. 6d.	14s. per cwt.

Ditto, with ion ditto			1s. 2d.	1s. 3d.	1s 5d.	1s 7d.	

A large Stock of Elliptic and Register Stoves, and Kitchen Ranges, at the lowest wholesale prices.

TERMS—NETT CASH.

Estimates given for any description of Wrought or Cast Iron Work.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE.

Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and

STEWART'S PATENT CAST-IRON GAS and WATER PIPES.

Office, No 7, Bise-lane, London.

OLD STOVES and RANGES.—F. EDWARDS, SON, and CO. have constantly on hand a quantity of OLD STOVES and KITCHEN RANGES, in very good condition, which are taken down by them at establishments when they erect new work, and which are to be sold at exceedingly low prices. 15, Poland-street, Oxford street.

WARMING and VENTILATION, &c.—Mr. S. EGAN ROSSER, C.E. successor to the late Mr. John Sylvester, has REMOVED to 3, CANNON-ROW, WESTMINSTER, and may be consulted upon all matters connected with warming and ventilation, heat and its applications, drying and dessicating processes, public and washing establishments, horticultural buildings, stoves and cooking apparatus, chimneys, furnaces, flues and fireplaces, gas ventilation, the ventilation of ships, &c &c. Mr R. will be happy to co-operate with architects engaged in the preparation of the plans of buildings, where any arrangements of the above character are required.

February 25th, 1856.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.
139, Strand, London.
97, Hyde-park-street, Glasgow.
67, Dale-street, Manchester.

WILLIAM RICHARDSON and CO. ENGINEERS, IRONFOUNDERS, and CONTRACTORS for the Erection, Enlargement, and Repair of GAS and WATER WORKS, No 34, CHARLES-STREET, CITY-ROAD, LONDON. WORKS—TUNNEL FOUNDRY and IRON WORKS, DUDLEY.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 315, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

---

300 MARBLE CHIMNEY-PIECES, of various designs and colours; also a quantity of stone ones, with about 3,000 feet of Marble Slabs. The slabs and marble chimneys consist of statuary, black and gold, bardilla, black, vein Sicilian, &c & which will be SOLD by AUCTION, on the PREMISES, at the MARBLE SAW-MILLS, Cambridge-heath, Hackney, by Messrs. EVERSFIELD and HORNE, on TUESDAY, the 22nd of APRIL.—Catalogues sent, if required.—Now on view.

MARBLE.—The Italian Marble Company, Importers of the produce of their own quarries, in the province of Massa-Carrara, Italy, beg to inform the general Marble Trade in the United Kingdom that they are prepared to undertake contracts for any quantity of Statuary, Veined, Sicilian, Bardilla, Dove, and other Marbles, in blocks of all dimensions, delivered on shipboard at Leghorn, or in dock, London. A constant stock always on view on the premises, where orders are taken for Paving Slabs, Garden and Hall Statues, Vases, Tazzas, Mortars, Consoles, Chimney-pieces of all classes, Circular Tabletops. Monuments, &c executed in Italy. For further particulars, inquire at the Office on their Wharf, Thames Bank, Pimlico, adjoining the east side of Vauxhall-bridge.

WILLIAM W. BONNIN, Secretary.

Lloyd's Marble Wharf, Thames-bank, Pimlico.
Adjoining Vauxhall-bridge.

ITALIAN STATUARY, veined, Sicilian, dove, Sienna, and other Marbles, for Sale, at import prices. A resident manager on the wharf at all hours.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab the beautiful stone now raised from the lower beds of their quarries. Chimney-pieces, Columns, Fonts, and ornamental works on view, at 20, Surrey-street, Strand.

HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent in London.

TO SCULPTORS, BUILDERS, MASONS, &c.

B. FABBRICOTTI respectfully invites the Gentlemen connected with the Marble Trade to inspect his fresh STOCK, composed of statuary, vein, Sicilian, bla k and gold, dove, Bardilla, Siena, and Breccia, in blocks, and particularly calls their attention to a large quantity of his best statuary, sixty blocks, of all sizes, just landed.

Monuments, vases, and statues, finely executed in Italy.
Carrara Wharf, Thames-bank, Pimlico.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, King's-cross, London, continue to supply the trade with all descriptions of Marble, in Block and Slab, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

SCULPTURED STATUARY MARBLE CHIMNEYPIECES, in great variety, on view at the Westminster Marble Company's Works, Earl-street, Millbank.

Architects and Builders may find every variety of marble worked in a superior manner, and will realise an immense saving, by forwarding orders to this establishment.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power, from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

ITALIAN and GALWAY MARBLE QUARRIES.—Depôt, WHITEHALL WHARF, Parliament-street, Westminster. Mr. FRANKLIN begs to invite the Sculptors, Marble Masons, Builders, &c. to inspect his extensive STOCK of Italian, Irish, and foreign MARBLES, which he is constantly importing in blocks and slabs, consisting of upwards of twenty different varieties, which he is enabled to offer at very reduced rates. Several large blocks of statuary, suitable for sculpture, &c. now landing.

STONE, GRANITE, and MARBLE.—BRAMLEY FALL, CAEN,
DARLEY DALE, FARLEY DOWN,
HARE HILL, HUDDLESTONE,
PORTLAND, and various Stones, in Block and Slab.
Yorkshire Paving, Landing and Step, Sills, Slabs, Coping, &c.;
Granite Blocks, Trams, Curbs, Pitching, &c.
Valentia Slate Slabs, Grindstones;
Marbles, in Blocks and Slabs.

At FREEMAN'S Stone Wharfs, Millbank-street, Westminster; City-road Basin; and Deptford.

STONE! STONE! STONE!—To the Trade, Builders, and Others.—The Cheapest place in London for Paving, Sinks, Self-faced Slab, Hare-hill Slab, Steps, Landings, Templets, Blue Lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS,
MILLBANK-STREET, WESTMINSTER.

Marble of all kinds and of best quality, in block and slab, Marble mortars, &c.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Kentish cements, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

The Builder.

Vol. XIV.—No. 685.

OUR readers know something of the abominations which are shrouded by the houses on the east side of *Gray's-inn-lane*, abominations of the most deadly kind. At all events we spoke loudly enough about them when we began our inquiries into the condition of London dwelling-places, and laid bare a few of the plague-spots and fever-stills of the metropolis. Some may remember the account of Charlotte's-buildings there, and the view we gave of the front rooms of one house with its sixty inhabitants. Bell-court, Fox-court, Baldwin's-gardens, and Tyndall's-buildings, were pointed to; and, remarking on how "few of the countless throngs who flood the paths in Gray's-inn-lane have any knowledge of the hot-beds of disease and vice which exist within a dozen yards of them," we called for the interference of some who had power or influence to cleanse and convert that fearful neighbourhood.

The title of the thoroughfare now filled, from early morning till late night, with the busiest of a busy community, speaks of the country. When we say "Gray's-inn-lane," there is a smell of new hay in the air, and we have a notion of singing-birds.

In Van den Wyngrerde's View of London (1543), it is seen to be truly a lane leading from the Inn northwards to the retired village of St. Pancras, with only one building in the pleasant fields eastwards between that and Ely House, where the strawberries grew. The Londoners found country air there, and men and maids went Maying in the spring time. It was then called Purtpool or Portpool lane, from the manor of that name, through which it passed. It soon, however, took its present title, and in Stow's time was "furnished with fair buildings and many tenements on both the sides, leading to the fields towards Highgate and Hampstead."

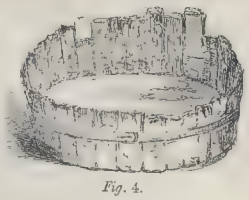
The Inn-Walks were much resorted to, and we may see with the mind's eye *Mr.* Francis Bacon superintending the "new rayle and quickset hedges" which were put up there under his direction. From this place (in 1597) he dated the first dedication to his "dear brother" of his admirable Essays, which may be read and re-read throughout a life with pleasure and profit; and here, in the walks he had himself laid out, and the summer-house he had built, he pondered the new *Organum*. Later it was a fashionable resort; and we have Pepys, in 1662, "when church was done," walking "to Graye's Inne, to observe fashions of the ladies, because of" his "wife's making some clothes."

The degradation of the neighbourhood to its present condition is of much more recent date: to trace it is unnecessary: it has now reached its climax, and our appeal in favour of its miserable inhabitants has been heard and responded to.

Lord Shaftesbury's excellent "Society for Improving the Condition of the Labouring Classes" has descended upon an utterly degraded part of it, *Tyndall's-buildings*, and proposes to put it into a proper condition for occupation by human beings,—to serve it, in short, as it served Wild-court, Drury-lane, described in these pages at the time, and we have no doubt with equally good results to the community and to the society itself,—preserving the capital of the poor man (his health), and producing a good return for the capital of the society,—its money.*

Tyndall's-buildings is a court containing twenty-two houses, of which the society have obtained possession of seventeen, including the two shops in Gray's-inn-lane, one on each side of the archway, and will presently have the rest. On next page we give a plan of it. The houses are all front, few of them having even the smallest outlet, and are in the most miserable state of dilapidation. Fig. 1 (page 163) represents the present appearance of the court, and Fig. 2 shows more plainly the aspect of the houses at the end. The shutters and doors are broken: from most of the windows projects a well-known apparatus for drying the day's "wash:" the pavement is broken and out of level, retaining decomposing matter to contaminate the air, while the basement story of nearly all the houses is filled with fœtid refuse, of which it has been the receptacle for years. In some of the houses it would seem scarcely possible that human beings could live: the floors are in holes, the stairs broken down, and the plastering fallen; nevertheless, they are densely peopled, and as much rent is paid for the rooms as ought to obtain for the tenants decent accommodation. In one the roof has fallen in. It was driven in by a tipsy woman one night, who sought to escape over the tiles from her husband. Listen to the conversation, if so it may be called, of those inhabiting it: you will find it in keeping with the disordered, disruptured, disreputable locality: notice the faces that press against the window-pane, or come out into the doorways as a stranger passes round the court: you will find them altogether in accordance,—as the house, so the inmate. Three or four years since, several of the cellars were inhabited, the place was ill-drained, cesspools were in the dark under-parts. The police have since then interfered, and the drainage has been slightly improved. The condition, however, is still bad enough. Take for example one of the houses as a specimen of the rest. Entering the doorway, we were shown a narrow staircase, dark as night, broken and shaky, down which we groped with bent back and much difficulty. At the bottom a glimmering light showed a water-barrel which would hold fifty or sixty gallons at the most. It was at this time not eleven o'clock in the morning, and the water was all gone, and this was not to be wondered at, when we found that this barrel was the only supply furnished for two houses, which, at the lowest calculation, contained a population of 100 persons old and young—this to serve for all purposes of cleanliness and domestic use. In this dim undercroft was also the only convenience provided for the same number of persons, the two as shown in our sketch 3, in close proximity. The smell was abominable. The owners of such places, as we have before observed, say,—"People of this sort are naturally dirty, and it is useless to do anything with them." We would ask in reply, "How is it possible that good habits can be acquired under such circumstances?"

In the basement of one of the houses the water-butt presented the appearance shown in Fig. 4, the remainder of it being sunk in the ground and serving accordingly, when empty, to drain the filthy soil. It was without surprise we heard it asserted in the neighbourhood, that this one house, during the last visitation of the cholera, provided no fewer than nineteen cases of the disease, together with twenty-one cases of fever!



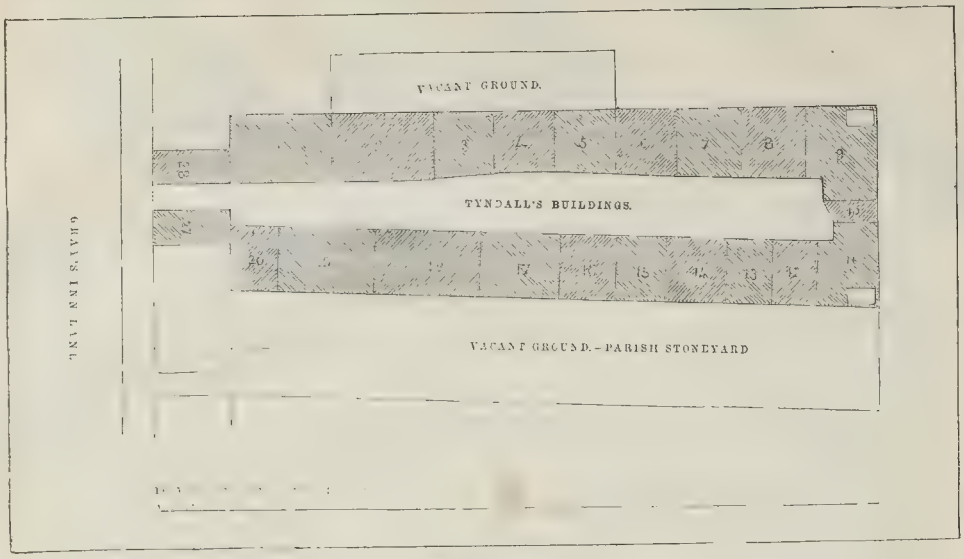


Fig. 4.

Wandering from room to room, we found the usual muddle, filth, and confusion, so painful to witness, and of which it is difficult to give an idea, either with pen or pencil. It is most important, however, that we should work vigorously with both, at this time of high prices, when so many scores of honest working men with families of children are, in order to procure other necessaries of life, obliged to avail themselves of less expensive and less comfortable houses than heretofore, and are sinking daily into those conditions from which, in the present state of things, they seldom rise. If the hovels of the poor such as we have described are allowed to remain in the large towns,—if even these are removed in part, and no proper accommodation provided, the numbers of the "roughs," and such as plague the police and workhouse authorities, must increase. If, however, on the other hand this important affair be taken up manfully, and the poor properly lodged, in conjunction with other steps, we may be saved both danger and expense.

In Tyndall's-buildings, notwithstanding the seeming poverty of the people, they appear to pay their rent regularly. The rooms vary in cost from 1s. 10d. per week to 2s. 3d. averaging say 2s.; so that an eight-roomed house may bring in 41*l.* 12s. per annum, gross. Each room is let separately, and lodges, admittedly, in many cases six or seven persons including children. Under the rose, however, some of the rooms are sub-let, and small as they are, have been made to contain three or four distinct families! The first room we went into at our last visit, 12 feet long and *six* feet wide, lodged six persons. In the second there were three women washing in front of the window, two poor old creatures cowering over a few embers, and four children—to say nothing of the men-folks who were out. There was no furniture whatever beyond the washing-tub and some dirty rags in one corner of the apartment to serve as a bed. In some of the rooms children were padlocked in. One room contained two large bedsteads, put up against the wall, and a bed on the floor, which was occupied. There was a very old woman close to the fire surrounded by a group—such as is often to be met with in these places smoking their pipes and watching the pot upon the fire: a number of pictures were over the fireplace, and not far from them two large slices of dried fish. Before the fire a young child lay in a cradle manufactured out of an orange-chest: in other parts of the room were baskets of oranges, fruits, onions, and other things forming their stock in trade. In the way we see here the unsold fish is stored for use, to the great damage of health. This room is much larger and better furnished than the majority, but we give a sketch of it (fig. 6), to show how full of life the place is.

The garrets, in most instances, are provided with that dangerous sort of gutter previously referred to, which in these neighbourhoods is converted into a poisonous drain: some of the pipes were of course choked, and others broken, producing the effect represented in sketch 5. Some of the inhabitants had shown great ingenuity and industry in fighting against the admission of fresh air, plugging up every rent and cranny. When filled with occupants at night, the atmosphere must be poisonous.

* In a recent report, the Registrar-general says—"Mr. Faulkner, the registrar of the south sub-district of St. Giles's, records two deaths in Wild court, which he calls 'an unusual occurrence' now in that locality. He attributes the remarkable diminution of mortality to sanitary improvements effected in the court. Wild-court (the registrar adds), from being the worst, is now the best court in my district, and is a striking proof how much the health of a neighbourhood may be improved by attention to cleanliness and comfort." As a money investment, we understand it is paying the society 10 per cent.

Plan of Tyndall's-buildings, Gray's-inn-lane.

Fig. 6.—A Room in Tyndall's-buildings.

The first house on the left-hand side, on entering the court, marked in fig. 1, as "The Lodging-house," was known as the Thieves' Kitchen, and was the scene of sad doings. The first act of the society was to get rid of the tenant, and lock up the house. We could tell some strange stories of occurrences in this den; but it is better they should remain amongst "The Mysteries of London."

We have probably said enough to show the present condition of the place: if not, our engravings will supply the deficiency, and will enable our readers hereafter to appreciate the changes about to be made by the society.

A number of workmen are already at work under the able direction of Mr. Baxendell, who endeavours to remove as few of the hard-working and honest tenants as possible: the rooms and staircases will be plastered and whitewashed, ventilation will be provided for, daylight let in where necessary, and a proper supply of water provided; large rooms will be divided by partitions, of such height as not to prevent the circulation of air, and yet afford decent sleeping accommodation for a family; and the cellars will be cleaned. In other words, before the summer comes a set of dens and styes will be transformed into cleanly, orderly, and wholesome dwellings.

The works are being proceeded with as rapidly as possible, but the filthy state of the basements causes considerable delay in the operations. The foul effluvia emitted actually render it impossible for the workmen to proceed for some time after the surface has been broken up, and already three of them have been taken ill. Since the works have been commenced, six cases of fever have occurred, and it is a noteworthy fact that none of these cases occurred in any of the rooms that had been cleansed, nor indeed has there been a single case of sickness there; while in those rooms which have not been purified, sickness is the order of the day. "Educated" men, nevertheless, are still to be found, who pretend to dis-

believe in the effects of sanitary improvements, who will not connect cause and effect, and, if they saw a man put his head under a cart-wheel, and be killed in consequence, would return a verdict, "Died by the Visitation of God."

Tyndall translated the Bible, and the Society for Improving the Labouring Classes are obeying its teaching in translating Tyndall's buildings.

ARCHÆOLOGICAL STUDIES IN JERUSALEM.*

USING the word Archæological in the French sense, I do not propose to treat of the topography of Jerusalem, but to limit my observations to the architecture of the past, in giving you the results of a year and a half's study, to which much might be added by further residence. I accept, without further remark, its traditionary topography, which is that of all ages, and has been well elucidated by the late Dr. Schultz, Prussian Consul, by Mr. Williams, and still better by Professor Willis, a master in archæological analysis.

There are three periods which may have influenced the architecture of Jerusalem, and which your knowledge of history will readily enable you to determine. The first is the *Jewish*, the second the *Byzantine*, and the third that of the Crusaders, or the *Latin* period. I shall make no allusion to the Mahometan specimens of architecture in Jerusalem, as they are not so much connected with our own immediate studies.

With regard to the Jewish period, it is difficult to find anything like ornamentation in the monuments of that time. We judge of western architecture by such marks, but in Jerusalem we are at a loss, though we find here and there a few Egyptian-like features, chiefly in the cornices of tombs, such as those of Zachariah and of Absalom.

I may state here what an ancient Jewish tomb is. The arrangements characterise it more than the detail. A large Jewish tomb consists of a porch from 3 to 6 yards in width, 3 or 4 yards in height, and sunk, to the depth of 2 or 3 yards, in a wall-like face of rock. In the middle of the porch is a very low doorway, something like the opening of a fire-place, through which we creep, and enter the funeral chamber, containing the "*loculi*," or places on which to lay the bodies, as on couches. Jerusalem is surrounded by these tombs. It is the city of the dead, *par excellence*.

To illustrate the small amount of ornamentation existing in works of known Jewish origin, I may state that the two great tombs of Absalom and Zachariah display a mixture of Jewish with the Roman Oriental style: but in a little tomb in the village of Siloam, we find the Jewish characteristic I have mentioned. It is very much like the Syrian example drawn by Mr. Scoles, and illustrated by Professor Willis, in his dissertation on the Holy Sepulchre. It is a monolithic tomb, carved out from the rock, and has no porch: a small vestibule leads from the first doorway to an inner one, inside which is a small room, about 10 feet square, containing a large "*loculus*," where one body could be placed, and on both sides smaller "*loculi*," on which to place the bodies of children, or lamps. In that at Siloam, the cornice consists of a deep fillet, a large cavetto, and a thick orlo.† That is the whole amount of genuine Jewish ornamentation we can find; and it very much resembles Egyptian architecture.

I may here allude to other peculiar arrangements of Jewish architecture—the Pools—which are very prominent features in Palestine; such as those at an hour's distance south of Bethlehem, called the Pools of Solomon, which supplied the whole of Jerusalem with water. Springs and sources of water are very scarce in Palestine, and it only rains in the winter: the winter water must therefore be preserved for the supply of the whole summer, by means of these large pools and cisterns. The Pool of Mamilla is on the west side of Jerusalem, and there is another on the east, near the gate of St. Stephen, just overlooking the valley of Jehosaphat. The pools were not made merely to supply water to the inhabitants of the towns, but for religious purposes. We have the remains of what is known as the Probatic* Pool, and I believe it is such, specially from its position with regard to the Temple. We have other pools in the vicinity of ancient temples, particularly a very large one near the entrance of the temple of the Samaritans, on the top of Mount Gerizim, which is seldom seen by travellers. The Temple of Jerusalem is altogether destroyed, so far as many of the details of such arrangements are concerned, but we can resort to the Temple of the Samaritans, which having been a sort of copy of it, will give us some data which we cannot get at Jerusalem.

I will pass now to constructed monuments, having hitherto dealt only with excavated ones; and in studying these, which give so little ornamental data, we must go deeper into archæological study as architects, and learn to *read a wall*; and to know the masonry, and recognize the different touches of different periods. The mason of one day does not imitate the mason of another, but he gives his own stroke of the chisel in his own particular way: he is not educated to be a good copyist, and it is singular to find how different periods are monumentalized by the stroke of the chisel, as they are in palæography by the stroke of the pen.

In treating of the study of Jewish masonry, I will begin with some data taken on the authority of a Jewish writer, who, though comparatively a modern author, knew what he was about. Rabbi Benjamin, of Tudela, in 1163, speaking of the Tower of David, says, "About 10 yards of the base of this building are very ancient, having been constructed by our ancestors: the remaining part was added by the Mahomedans." This, therefore, is a good specimen of Jewish masonry. The Jewish "Place of Wailing" is mentioned by very early travellers; and Benjamin, of Tudela, says, "In front of it (the cupola of Omar) you see the western wall, one of the walls which formed the Holy of Holies of the ancient temple: it is called the Gate of Mercy, and all Jews resort thither to say their prayers, near the wall of the court-yard." You see here clearly what kind of masonry the Jewish masonry is, as distinguished from later masonry. It consists of stones of 5 or 6 feet high on an average, and sometimes extending (as in the south-west corner of the Temple) to a length of 30 feet. The four edges of the face of each stone are rebated to form rustic joints, but the centre is worked perfectly smooth. This is also the kind of masonry we see in the monuments which we must attribute to the Herodian period. In many of these latter walls, however, the stones, though of the same large size, are perfectly smooth, without rebated rustic joints. Starting from the Place of Wailing on the west of the Temple close and going south, we come to a good piece of masonry,—the arch of the broken bridge spoken of by Dr. Robertson. It is made of very large stones, and, as far as we can conjecture, must be the work of Herod the Great. We see above it masonry of small stones, worked smooth, of the Byzantine period, and above that Mahomedan rusticated masonry. This is in the southern part of the western side of the walls of the Temple close. We have just come to the south-west corner of it; and now, turning to the south side, we begin to find something like architectural ornamentation. It is of the Herodian period, and we may call it of the Roman Oriental style. It is evidently of the same school as the monuments of the Romans in Italy, but differs from them in being overloaded with ornament. About the middle of the southern side of the Temple we have an old gateway (the convent which the Knights Templars built afterwards cuts it completely in half), and the lower course of stones all along the wall show it to have been entirely of Jewish origin. Up to a certain height it is such: above are smaller stones, this part being probably of the time of Justinian; and above that another kind of masonry, which may be attributed to the Mahometans. This was probably the gate of the "*Prostoa*," described by Josephus as added to the Temple by Herod the Great, and which Professor Willis has completely identified from the position of the existing foundations. Going eastward along this southern side, we come to the three arches within the wall, which have been noticed by Williams and other writers. These are plain semicircular arches, evidently of the Byzantine times; yet it is a curious fact, that the western extremity of the series is placed exactly upon a jamb of the Herodian period; and the small size of the stones forming the archivolt compared with the immense size of the stones of the jamb is remarkable. The deep and thick mouldings on the jamb prove this to be an old Herodian doorway, capped by subsequent Byzantine work. The views of Jerusalem which you have seen will enable you to understand me when I speak of the south-eastern corner of the Temple close, which towers above the valley in a marvellous manner. The level of the enclosure is carried on vaultings. These vaultings I have not examined; but, from the report of others, I judge them to rest on piers much older than themselves; and we may suppose the piers to have been also of Herodian work, the vaulting being added afterwards, probably in the period of Justinian. Turning this corner to the eastern side, we come to another ornamented architectural feature, the Golden Gate, which consists of a double archway on piers; the arches ornamented with thick garlands of flowers, &c. We cannot so well describe the internal front, because it is in the "Haram," and we have not access to it. As far as I have seen it from a distance, I believe (and some illustrations from Mr. Catherwood warrant my conjecture) it is very much like the outside of the southern gate. Both fronts seem to be of the Roman Oriental style; but when we look through the loopholes in the exterior face, we see inside some much coarser work of a heavy Byzantine character. At the north-east corner of the Temple close we see the manner in which the old masonry is distinguished from the new. The corners of the close were made more solid than the rest, and much more of the old courses of stone exists there. On the northern side of the Temple close, we have already noticed the Probatic pool; but this, like the other pools, having been restored by the modern Orientals, it is difficult to discern any old masonry in it. Passing on, we come to the north-west corner, which, most likely, is the spot where the tower of Antonia stood. This tower was, to some extent, of the Herodian style, and here probably the second wall of the city terminated eastward. Here we begin to see some traces of masonry jutting out of the general quadrangle.

Where the Prætorium of Pilate is pointed out by tradition, we see the square of an atrium marked out by the rock being trimmed up to the masonry that was afterwards erected upon it; and on the eastern side of the present building there is a large quantity of ancient stones. The north-west corner is made by scooping the rock inside, to bring that point to the general level of the Temple close. Sometimes 20 or 30 feet of the rock is excavated to form the wall, as mentioned by Mr. Bartlett.

Here are the remains of a very ancient wall, which may be near the great stairs mentioned as having connected the tower Antonia with the inclosure, and by which the troops of Titus descended into the Temple area during the assault of the city.

On returning again to the western side of the Temple close, I have to notice two buildings still remaining. The first has the tradition of being the place of the Beautiful Gate; and the second, where the present town-hall of Jerusalem stands, is supposed to be the Chamber of Council of Josephus. These bear more the trace of genuine Roman masonry, the stones being not more than 2 or 3 feet high, and left rough in downright rustic, without any sort of plain face.

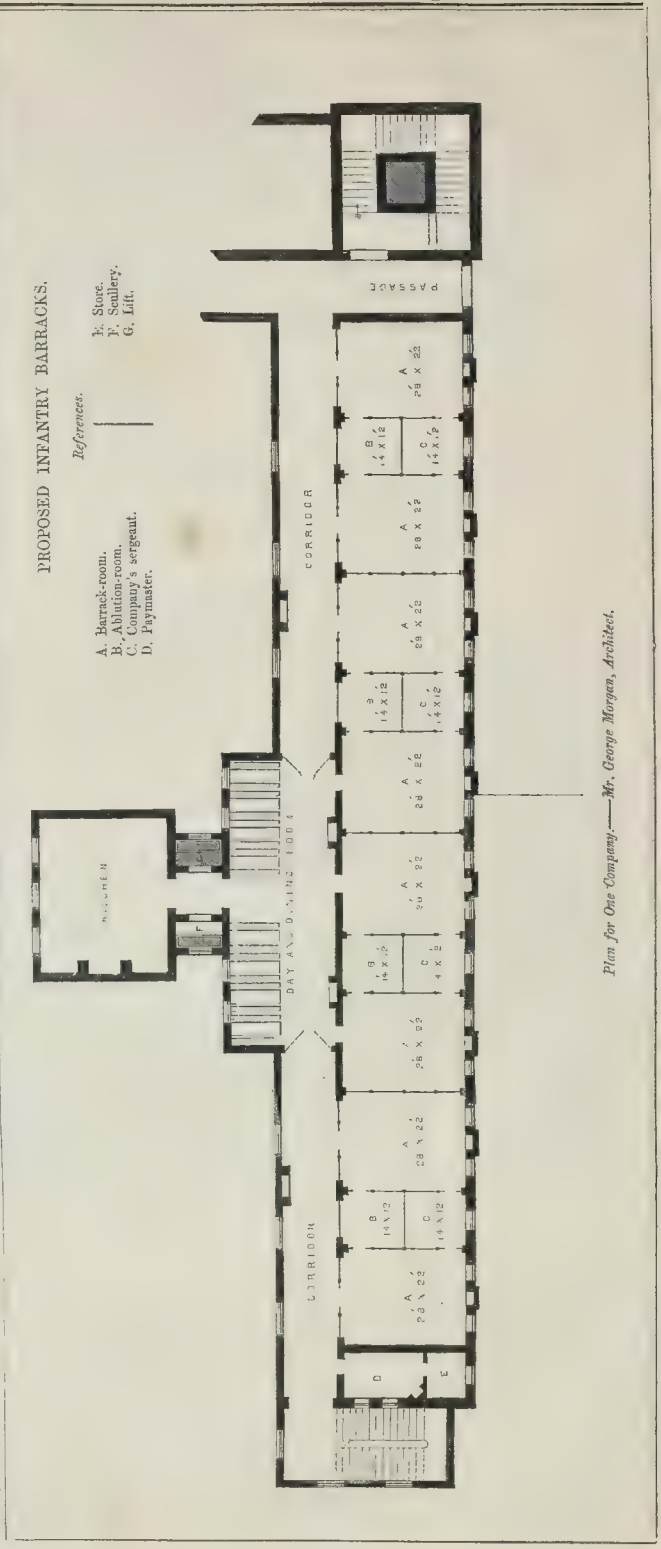
Near the north-west corner of the area is the traditional arch of the Ecce Homo. It is at a short distance from the atrium of Pilate, and is also an arch of Roman masonry. The mouldings of it still exist on several voussoirs and on the impost, and they display the plain Roman colonial style.

We see other specimens of Herodian archi-

* Observations made at the Ordinary General Meeting of the Royal Institute of British Architects, February 25th, by Mr. George J. Wigley, associate.

† Torus.

* Sheep Pool.



tecture round about the town. At the traditionary spot of the iron gate we have pilasters of Roman work embedded in the wall. The medical man of the Jewish Protestant Mission having restored his house there, has confirmed the fact of there having been some considerable portion of masonry on that spot.

The rock tombs exemplify still better the Herodian school, among the most important of which are the Tombs of the Kings. The monument so called possesses important architectural features, and is one of the noblest royal tombs in the world. There is nothing indeed equal to it in solemnity but the recently formed tomb of Napoleon. It stands in the centre of an open Confession (in the sense we use the term in the Roman basilicas), consisting of a court-yard sunk in the rock. Even that court-yard is divided into an inner and outer space, and is about 50 or 60 feet square. One portion of it consists of an inclined plane, divided from the rest by a wall of rock, and this communicates with the inner court-yard by a round arch, carved in the rock itself. Going northwards down this plane, turning to the left and entering the funeral yard, we have to turn again to the left to be in front of the tombs properly so called, which are on the southern side of the court-yard. They are an amplification of the common kind of ancient Jewish tombs. The porch is adorned with an abundance of carvings in the live rock itself; consisting of a Doric cornice enriched with bands of flowers and fruit. In the centre of the frieze is a bunch of grapes between two crowns, filling the space which would be otherwise occupied by a triglyph and two metopes. I regret to say that the central ornament now exists only in my photograph, an American traveller having knocked it off in order to take it home. There have been many suggestions as to the date of these tombs; a recent French traveller having the presumption to ascribe them to the time of King David. The photograph, however, will not lend itself to such fantastic notions; and in this respect it is the very best safeguard against the over-imaginative views of archæologists. As far as we can judge, it is a tomb of the Herodian period. We know that Herod the Great was buried at Herodium; and we know where all the princes before Herod Agrippa the elder were buried; and the position of this tomb is close to what we believe to be the wall of Agrippa, and to the way which led from Jerusalem to Cesaræa, therefore close to a gate of that wall. The royal caverns are mentioned for the first time by Josephus in connection with the wall of Agrippa: we are therefore amply justified in thinking that it was part and parcel of the general adornment which King Herod Agrippa added to Jerusalem.

Another illustration of the Herodian period is the cornice of the noted tomb of the Judges. This tomb is 3 miles from Jerusalem, and from the gate of the city of Agrippa to that spot there is a long line of rock tombs, forming as magnificent a funeral way as any in the world; quite as fine as the Via Appia, displaying indeed more thought and character, and executed at more expense. Even beyond that distance there are tombs. On one 8 miles from Jerusalem there are some fragments of a Doric cornice. In the famous tomb of Absalom an Egyptian cornice seems to crown the Roman work. Remodelling the monuments of the Jews may be fairly considered as part of the mania of Herod the Great. Indeed, he went to the extent of rebuilding the whole Temple for them. With this last tomb we conclude the series of illustrations of the first or Jewish period.*

BOARD OF HEALTH.—A deputation, appointed by the Associated Registrars' Society, had a long interview on Saturday last with the Hon. Mr. Cowper, the president of the board. The object of the deputation was to point out the onerous duties imposed upon the registrars by the present Vaccination Act, and the new Bill now read a first time; the inadequate remuneration contemplated, and the unsatisfactory mode of obtaining it; and, above all, that the mode of payment is not referable to the competency and exertions of the registrars, but depends upon the caprice, apathy, or downright unwillingness of others.

* To be continued.

THE SELECTED DESIGNS IN THE BARRACK COMPETITION.

WE proceed to give a description of the selected design for Infantry Barracks, by Mr. George Morgan.

The general plan of ground occupied by this design is oblong, the principal buildings, of simple Anglo-Italian character, having frontages to three sides of the parade-ground, which is bounded on its fourth side by the barrack wall, and a supposed road. In this wall are two gateway entrances, the one on the left being the barrack entrance, that on the right an entrance for the officers and their families. Adjoining the barrack entrance are the guard-room and requisite offices. On the same side of the parade as the guard-room, in a retired position, is the hospital, a building two stories in height, and corresponding to the hospital, in architectural elevation: on the opposite side of the parade are the married officers' quarters. The principal frontage of the parade is occupied in the centre by the barrack building, with the chapel in front. To the right of the barrack building are the unmarried officers' quarters, with attached mess-room, &c.; and to the left are the canteen and married privates' quarters, with infant school attached. To the rear of the married privates' quarters is the laundry, &c. The "provost prison," &c. is to the rear of the guard-house.

All the buildings on either side of the barrack building are connected therewith by covered ways, with an iron colonnade towards the parade ground. The laundry is connected with the hospital, and the married private' quarters by covered ways.

The barrack building is three stories in height, presenting in plan about half its frontage to the parade, and then receding at right angles. The centre portion is roofed with a quadrilateral dome. At the external angles ventilating shafts are carried up to some elevation above the general line of roof.

In this building appear to be concentrated on the ground-floor in that portion fronting the parade, and to the rear thereof, the orderly and court-martial rooms, the school or chapel, the majority of the staff sergeants, with their mess-room, &c. The library and reading-room, the band-master's department, the quarter-master's stores, the barrack-master's stores, drill-room, workshops, drying and cleaning sheds, &c. The remainder of the barrack building is devoted to the quarters of the privates, five companies in each wing, viz. one company on the ground-floor, two companies on the first, and two companies on the second floor. Each company is placed in a separate and distinct compartment of the building, and as will be seen by the plan, each has a day-room and kitchen allotted to it. Each squad has its own dormitory and table. In the barrack-rooms, the gallery appropriated to each company is proposed to be divided by wooden, slate, or corrugated iron partitions (between iron columns), to the height of 8 or 9 feet from the floor, the whole of the upper space being left open. An ablution-room is placed between every two squads. In respect to the ventilation and the above salient points of the plan, we quote from a brief recital submitted with the design.

In the barrack-rooms, to facilitate the most important point of ventilation, the gallery appropriated to each company is proposed to be erected in a manner that has been most successful in model lodging-houses. The partitions of the gallery so appropriated are proposed to be iron columns and wooden, slate, or corrugated iron partitions to the height of 8 or 9 feet from the floor, the whole of the upper space being left open. By this means the free circulation of air is obtained, and a direct communication with the ventilating-shaft out of the chamber. It is proposed to supply fresh air by means of flues, also to adopt fire-brick fire-places, supplied by fresh air, and which, when lighted, will circulate a large quantity of warm fresh air. The kitchen-ranges will warm a coil of pipes, for the purpose of heating the corridors. The foul air is proposed to be extracted by the ventilating-shafts through horizontal flues connected therewith.

As to military classification,—To offer minute subdivision throughout the barrack, the battalion in the building is divided into wings, companies, and squads. The right wing is lodged in the right wing; the left, in the left (taking the front of the building as the front of a battalion in line). The companies are placed each in a separate and distinct compartment of the building. All the men of a company are proposed to sleep, dine, or wash on the same floor. Each squad has its own barrack-room and its own table in the dining-room.

To promote and encourage cleanly habits, an ablution-room is planned to every two squads, and the barrack-rooms communicate therewith.

Each company would have a convenient day and dining room, while the whole of the space is not lost, as the corridor is thrown in to make it a suitable size. The men would be in the immediate vicinity of the barrack-rooms.

The kitchen, being centrally situated on the same floor as the barrack-rooms of each company, will offer facilities for the men learning cooking. It is proposed to appropriate a table to each squad, and to give each man a small locker, where he may put by the rations not eaten at any particular meal, instead of carrying them to his barrack-room.

The unmarried officers' quarters and the married privates' building, both approaching the quadrangle in plan, and three stories in height, assimilating in elevation on either side of the barrack building, complete the principal frontage to the parade-ground. The canteen forms one of the sides of the married privates' quadrangle: it contains accommodation for the sergeants and privates, and a bar or shop partitioned off for serving the women, with an entrance from the married privates' building.

In the married officers' quarters separate residences are appropriated for the superior officers, and suites of rooms on the general plan of chambers to the other officers.

Let us add, that the designs have been arranged in Burlington House, Piccadilly, and will be open to the public on Monday next.

REVOLUTIONARY ARCHITECTURAL PRINCIPLES.

SIR,—You were good enough, some time since, to give a place in your valuable columns, to some remarks which I ventured to offer, relative to the building of a National Gallery. I propose now to call attention, in a short series of letters, to certain matters affecting architecture on a larger scale, holding you exempt from participation, of necessity, in the opinions expressed.

I have been long impressed, in common, perhaps, with many of your readers, with an ever-growing sense of the onward progress of a system which has become conventionally known by the name of "Pre-Raffaellitism;" and the ever-growing conviction that it is essentially, and in all its parts and bearings, in the extremest sense of the word, *a revolutionary system*—absolute, uncompromising, assuming exclusive truth, and carrying out its principles without respect of persons, toleration of differences, allowance of infirmities, or calculation of consequences. We have been authoritatively told, that it "consists mainly in the assertion that the principles on which art has been taught for these three hundred years back, are essentially wrong" (Mr. Ruskin's "Edinburgh Lectures," p. 159),—that "all Greek conception is dangerous in proportion to our admiration of it" ("Modern Painters," part i. sec. 1),—that what we have taken for Epic landscapes are, properly speaking, "nonsense pictures" (Ibid. part ii. sec. 1),—that "contemporary portrait is the only true and proper history" ("Edinburgh Lectures," pp. 217, 218),—that the *one principle* is that of "working everything, down to the minutest detail, from nature, and from nature only" (Ibid. pp. 227, 230). These and the like sweeping statements, do not confine themselves to painting; they are but expressions of great radical principles, that are to pervade our artistic, intellectual, social, and moral life. We have been further told, that "Poetry is but higher knowledge, and reality the only genuine romance for full-grown persons" (Ibid. p. 237),—that "the life of imagination is in the discovery of truth" ("Modern Painters," part iii. sec. 2, chap. 3). We find that we must have new systems of metaphysics,—that the expression so long stereotyped, of "the sublime and beautiful," does not mark any "generic distinction" (Ibid.),—and that Burke is amongst "the less accurate thinkers" (Ibid.). Even language is undermined: we are no longer to understand the word "excellent" as we have been used to do, when we speak of "the Queen's most excellent Majesty," or say that—

> "When land is gone, and money spent,
> Then learning is most excellent;"

but are to take it "in the sense of *excelling*" (Ibid. part i.). Other abjurations no less emphatic of things established I will not recapitulate: I desire to call special attention at the present moment to the interests of architecture. We read in the "Edinburgh Lectures" that—

"It is difficult to overstate the enormity of the ignorance which the popular notion implies, 'that the nobility of architecture is in the disposition of masses; that architecture is, in fact, the art of proportion.' . . . Proportion is a principle, not of architecture, but of existence: it is by the laws of proportion that stars shine, mountains stand, and rivers flow. . . . A Gothic Cathedral is properly to be defined as 'a piece of the most magnificent associative sculpture.' . . . Architecture, as distinguished from sculpture, is 'merely the art of designing sculpture for a particular place, and putting it there on the best principles.'" (Pp. 113—115.)

Not to waste curiosity on stars shining by rules of proportion, we see now why St. Paul's, Greenwich Hospital, the interior of St Stephen's Walbrook, the façade of Whitehall, and we might go through a large circuit of other structures, including the Pantheon, the dome of Florence, the temple at Pæstum, and our own Salisbury Cathedral, are *not* striking, noble, or legitimate architecture, because they are not, properly speaking, pediments for "associative sculpture." We see also something of the "enormity of ignorance" that indited the well-known lines—

> "And on thy happy shore a temple still,
> Of small and delicate proportion, keeps
> Upon a mild declivity of hill
> Its memory of thee."
>
> *Childe Harold*, cant. iv.

And still more of that monstrous account, by the acute Forsyth, of Palladio's palaces:—

"Their beauty originates in the design, and is never superinduced by ornament. Their elevations enchant you, not by length and altitude, *nor by the materials and sculpture, but by the consummate felicity of their proportions.*" ("Italy," p. 351.)

The "enormous ignorance" is plain enough. Forsyth and Byron have taken proportion, as all before them have always done, for a sensible quality that charms the eye, irrespective of any other consideration. Mr. Ruskin has utilitarianized—I was going to say Cobdenized—it: made it nothing better nor worse than a mere adaptation of the law of gravity. As for a passage (I think in the "Seven Lamps") where he allows a certain quantity of "*useless wall to complete the cadence*," we must take it as amongst the many which—happily or unhappily—put him at variance with his own principles. It requires no argument to show that if architecture be *not* "the art of proportion," but "merely the art of designing sculpture for a particular place," we can have no need of useless walls to complete cadences. Rather shall we need some feat of logic to defend "associative sculpture" itself from the reach of the principle; for if proportion be but "the law of existence by which mountains stand and rivers flow," I see not how the *πον στω* does not involve all we have to do with proportion, in regard to the figure as well as the place designed for it. But this sounds very like revolutionary language as to higher works than those of man.

It may be that universal instinct has been in "enormous ignorance" since the Tower of Babel; or it may be I have myself mistaken certain expressions of it that have moved my own sympathy; that when, for instance, Mrs. Stowe told us, in her "Sunny Memories,"—"Cathedrals appear to me the most sublime efforts of human genius," and Robert Hall replied to one who asked him what he thought of York Minster,—"York Minster, sir; why, it's enough to soberise a Bacchanalian,"—both one and the other spoke "*merely*" of associative sculpture, and if asked to explain themselves, would have pointed to a parenthetical mitre, or sundry bunches of trefoil or parsley about the walls.

I may certainly have mistaken others; I think I have not mistaken myself. To my own feelings, the roof of Westminster Hall is one of the most impressive objects the whole world of architecture can show us. When I walk beneath it—and I take all possible opportunities of doing so—I can scarce believe that the power of architecture is even in those efforts of associative sculpture, the angel heads that form the hammer-beams. To my perception sculpture has little to do with what, in point of fact, I am never tired of contemplating—the quaint intricacy of constructive strength, the bold but graceful arches, the majestic series, the mysterious recesses, the alternate light and darkness, above all, the stupendous firmament of brooding twilight, of whose solemnities the very angels seem but symbolical interpreters.

But what need of personal experience or illustrative cases? So far there is no enigma: an all-subordinating principle of Pre-Raffaellitism stands out distinct and plain: actual things in their actuality, rather than in the qualities they suggest or develope, are everywhere to be taken for the commanding object, and the imitation of them, religiously scrupulous, as the highest attainment of human art. Originality, invention, abstraction, sublimation—all we have been used to honour as the special prerogative of mind and genius, are out of the question. Fancy itself must turn Quaker, and make plain *matter of fact* its end and object. What wonder if architecture is no longer the disposition of masses, dreamy vistas, majestical pillars, or awful space—but the faithful designing of sculptured objects, and the putting them in their several places in accordance with the laws of gravity.

There *is* enigma; but it is not here. The wonder begins when we turn to other pages of the "Institutes." We have proclaimed a revolution; we have cut down architectural symmetry to the gravitating principle, and made indignant declaration of the "enormous ignorance," that looked beyond. Have we really done, after all, with symmetry? Go to that no less authoritative and far more elaborate work, the "Seven Lamps," just referred to, and you shall find a broad principle, broadly appealed to, as at the very root and base of all architectural practice, which not only assumes "proportion" as a something beyond all mere consideration of stability, but lays down a law to which, both from its significancy and the confidence with which it is quoted, I must challenge the attention of all such lovers of art and architecture—and *something more*—as have yet to be made alive to the revolutionary character of Pre-Raffaelleitism.

When men take up a "Lamp of Beauty," they have got, I suppose, beyond "the laws of gravity." Now if they will but take Mr. Ruskin's Lamp, they will find an order to "knock away a couple of pinnacles at either end of King's College Chapel" enforced by reasoning supposed unanswerable:—

> "*Beasts have four legs.* Yes; but legs of different shapes; and with a head between them. So they have a pair of ears, and perhaps a pair of horns; *but not at both ends.*"—*Seven Lamps*, p. 115.

And the approval of "fine west fronts" with the same confident appeal:—

> "The centre is always the principal mass, both in bulk and interest [query?], and the towers are subordinated to it, *as an animal's horns are to its head.*"—*Ibid.* p. 116.

So as to colour, the appeal stands as no less conclusive:—

> "Single members may sometimes have single colour, *as a bird's head* is sometimes of one colour and its shoulders of another. An *animal is mottled* on its breast and back—rarely on its paws or about its eyes; *so put your variegation* boldly on the flat wall and broad shaft, but be shy of it in the capital and moulding."—*Ibid.* p. 127.

I will not stop to ask whether architecture would not have precisely reversed the rule, nor travel a second time over the sentence I have elsewhere noticed,* on "that Greek fret," its remote resemblance to "crystals of bismuth" notwithstanding, and of a common Tudor ornament, on the simple showing that "*there is no family relationship between portcullis and beetles' wings*;" as also a most eloquent demolition of "Gothic scrolls," on the broad principle that *there are no ribands in nature*; and that even "*grass and sea-weed do not really afford apologetic types.*"

No doubt it is a good rule, this analogy of animal and vegetable nature; it needs no prophetic eye to see how conventionalism must fall before it: were its consequences ever so harmless, it were at least lawful to think a moment before assuming it: as it is, I shall not scruple to try it by an application or two, perhaps not foreseen by all its implicit disciples. Mr. Ruskin has struck out a line: I shall scarce go a step beyond his *formulæ*.

Don't "knock away," then, the "pinnacles of King's College Chapel." Put the chapel on the pinnacles, not the pinnacles on the chapel. "Beasts have legs." Yes; but where do you see beasts with their legs up in the air?

Block up the great west window in those "fine fronts." Animals have heads with horns subordinated? Yes; and eyes too; but where was ever one great eye between the horns?

Away, also, with all windows in nave and transept; but by all means all windows, civil, military, or ecclesiastical, on the ground floor. Where was ever a decent beast with eye either in its sides, or on its basement story? Put your door also in the upper regions: the door is the mouth: was it not the very condemnation of the serpent that it should have its mouth on the ground and lick the dust?

But what mean you by that straight roof? "Animals have dorsal ridges?" Yes; but what animal did you ever see,—horse, ass, ox, camel, dromedary, crocodile, porpoise, with such a ridge as men called architects have contrived to hit on?

Away also with those straight columns. Show me a straight leg in comparative anatomy: stag, stork, dog, hog, dragon-fly,—all have joints, more or less visible; even

> "The elephant hath joints, though not for courtesy."

And, touching columns,—remember that all your noblest buildings have but two. Man is the first of animals, and he is *biped*. The ignoble are centipedes, caterpillars, and such like. Away, therefore, with some nineteen-twentieths of those unseemly columns from the Parthenon.

And—not to ride a principle to death—having brought down the columns to nature, take away the whole of the entablature. It is worse than frightful,—it is wicked. Nature has horizontal strata, no doubt; but where do you find stratified animals' legs, or stratified trunks of trees?

I owe no apology for these instances. They are all, seminally, in the *Novum Organum*. The author betrays no scruples. He says;—"*I know this is heresy; but I never shrink from any conclusion, however contrary to human authority, to which I am led by the observance of natural objects*" (Ibid. p. 127). And here is a Westminster Reviewer, ready to hail all "special merit of recalling to manliness, veracity, and morality, what has been too long given over to dilettantism and conventionalism."*

We are very far even yet from the proper limits of the principle. It has its positive as well as its negative, its retrospective as well as prospective, bearings. If anatomy is to furnish architecture with absolute laws of right and wrong, we might fill a chapter with examples of things heretofore condemned for want of grace, of which it were enough to produce the "apologetic type," to convert them at once to all of comeliness we are entitled to ask for. Certain is it that "Nature's sweetest child" must have committed a grave offence, when he dared to call "the toad, ugly and venomous."

Indeed, I know not how we can limit this analogy to mere questions of beauty, or the want of it. If, short of religiously taking creative arrangement as the "apologetic type," nothing is lovely, nothing symmetrical, nothing legitimate, what can architecture aspire to, save rocky caverns and basaltic columns?

Or, perhaps, seeing all we have dared to call "architecture" is amongst man's "many inventions," why not fall reverently back on that of animals? No invention, discretion, experiment, or failure there—no genius, apprenticeship, or calculation, but one infallible constructive impulse, that goes direct to its purpose, and marks no less directly the hand it comes from. Don't palter, then, with great principles. Make all your practice consistent. Knock away—not a college pinnacle, or a wretched portcullis, but the whole array of man's presumption—Gothic, Roman, Greek, Egyptian, and what not,—and grope your way, in penitential self-denial, amongst beavers' huts, birds' nests, and spiders' webs.

This may sound extreme: I find no measures in Pre-Raffaellitism. It is all in that one undisguisable text—"apologetic type." Leny.

THE NEW WAR-OFFICE COMPETITION.

The project for the new War Office commends itself to the wise men of our generation. The site is admirable, and with its north and south fronts presents as good an opportunity as the most ambitious architect need desire, on which to exercise his skill and develope his powers of composition.

The selection of competitive architects is judicious, and such as I imagine every unprejudiced member of the profession would have made. The absence of Mr. Cockerell from the list is to be deplored by every lover of Italian architecture, of which he is so great a master; but this is, no doubt, to be attributed to his gradual and voluntary retirement from practice, and not to want of appreciation on the part of the Government.

Let us array in alphabetical order our knights of the T square,—Barry, Hardwick, Pennethorne, Tite, Shaw, Smirke!—all gentlemen of high character, distinguished by their public works and their peculiarities of style.

It is a glorious contest, and I own to an envious wish that I had earned my spurs and was summoned to the tournay: but I will never complain that "honour is given where honour is due." Let this motto rule the decision of the arbiters. The object of this contribution is to ventilate the opinion that the new building must not stop at the Ordnance Office, but must be followed by at least a screen elevation to the old part of that office, and embrace a new front to the recently built wing. The Ordnance, in its best days very "ordinary," has been rendered more unsightly by alterations and incongruous additions. Believe me, it will never do to parade arm-in-arm with the spic and span new War Office on the "shady side of the Mall."

C. F.

LILLE CATHEDRAL COMPETITION.

The competition drawings for the proposed cathedral, in honour of Notre Dame de la Treille, forty-one in number, are now classed, and are exhibited in the large room of the Halle au Blé, a spacious and well-lighted apartment. Many, in fact most of the plans submitted are worthy of note, and must have cost a deal of labour and pains in their preparation. Some of them are accompanied by working drawings of a very elaborate description. Architects from Germany, Holland, Belgium, Switzerland, and England, there vie with their *confrères* of France in doing honour to the call of the commission, and it is with pleasure that we say that the productions of our own countrymen take a very prominent position among the rest.

The exhibition will close on the 25th inst.: the jury will then immediately undertake the duty of selecting the three best from this numerous and beautiful collection of plans.

The jury is composed of,—M. De Contencin: once sub-prefect of Lille, now a chief in the *Ministre des Cultes à Paris; archéologue amateur*. De Caumont, *archéologue amateur*; author of works on archæology. Didron, *archéologue de profession*. D'Anstaing.—This gentleman is a member of the commission for the restoration of Tournay Cathedral, and has written on the subject. Danjoi, *archéologue*. Rev. Père Martin, *archéologue*. Reichemsperger, *archéologue*.

Complaint is made to us from the spot that the list does not include one professional architect.

We understand a Paris architect was invited, but he declined to join the jury.

It seems to be doubted in Lille if the commission will be able to raise the money required for such a building.

MANSFIELD CEMETERY COMPETITION.

In reply to the advertisement of this matter, about forty sets of designs were sent in by the day named: six or eight others came too late to be received. The first premium of 7*l*. was awarded to Messrs. Pritchett and Son, Darlington; the second, of 5*l*. to Messrs. Aickin and Capes, London; the third, of 3*l*. to Mr. C. J. Neale, of Mansfield. The first premium of 10*l*. for laying out the ground was awarded to Mr. C. J. Neale, and the second premium of 5*l*. to Mr. Bakewell, of Nottingham.

CHURCH-BUILDING NEWS.

St. Alban's.—An important county movement will be made in the course of this month for the restoration of St. Alban's abbey church. Two objects, says a Herts paper, are in view; the one, the preserving of this interesting monument of antiquity; the other, the placing it in such a state as to make it fit to receive a Bishop of St. Alban's. The Earl of Verulam, lord lieutenant of the county, will, it is said, initiate the movement (subscribing himself 500*l.*), and Lord Robert Cecil, M.P. has undertaken the task of honorary secretary.

Chatteris.—The works connected with the new cemetery for this town have been commenced. The buildings will be of an inexpensive character, carried out under the superintendence of Mr. C. H. Edwards, architect, London. The contractor is Mr. Green, also of London, whose tender for the entire completion of the works was accepted some time ago.

Wells.—The foundation-stone of a new church, dedicated to St. Thomas, was laid at East Wells on Thursday in week before last, by Mrs. Troth Jenkyns, at whose cost the edifice is to be erected, as a memorial of her late husband, the Rev. R. Jenkyns, D.D. late Dean of Wells, and Master of Balliol College, Oxford. The situation of the church is elevated. The edifice will include a nave and north aisle, with north-west porch; chancel ending in a five-sided apse, and transept, the north end of which will form the base of the tower, which, with its octangular spire, will rise to the height of 150 feet. Mr. Teulon is the architect, and Mr. Davies, of Langport, the builder.

Leek.—The foundation-stone of a new Wesleyan Chapel was laid in this town on 29th ult. The projected building is to take the name (Brunswick Chapel) attached to the old one, and will occupy a site in Market-street. The design for the new building is Early English, of the transitional character that prevailed during the reign of Edward I. a peculiarity being that there are no obstructions either to sight or sound. The materials to be used in the erection are pressed bricks, with Hollington stone dressings. The dimensions of the building are as follow:—Length within the walls, exclusive of vestry and orchestra, 60 feet; width, 42 feet; entire length outside of buttresses, including vestry and orchestra, 85 feet; and width, 50 feet. The internal height of the side walls is 31 feet, and the external height 36 feet. The height from the floor to the ceiling is 45 feet, and to the apex of the gable 61 feet. At the east end of the chapel is a vestry, and over this is the orchestra, separated from the chapel by a moulded and enriched pointed arch, extending the whole width of the well between the gallery fronts. The galleries are four seats deep on the sides of the building and eight on the west end. They are supported by clustered cast-iron columns, with vertical bands and carved foliated capitals. The roof is 42 feet in the clear, without any horizontal tie below the elevated straining beam. The entire width is spanned by moulded laminated ribs, springing from stone responds, with moulded caps and corbels. The windows will be glazed with Hartley's diamond plate-glass, in large squares. The chapel will contain about 800 sittings, nearly one-third of which will be free. The whole of the joiners' work will be of red pine deal, stained in imitation of wainscot, and varnished. The building will be heated by hot water, and fresh air will be admitted by flues in the walls, and by flues in connection with the heating apparatus, so disposed as to pass fresh air over the heated surface of the pipes when the apparatus is in action; and in summer for the admission of a current of cold air to any extent required. Lighting is proposed to be effected by sunlights in the ceiling. In connection with these lights will be provided shafts for drawing off vitiated air. The amount of the works contracted for, exclusive of lighting and heating, and boundary railing, is 2,300*l.* The works have been contracted for by Mr. Mathews, except the plumbing, glazing, and painting, for which Messrs. Johnson and Son are the contractors, all of Leek. Mr. Sugden, of Leek, is the architect, under whose direction the works will be carried out.

Smethwick.—On Tuesday before last the place of worship belonging to the Wesleyan denomination, just completed in New-street, Smethwick, was formally opened for divine service. The total estimated cost was 2,600*l.* The accommodation provided is 1,000 sittings, nearly one-third free. The architect was Mr. G. B. Nichols, of West Bromwich, and the builder, Mr. John Harley, of Smethwick.

Coventry.—The following inscription on a brass tablet has been fixed in the wall at the east end of St. Michael's Church:—"The three easternmost windows of this apse have been filled with stained glass, to the glory of Almighty God, and in memory of Adelaide, Queen Dowager, widow of his late Majesty King William IV. The centre window was the gift of the Right Hon. E. Ellice, M.P. as a memorial of his long connection with the city of Coventry as one of its representatives in Parliament.

Bradford.—The directors of the Bradford Cemetery Company are now contemplating the formation of another cemetery on the western side of the borough.

Stockport.—The Borough Cemetery directors having retained the services of Mr. Henry Bowman, of Manchester, architect, to prepare a plan for an episcopal chapel for the cemetery, one has been selected and approved, and placed at the overseers' office for public inspection. The building is an oblong, 46 feet long and 18 feet wide, measured internally, with a high-pitched roof, running unbroken from end to end. It will stand with its length nearly east and west. The end facing the west is flanked by projecting buttresses, and contains the principal entrance doorway; above which, partly in the gable, is a wheel window, under a pointed arch. This front is terminated at the top by a small bell-gable, consisting simply of an arched opening for a bell, covered by a high-pitched gable, from the apex of which rises an ornamental cross finial of iron and copper gilt. In the easterly elevation (which has a buttress on the south similar to those at the west end, the corresponding point on the north being occupied by the wall of the vestry), the chief feature is the large east window of four lights, the head being filled with tracery of circles and cinquefoils. On the south side, which will face the road, the elevation will contain merely four single-light windows, resting on a moulded string course, and each having in the head a trefoil. The north side will be of a similar character to the south. It is proposed to face the whole of the building with wall-stone; and the angles of the buttresses and walls, and door and window openings, will be executed in stone ashlar. The roof will be covered with blue slate, and the ridge ornamented with crested tiles. The building will be warmed by hot-water pipes.

New Brighton.—In the new church here, now nearly completed, three two-light windows in the chancel have just been filled with stained glass. The subjects are embraced in a series of medallions, illustrating various passages from the Life of our Lord, designed and executed by Messrs. Pilkington, of St. Helen's.

Oldbury.—A burial board has been formed at this place, and the present burial-grounds are to be closed by the end of the year. The board has advertised for land for the new cemetery, and have had some eligible offers, but decided upon none at present. There will be the customary mortuary chapels for church and dissent, entrance-lodges, &c. A correspondent says,—The Board of Health will be elected at the close of this month: the contest will be very severe, and entirely of a political character. We trust men who understand the question, and the responsibility of their position, will be returned. The average duration of life in this neighbourhood has been *proved* to be the *lowest* in the kingdom, being but a fraction above 16! The causes are to be found entirely distinct from Messrs. Chance's alkali-works, two miles distant, being in the condition of the "homes" of the thousands of great unwashed, who swarm up from the dark pit's mouth to enter another in which deleterious gases are always abounding, even those hovels which have *proved* to be mere charnel-houses.

Saffron Walden.—On the 10th inst. the Rev. Mr. Clutton (vicar) laid the foundation-stone of the Episcopal Chapel, and on the 12th the Rev. Mr. Gilson (Baptist minister) laid that of the Dissenters' Chapel, in the new cemetery. The designs are by Mr. Pritchett, and will be executed with Kentish rag facings and Bath stone dressings, open timbered high-pitched roof, with tower, surmounted by an octagonal lantern and spire to each.

BELLS AND BELL-HANGING.

I AM not particularly concerned to vindicate the system of hanging large bells, like small ones, with the top no higher than the gudgeons. The point was not first raised by me, but by the Rev. Mr. Taylor; neither has it anything to do with the differences between Mr. Baker's patent plan of hanging bells so that they may be turned in the stock, and my unpatented one, for the same purpose, further than this—that Mr. Baker and his calculating friend at the Institute of Architects evidently set themselves to work to knock up as many of my conclusions as they could, by way of paying me off for having come to the conclusion that his plan will not answer, or at any rate will never be adopted; for which reason only I proposed a different plan of my own.

But I have rather a dislike of being quoted as having talked nonsense; and therefore I beg to disclaim the nonsense which Mr. Burlison has been pleased (I dare say without meaning it) to put into my mouth. He says that the only answer I made to the calculations of Mr. Baker's friend at the Architects' Institute was, "that there were some inscrutable laws of friction involved, which rendered the theory [of the motion of bells according to calculation] contradictory and nugatory." What I did say was, that these calculations were worth nothing for the purpose of proving the advantage of hanging bells high in the stock, for the obvious reason that they did not even profess to take any account of the friction, on which the whole question depends. And I said further, that if they had professed to take account of the friction, I should still receive the conclusions with very little respect, if they were opposed to the unquestionable evidence of experience which Mr. Taylor had given before: not merely because I have a prejudice in favour of experience against theory, but because I know that the best mathematicians have sometimes failed ludicrously when they have tried to solve by theory questions depending on the effects of friction; and I mentioned one very notable instance of the kind.

The cases brought forward in opposition to those of Mr. Taylor proved nothing at all; because it was evident in some of them, and probably in all, that the hanging of the bells mentioned had been in a bad state before they were re-hung and set up higher in their stock. Whereas, in all the cases mentioned by Mr. Taylor, the high-set bell had the advantage of the newest hanging, and therefore of the most perfect state of repair, and yet was not easier to ring up, but harder, and in one case impossible, viz. at York; for it turns out to be perfectly correct, as Mr. Taylor stated a year ago, that that bell has never been rung up to *set* yet,—though he offered to fill it with beer for the ringers when they should set it,—being convinced that they could not. Therefore, the very experiment which Mr. Burlison desires, has been already tried, and tried in the way which is right and conclusive, instead of in that which he suggests, and which would be wrong and inconclusive, as this question has nothing whatever to do with Mr. Baker's mode of hanging. For it is only fair to say, that he can hang his bells as low as he pleases; and the objections which have been made to his plan have also nothing to do with hanging low or hanging high. If the advocates of hanging high will use friction rollers under the gudgeons, then the high hanging will really make a large bell easier to raise. And, of course, it will reduce the swing upon the tower: it did not need much calculation to prove that, which was all that the calculation referred to really did prove on the subject.

As to putting silver into bells, I should be very glad to see anything like real evidence in favour of it; by which I mean something better

than vague stories of an indefinite quantity of silver having been put into some bell which is no longer here to speak for itself. All the evidence I have yet seen rather tends to show that it never was used, except occasionally for fancy; and I have never seen a word of evidence to prove that it would be of any use. It has a quite different effect in alloys from tin. Aluminium seems to me, from a specimen of copper alloy with it that I have seen, very much more likely to answer, as soon as it is cheap enough, in the way of producing a superior effect to tin.

I am not prepared to follow Mr. Burlison into the properties of "major" and "minor" bells; but I am prepared to say that the faults of most modern bells, and particularly the Exchange bells, depend on no such recondite causes as these. And I am now able to add that I have got a bell cast at Messrs. Warner's, from a new *sweep*, one-fourth of the diameter, and one sixty-fourth of the weight of the great Westminster bell, and, therefore, two octaves higher, which sounds the same note, and sounds it well, wherever it is struck—a very unusual thing,—and holds the sound longer than any bell of the size that I have yet seen: the composition is about 13 of copper to 4 of tin *by weight*,—which I mentioned at the Architects' Institute, as then in course of trial—or, as nearly as we can secure it, in the proportion of 6 *atoms* of copper to 1 of tin. If the great bell comes out anything equal to its model, the public will have great reason to be satisfied. It now depends merely on the soundness of the casting.

E. B. DENISON.

INQUIRY INTO THE DESTRUCTION OF COVENT-GARDEN THEATRE.

THE inquiry into the cause of the destruction of Covent-garden Theatre by fire, after a second adjournment, was completed on Wednesday last, at too late an hour for us to offer all the observations on the evidence to which it would lead. The verdict by the jury was, "That the theatre was destroyed on the morning of the 5th of March, but how, or by what means, the fire originated, they had no evidence before them to show." It is possible that no very different conclusion could have been expressed, although a form of words might have been chosen directing attention to some of the deductions which may be made from the experience in this case. Had any proof been required of the extraordinary danger to which theatres are liable, it would be afforded by what has recently occurred; and the pressing necessity of some revision of the methods of construction, and arrangements for working the scenes and machinery, should be now fully established. The jury could not point to any distinct cause of the calamity at Covent-garden, because there were *so many* probabilities to be considered. The fire which lately occurred at Drury-lane Theatre was known when it commenced, to the firemen in attendance; yet with all the vigilance which in that case was shown, the thing appears to have been before their eyes for some hazardous length of time, ere the source of the fire could be detected, and full means taken to stop it. A building must be in a dangerous state, indeed, when its existence—and the lives of an audience—tremble upon the ability of a few men to look in all directions at once over a large and complicated structure, or upon their invariable sobriety. Mr. Braidwood very conclusively showed that it was impossible for men engaged for numerous consecutive hours, to retain the watchfulness that is needed. Fires, he said, were found to occur much more frequently in buildings where the workmen were "hard pressed," than where the ordinary hours of labour were kept; and, without imputing anything to the firemen in the case that called forth the inquiry, where a man had to be kept on duty for so many hours as Castle had been, it could only be inferred that there was no real watching. The position of the owners of the Covent-garden Theatre, who have suffered from the extraordinary demand made upon those whom they had placed in charge, is one that greatly deserves commiseration.

The enormous importance of the fact as to the danger from fire in theatres, especially when in use for entertainments of unusual character, or duration, comes up at every turn of the evidence in this recent, and most disastrous case. When Castle was asked where he had gained the requisite qualifications to perform his duty as a fireman, he replied, pertinently enough, that he gained them at the theatre itself. It appeared from what he said, that fires at Covent-garden, or any other theatre, were matters of constant occurrence; and he even said that during "the great alterations" (necessarily a period of the utmost danger) some fire, or other, broke out generally once in each day.

The questions to which the course of investigation was directed at the recent sittings, were, —as to the chance of ignition to any parts of the theatre or fittings adjacent to gas-lights, or ignition to the gas which escaped in various parts of the house—and which it was supposed might have collected in some place, as in the roof,—as to any result from the occasional use of lighted candles, which use it seems prevailed, in spite of the rules; or from communication by the galvanic wires, which, in Mr. Anderson's experiments, were passed to various parts of the house; from the use of sulphuric acid for the electric-light apparatus and Mr. Anderson's galvanic batteries; from spontaneous combustion as a primary cause, or from incendiarism. We have already pointed out that the last-named cause, was assumed by some, merely because inquiry as to other agencies had not been instituted. The firemen's opinion was given without any real ground on which to rest it. Next as to the lighted candles,—though the placing one on a chair in a common table candlestick, and the use of candles at all may have been highly reprehensible, there does not appear reason to think that in the present case, such a thing led to the fire. As regards the galvanic wires—it was affirmed that they had been removed; and as to the sulphuric acid, the large quantity brought for the purpose of the electric light had been consumed or taken away some weeks previously. Besides, sulphuric acid, though it evolves heat when mixed with water, has not a combustible property in itself. It seems, therefore, that the inquiry is narrowed (much more easily here, than it was at the Piazza Hotel), to the questions as to the gas, and spontaneous combustion.

The danger which there is from the method of lighting the stage is obvious, even to those who have not been behind a *proscenium*. Beyond some slight fencing to the foot-lights, and to the lights at the wings, we believe no very important change, with a view to safety, has been made in this class of contrivances for many years. Fencing to foot-lights, deemed necessary from the lamentable accidents to dancers, is even yet not always used. Would it not be possible to give complete protection, from all causes of accident, by encasing the whole light, as has been done often enough of late for the purpose of ventilation, as in the invention by Faraday? The most fertile source of danger, however, is that which was suggested by one of the witnesses, Benjamin Dalliston—the contrivance called "battens" or "batten-lights." This apparatus is for the purpose of lighting the upper part of the scenery. It consists of a metal tube or barrel drilled with holes as burners, and protected at the back and top by boarding covered with sheet-iron. The whole contrivance is suspended by ropes, running through blocks which are attached to the under side of the floor of the carpenter's shop; and the gas is supplied to it by leather hose. The "borders" or top scenes are very numerous, and hang loose; and a change in the scenery can hardly be effected without one of these borders flapping against the protecting shield, or the flame itself. Whether the "borders" caught fire in the case of Covent-garden, or whether their number merely prevented the fire being seen from below when it broke out, there is no means of deciding. It was, however, proved that the gas was turned "full on" that night, by Mr. Anderson's direction; and it remained so during hours in which, from diminished consumption elsewhere in the metropolis, the full force of the pressure would be exerted, raising the flame to a greater height than usual. One of the witnesses, indeed, appeared to think either that more gas would be evolved than could be immediately consumed, or that the flame itself would be raised to a height which would seem almost marvellous; and he instanced the burning of the Olympic Theatre as having originated from such excessive increase of the gas-flames—also saying that he saw the first outbreak of the fire at Covent-garden from Bow-street, when a clear gassy or smokeless flame was ejected from the ventilator. The same flame was seen by Mr. Sloman from the west side, at about the same hour (twenty minutes past four),—at which time the fire does not seem to have been discovered by the people in the theatre. William Jones, one of Mr. Sloman's men, was actually up in the flies at a quarter past four, yet remarked no fire, or smell of fire. This was ten minutes before he saw a spark fall on the stage—the first indication to him that fire had broken out. But as he went up only to fetch his coat, he may not have observed what was to be seen. The "battens" hypothesis is noticeable in the present individual case, chiefly because it was admitted in some measure by Mr. Braidwood. His evidence in the particular in question, tended to show that the iron afforded no real protection. If the iron became heated, the wood which it covered would become so likewise. Other witnesses had suggested that the flame might pass up the ropes to the floor above.

Now it does seem to us that it would not be difficult to improve upon the arrangement of these "borders" and "battens." The main danger is in the swinging about,—and every now and then, against each other. Surely it would not require great mechanical skill, to devise "battens" which could slide in any required direction; and to have the "borders" stretched — on the same principle as side-scenes. But, beyond the danger from "battens," in other cases we apprehend that there may be much from the ordinary lights of the house. At some places of entertainment, these are placed at too close a distance beneath woodwork. A case was mentioned on Wednesday, where fire had been caused by a light distant 28½ inches. And, it should be recollected that with Argand burners, in consequence of the draft, a greater distance is needed than might suffice with the bat's-wing burner.

The idea of the accumulation of gas in the roof and its ignition was opposed by the scientific evidence, and that of Mr. Braidwood,—from which it seemed that the great draft would prevent accumulation; that, should anything of the kind occur, ignition of the gas could not take place without contact of flame, or of a surface at a white heat; and that, in the event of ignition, that would have been attended with explosion. The roof would have been blown off, and the report would have been heard by the throng below,—we suppose above all the din of the "infernal galop." Mr. Braidwood appeared to consider carefully the gas supposition,—naming the proportions of gas and atmospheric air that went to form an explosive mixture. He also said that the flame emitted from the ventilator, however smokeless, could not be burning gas; because, to make up such a flame (the shaft having been shown by Mr. Albano to be eight feet in diameter) would have required more gas than could have been got from all the pipes in the house. The evidence of Mr. R. Jones, the engineer to the London Gas Company, previously given, had tended to a similar conclusion.

Mr. Braidwood's general opinion, therefore, (stated after having heard the whole evidence), was that no *data* had been elicited for a definite conclusion as to the cause of the conflagration. He could easily suppose that the fire took place in some one of two or three ways. He, however, considered it was probably due to spontaneous combustion. He had been over Drury-lane Theatre; and, from his general impression, he believed it was impossible to say at any time, what there was or was not of an inflammable character in such places as property-rooms and "shops." Presuming the combustible matter existed in the case of Covent-garden,—the generally heated atmosphere of the "shop," the length of time during which the gas had been kept lighted, and the dried state of the materials, would favour the ignition. The smokeless character of the flame seen from the exterior would be the appearance which flame, even of wood, would have where there was strong

draft. We should mention that it had been previously stated by Mr. Thomas Grieve, the scene-painter, that he had always considered the *little property-room* a very dangerous place. Oil was used by the property-men. It was not so much used by scene-painters. He once returned to Covent-garden Theatre, after a long absence, and found in one spot a heap of rubbish, chiefly of sweepings from the painting-room. When the property-man was about to remove it, it began to smoulder and emit heat. Had such rubbish been allowed to lie in any part of the "shop," it would be quite sufficient to lead to the fire, under the circumstances which had been detailed.

To understand the importance of this theory of the cause of the fire, would demand a long statement of many well-ascertained facts as to a curious subject which requires even further investigation. Incendiarism is too diabolical an act to be credited as the cause of fires in every instance; and enough may be stated in few words here to show the importance of the general question, and its application to the present case. Cotton waste, oily rags, tow, and saw-dust may all be placed in such positions, or near such other substances as may cause them to ignite. The result does not occur invariably, as in the better known instances of chemical action; but it occurs positively, in certain cases, which are the source of greater danger because of the uncertainty. Tow is constantly used in theatres for stuffing figures and various other purposes, especially about the pantomime season. Saw-dust, Mr. Braidwood states that he has seen catch fire from the breakage of one of the flasks of Florence oil in the packages used, just at the time when the sun was shining in that direction. It is worth remarking, though perhaps not applying to the present case, that a carpenters' shop is lighted by sky-lights.

It is, as we may call it, the general tendency of things for the carpenters' shop to get crowded with lumber of all kinds. The witnesses in the recent case, differ as to *where* things were left; but enough is learned to show that in the shop and many parts, there was generally a large quantity of combustible material. Every one seems to have noticed something of the sort in newly coming to the place. Mr. Albano fought with the accumulation of shavings in 1846-7; Mr. Sloman found the shop in a disorderly state when he came to his old haunts; Mr. Grieve, ditto; Mr. Braidwood found the like, elsewhere the other day; and we must assume that it is inevitable.

It would, however, have much helped the inquiry, if it had been more clearly shown at what different parts of the house the several rooms called "property-rooms" and "property-shop" were situated—also where on the plan were the partitions spoken of in the general area of the roof, and where the positions designated by the witnesses, for the different benches, properties, frames, and indescribable lumber.

We took occasion last week to urge that plans should be before the jury during this inquiry; and when it was stated, as we understood on Saturday last, that a model was be ng prepared, we hoped that the jury would have the means which, in such cases, are so obviously required of coming to a true decision. It is just as much necessary to use large diagrams at an inquiry of this sort, as at Parliamentary committees. Something of the kind there used, could readily have been prepared; and the excessive loss of time, and confusion of witnesses in their vain efforts to unravel the mysteries of the plan, and to guess at distances, would have been avoided. Mr. Albano's drawings, which were at hand, were not referred to. If facts are to be elicited in such inquiries, the present round-about way of getting at them must be altered.*

NATIONAL INSTITUTION OF FINE ARTS.—The exhibition of this society is now open at the Portland Gallery, in Regent-street, but press of matter prevents us from giving any details in our present number. The exhibition comprises 575 pictures and five pieces of sculpture.

* In answer to an inquiry as to the area covered by Covent-garden Theatre, we may say that we find the *building* measures, on the Bow-street line, 209 feet 3 inches, and on the Hart-street line, 166 feet 4 inches, the projection of the portico not being included. The property includes Princes-place and the Piazza Hotel.

ST. MARYLEBONE EXTRAMURAL CEMETERY, FINCHLEY.

IN consequence of the very great complaints of the wet state of this cemetery, notwithstanding its natural inclination of surface, that the graves were found to fill with water, and, upon heavy rains occurring, the whole became a complete swamp, this led to an examination, when it was discovered that not a drop of water passed out from the main sewers. Subsequently, matters became so much worse that an eminent engineer was called in; when, after making a minute examination, he made a startling report. He condemns the plan adopted as being unscientific and unfit for the end in view, and says that the main sewer has not been put in at the depth contracted for, consequently, the graves cannot be made so deep as they might have been, thus at the outset causing great loss to the parish; that the sewer has sunk in part, and has been constructed in lengths which do not connect at their junctions in a continuous line; that the arterial drains are put in at a depth of several feet less than contracted for, without regard to levels or continuous lines, some up, some down, some falling the wrong way, and with interregnums of from 20 to 50 feet lengths; with other matters almost too monstrous to believe could be the case where two architects, having the constant assistance of a clerk of works, were employed in the supervision. The buildings also were obliged to be altered in order to render them practically useful for their intended purposes. However, as the matter may possibly become a subject for the gentlemen of the law, it is not desirable to offer any remarks by way of criticism upon the result of this business, which my former communication* (never controverted) as to the way in which the competition was conducted, and this particular design selected, referred to, farther than this,—that it is a very sad thing for the profession, and indeed for the parishioners, that committees undertaking the responsibility of making a sound and proper selection, do not call in such professional aid as would at least guard them from adopting crude and ill-considered designs, resulting in loss and vexatious litigation to those whose interest they are delegated to protect, as well as loss and cruel disappointment to competitors pursuing a fair and honourable course. I send you my name. A COMPETITOR.

LOOKER'S HOLLOW BRICKS FOR VENTILATION.

THE arrangement of bricks, proposed by Mr. Looker, already noticed in connection with the late Architectural Exhibition, deserves fuller description. It is designed especially to afford cheap, simple, and effectual ventilation, particularly in the humbler class of dwellings, in accordance with a plan suggested by Mr. Lloyd, and illustrated in our pages.

The hearth has beneath it an air-chamber communicating with the outer air. The jambs are built in with the bricks, which form conduits for the air entering under the hearth. The air is conducted through the bricks from the mantel to the upper part of the room, where it is delivered warm, the warmth being acquired chiefly from the smoke flue, whereby there is an economy of heat, and consequently of fuel. By an arrangement of the same bricks at the back of the fireplace and smoke flue, air-flues are formed, which may be carried to any desired height, and to the right or left, in the same or other rooms. By this means part of the heat of the back of the smoke-flue, instead of being suffered to escape at the chimney-top, may be carried to any room, and be the means of giving warmth and ventilation to rooms not provided with a fireplace.

"RECEIVING HOUSES."

HAVING read in your useful periodical some remarks upon the newly-established cemetery at Woking, as connected with the recently-enacted sanitary laws relating to intramural burials, with the difficulties attending their practical working, I am induced to state a circumstance bearing upon the subject, which is, probably, but one of many of a similar kind, and one which the Woking and other cemetery companies, aided by the clergy and parochial authorities, could easily remedy. A short time since, a poor woman living in a court in the City was prematurely delivered of a still-born child. The body of the child was placed in a box in the room (the only one occupied by the husband, wife, and three children), where it remained upwards of a week, when a disagreeable smell was noticed by persons entering the room: this led the husband to inquire what ought to be done with the body: he was told to take it to the sexton of the parish, who would inter it for him upon the payment of a small fee. The parish burial-ground being closed, the sexton referred him to the churchwarden, the churchwarden consulted one of the guardians, the guardian thought it would be illegal, but said the rector had better be applied to: the rector could not give his consent to the opening of the ground without rendering himself liable to a heavy penalty, which he was unwilling to risk. The poor man was then ordered to carry it to the nearest cemetery he could find, which he did the next day, having to carry his unpleasant burden upwards of 2 miles. Does it not seem desirable that receiving-houses should be established in every parish where the burial-grounds have been closed, as a depository for such births, from whence they might be collected once or twice a week by the various cemetery companies now in existence, and decently and properly interred? Should some such plan be carried into effect, would it not tend to prevent the practice of child-dropping, so frightfully prevalent in some populous districts, and so expensive to parishes, by the calling of coroners' inquests, &c.? It would also assist in the prevention of such a scene as that witnessed on draining some stagnant water by the Eastern Counties Railway Company, where, it has been stated, a number of human bodies were discovered among those of such animals as are generally found in similar receptacles. R. H. N.

Notices of Books.

The Drainage of London: A Letter addressed to the Metropolitan Board of Works on the Value of the Sewage, the most economical Mode of disposing of it, &c. By W. W. POCOCK, F.R.I.B.A. &c. Ridgway, Piccadilly. 1856.

MR. POCOCK is a member of "the Board of Works for the Westminster district," and his purpose is to consider whether the projected sewers, at a cost of several millions sterling, to take the sewage into the Thames at Barking Creek, or elsewhere, really be the best mode of expending so large a sum of money.

The author urges, in the outset, that the drainage of the metropolis is the only want of the inhabitants that has been entrusted to public functionaries, and the only want that has not been satisfactorily met. Having taken a step in the right direction, he remarks—

"We must cast about and see, whether the same principle that has covered the sea with our commerce, filled the world with our manufactures and our countrymen, brought the capitals of Europe within whispering distance of each other, netted our land first with canals, and then with railways, crowded our suburbs with houses, and lighted our streets with gas, cannot be brought to bear for the removal of the sewage of our drains, as well as the ashes of our grates and the sweepings of our houses."

With this view the author proposes a scheme for the disposal of the sewage to a company or companies, who shall rid the Londoners of it altogether, for a consideration, and convert it (notwithstanding all that has been said against such schemes) to use for agricultural purposes, by sending it out to the country through pipes, and distributing it to land occupiers, much as the water supply is brought into London, and distributed to house occupiers. The removal of the filth, he conceives, is all that the Metropolitan Board of Works itself has to see to as regards the sewage question, its application or conversion as manure not coming legitimately within their province:

"Nor if it did," continues the author, addressing the Board, "could you possibly effect it so advantageously as a purely commercial and personally interested association. Suppose, then, the sewage collected at the Galleous, your next step towards utilizing it is to offer it to parties willing to operate upon it, for their own benefit. Then why not offer it as it is, and where it is, without expending a penny upon tunnels and arterial sewers, pumps, and flood-gates? And let the contractors, subject to such terms and conditions as you may approve of, take it where they like, and do with it as they like.

The answer will probably be, that no one would take it. But, has it been tried? What terms have been offered? If it is expected that parties should offer to pay for that which is daily paraded as a nuisance, or even remove, without charge, that which we acknowledge it will cost us millions to pass on to our next neighbours, it is not to be wondered at that such hopes are doomed to disappointment. But, if we are willing to pay the interest of the expenditure thus saved, has this ever been made known, or even hinted at?"

It is on some such basis as that here suggested that Mr. Pocock proposes to solve the sewer

problem. He enters into detailed calculations to show how it could probably be done. He makes no doubt but that after a time the sewage would not only pay for removal, but provide for the maintenance of the sewers themselves, if not more.

"Had I been inclined to calculate closely," he remarks in conclusion, "it would have been easy to have shown that the sewage could be removed at such a price as to render it worth the farmer's while to bear the whole of the expense, and even pay the Londoner for it. Thus even supposing the quantity to be not seventy but a hundred million gallons a day and that a ton of water to the farmer was worth a halfpenny, we have the liquid still worth 4d. (or rather 7½d.) per ton, instead of 5d. and allowing 1½d. for distribution, and the carrier 1½d. for interest upon plant; we still have a balance of 1d. (or rather 4½d.) per ton, out of which to pay working expenses and purchase. But this I should regard as an unfair position; and any impression on the part of the agriculturist that it was wished he should confer a boon upon the Londoner, without a corresponding concession on the citizen's part, would greatly tend to prevent the working of the scheme. On the other hand, an impression that he might have the liquid for less than its real worth would promote a more extensive and rapid consumption of it. And the knowledge that the carrier was receiving a sum for removing it, would tend to strengthen such an idea. Besides, it is but fair that we should bear a reasonable proportion of the expense attending what would, under existing circumstances, be a mutual advantage. And the income thus secured would, it is obvious, as a guarantee fund, be an immense advantage to a working company, and would bring into the field competitors who would otherwise not think of entering it."

On the Arrangement, Construction, and Fittings of School-houses. By R. SCOTT BURN. London and Edinburgh: Blackwood. 1856.

THIS is chiefly an abstract, in an available form, of Mr. Barnard's "Practical Illustrations of School Architecture," published in America, and which was reviewed in our columns at considerable length some time ago. It contains many useful hints and details; but it should be pointed out to those who are concerned, that it would be waste of time in any case where assistance from the Committee of the Privy Council on Education is desired, to found plans on those given by Mr. Barnard, as no pecuniary aid is granted unless the plans are in accordance with the arrangement laid down as the best by the Committee of Council.

The Royal Gallery of Art. Edited by S. C. HALL, F.S.A. Parts XIII. XIV. and XV. London: P. and D. Colnaghi; Manchester: Agnew.

OF this very beautiful and valuable work fifteen parts are now issued, the last of them equal, if not superior, to any of the preceding. This contains E. Corbould's "Go, and sin no more" (one of that artist's best works), very well engraved by C. H. Jeens; Harding's view of "Hyde-park in 1851," a pleasant reminiscence of a pleasant time; and "The Madonna," engraved by F. Bal, after Carlo Dolci. We are disposed to fear that the circumstances of the time must tend to lessen the present sale of this work,—a reason, if it be so, why all who really desire to assist the arts should give their aid to the work during its progress. The first volume, containing thirty-six fine engravings, can now be had complete; and we most cordially recommend it.

VARIORUM.

"THINGS not generally known familiarly explained" is "a book for old and young," by Mr. Timbs, the editor of the "Year-Book of Facts," and is published by Mr. Bogue, of Fleet-street. It contains much curious and useful information, scientific, historical, traditionary, and speculative. By the way, is it certain that "The popular superstition of overturning the salt at table being unlucky originated from Leonardo da Vinci's picture of the Last Supper, in which Judas Iscariot is represented as overturning the salt?" This, we should think, must at least be doubtful, considering the deep-seated and prevalent superstitions in regard to salt which pervade the East, and did so long ere da Vinci merely embodied one of them probably in accordance with Eastern ideas while painting an event which occurred in the East. The collection makes a very entertaining and instructive little book.——A new edition of Lockhart's "Ancient Spanish Ballads" has been published by Murray. It contains, in addition to the illustrations by Warren, Harvey, &c. and matter in the first issue, a portrait of the author after Pickersgill, and the sketch of his life, which appeared in the *Times*. It is a charming book for the drawing-room, especially remarkable for the series of elegant borders and coloured title-pages, by Mr. Owen Jones.

Miscellanea.

GUN WADDING THAT WILL NOT BURN A THEATRE.—The great liability of theatres to destruction by fire is a fact that must at the present time be strongly impressed on the public mind, two theatres having been entirely destroyed within a few weeks. That great loss of life has not occurred is almost miraculous: the panic that seized the comparatively few present in the house at Covent-garden shows what might have happened had the fire broken out when the house was full. And now, almost before the ruins of Covent-garden have ceased to smoke, we are startled with the intelligence that Drury-lane has had a narrow escape, and two firemen have received great commendation for arresting the fire in time. The cause of this last-mentioned accident, and also of the destruction of Covent-garden in 1808, has been ascertained, viz. the ignited wadding from firearms; and it requires but little consideration of the contents of a theatre to understand how these apparently insignificant bits of smouldering material may sometimes be lodged in places were ignition will be produced. Now that the military spirit of the nation is roused, no doubt theatricals will for many years comprise more than the usual proportion of warlike scenes, and the danger be consequently increased. The question arises, cannot a wadding be made that will fall merely chared, and not holding fire? I think there is no doubt it can be done, and I would suggest that the various proprietors of theatrical properties, whose interests are involved to the extent of hundreds of thousands, should combine to offer a small premium for a perfectly safe gun wadding, and appoint umpires to test any specimens offered.—J. R.

HOLBORN-HILL. — An excellent opportunity of improving Holborn-hill appears to be at this moment slipping away or neglected, in the way in which the City authorities are proceeding to make the new street from Coppice-row, Clerkenwell, to Holborn-hill. They are now engaged in forming the vaults, and are, it is said, pitching the level of the street too low. If the street, at all events, be formed at the level now being made where the street from Cow-cross to Peter-street is being carried across, and where a sudden descent is being made, the Holborn-hill and other improvements may be for ever precluded. Mr. Goldsworthy has called the attention of the Holborn District Board of Works to this subject. At the place indicated, the street, it is calculated, ought to be carried 6 feet higher than it is, otherwise, a sudden rise must be made in the level at Vine-street. In justice to the City Committee it may be added, that the original commissioners, and not they, are blamed for the manner in which this improvement is being carried out.

PRESENTATION OF THE INSTITUTE OF ARCHITECTS' MEDALS.—At the next meeting of the Institute of British architects, the 31st instant, Earl de Grey, president, will present the Royal medal, the Institute medals, the Soane medallion, and the prize in books, in conformity with the award of the special general meeting, held February 18th, 1856. A paper on the Triumphal Arches of the Romans, with illustrations, by Professor Donaldson, will be read.

SURVEYORS OF HIGHWAYS. — At Worship-street, on the 12th inst. Mr. Charles Fyson, surveyor of highways for the parish of St. Leonard's, Shoreditch, appeared to an adjourned summons, in which he was charged, at the instance of the new vestry appointed under the Metropolis Local Management Act, with having unlawfully refused to permit certain of the inhabitant ratepayers to inspect the books connected with his office, whereby he had rendered himself liable to a penalty of 5*l.* for each default.—Mr. D'Eyncourt said, that although he had no hesitation in pronouncing the conduct of the defendant to be reprehensible, he considered it to be so doubtful whether he could be proceeded against in the character of surveyor of highways, all the duties and liabilities attached to that office being now vested in the district boards or vestries elected under the Metropolis Management Act, that he did not feel justified in imposing a penalty upon him, and must order the summons to be dismissed.

THE TAUNTON SCHOOL OF ART AND SCIENCE.—An impetus was given to the object of establishing a school of science and art for Taunton, by a meeting held last week, when Mr. Cole, the inspector-general of the Department of Science and Art, attended to explain the objects and advantages of Schools of Art. The attendance, according to the local *Courier*, was very numerous, the room being at one time quite crowded; and many artizans, connected in some degree with the production of local art manufactures, interested themselves in the proceedings. Mr. Cole was accompanied by Mr. Wild, the Government assistant-inspector. In the course of his address Mr. Cole said, most of them had more or less, a knowledge of history, and if they looked into history they found that before writing was established, drawing was employed to convey ideas which would now be expressed in writing. Ancient nations used forms to represent the ideas to be conveyed, and the Egyptians particularly represented these by forms rather than by letters. Every ploughman had something to do with things in which his accuracy was desirable: every housemaid in her daily work had to put things to rights: every sempstress should see correctly and know how to cut out a shirt or to make it, to draw a straight line and know whether her work was done right or wrong: every carpenter, every hodman, every mason, every artizan, on whatever he might be employed, had something to do with judging whether he did it right or wrong. What they did in schools of art was to teach them to see with precision, so that they should deal accurately and correctly with what was before them. He was told at Taunton that the committee were somewhat in a dilemma, as they had at present only two schools; but it would be a great pity if Taunton, possessing so many advantages, should lose the opportunity of having a school of art because it cannot get a third school. When he visited their National School, he found there both boys and girls; and though there was no objection to the boys being taught drawing, he was told that there was great prejudice against girls being taught to see correctly. In some places he had met with just the contrary objection:—"We can allow the girls to be taught, there can be no harm in that; but certainly not the boys. We find that if you teach the boys drawing, it makes them impudent!" Now he did not think, from what had been stated to him that day, that it was likely the objection would be persisted in. He had heard with great satisfaction that the committee had collected a subscription, certainly sufficient to start the school exceedingly well.

SCHOOLS AT DEPTFORD.—The schools to the new church, built by Miss Coutts, in the Lewisham-road, which was opened last year, have been completed, and were opened on the 13th by Lord Haddo. Two of the group have only yet been completed, for 200 boys and 180 girls, with class-rooms and residence for the master. The contract was 2,230*l.* and was taken by Mr. Thompson, of Camberwell, and built from the design of Mr. Joseph Peacock. The schools occupy a large site, which was given by the freeholder, and have separate playgrounds and garden in front: the buildings are arranged to form two sides of a quadrangle, with the playgrounds behind.

CHEAP "GENTEEL" DWELLINGS.—In the Court of Common Pleas, a jury has exonerated a Mr. Bartlett, who had given an "I O U" for deposit-money on purchasing "a pretty little estate," consisting of six houses "of a genteel character." He discovered that the character was more "genteel" than substantial, and he declared off the bargain. The seller referred the question to a jury. The jury went over the premises—yea, over the roof; and found the roof give way under their feet; a painful thing for the transient jurymen, but how much more painful for the abiding tenants with the said roof over their heads! Yet the "pretty little estate" at Mile-end, is only a type of innumerable little estates at the end of many a mile about the country. The tenant may perhaps be enjoying domestic bliss, when the middle half of the parlour-wall shall come in by the force of a British gale, and the family shall be panic-stricken with a natural dread lest the whole house should imitate the wall. But in every house of the "genteel estate," fear unsettles the heart of the tenant. . . . . How many a tenant lives in ignorance until his situation is illustrated by a failure in the bricks! How many a tenant dares not bring to the account the landlords to whom he owes rent! How many a tenant, in over-cheapening rents, has brought about the present condition of building! The trade is such that those who build substantially—whose work can defy the rats, the elements, or a dancing-party in any story of the house — find it impracticable to cover their own outlay unless they ask a rent which few will pay; the competition of the market drawing the paterfamilias in search of a house towards those genteel traps which stand by sufferance of wind and weather.—*Spectator.*

RAILWAYS.—The poor West-London Railway can get no award from Mr. Hawkshaw, to whom the settlement of its claims against the London and North-Western Company was referred. Month after month, quarter after quarter, passes, but no award comes. At the half-yearly meeting of the West London, held the other day, it was said the delay "rested with the gentlemen of the long robe. The great difficulty was to make an appointment that would suit the counsel of the London and North-Western Company." Gentlemen, whether of the "long robe" or short robe, have no business to undertake matters they cannot attend to. But what care they? It is only the poor shareholders of a weak company who suffer. The injustice and ill-treatment the West-London Railway shareholders have received from the great companies is unexampled in the whole history of railway *management*; and what a history that is! Mr. Hawkshaw owes it to his own character to insist on an immediate appointment.——The engineering estimate for the proposed deviation of the Crewe and Shrewsbury line of the London and North Western Railway Company is 110,000*l.* and the cost of the authorised works intended to be relinquished under the bill 83,000*l.* making an increased expenditure in relation to that part of the undertaking of 27,000*l.*——The Irish Southern and Western Railways are expending 48,000*l.* on a hotel at Killarney, with the expectation of realising 1,000*l.* a year rent. The Irish Great Western expended 90,000*l.* on a hotel at Galway.

PUBLIC WORKS AND BUILDINGS.—The estimates published on Friday include 195,141*l.* for public buildings and royal palaces; 7,868*l.* for additional works in the south portion of Buckingham Palace, for external enclosures, lighting, and warming; 21,684*l.* for royal parks and pleasure-gardens; 99,383*l.* for the New Houses of Parliament; 207,305*l.* for Holyhead harbour and roads; 233,000*l.* for harbours of refuge; 384*l.* for Port Patrick harbour; 41,221*l.* for public buildings in Ireland; and 19,350*l.* for the harbour of Kingstown. As regards the parks, it is found that to St. James's the Green and Hyde Parks is appropriated 25,631*l.*; to Kensington-gardens, 2,716*l.*; to Chelsea Hospital grounds, 750*l.*; the Regent's Park, 6,601*l.*; to Victoria Park, 4,860*l.*; to Greenwich Park, 2,287*l.*; and to the Royal Botanical and Pleasure-gardens at Kew, 19,078*l.* Under the head of the New Houses of Parliament, Sir C. Barry demands 9,500*l.* for the completion of the Victoria-tower, 7,600*l.* for the clock-tower, and other items, amounting altogether to 52,540*l.*; exclusive of the works not under his direction. 4,000*l.* is to be applied this year to the decoration of the new Palace at Westminster, under the direction of the Fine Arts Commission. The works include Mr. J. Gibson's statue of the Queen and its bas-reliefs, Mr. J. R. Herbert's frescoes in the Peers' robing-room, illustrative of "Justice on earth and its development in law and judgment," and the marble statues of men of eminence (as members of Parliament) in St. Stephen's-hall. The work of Mr. Gibson is nearly completed. Mr. Herbert is about to commence his fresco paintings, and, as regards the statues, commissions for ten, at the cost of 1,200*l.* each for three, and 1,000*l.* each for the other seven, have already been given.

CLEANING BOARDS.—In answer to "J. K. E." allow me to say, that if by the above, *floor boards* are meant, he will find scrubbing them with a mixture made by dissolving unslacked lime in boiling water will have the desired effect. The proportions are, two tablespoonsful to a quart of water. No soap need be used.—REINIGKEIT.

THE OMNIBUS QUESTION.—I have seen the drawing of the vehicle to which was awarded the 100*l.* premium; and I could not fail being much impressed with the justice of the jurors' remarks in reference thereto, and am precisely of their opinion, that it comes far short of the public requirements. For instance, I would suggest the addition of a *hand-rail*, to depend a few inches from the roof, on either side, whereby unfortunate passengers might be saved the imminent risk of crushing the "last Paris fashion," or mutilating some unoffending old gentleman's too-susceptible bunnions, &c. when thrown head-foremost by the conductor into "the repository;" and also that the windows (producing, when in motion, that most indescribable of noises) be made perfectly *secure*, as there can exist no necessity for the opening of same, if ventilation be provided through the open door-window and roof. I might also call attention to the discomfort arising from having to sit bolt upright, with the alternative of a sharp window-beading in close juxtaposition with the spine; and the *ample space* which is provided for travellers if the conveyance chance to be full. But this would be almost as bad as demanding "comfort and consideration" for the public, which I am hardly bold enough to ask for whilst I sign myself OMNIBUS.

DULWICH COLLEGE.—THE ALLEYN GIFT.—Mr. Benjamin Webster is making a good fight to obtain for actors some share of the benevolent bequest of Alleyn, himself an actor, and we sincerely hope he may succeed in his praiseworthy endeavour. All that is asked is—"That one actor and actress be admitted as indoor pensioners; one actor and actress, as outdoor pensioners; and that four children of actors and actresses be placed upon the foundation of the Upper School; that four children of actors and actresses be placed upon the foundation of the Lower School; and that the selection of the most deserving claimants be made by the committees of the Drury-lane, Covent-garden General Theatrical Fund, and the General Dramatic, Equestrian, and Musical Sick Fund Association, as most likely to be acquainted with the merits of the applicants." The resources of the charity have been enormously increased by the erection of the Crystal Palace, and would suffice for all that could be demanded of it. Mr. Webster, at the public meeting which was held on the subject (Mr. C. Dickens in the chair), said to the disgrace of the managers of the college, that in 1843 the tombstone of Edward Alleyn was found in the skittle-alley of the Halfmoon, Dulwich, and the gentleman who made the discovery had called upon them to remove it; but, according to the reports, dated 1844, it had not been done. Would not this be a good moment to establish a General Dramatic Institution, the main object of which should be the elevation of the profession?

THE LECTURES ON PAINTING AT THE ROYAL ACADEMY.—Professor Hart's lectures on painting are being published in full in the *Athenæum*. Four have already appeared, and well deserve the attention of our readers.

THE ALHAMBRA.—The *Literary Gazette* says, Madrid papers inform us of the melancholy fact, that the Alhambra is falling before the destroying hand of time. The inhabitants of Granada were awakened in the dead of the night by a loud crash like a clap of thunder, followed by what seemed an earthquake. Thousands rushed into the streets, and it was soon discovered that the noise proceeded from the fall of one of the largest walls of the Alhambra, that which joins the tower "los Picos," with the gate "de Hierro." A strict examination was made of the ruins, which resulted in the discovery that one of the towers, and the fortress itself, are threatened with a similar fate. Workmen are employed in restoring the palace.

PARIS AND LONDON HOUSES.—There is no denying it,—*space is* a very important element in considering the salubrity of a town. Six-story houses, however, if only occupied by one family, have their faults; and many a medical man could, if he would, tell of lung and heart diseases brought on by the constant running up and down five and six flights of stairs. "J. P. W.'s" observations, therefore, must be taken, even in this sense, with some qualification. The Paris servants have not to run up and down stairs all day long, as the London servants have. Then is it *really* the fault of the public that they live in unhealthy houses? My neighbour, Bridgestream, came to London without ten pounds to bless himself with. He built houses *for sale* and *occupation*, and is now said to be worth 20,000*l.* a year. Everybody knows his houses to be regular lath and plaster compositions—that is, all professional men and tradesmen know it; but Bridgestream was thrown on a taking neighbourhood, and his houses did *sell* and *let*. But what is the effect, now that his fortune is made? Why those who bought his houses, even under professional advice, and only gave for them the sum advised, find out that they had better not have bought them at any price. The builder has made his fortune, and the people suffer.—A VICTIM.

EXPLOSION IN A VAULT.—Allow me to draw your attention to a circumstance which occurred to me a week since. I was requested to inspect an old vault in Holborn, which runs some distance under the road, and to give my opinion as to its safety. Having entered it through a small aperture, accompanied by the occupier of the house, I carefully examined the cracks in the brickwork, and came to an opening in the crown of the arch, which appeared to have been a shaft to admit coals. On holding a lighted candle to its mouth, an explosion immediately took place, which threw me almost senseless to the ground. One side of my face was slightly burned and my hair was singed. I am thankful it was no worse. The cause I cannot exactly account for. There was no smell of gas: the cellar is in use; and I went all round it previously to the explosion. Most probably it was the accumulation of foul air, collected for some time in the shaft, and unable to escape. If you think this little incident worthy of a place in your excellent journal, it may serve as a caution to those whose business calls them to inspect underground works, and may, at the same time, suggest the importance of ventilation there, where it can possibly be done.

JOHN WILLIAMS.

EXHAUSTION OF INDIAN FORESTS.—Almost the last remaining source of supply of timber within British territories is Pegu. There are, it is true, considerable forests of teak still remaining to the westward, within Dr. Gibson's jurisdiction. There are teak "forests" also in Chota Nagpore, but they belong to *quasi* independent chiefs, whose barbarian dread of European intercourse leads them positively to deny the fact. There may be patches also on the frontier to the north-east; but all these sources are too remote and possibly too insignificant for a great commerce. Pegu alone remains; and of Pegu Dr. M'Clelland's report is by no means hopeful. The Burmese Government has overworked the forests: the native squatters have overworked the forests: the British Government has indirectly overworked the forests; and this grand source of wealth stands in need rather of renovation than of further drainage.—*Friend of India.*

RAIN-WATER CISTERN AND LEAD POISON.—A Birmingham correspondent, Mr. W. M. Williams, points attention to a circumstance in respect to which the readers of the *Builder* have been frequently warned, namely, to the risk of the poisonous impregnation of rain-water, held in cisterns, lined with lead, as incidentally (and, doubtless, inadvertently), set forth by our correspondent, Mr. Wylson, while describing his mode of filtering rain-water. As we have more than once suggested, it would be well not only to avoid the use of lead in such cisterns, but also in the gutters, &c. from which the rain-water for domestic use is collected; or, failing the substitution of slate, or other lining in the cistern, and zinc for the gutters, a coating of some cement or mastic, such as was lately suggested in our columns for these same purposes, might be laid over the lead, both of gutters and cistern. The disuse of lead, however, in the cistern and filtering apparatus recommended by Mr. Wylson, does not affect the merits of his plan in the slightest degree, but, on the contrary, would be a decided improvement where the water is wanted for domestic use, in which case, in fact, the use of lead for lining a cistern, as we cannot too often repeat, is positively deleterious and dangerous to life as well as injurious to health.

NEW YORK.—The St. Germain Hotel, lately opened for the reception of guests, forms, according to the *Home Journal*, *a feature* at the junction of the two great thoroughfares, Broadway and the Fifth Avenue. It is six stories in height, presenting three façades of the Composite order, and is an ornament to the park which it overlooks. From the entrance, a grand staircase of white marble leads to the rotunda, or great hall, which is surpassingly beautiful and imposing. The architects, Messrs. Mettauer and Burke; the builders, Messrs. Stewart and Howell, and Van Pelt and Smith and others, deserve credit for carrying out a design so novel. The same paper says,—"The Central Park we are to have—and who is not glad of it? Let the commissioners commence the work at once, and give to the city as soon as possible this magnificent garden, where the rich and the poor, the old and the young, may repair and enjoy its pure air and sunlight."

TENDERS

For the chapels, lodge, entrance-gates, and boundary-walls, for the Folkestone cemetery, advertised for in the *Builder*. Mr. Joseph Messenger, architect:—

Eyre	£2,933	0	0
Ayers	2,437	0	0
Banks	2,428	0	0
Pope	2,360	0	0
Edwards	2,330	0	0
Golder	2,200	0	0
Porter (accepted)	2,148	0	0

For the Regent-street Tabernacle,—Princes-end, Tipton. Mr. Wigginton, architect:—

Phillips, Great Bridge	£1,311	19	0
Dolland, Dudley	1,152	0	0
Peacock, Gornal	1,140	0	0
Cox and Son, Tipton	1,140	0	0

As the trustees wished the whole of the light to be derived from the roof, there was a slight alteration in the plans; the amended tenders for which,—from Messrs. Cox and Peacock, showed a difference of 27*l.*—and the contract fell to Mr. Peacock.

For a proposed building in Lombard-street, for the Royal Insurance Company. Mr. John Belcher, architect. The quantities prepared by Mr. Richard Roberts:—

	For Building.	Party walls	Mahogany in lobbies.	Total.
J. Jay	£4,110	£708	£387	£5,205

Lawrence	3,820	590	320	4,730
Downs	3,756	537	167	4,460
Wilson	3,545	417	258	4,220
Browne	3,517	401	240	4,158

PARTNERSHIPS NEGOTIATED (limited or unlimited) and ACCOUNTS AUDITED, for in-coming and out-going Partners, by Mr THOMAS GERVAS ROBINSON, Public Auditor and Accountant, No. 10, Old Jewry Chambers, City.

PARTNERSHIP, or SALE of an ENGINEERING BUSINESS, in London.—The works are waterside, held on lease an unexpired lease of thirty-five years. The plant is complete and compact, and the tools are modern and admirably fitted. Coming in, good, or part may remain on mortgage.—Apply to Mr. THOMAS GERVAS ROBINSON, No 10, Old Jewry Chambers, City

PARTNER WANTED in a Carpenter's, Builder's, and House Agent's Business. A party with about 150l. Not necessary to have a knowledge of the business. The above is an opening—there being no rent to pay—for a young man of business habits seldom to be met with.—Apply by letter. 88, Berwick-street, Soho.

WANTED, to JOIN in a BUILDER'S BUSINESS, by a party with a small capital, that would engage in conducting the business, being practically master with it in all its details Every information given and required. Address, in first instance, to M. S. 37, East-street, Walworth.

A NEW LIGHT in the SCIENCE of HYDRAULICS.—To CAPITALISTS.—A Plumber and Pumpmaker, the patentee of a gravity force filter pump that is patronized by the Board of Ordnance in the army, and is applicable for ships, deep wells, fire-engines, &c. is in WANT of a person to JOIN him, with a capital of from 300l. to 500l.—Apply, if by letter, to Y. Z. Mr. R. L. Curtis, Surveyor, No. 1, Riches-court, Lime-street, City, where plans and a working model may be seen.

CROYDON, SURREY.—To BRICK-MAKERS, BUILDERS, and OTHERS.—TO BE SOLD, a FREEHOLD BRICKFIELD, situate in the Brighton-road, about a quarter of a mile from the town of Croydon, containing about 3½ acres, abounding with good malm brick earth to the depth of 15 feet. There are also two lime kilns, and a famous supply of chalk for lime-burning, and two cottages, stabling, land, house, &c erected on the premises for the purpose of carrying on the above business.—For further particulars apply to Messrs. GREGSON and SON, Solicitors, Angel-court, Throgmorton-street, City; also to Mr. EDWIN DAVIS, 2, Haling-road, Croydon.

ELIGIBLE INVESTMENTS.—A Valuable Piece of LAND of superior quality, Freehold and tithe free, containing about 25 acres, in excellent cultivation and well adapted for market-gardens, situate near Hounslow, TO BE SOLD by Private Contract. It has many advantages for building.—Apply for particulars to H. FARNELL, Esq. Holland-house, Isleworth, Middlesex

FREEHOLD.—WANTED to PURCHASE, a BLOCK of OLD HOUSES or a vacant space of Ground, having a superficies of about 46 yards by 36 yards, to be situate within the four boundaries formed by Great George-street, Westminster, on the south, the Parks on the west, Oxford-street on the north, and Regent-street, Charing cross, and Parliament-street on the east. A Frontage to a main street would be preferred, but it is not absolutely essential.—Particulars to be addressed to Messrs. WATKINS and HOOPER, Solicitors, 11, Sackville-street, Piccadilly.

CAMDEN-TOWN CEMETERY BUILDING ESTATE.—TO BE LET, on Building Leases, for Ninety-nine Years, very eligible SITES upon the above estate, having good frontages into Camden-street and Bigham-street, and including frontages to the intended street to be called St. Martin's-place, and mews approached from Pratt-street. There is a great demand for private houses of the third rate in this locality, which is enhanced by its near proximity to the Chalk Farm Station of the North London Railway Stations, and the Hampstead road.—Plans may be seen and particulars obtained by application to H. E. KENDALL, Esq. Architect, 17, Suffolk-street, Pall-mall East; or to JOHN DANGERFIELD, Esq. Solicitor, 26, Craven-street, Charing-cross.

STRATFORD, ESSEX.—FREEHOLD LAND within three miles of London, exonerated from land tax, and free of tithe, TO BE LET on lease for a long term of years, in large or small plots, suitable for manufactories or building purposes.—Apply to Mr. W. H. DEAN, Auctioneer and Surveyor, Stratford; or to Mr. GEORGE POWNALL, Surveyor, 37, Bloomsbury-square, London.

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to responsible parties Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Messrs MORGAN and PHIPSON, Architects, 3, Danes-Inn, St. Clement's, Strand.

TO BUILDERS.

LEE, near BLACKHEATH.—FRONTAGES TO BE LET, for detached or semi-detached villas, on the Belmont Estate. This estate contains the finest site for building purposes anywhere round London, and good villas are in great demand, on account of the situation being lofty, dry, well drained, and exceedingly healthy. Assistance may be had to responsible parties.—For particulars, apply to Messrs. J. and C. W. TODD, Milner-street, Brompton, London, or Belmont, Lee, Kent; or Messrs. NELSON and INNES, 6, Whitehall-yard, and of Messrs. KIRKMAN and ENGLEHEART, King William-street, City.

BUILDING AGREEMENT TO BE SOLD. To BUILDERS, BUILDING SOCIETIES, and OTHERS. HAVERSTOCK-HILL, HAMPSTEAD-ROAD.—TO BE SOLD, a valuable Building Agreement for a PLOT of FREEHOLD LAND, suitable in one of the healthiest and most commanding positions in London, and only three minutes' walk from the Railway Station, Chalk Farm, whereon is to be built Fifty-six Houses. There is sufficient brick-earth dug and prepared for making at once bricks sufficient for erecting the whole of the houses The Plant necessary for carrying on the works could be had with the brick-earth at a fair valuation, or the holder of the land would make the offered very low price to be agreed upon. For particulars apply to Mr NUTTER, Land Surveyor and Auctioneer, Prince of Wales-road, Haverstock-hill.

MAITLAND-PARK, HAVERSTOCK-HILL, HAMPSTEAD-ROAD, Land tax redeemed.—TO BE LET, upon Building leases, for 99 years, BUILDING SITES upon the above estate. The continued demand for houses in this locality, and the picturesque position of the property, adjoining the grounds of the Orphan Working School, render this a desirable opportunity for builders or gentlemen wishing to erect villas for themselves.—For plan and terms apply to the Secretary of the Orphan Working School, Haverstock-hill: Messrs. TERRELL and CHAMBERLAIN, 30, Basinghall-street; the Architects, Messrs. WEHNERT and ASHDOWN, 43, Charing-cross; or at the Lodge attached to the School.

FREEHOLD LAND, SHEPHERD'S-BUSH.—TO BE LET, or SOLD, by Private Contract, about THIRTY-SIX ACRES of valuable FREEHOLD BUILDING LAND, land-tax redeemed; most desirably situated within 3 miles from Hyde-park.—Plans and terms of Mr. PETER BROAD, 28, Poultry.

FREEHOLD GROUND for Building on.—TO BE LET, upon BUILDING LEASES, PLOTS of GROUND, in that healthy locality, Holloway, two or three minutes' walk from the Archway Tavern. Omnibuses every four or five minutes to all parts of London. Situate in St. John's-road, where houses let as fast as built.—For particulars, apply to Mr. H. WITHERS, 9, Poultry; or Mr. WILLS, 2, Esplanade, Ealing. The leases direct from the freeholder. Money advanced.

FREEHOLD GROUND, Fetter-lane.—The Commissioners of Sewers of the City of London hereby give Notice, that they will meet in the GUILDHALL of the said City, on TUESDAY, the 29th of APRIL next, at TWELVE o'clock at noon precisely, to receive PROPOSALS for taking on BUILDING LEASE, for eighty years, certain PLOTS of GROUND, situate at the south-east end of Fetter-lane. Further particulars may be had, and a plan seen, on application to Mr. HAYWOOD, Engineer to the Commissioners, at these Offices in the Guildhall. The Commissioners will require a plan and elevation of the Premises proposed to be built to be submitted to them for approval; and do not bind themselves to accept any proposal unless deemed advantageous. JOSEPH DAW.
Sewers Office Guildhall, March 4th, 1856.

HARROW.—FREEHOLD LAND.—TO BE SOLD, 100 ACRES, in a ring fence, and several other eligible plots of FREEHOLD LAND, at a moderate price, contiguous to the Harrow Railway Station, surrounded and intersected by capital roads. Residents are entitled to the privileges of the Harrow School, and the London and North Western Railway Company offer to persons building houses of approved elevation, worth 80l. per year each, a free first-class pass between Harrow station and Euston-square, for eleven years. There is an abundant supply of excellent water, and very superior brick-earth on the land.—Apply to WILLIAM B. COOPER, Esq. Solicitor, 3, Verulam-buildings, Gray's-inn.

ELIGIBLE BUILDING LAND TO BE LET, in the very best part of the immediate neighbourhood of Croydon. It is exceedingly dry and nicely timbered, and within ten minutes' walk of either railway station. A very liberal peppercorn term will be granted.—For particulars apply to Mr. T. L. ROBERTSON, 16, High-street, Croydon, Surrey.

TO BUILDERS and OTHERS. — An excellent SITE TO BE LET or SOLD, for BUILDING PURPOSES, with a good double frontage, situate in a leading thoroughfare, and in an established neighbourhood, well adapted for shops and dwelling-houses, and workshops. The materials of the present erections may be used if sound, in erecting any new buildings that may be approved. Money will be advanced if required by the purchaser, or taken to carry out the undertaking, upon a satisfactory arrangement.—Inquire of Messrs. HOWARD and DOLLMAN, Solicitors, 141, Fenchurch-street; Mr. EDWARD LOWTHER, 58, Red Lion-street, Clerkenwell; or of Mr. MORRELL, Auctioneer, 1, Walbrook, City.

FOR SALE.—In the best part of Gray's-inn-road, the extensive FREEHOLD LAND (over an acre) and PREMISES, belonging to the Welsh Charity.—For permission to view the property, and further particulars, apply at the Office of Mr. HENRY CLUTTON, 28, Charles street, St James's-square

FREEHOLD LAND.—Wanted, to Purchase, a piece of Freehold Land, of not less than an acre and a half, having a frontage of 250 feet towards a public road, and within a short distance of the Royal Exchange; it must be in the vicinity of a market, and capable of good drainage.—Address, stating full particulars, containing price, situation, &c. to Mr. HERBERT WILLIAMS, Architect, 21 Great Ormond street, Bloomsbury, on or before the 2nd APRIL next.

WIVELSFIELD, SUSSEX.—TO BE SOLD or LET, PODSTREAM HOUSE, a commodious residence, with good garden, stable, coach-house, and dome very fine old meadow land, capable of being altogether in Pasture. It is situated a mile and a half from Haywards heath railway station. Immediate possession may be had, and further particulars obtained of Mr. JOHN BUTCHER, Ditchling, Sussex, or Mr. TANNER, 86, Fleet-street, London.

TO BE LET, at PLAISTOW, SEMI-DETACHED VILLAS, in the immediate neighbourhood of the Victoria New Docks. Each house contains two parlours and breakfast-room, three bed-rooms, kitchen, scullery, pantries, and watercloset; they are completely fitted up with every convenience, dressers, coppers, water, stoves, and blinds; they are partially grained oak and varnished, and all are papered with the newest patterns; they are ready for immediate occupation, and, in consequence of the failure of the builder, they will be let for the low rent of 22l. per annum. Taxes are very moderate, and railroad and omnibus conveyance within easy distance.—Apply to Messrs. W. G. and E. HABERSHON, Architects, 38, Bloomsbury-square, London; or to Mr. FISHER, Builder, Balaam-street, Plaistow.
N.B.—A railroad is now in course of construction from the Shoreditch and Fenchurch-street stations to Plaistow, which will be opened in a few months. The station will be about a quarter of mile from the above-mentioned houses.

TO SMALL CAPITALISTS.—TO BE SOLD a bargain, the CHOICE of RIGHT of TWO ALLOTMENTS in a Freehold Land Society's Estate at Hornsey, adjoining railway station. The land is eligibly situated for building or other purposes, and will be ready for building immediately on completion of roads and sewers. Average size of plots 25 feet by 75 feet, none of which will exceed 50l and can be held at mortgage if preferred.—Address, A. B. Mr. Chalfont's, 99, Great Tichfield-street, St. Marylebone.

TO BUILDERS.—TO LET, on a rebuilding lease for ninety-nine years, FIVE HOUSES, MELIOR-STREET, WESTON STREET, BOROUGH. They form one corner of the street, with two frontages, about 60 feet each, land-tax redeemed, with a new sewer within ten years. The ground-rent 40l. per annum; the freehold, 800l.—Apply to Mr. BUCKLEY, No. 5, Guildford-street East, Wilmington-square.

ELIGIBLE MANUFACTURING PREMISES, with river frontage, TO BE LET, from year to year, or for a term of years, as may be agreed upon, with immediate possession, the greater portion of those valuable WATERSIDE PREMISES, known as the DON ALKALI WORKS, situate at East Jarrow, near South Shields, in the County of Durham, and within half-a-mile of the Public Docks now in course of construction at Jarrow Slake, on the River Tyne. The premises, which are very extensive, consist of a commodious wharf or quay, adjoining the River Don, navigable for keels and river craft, a lofty chimney and flues communicating, an excellent fresh-water well, two capacious reservoirs for water, numerous range of sheds, warehouses, and other buildings, laboratory, a well-built counting-house and commodious office, and porter's lodge, together with a close of land, cooperage, &c. and have been heretofore used as an Alkali Manufactory and Chemical Works, but are also suitable for an iron-foundry, forge, or other manufacturing business, for which railway communication or shipping facilities are requisite.—For further particulars, apply to Messrs. GRIFFITH and CRIGHTON Solicitors, Newcastle-upon-Tyne; Mr. CROWDY, Solicitor, 17, Serjeant's-inn, Fleet-street, London; ROBERT DAWSON, Esq. or Mr. J. D. LISTER, South Shields; or to Mr. ROBERT WART, East Jarrow, near South Shields, who will show the premises.

TO WHARFINGERS, COAL-MERCHANTS, and OTHERS requiring WATERSIDE PREMISES.—TO BE LET, BEAUFORT WHARF, Carting-lane, Strand. There is water-way for eight barges, landing-stage, stabling for twenty horses, with roomy lofts, and other outbuildings. There is also a neat dwelling-house and counting-house.—Inquire of Mr. PRESTON, Jun. 10, Wych-street, Drury-lane; or Mr. SAUNDERS, Builder, Phœnix-yard, Oxford-street.

OXFORD.—Valuable BUILDING LAND, to be LEASED on a term not exceeding 99 years. It immediately adjoins the City of Oxford, and belongs to the President and Scholars of St. John's College. The land is proposed to be let in large or small quantities, for the erection of private residences, and builders, speculators, and others may obtain allotments on such terms as will insure peculiar advantages, as it is well known that genteel residences are much wanted, and in daily request. It is most healthily situated on a fine bed of gravel, has springs of pure and excellent water, and good bricks may be obtained within a few hundred yards of the site.—For particulars, apply to the Messrs. BECKHAM and CO. 6 and 7, St. Aldate's-street, Oxford.

MILITARY CAMP, ALDERSHOT.—To BUILDERS, HOTEL and SHOPKEEPERS, and OTHERS.—TO BE LET, on building leases, for long terms, at peppercorn rents (with a premium), or at ground rents, very eligible PLOTS of BUILDING-LAND at Aldershot, fronting the high road to Farnham, immediately opposite the Artillery Barracks now in course of erection, comprising the best situation in the locality for an hotel and shops; also several plots for the erection of cottages the demand for houses of every description being so pressing as to insure an unusually high rate of interest for capital expended For terms and particulars apply to Mr. BARRETT, Farnham, Surrey; or to Mr. J. W. PENFOLD, Architect and Surveyor, 3, Charlotte-row, Mansion-house, London.

NORWICH UNION FIRE INSURANCE SOCIETY.—Established 1797. Total Amount Insured, £13,600,000. Insurances may be effected with this Company upon more favourable terms than with other Offices.—For prospectuses, apply to the Society's Offices, Surrey-street, Norwich, and 6, Cre cent, New Bridge-street, Blackfriars, London.

SIXTH DIVISION OF PROFITS.

CLERICAL, MEDICAL, and GENERAL LIFE ASSURANCE SOCIETY, 63, Great Russell street, Bloomsbury, London.

SPECIAL NOTICE.

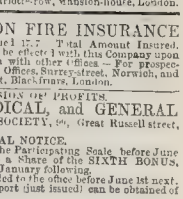
All persons who assure on the Participating Scale before June 30th, 1856, will be entitled to a Share of the SIXTH BONUS, which will be declared in the January following.
Proposals should be forwarded to the office before June 1st next.
The Thirty-first Annual Report (just issued) can be obtained of the Society's Agents, or of
GEO. H. PINCKARD, Resident Secretary.

THE ASYLUM LIFE ASSURANCE OFFICE, 72, CORNHILL, LONDON.
Established 1824.

Policies on healthy and diseased lives, at home and abroad, for civil, military, and naval employments.
The Office being purely proprietary principles, no partnership among policy-holders is involved.
For prospectuses, proposal papers, &c apply to
MANLEY HOPKINS, Resident Director.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1s per foot super. together with every particular of its cost and adaptation, can be obtained of Mr. BURD, 3, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 89, New Bond-street.

PAPER-HANGINGS.—To BUILDERS, PAINTERS, and the TRADE generally.—TRUMBLE and CO Manufacturers, Leeds, beg to call the attention of the trade to their immense STOCK of PAPER-HANGINGS, at No. 3, Oxford-street, London, consisting of Gold, Flock, Satins, Oaks, Marbles, Granites, and Machine Goods. The whole being their own manufacture, can supply on the very best terms.



PAPER-HANGINGS. — JEFFREY, ALLEN, and CO. beg to inform the trade, they have a large selection of Paper-Hangings of their own manufacture, of all qualities, and at very low prices. They confidently invite attention to their best papers, which in price, style, and colouring, are equal to any that can be manufactured.—J. A. and CO. are the sole proprietors of the Guide Perchs Paper, an efficient remedy for damp walls. — Factory, 115, Whitechapel; Show room, 509, Oxford street.

PAPER HANGINGS! PAPER HANGINGS!! PAPER HANGINGS!!!—Builders, the Trade, Country Dealers, and others, will find an immense STOCK and all the newest Designs of PAPER HANGINGS, at W. CROSBY'S MANUFACTORY, 29, Lowther Arcade, Charing-cross, London. Splendid new designs, both in machine and block printing, not to be surpassed by any house in England. Patterns sent for approval in town or country. Cheapest house for panel decorations. Terms, Cash.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is OLDISS'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

SWINTON IRON WORKS, near Rotherham.—TO BE DISPOSED OF, by PRIVATE CONTRACT, all those valuable and extensive IRON WORKS, known as the Swinton Iron Works, five miles from Rotherham, and eleven miles from Sheffield, having a frontage to the River Don Company's Canal, the whole length of the works, with water communication to Rotherham, Sheffield, Doncaster, Hull, &c. &c. and near the Midland and Swinton Railway Stations, on the Midland Railway, and Mexborough, on the South Yorkshire Railway. The works consist of sixteen puddling furnaces, two ball furnaces, two mill furnaces, one annealing furnace, one 30-horse condensing beam-engine, driving plate-mill, and one hammer complete, with stone-built engine-house; large iron cistern, one other portable beam-engine, 14-horse power, driving finishing hammer; one other portable condensing beam-engine, 25-horse power, driving bar-mill, with all wheels, gears, water boshes, loop plates, working tools, in the most complete working order, together with four large cylinder boilers, supplying the whole with steam; two steam-built converting furnaces, in good working order. Smiths' shop, two hearths, two pairs of bellows, with all tools complete; roll turners' shop, with two lathes, one fitted with screw machinery, driven by one 6-horse high-pressure engine, with 8-horse cylinder boiler; foundry, with air furnace, capable of melting 15 tons, two cupolas, cranes, crane and hand ladles, moulding boxes, sand, &c. all complete, with models for all the gear, wheels, &c. in the forge; dry-house, fitting-shop, model-maker's shop, joiners' shop, and carpenters' shop, melting furnace, ten holes; counting-house, three cottages, coal pens, pens for red ore and scrap iron, with coking furnace for foundry, and other warehouses and outbuildings. Also One Close or Parcel of LAND adjoining, comprising about three acres. Also Eighteen stone-built COTTAGES, at High Thorn, in the township of Swinton, and near the works, with a valuable Stone Quarry. Also a large and substantial stone-built HOUSE, at Kilnhurst, close to the railway station, well adapted for an inn, with two cottages, stabling for ten horses, with hay-lofts and carriage-house, so built as to be easily converted into cottages.—To view the Premises, apply to the Manager, Mr. COOK; for further particulars, apply to CARES and CUDWORTH, Solicitors, Leeds.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, weight, singly or in peals.
TUNED BY MACHINERY.
Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system which gives superior tone and facility for ringing.

WARNER'S PATENT VIBRATING STANDARD PUMPS. PATENT CAST IRON PUMPS, for the use of farms, cottages, manure-tanks, and wells of a depth not exceeding 30 feet.

Diameter of Barrel.	Length of Barrel.		£ s. d.
2½ in.	short 1 ft. 7 in.	Fitted for lead,	1 10 0
2½ „	long 3 3	gutta percha	1 14 0
3 „	ditto 3 6	or cast iron	2 8 0
3½ „	ditto 3 6	flanged pipe,	2 12 0
4 „	ditto 3 6	as required.	3 3 0
2½ „	short, with 15 feet of lead pipe attached, ready for fixing		2 14 0
2½ in.	long ditto ditto		2 16 0

The short-barrel Pump is very convenient for fixing in situations of limited height and space, for the supply of coppers and sinks in washhouses with soft water from under-ground tanks, or in hot forcing, and plant houses; they may be fixed, when desired, under the stage.—May be obtained of any Ironmonger or Plumber in town or country, at the above prices, or of the Patentees and Manufacturers, JOHN WARNER and SONS, No. 8, Crescent, Jewin-street, London. Every description of Machinery for Raising Water, by means of wheels, rams, deep well pumps, &c. Also, Fire and Garden Engines, &c. &c.—Engravings sent on application.

R. RICHARDS and CO. PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 18-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

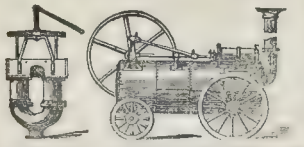
Iron Pails 32s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

B. FOWLER & CO.'S PORTABLE PUMPS,

3-inch to 9-inch Barrels,

Plain or Sliding Telescope Suction,



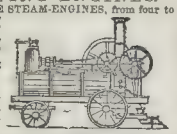
ON HIRE.

SINGLE AND DOUBLE PUMPS, all sizes, to any depth, for Hand or Steam Power.

Patent Double-action and General Pump-makers, Builders' Smiths, &c.

WHITEFRIARS-STREET, Fleet-street.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).



TO BE SOLD, a Portable 9-horse power ENGINE, with boiler attached (Gough's Patent), mounted on frame and railway-wheels; it has till latterly been used at the Grimsby Docks for pile driving and pumping, and is in good condition. Price 80£.—Apply to WM. SISSONS, 8, Station-terrace, Hull.

PUMPING and WINDING ENGINE.—TO BE LET on HIRE, or for SALE, a nearly new strong and simple PUMPING and WINDING STEAM ENGINE, of 10-horse power, by Medwin and Hall, with a pair of 10-inch pumps and all the driving gear complete. The contractor for whom it was fitted up will make a considerable sacrifice on the cost price, or let the whole on hire.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, 93, Blackfriars-road.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS, Engineers and Contractors, John's-place, Holland-street, Southwark, London.

PATENT DRAIN-PIPES, UNGLAZED, manufactured by ARTHUR C. FRANCIS and CO. Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Nine Elms, London, and at all their Warehouses.

PRICES.

3 inch bore, in 2 ft. 6 in. lengths, at		3d. per foot.
4	„ „ „ „	4d. „
6	„ „ „ „	6d. „
9	„ „ „ „	9d. „
12	„ „ „ „	1s. 3d. „
15	„ „ „ „	2s. 6d. „

These pipes are made to bear steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is now nearly thus manufacture, and it is well known that roof earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

JOHN DOULTON, BROTHERS, AND CO.
LIVERPOOL POTTERY,

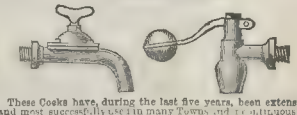
TO WATER COMPANIES AND PLUMBERS
HIGH-PRESSURE COCKS & CLOSETS.



The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a cock free from leakage, and applicable for all purposes of draw-taps. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

PRIZE MEDAL, CLASS 2.
HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns and for various high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. This internal stucco may be painted or papered within a few hours of its application, and rooms be thus made dry and habitable immediately.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.

These cements set under water in a few minutes, and are not affected by extreme heat or cold.

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with special reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, dial work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank street, Westminster, who prepare one quality only of Portland Cement

BATH, PORTLAND, and ROMAN CEMENTS GROUND and LUMP HYDRAULIC BLUE LIAS LIME.

The LONDON and WEST of ENGLAND CEMENT COMPANY can offer to the trade the best Hydraulic Cements, at reduced prices, the material being excavated in its pure and unadulterated state, from quarries on their own property. The Company particularly recommend a trial of their XXXX Bath Cement, as far superior to any article now in the market. These cements can be sent by rail or ships d from their wharf, direct to all parts.—Agents required, and a liberal discount allowed. Orders received by Mr. KIALLMARK, 80, Old Broad-street, City, or by RICHARD WINTER, Cement Works, Dunball, Bridgwater.

EASTWOOD and SONS take this opportunity of informing their customers and the trade, that they have made arrangements for the Manufacture of White Suffolk Perforated Bricks. In carrying out this common to bricks of this description, care has been bestowed to produce them of a true and perfect shape, of an even and beautiful surface, and free from fire flaws.—J. EASTWOOD and SONS, Belvedere-road, Lambeth.

WHITE SUFFOLK and RED FACING BRICKS.
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.
KENTISH RAG-STONE of the FINEST QUALITY
MILLS and PRICE, 5 ADELAIDE-PLACE, London-bridge

IMPORTANT to BUILDERS.—GREAT REDUCTION in the PRICE of BRICKS.—BRICKS delivered to any part of the River up to Battersea-bridge, at the following prices, viz.—Grey Stocks, 25s. per thousand; Grizzles, 20s. per thousand; Rough Stocks, 20s. Place, 13s. to 15s per thousand.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale There bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

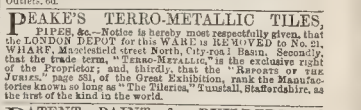
Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

THE BEST HERTFORDSHIRE MALM SECONDS;
THE BEST WHITE SUFFOLK and RED FACINGS:
DEEP-RED RUBBING BRICKS.
Also COWLEY and KENT STOCKS, in any quantity.
J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.

BRICKS.—White and Red Facing Bricks, and Hard Clinkers, for paving stables, &c. can be delivered by Thames or Eastern Counties Railway, at 10 per cent. under the usual prices.—Apply to W. and W. WRIGHT, Springfield, Essex

REMOVED FROM CRITCHILL-PLACE, NEW NORTH-ROAD, HOXTON.



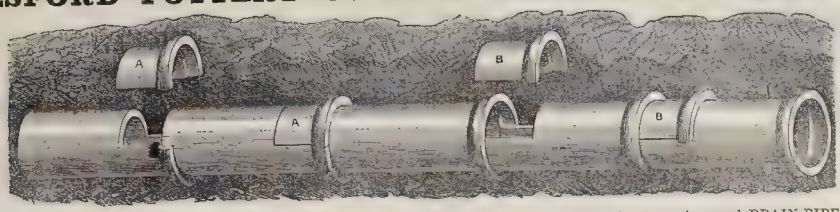
BRICK MOULDS (improved), Steel-face Stocks and Plates, with Screws and Pegs, used four seasons. Various sizes kept on hand. References where in use. Brick Mill Work and Implements.—J. LEACH, Millwright and Engineer, 9, St. Peter's-square, Hackney-road, London.

THE PATENT BRICK-MACHINE COMPANY invite orders for their IMPROVED MACHINES, the only ones that manufacture solid bricks equal to hand-made, will shortly be at work in Gold near London, accessible by railway, where it may now be seen with bricks of last season.—H. C. MOUNT, Secretary.

7, King William street, City, February, 1856.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 solid bricks per day, of far superior quality to hand-made, with 3-horse power; one man to feed the machine with clay, and boys to remove the bricks. For a plate and description, see "Practical Mechanic's Journal," for January 1st, 1856.—Any further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES to roofs of descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide place, London-bridge.



BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES either old or new whether of tiles, slate, or tiled, and other structures. Sole agent, J. B. LAWES, 1, Adelaide-place, London-bridge. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvestoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 1d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street, City-road, Regent's Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 261, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

PATENT PAINT for BUILDERS and IRONFOUNDERS.—The LONDON PATENT ANTI-OXYDE PAINT has been specially chosen by the Government Engineers as the best, cheapest, and most durable that has ever been discovered.—Address, to Mr. DEANE WALKER, at the Office of the Company, 29, New Bridge-street, Blackfriars, where every information is afforded.

AYLESFORD POTTERY COMPANY'S PATENT DRAIN-PIPES.

THE above Company respectfully invites the attention of Engineers, Architects, Surveyors, Builders, &c. to an improved DRAIN-PIPE, whereby all stoppages may be cleared without disturbing the invert of the drain, by simply removing the cover (marked A or B) whichever may be preferred.

The cover (marked B) may be used in conjunction with whole or half-socket Pipes.

Pipes thus constructed may be laid at intervals in a drain of ordinary Socket-Pipes.

With the great advantage these Pipes offer, they are cheaper than any yet submitted to the public.

London Depôt—AYLESFORD WHARF, Belvedere-road, Lambeth.

MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

GREAT REDUCTION IN GLAZED STONEWARE PIPES.

STEPHEN GREEN,

IMPERIAL POTTERIES, LAMBETH.

S. G. wishes to call attention to his WHOLE and HALF-SOCKET PIPES, made on the principle of PILBROW'S IMPROVED REBATED SOCKET-END, which fully secures a joint free from obstructions, and meets the demand for removing Pipes at any point.

5s. 6d. each; if fitted with PATENT AIR-TIGHT VALVES, 1s. 6d. each extra.

Also to his IMPROVED REGISTERED CLOSET-PAN, with an impervious White Glaze inside, and formed to insure a Flush of Water over the entire Internal Surface. Made with or without STEPHEN GREEN'S PATENT AIR-TIGHT VALVE on the top of the Trap.

N.B. Prospectuses, with Prices and Terms, forwarded post-free, as also Prospectuses of STEPHEN GREEN'S PATENT SELF-ACTING FLUSHING CISTERN, complete with Seat and Riser, &c.

WILLIAM INGHAM AND SONS,

WORTLEY FIRE-BRICK, GAS RETORT, SANITARY PIPE, AND TERRA-COTTA WORKS, NEAR LEEDS, YORKSHIRE,

Making the most COMPLETE, DURABLE, and EFFICIENT APPARATUS, as well as by far the CHEAPEST yet manufactured.

KINSON POTTERY AND CLAY WORKS, POOLE, DORSET.

DEPOT, 2 AND 3, HIGH-STREET, LAMBETH.

HALF SOCKET.

WHOLE SOCKET.

Manufacturers of every description of Sanitary Glazed Sewage Pipes, Bends, Junctions, White Glazed Closet Pans, Gas Retorts, Furnace Blocks, Crucibles, Fire Clay, &c. &c.

The Fire Bricks made from the Clay of this estate have been tested, and proved to be in every respect equal to those of Stourbridge and Newcastle.

DRAWINGS AND PRICES MAY BE HAD OF J. COX, AS ABOVE.

JOHN BROWN'S PATENT SANITARY WATER-CLOSET.

In presenting this Water-closet to public notice, the Inventor can confidently recommend it as the best of the kind yet offered. It will be seen by the trade and all practical men, to accomplish the desired end the Inventor had in view. His attention has been often called to the ill-constructed usual closet-basin, so repulsive and unpleasant in use. The accompanying design will be seen to conduct instead of repulse, giving room and pleasantness over the ordinary water-closets.

1st. It is not unsightly, and is extremely simple.

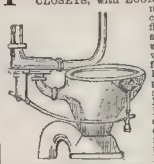
2nd. The water has a direct action, will keep it clean, and it is never liable to stop or clog up.

3rd. The trap, &c. stands perfectly above the flow, is easily fixed, and of ready access at any time.

The Patent can be purchased. Tenders will be received for the manufacture of the above by applying, post-paid, to

JOHN BROWN, Plumber, Cheltenham.

WILLIAM GILBERT, Tividale Pottery and Blue Tile Works, near Tipton, Staffordshire.—The BLUE WARE SANITARY PIPES made by W. GILBERT are the only GLAZED pipes of the kind manufactured in England. They are well vitrified, smoothly glazed, and very durable, being subjected to intense heat in the kilns. Being moulded by machinery, they are as smooth and straight as stoneware pipes; and in turn they last longer in the drains a longer than any other material. The body of the pipe is much stronger than the body of the pipe, so as to resist any undue pressure under ground. These pipes are cheaper than stoneware, and may be had in 2 feet lengths, of 2 in. 3 in. 4 in. 6 in. 9 in. 12 in. 15 in. and 18 in. bore,—with all kinds of syphons, junctions, bends, gullies, and sink grates to match. Fire-clay chimney-pots of 100 patterns. Glazed stoneware sewerage pipes, &c. &c. Terra cotta clay brackets, trusses, vases, fountains, busts, statues pedestals, &c



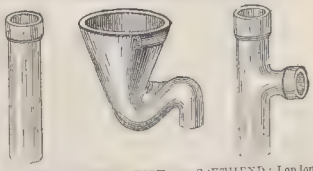
CLOSET BASINS, WHITE and BLUE URINALS, &c.

MANUFACTORY—MILLWALL.

DEPOT:

ARTHUR-STREET, NEW OXFORD-STREET.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 22, Old Fish-street, near St. Paul's, London—Price for Closet and Apparatus complete, from 22s. and perfect action guaranteed.



TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES.

FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

GREAT REDUCTION in the PRICE of STONEWARE POTTERY from this date.

VICTORIA POTTERY, LEIGH, near SOUTHEND; London Establishment, Falcon Wharf, Battersea; DAVID MOON, MAKER. Manufacturer of every article of Leadenhall POTTERY, having now fully received the prize, bronze medal, and honourable mention, for STONEWARE PIPES &c. &c. on the most advantageous terms. The new lists of prices will be forwarded on application as above.—Feb 11, 1856

SALES BY AUCTION.

In the Western Suburbs of London and Parish of Kensington, singularly valuable Freehold Lands, offering very choice and beautiful Sites for Building.

MESSRS. DANIEL SMITH and SON will (unless an acceptable offer shall be made for the entirety) submit at AUCTION, at the MART, near the Bank of England, on TUESDAY, the 8th of APRIL, 1856, at TWELVE o'clock, in lots of from three to four acres each, presenting beautiful sites for the erection of noble mansions or villas, about TWENTY ACRES of rich sound FREEHOLD PASTURE LAND, forming one fine undulating inclosure, within a few minutes' walk of the Harrow and Hanwell Stations, near several churches, but situate perfectly detached from any houses or other buildings, and commanding some extensive and cheerful scenery. It would be a peculiarly fine spot for any public institution or establishment.—Particulars, with plans, may be had at the Auction Mart; of Messrs. R. M. and F. Lowe, Solicitors, Temple; of Mr. W. Eve, Architect, 59, Eleincrescent, Nottinghill; and of Messrs. Daniel Smith and Son, Land Agents, in Waterloo-place, Pall-mall, who are fully authorised to treat for the whole or any part thereof. A valuable farm and cowhouse may be purchased, if required, at the same time.

BRIXTON-HILL, Contractor's Plant and Lots, at the Reservoir of the Lambeth Waterworks (adjoining from the new road).

MESSRS. EVERSFIELD and HORNE are instructed by the Executors of the late Mr. Nesham to SELL, by AUCTION, on the PREMISES of the LAMBETH WATERWORKS COMPANY, Brixton-hill, on WEDNESDAY, MARCH 26th, at TEN (or ELEVEN, in consequence of the completion of the contract), the valuable PLANT and EFFECTS, comprising about 1 Locomotive, 200 feet of 4 inch timber, 2 trucks, 2 barrows, 2 wheeling planks, 400 scaffold boards, poles, and putlogs, seven pile-driving engines and monkeys, pugmills, buildings, scrapers, brick and plaster carts, harness, quantity of centres, rails, quarter-iron, firewood, and other effects. May be viewed two days' prior to, and catalogues had on the Premises; also at the George Inn, Fourth, and of the Auctioneers, 10, Parliament street, or Coal Exchange.

BOROUGH-ROAD.—Remaining Stock of Artificial Stone Figures.

MESSRS. EVERSFIELD and HORNE are instructed by the Proprietor to SELL by AUCTION, on the PREMISES, 74, Borough-road, Southwark, on WEDNESDAY, APRIL 2nd, at TEN for ELEVEN, the final portion of the extensive STOCK; comprising fountains, vases, figures, groups (including the large "Dancers," the only one in artificial stone), centre-flowers, &c. To be sold without reserve, and will be the last sale this season. May be viewed one week previous, and catalogues had on the Premises, and of the Auctioneers, 10, Parliament street, or Coal Exchange.

TO MARBLE MASONS AND OTHERS.

MESSRS. EVERSFIELD and HORNE are instructed to announce that the 150 BLOCKS of MARBLE which were withdrawn from their sale on Tuesday last, at Lights Wharf, Thames Bank, Pimlico, will be SOLD by AUCTION (with an assortment of Slabs), on TUESDAY the 15th of APRIL 40, Parliament-street, March 20, 1856.

Building Materials, Westminster.

MESSRS. EVERSFIELD and HORNE will SELL by AUCTION, on the PREMISES, Perkin's rents, Great Peter-street, Westminster, on THURSDAY, the 27th of MARCH, at TEN for ELEVEN, the MATERIALS of a HOUSE and STEPS; to clear the ground.—May be viewed, and catalogues had of the Auctioneers, 40, Parliament street, or Coal Exchange.

BANKSIDE. Valuable Stock in Trade and Effects of a Stone-merchant.

MESSRS. EVERSFIELD and HORNE have received instructions from the trustee, Mr. Hy. Booth, to SELL by AUCTION, on the PREMISES, 61 & 62, Bankside, Southwark, on WEDNESDAY next, the 26th, and THURSDAY the 27th of APRIL, valuable STOCK of STONE, comprising several thousand feet of tooled York paving, landings, and sinks, York steps, kerbs, copings, and sinks, Portland, Bath, and Caen stone in block and scantling, granite blocks, pitchings, and kerb; Hare Hill and Robin Hood slab, numerous grindstones, millstones, marble slabs, chimney-pieces, &c. Also the plant and effects, comprising two excellent travelling-cranes, a seven-ton crab crane, four mason's carts, one spring cart, four stone trucks, several hand trucks, trolleys, crab capstan, crab windlass, three powerful cart horses, eight sets of harness, and numerous other effects.—May be viewed two days previous; and catalogues had, on the Premises; and of the Auctioneers, 40, Parliament; or Coal-Exchange.

ESSEX and MIDDLESEX. Paulatim Lodge; Dagenham.—Valuable Detached Enclosure of Arable Land, and Five Houses in the Baniface-wells-road, Clerkenwell.

MESSRS. BEADEL and SONS have received instructions to SELL by AUCTION, at the MART, London, on TUESDAY, MARCH 25, at TWELVE, a very desirable VILLA RESIDENCE, known as Paulatim Lodge, with conservery, excellent out-buildings, and tastefully laid-out grounds, together with a small pasture adjoining, pleasantly situate on Chadwell heath, within three miles of the Essex of Dagenham, two miles from Romford, and three from Ilford, at both of which are stations on the Eastern Counties Railway; a valuable detached enclosure of prime rich Arable Land, known as Mill Field, containing 3a. 2r. 9p., or thereabouts, the property of Mrs. Thomas Warre, at 1.1 per annum; also, a desirable Leasehold Property, comprising five houses in Oltham gardens, Penruddock-wells-road, Clerkenwell, let to responsible tenants at rents amounting to 42 10s. per annum. Possession of the residence can be had upon completion of the purchase. Particulars and conditions may be obtained of Messrs. Dawson and Bass, Solicitors, 18, Basinghall-street; at the Auction Mart; and of Messrs. Bloxam and Son, 27, Gresham street.

ESSEX.

MESSRS. BEADEL and SONS are instructed to SELL by AUCTION, at the MART, on TUESDAY, MARCH 25, EIGHT valuable FREEHOLD COTTAGES, situate on Chadwell heath, in close proximity to the Ilford-road from London to Romford; let at rents amounting to 38 per annum, the leases having originally been granted for terms of 99 years from the Michaelmas following the year 1852, and the life of a party wall only. Particulars and conditions of Sale may be obtained of Messrs. Mudford and Greening, 10, Austinfriars, at the Mart; and of Messrs. Bloxam and Son, 29, Gresham street.

PETERBOROUGH, NORTHAMPTONSHIRE.—TO IRON MERCHANTS, IRONMONGERS, SMITHS, &c.—TO BE SOLD by AUCTION, by

MR. PEAKE is favoured with instructions to SELL by AUCTION, on the PREMISES, Rush on-street, Peckham, on THURSDAY, MARCH 27, 1856, at TWELVE, without the least reserve, SIXTY TONS of SLATES, Princesses, Duchesses, Countesses, &c.; also a quantity of loose building materials, comprising deals and battens, sashes, quarter-ing, mahogany shop-front and shutters, joists, quantity of deal boards, one oak posts, scantling and other oak, with a variety of useful materials. May be viewed the morning of sale, and catalogues obtained of J. H. Anthony, Esq. Solicitor, 31, Nicholas-lane; and at Mr. Peake's Offices, 11, Tooley street, and 4, Fer-street, Southwark.

SALES BY AUCTION.

VALUABLE FREEHOLD BUILDING FRONTAGES and PLOTS Land-tax redeemed, Bermondsey, Surrey.

MR. HUMPHREYS will SELL by AUCTION, on MONDAY, APRIL 7th, at TWELVE, at GARRAWAY'S (by order of the executors of the late Mr. George Stevens), in five lots, valuable BUILDING PLOTS in Great Russell street, Riley street, Stevens-street, and Brook-street, Bermondsey, near Harold Chapel, each containing from 105 feet to 156 feet frontage, and areas from 550 to 880 yards, superficial.—Particulars and plans may be had of Mr. Joseph Finton, the executor, 18, Riley-street, Bermondsey; Mr. Phillips, collector to the estate, 168, Bermondsey-street; Mr. Frederick Hatton, Solicitor, 17, Essex-street, Strand; Mr. Brooks Hemerdon, Solicitor, 14, East-India Chambers, Leadenhall-street; at Garraway's; and of the Auctioneer, 61, Lendenhall-street.

ILFORD, ESSEX. Surplus Building Materials

MR. W. H. DEAN, will SELL by AUCTION, on TUESDAY, MARCH 25, 1856, at THREE o'clock precisely, on the PREMISES, adjoining the City of London Cemetery, SURPLUS MATERIALS, comprising planks, boards, battens, about 150 centres, and a quantity of others for arched arches, small Hipples and standards, tubs, mortar-boards, fourteen wheel-barrows, about 20 tons of rag stone, a quantity of Oven stone, York curbstone, glazed drain pipes, &c. May be viewed the day prior to the sale, and catalogues had at the Rising Sun Inn, Ilford road; and of the Auctioneer, Stratford, E. Essex.

PLAISTOW, ESSEX.—Fourteen Plots of Eligible Building Ground.

MR. W. H. DEAN will SELL by AUCTION, on THURSDAY, MARCH 27th, 1856, at the BLACK LION INN, Plaistow, FOURTEEN LOTS of valuable FREEHOLD BUILDING GROUND, exempt from land-tax, and eligibly situate on the Broadway in Plaistow, to Stratford, each having a frontage to that road. May be viewed, and particulars and conditions of sale, with plans, may be had, at the Black Lion Inn, Plaistow; of Mr. Richard Bastard, Solicitor, 7, Bedford, City; and of the Auctioneer, Stratford, Essex.

The Valuable Stock, of Architectural Books, Works on Ornament, Choice Engravings, &c.

SOUTHGATE and BARRETT will SELL by AUCTION, on the PREMISES, 137, Regent-street, on WEDNESDAY, MARCH 26, and four following days (Sunday excepted), at TWELVE for ONE o'clock, in consequence of the retirement of Mr. Remington, a large variety of ENGLISH and FOREIGN HALF-BOUND WORKS of ART, and the ARTS DECORATIVE and ORNAMENTAL, for the use of artists, architects, builders, sculptors, stone-masons, decorators, paper-stainers, calico-printers, calico-printers, jewellers, gold and silversmiths, iron and brass workers; manufacturers in glass, earthenware, carpets, oil-cloth, and furniture; glass and flower painters, schools of design, drawing-masters, and every other branch of trade connected with the arts. Also, the stock of choice English and Foreign Engravings. Catalogues forwarded on receipt of six postage-stamps.

GLOUCESTERSHIRE TO CAPITALISTS, PUBLIC COMPANIES, and OTHERS.—A valuable and most important Freehold Mineral Property, extending in the whole under about 1,200 acres. An especially eligible Investment.

MR. LEITCHILD is instructed by the Mortgagees to OFFER for PUBLIC SALE, at GARRAWAY'S, on WEDNESDAY, APRIL 16th, instead of March 26th, as before advertised at TWELVE for ONE, in seven lots, those exceedingly valuable MINERAL PROPERTIES and COAL MINES, in the Forest of Dean, which are well known as the Engine, the Pingree, the Old Church, the Hills, the Beeches, the Big Hollow, and the Upper Lewdown Coal Mines. The capital collieries are, generally speaking, in full work, and the coal are a short distance from the river Wye, and they are also supplied by a railroad belonging to the proprietors, adjoining to the Severn and Wye Railway. These valuable mines are rich in well-known seams of coal; there exists a considerable demand for both large and small coals, which can be readily worked and sent to all parts of the world. The whole of the collieries are fitted with steam engines, and all with every requisite for working with economy and effect. Also, to the extent of at least 1,000 acres of wood, and timber, of which a considerable quantity is all ready for sale, and can be cut and sent to the railway. The extensive sales contain a number of cottages, farm-houses, and other premises, and are held in perpetuity from the Crown on terms of a small yearly rent, and a royalty of 1s. per ton of coals, and a small sleeping rent, so that they are in full work. Full descriptive particulars and conditions of sale, with plans of each lot, will be issued in due course, and may be had of Messrs. Maskell and Sadler, Solicitors, of Mr. Hornblow, Bromsgrove; or at the Offices of Mr. Leitchild, 102, Moorgate street, E.C., from whom every information may be had; any communication or enquiry for the whole or a portion of the estates to private contract.

A valuable and most important Commercial Property, New Broad-street, City.

MR. LEITCHILD is instructed by the Mortgagees, to SELL by PUBLIC AUCTION, at GARRAWAY'S, on WEDNESDAY, APRIL 16, at TWELVE for ONE, in one lot, those capital PREMISES, 15 and 16, New Broad-street West, which have been recently completed in the soundest and best manner; they possess great advantages in situation, have a very extensive frontage, are lofty and airy, and are fitted up with every comfort and convenience. The premises are of seven inch and superior brickwork, of first rate fixtures and counting-house forty in all, with several cellarages and light access to every room, four strong rooms, water-closets, &c. Also, adjoining and communicating, the spacious and capital PREMISES in St. Mary Aldermary-churchyard, which consist of a respectable family dwelling-house, with excellent domestic accommodations, spacious warehouses, offices, and counting-rooms on the first, second, and third floors, and capital shops and cellars on the ground-floor and the basement. These last named premises have long been in the occupation of the proprietor, Mr. R. T. Johnson, and their rental value, with those of the premises in New Broad-street which are at present in occupation, may be fairly estimated at 1,500 per annum. The entire estate is held from the Mayor, Commonalty, and Citizens of London, for a term of 99 years, from 1853, at a ground rent of 300 per annum. To a bank, public company, merchant, established tradesman, or first class, these premises offer great advantages, as well in their central situation as in the unusual extent of space they occupy. Immediate possession may be had. Particulars and plans may be obtained shortly to be issued, and may be had at Garraway's, of Messrs. Bell and Brandon, Solicitors, Western Hall, Basinhall-street; and at Mr. Leitchild's Offices, 102, Moorgate-street, where cards to view may be obtained.

TO BUILDERS French Paperhangings, direct from Paris; Fancy Decorations and a large assortment of English Papers.

MESSRS. ROBINS will SELL by AUCTION, at their ROOMS in Covent-garden, on THURSDAY, MARCH 27, at TWELVE, FRENCH PAPERHANGINGS, recently imported direct from Paris, new and elegant patterns, panels and flocks, enriched with gold; also fancy decorations for drawing-rooms and borders, and a large assortment of English papers of a superior description, arranged into convenient lots.—On view two days prior, in Covent-garden.

ANNUAL TIMBER SALE, AUDLEY END, near SAFFRON WALDEN, ESSEX.—By order of the Rt. Hon. Lord Braybrooke, Acacia, Lime, and Chestnut Timber Trees (many of which are of good dimensions and excellent quality); 430 capital Larch Firs, well suited for farming purposes and fencing; 250 Scotch and Spruce Firs, 150 oak Saplings, and a quantity of Firewood, TO BE SOLD by AUCTION, by

MESSRS. NOCKOLDS and KING, upon the PREMISES, at TEN o'clock, on FRIDAY, MARCH 28, 1856.—Catalogues may be had of Mr. Hobbins, Audley End; of Messrs. Nockolds and King, Land Agents, &c. Saffron Walden.—The whole of the timber is lying at convenient lots and contiguous to good roads, and within a mile of the Audley End Station, on the Eastern Counties Railway. The company are requested to meet at the Littlebury Green-road, near Audley End.

SALES BY AUCTION.

DUKE-STREET, GROSVENOR-SQUARE.—To IRONMONGERS, BUILDERS, COACH MAKERS, CABINET-MAKERS, SMITHS, and OTHERS.

MR. BILLINGAY will SELL by AUCTION, on the PREMISES, 29, Duke-street, Grosvenor-square, on WEDNESDAY next, MARCH 26th, 1856, and following day, at TWELVE o'clock, without reserve, all the STOCK-IN-TRADE, comprising locks, latches, bolts, hinges, screws, files, rasps, cabinet brass work, sashlines, glass paper, glue, wrought and cut nails, chain cooach bolts, shovels and spades, a variety of iron and steel bars, and sheet-iron, brass, iron, and copper wire, cast rain water pipes, gutters, heads and shoes, various castings, also the trade fixtures, inch ring counters, shelving, drawers, sash cord, &c. Lots may be viewed, and numerous effects.—May be viewed the day prior and on morning of Sale, and catalogues had on the Premises; and at the Offices of Mr. Billingay, Metal Trades Valuer and Auctioneer, 21, Coleman-street, City.

TO ENGINEERS, MACHINE MAKERS, AND OTHERS.

CHARLES MACINTOSH and CO., Patentees and Manufacturers of the VULCANIZED INDIA-RUBBER in all degrees of elasticity, recommend its use as a valuable packing for steam-joints, for hot or cold water, gas, steam, acids, and grease. It is used extensively for valves in pumps and hand engines, railway buffers and springs, washers for sash cisterns, &c. &c. Address as above, and 106, Fenchurch-street, London; and Cambridge street, Manchester.

DURABILITY of GUTTA PERCHA TUBING. Many inquiries having been made as to the durability of Gutta Percha Tubing, the Gutta Percha Company take pleasure in giving publicity to the following letter from SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT.—"Second-street, Ventnor." March 20th, 1856. In reply to your letter, received this morning, respecting the Gutta Percha Tubing of the Company's manufacture, I am glad to say it has given perfectly satisfaction. I have seen it in operation for many years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

TO ENGINEERS, MILL OWNERS, &c.

N. Woolwich Elastic steam-packing Canvas and India rubber).

S. W. SILVER and CO. INDIA-RUBBER WORKS, North Woolwich, opposite H. M. Dockyard, having considerably extended their manufacture in order to meet the increasing demand upon them for this effective and durable article, are enabled to offer the very best material at the reduced price of 1s. 4d. per lb. for sheet and rope.

Testimonials may be seen at S. W. SILVER and CO.'s Warehouses, Nos. 3 and 4, Dashwood-street, Finsbury-square, To Engineers, who orders for Steam Packing, &c., Butler Spring Pump Leathers, and the various India-rubber appliances, will meet with prompt attention.

CAUTION.—S. W. S. and Co. have found it necessary to stamp all their manufacture, thus—"S. W. SILVER and CO. WORKS, NORTH WOOLWICH."

ROYAL ACADEMY of ARTS, Trafalgar-square.—NOTICE to ARTISTS.—All Works of Painting, Sculpture, Architecture, or Engraving, intended for the ensuing EXHIBITION at the ROYAL ACADEMY, must be sent in on MONDAY, the 7th, or TUESDAY, the 8th of APRIL next, after which no such Work can possibly be received, nor can any Works be received which have already been publicly exhibited.

FRAMES.—All Pictures and Drawings must be in gilt frames. Oil Paintings under glass, and Drawings with wide margins are inadmissible. Deceptive breadth in frames as well as projecting mouldings may prevent Pictures obtaining the situation they otherwise merit. The other regulations necessary to be observed may be obtained at the Royal Academy

JOHN PRESCOTT KNIGHT, R.A. Sec.

Every possible care will be taken of Works sent for exhibition, but the Royal Academy will not hold itself accountable in any case of injury or loss, nor can it undertake to pay the carriage of any package

The prices of Works to be disposed of may be communicated to the Secretary.

ART UNION OF LONDON (by Royal Charter). Prizeholders select for themselves from the Public Exhibitions. Every subscriber of One Guinea, will have besides the chance of a Prize, an impression of a plate of Harvest in the Highlands, engraved by J. T. Willmore, A.R.A. from the important and well-known Picture by Sir E. Landseer, R.A. and Sir Augustus Callcott, R.A. Subscription closes on MONDAY next, 31st instant.

THE ARCHITECTURAL MUSEUM, CANON-ROW, WESTMINSTER.

SUMMER SESSION, 1856.—The presentation of the prizes for Wood and Stone Carving (value in 1855) will take place on MONDAY, the 7th of APRIL next. Lectures will be delivered on the following MONDAY EVENINGS, APRIL 21, MAY 12 and 27, and JUNE 9 and 23. Hour of admission, SEVEN o'clock. The chair to be taken at EIGHT o'clock. Cards of admission will be presented on application at the Museum; or at the Office of "The Builder." The Annual Conversazione will be held on WEDNESDAY, JULY 2. Prizes of 10l. each for Wrought-iron Work and Stone Carving, will be offered during the present year.—Full particulars may be had at the Museum, on and after MONDAY next, the 31st of MARCH

GEORGE GILBERT SCOTT, Treasurer.
HENRY CLUTTON, Hon. Sec.

COMPETITIONS.

TO ARCHITECTS, &c.

THE SOUTH SHIELDS and WESTOE UNITED BURIAL BOARD are desirous of receiving DESIGNS, SPECIFICATIONS, and ESTIMATES for the following WORKS, connected with the intended New Burial Ground, the extent of which, including the road, is seventeen acres, viz:—Two Chapels (one for burials according to the rites of the Church of England, and the other for burials otherwise than according to those rites), a Superintendent's House and necessary Offices, a small Gatekeeper's Lodge, and Two Gates, the total amount of which is not to exceed 2,200l. Premiums will be given for the two designs which may be most approved of, and be also well adapted for the purpose, viz.—15l. for the first, and 10l. for the second; the plans, specifications, and estimates, for which they are given, to be the property of the Board, but neither of the premiums will be paid, unless a Tender be accepted by the Board for the actual execution of the works, at or within the stipulated sum of 2,200l. Competitors must state the amount of Architect's charges required, over and above the premium, for furnishing all necessary working drawings and superintending the works, if the Board should require their services. A plan of the site may be seen at the Offices of Mr. C. THOMPSON, Borough Surveyor, Central Hall, Chapter-row, South Shields, and the whole of the designs, specifications, and estimates must be sent to me free of expense, sealed and endorsed, but without any name or distinguishing mark, on or before the 10th of April next, enclosing a sealed letter in each case, from the person forwarding it.

By order, THOMAS SALMON, Clerk to the Burial Board.
South Shields, 24th March, 1856.

COMPETITIONS.

GARSTON, near LIVERPOOL.—To ENGINEERS, SURVEYORS, &c.—The Surveyor for the District of Garston, to which the Public Health Act, 1848, is applied, being now vacant, the Local Board of Health for said district are desirous of obtaining PLANS, SPECIFICATIONS, and ESTIMATES, for a system of SEWERAGE for effectually draining the district. Premiums of 7l. and 3l. respectively will be given to the Authors of the Two Plans, &c. &c. in estimation approved of, which Plans, &c. &c. will become the property of the Board. The specification must contain all information regarding materials, expense, &c. necessary to practically working of the drainage, and must include, so far as practicable, a scheme for preserving the sewage matter for agricultural or other purposes. Mr. GOTTOS Plans of the Parish, on the scale pre cribed by the General Board of Health, are in the custody of the Surveyor, Mr. JAMES STANDING, and may be inspected at his house, Mayfield-road, Aigburth, on application to him. But inasmuch as lithographed copies of the general plan, on a scale of two feet to a mile, may be had from the Surveyor (price 10s.), no tracings will be allowed to be taken from the original plans. Four plans, at least, from as many different bonâ fide competitors, must be sent in, otherwise the premiums will not be awarded. The plans, specifications, &c. &c. signed with a motto or device, and accompanied by a letter marked with a similar motto or device, enclosing the name and address of the Author, must be sent (carriage free) to the Office of Mr. J. B. LLOYD, Solicitor, 8, Exchange-alley, Liverpool, on or before the 15th day of MAY next.

Dated the 5th day of March, 1856.

TO ARCHITECTS.

THE Committee of the Independent Chapel, Aylesbury, are desirous of receiving DESIGNS, to comprise plans, specification, and estimate, for a new CHAPEL, to be erected on the site of the existing one, to seat 800 persons, and with a school-room and vestry attached; the whole expense of fittings of chapel, &c not to exceed 1,000l. A premium of 50l. will be given for the most approved design, unless the architect should be employed to carry out the work, the premium will then merge in the commission, the amount of such commission to be stated at the time of sending in the plans. A specification, stating the general mode of construction, the materials to be used, and the manner of finishing, to be sent with the plans, to assist the committee in their decision. Each design to be sent in accompanied with a sealed letter, bearing some motto or device, to distinguish it from others, on or before the 14th of APRIL, 1856, to Mr. JOHN GUNN, Aylesbury, of whom further particulars may be obtained

BARRACK COMMITTEE.—The Designs for Barracks, submitted to the Committee on Barrack Accommodation, are now arranged at BURLINGTON HOUSE, Piccadilly, for the inspection of the public, from Ten A.M. to SIX P.M

BUCKS COUNTY PRISON.—ENGINEER WANTED.—The Visiting Justices of the Prison will receive APPLICATIONS from persons who desire to become candidates for the situation of ENGINEER at the said prison, at a salary of 70l. per annum, with rations and lodging within the prison. The person selected must be a single man, of good character and experience; he will have charge of the ventilating and warming apparatus, the fires, the pumps, cisterns, water-conduits, gas-fittings, locks, taps, bells, and all other apparatus in and about the prison; and he will be responsible for keeping the whole in repair and working condition; and he will be required to comply in all respects with the rules and regulations of the prison. Applications and testimonials, stating age and qualifications, must be sent to me on or before the 19th day of APRIL next; and candidates for the office are not to attend personally until required by the Visiting Justices.

ACTON TINDAL, Clerk of the Peace for Bucks.
Aylesbury, March 24, 1856.

CONTRACTS.

TO IRONFOUNDERS.

Tenders to be delivered at my Office on or before MONDAY, the 14th day of APRIL next, endorsed "Tender for West Hartlepool Markets." The Commissioners do not pledge themselves to accept the lowest Tender necessarily.—By order,

WM. W. BRUNTON,
Clerk to the West Hartlepool Improvement Commissioners.
March 6, 1856.

CONTRACTS.

NOTICE to BUILDERS and CONTRACTORS.—ORDNANCE WORKS.—The Commanding Royal Engineer of the Dover District hereby gives Notice that the Right Honourable the Secretary at War will be prepared to receive TENDERS for the Execution of the Works required for the Erection of NEW BARRACKS for FIVE COMPANIES of INFANTRY, and that such TENDERS will be received at the Office of the Director-General of Contracts, Pall-mall, London, on or before TWELVE o'clock at Noon of the 2nd day of APRIL next, and not later.

Printed Forms of Tender, with Plans, Specifications, and Conditions of Contract, may be seen and obtained at the Office of the Director-General of Contracts, Pall-mall, London, on or before MONDAY, the 31st day of MARCH, 1856, from persons desirous of contracting for SUPPLYING CASTINGS of CAST and WROUGHT IRON at the several barracks in the Dover District for the War Department.

Plans, Specifications, and Drawings of the articles to be supplied, with conditions of the Contract, may be seen by persons fully competent to undertake the supply of the same by application at Tender Office, Royal Engineer Office, Arsenal, Fort, Dover, between the hours of TEN and FOUR o'clock, from THURSDAY, the 27th MARCH, to SATURDAY, the 29th APRIL, 1856, Sundays excepted. The party whose Tender may be accepted for the work will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of 2,000l. for the due performance of the contract. Parties Tendering will take notice, that the period for completing the work is extended to 31st DECEMBER, 1856.

N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Dover, 19th March, 1856.

NOTICE to IRONFOUNDERS and SMITHS.—The Commanding Royal Engineer of the Dover district hereby gives notice that sealed TENDERS will be received at the Office of the Director-General of Contracts, Pall-mall, London, on or before MONDAY, the 14th day of APRIL, 1856, from persons desirous of contracting for SUPPLYING CASTINGS of CAST and WROUGHT IRON at the several barracks in the Dover District for the War Department. Specifications and drawings of the articles to be supplied, with conditions of the contract, may be seen by persons fully competent to undertake the supply of the same by application at Tender Office, Royal Engineer Office, Arsenal, Fort, Dover, between the hours of TEN and FOUR o'clock, from THURSDAY, the 27th MARCH, to SATURDAY, the 29th APRIL, 1856, Sundays excepted. The party whose Tender may be accepted for the work will be required to enter into a bond, with two eligible securities, jointly and severally to be bound under a penalty of 500l. for the due performance of the contract. Tenders for the above service to be addressed to the Director-General of Contracts, Pall-mall, London, and endorsed "Tender for Stores, Dover District."

N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Dover, 19th March, 1856.

LIME TENDERS.—The Phœnix Gaslight and Coke Company are ready to receive TENDERS for the SUPPLY of WHITE FLARE BURNT LIME, for their stations at Bankside, Vauxhall, and Greenwich, until Lady-day in next year. The quantities are about 15,000 yards. The lime is to be fresh burnt from the kiln, unbroken, of the best quality, and to be delivered at the stations in quantities as ordered, not exceeding two yards at a time, or in barge loads of sixty or eighty yards, duly delivered into stations. Instead of white flare burnt, parties may Tender to supply common chalk lime, only taking care to designate it in their Tenders. Payment to be in cash, quarterly, or in coke at the option of the Company on the commencement of each quarter; or parties tendering can offer for payment in cash only or in breeze only. The Tender to state the lowest price at per yard for lime in carts, and also separate price if delivered by barge, and also the price per coke to be taken in exchange. The Tender to be marked with the words "Lime Tender" on the cover, and to be delivered at the Company's Office at Bankside before TWELVE o'clock on the 2nd of APRIL next.

Bankside, March 27, 1856.

BREEZE TENDERS.—The Phœnix Gaslight and Coke Company are ready to receive TENDERS for TAKING AWAY all the SMALL COKE or BREEZE from their Stations. The quantity will be about 2,500 chaldrons each from Bankside and Vauxhall, and 1,500 chaldrons from Greenwich; but parties are at liberty to Tender for any quantity not less than 500 chaldrons, to be cleared away at periods to be fixed by the Company. The Contractor, making a Tender, will thereby bind himself not to leave more than 50 chaldrons on the works at any one time, except at his own risk, upon its sale by the Company, and to pay for the same within one month after each quarter-day. The Tender is to state price per chaldron of 40 bushels, delivered into craft alongside, or into carts. It is also to be marked with the words "Breeze Tender" on the cover, and to be delivered at their Office before TWELVE o'clock on the 2nd of APRIL next.

Bankside, March 27, 1856.

TO CONTRACTORS, BUILDERS, AND OTHERS.

CLUN UNION.—Persons desirous to CONTRACT for MAKING IMPROVEMENTS in the DRAINAGE of the CLUN UNION WORKHOUSE PREMISES situate at Bishop's Castle, in conformity with the plans and specifications now lying in the Clerk's Office for inspection, are requested to send in Tenders, addressed to the Board of Guardians, at the Workhouse, in Bishop's Castle, on or before the 7th day of MAY next. By order of the Board.

FREDERIC PARDOE, Clerk.
Bishop's Castle, March 14, 1856.

TO BUILDERS AND CONTRACTORS.

PERSONS desirous of TENDERING for the ERECTION of a NEW HOUSE and OFFICES, at Ingoldisthorpe, Norfolk, may obtain the plans and specifications at the Office of G. E. PRITCHETT, Architect, Bishop's-stortford, and copies at the Rev. W. COCKETT'S, Rectory, Ingoldesthorpe. Tenders to be delivered at the Office of the Architect on the 5th of APRIL. The lowest Tender will not necessarily be accepted.

[For remainder of Contracts see next page.

CONTRACTS.

WILTON LOCAL BOARD of HEALTH.
The Local Board are prepared to receive TENDERS from competent Persons for the execution of the Works comprised in the following Contracts for the Drainage of the District, viz
CONTRACT No 1.—For excavating and Pipe-laying, to form Main and Collateral Sewers from the Brewery Boundary in Water-park to the Outfall, and for forming such Outfall

By order of the Board,
THOS. SHARRING Clerk.
Wilton-house Salisbury, March 17, 1856.

EAST DEREHAM, NORFOLK, CORN-EXCHANGE.—To BUILDERS and CONTRACTORS.—Builders desirous of Contracting for the ERECTION of the CORN EXCHANGE, East Dereham, in accordance with the plans and specifications and drawings to be seen at my Office, Dereham, may obtain the necessary information with reference to the same, at the Office of the Architects, Messrs. J. and M. GOGGS, SWAFFHAM, and after TUESDAY, the 25th day of MARCH, is sent, to the Office of the Surveyor, E. W. FOX, East Dereham, and sent by post as far as Thetford by the morning of WEDNESDAY, the 9th day of APRIL next. The Directors will not bind themselves to accept the lowest Tender, but prefer that party who will be to give good and sufficient security for the due performance of the works.—By order of the Directors,
HENRY R. COPPER, Secretary.

CONTRACT.—REMOVAL of the DUST, &c.—The Parish of St. George, Hanover-square. Such persons as are willing to CONTRACT with the Vestry of the said parish for the REMOVAL of the CINDERS, ASHES, &c. from the 9th of APRIL next until the 25th day of MARCH, 1857, from the streets and places comprised in the several districts of the Inland Revenue Commissioners, Regent-street, Golden-square, and the Pimlico district, and from all other streets and places in the out-wards of the said parish not comprised in the district under the control of the Inland Revenue Commissioners, are required, sealed up, at the Office of the Clerk of the Board-room, Mount-street, on or before TUESDAY, the 8th day of APRIL, 1856. Parties tendering are desired to take notice that all proposals must be made upon printed forms, and in the printed form of Tender. Such proposals must be delivered sealed up before the hour of TEN o'clock. The opening of the Tenders will be done by the contractor, and the Vestry will not be bound to accept the highest or any Tender. By order of the Committee of Works.
THOMAS HASTINGS CHAPPELL, Clerk.

PARISH of ST. MARYLEBONE, March 28th, 1856.—CONTRACT for SEWAGE DRAINPIPES, IRON GULLY GRATES, and other IRON WORKS for SEWERS.—Notice is hereby given, that the several Committees of the Vestry of St. Marylebone will meet at the Court-house of the said Parish, on WEDNESDAY, the 30th day of APRIL, 1856, at the LEVEE of the Vestry, for the purpose of opening TENDERS from persons willing to contract with the said Vestry of St. Marylebone for one year for the supply of Sewage Drain-pipes, Bends, Junctions, Stopped Junctions, Traps, and other Castings for Sewers. The Tenders to be upon the printed forms, and to be sent in, sealed, on or before ELEVEN o'clock on the said 16th day of APRIL. Further particulars may be known, and forms of Tender procured of the Vestry's Surveyor, Mr. ROBERT SCACE, at his draw ng-office at the Court-house, from TWELVE till ONE o'clock. The Vestry do not pledge themselves to accept the lowest Tender. By order,
W. E. GRENWELL, Vestry Clerk.

BOARD of WORKS for the STRAND DISTRICT.—To MASONS, PAVIORS, and OTHERS.—The Board will receive their Offers, 24, Henrietta-street, Covent-garden, on WEDNESDAY, the 9th of APRIL, at SIX o'clock precisely, for the SUPPLY of 1000 cubic yards of new YORKSHIRE and IRISH PAVING, GRANITE KERB CHANNELS, and IRISH LANDINGS, & Also for RESTRAINING and RELAYING the CARRIAGE WAYS and FOOTWAYS within the said District for Three Years from July last. Printed forms of Tender may be obtained at the office of the Board, between TEN and FOUR daily, and Tenders must be delivered, sealed, at the said Offices, before TWO o'clock on the day of meeting. The contractor will be required to enter into a bond, and find two sureties, to secure the due performance thereof, to be prepared at his expense. The Board do not bind themselves to accept the lowest or any Tender.—By order,
JAMES H. F. LEWIS, Clerk to the Board.
24, Henrietta-street, Covent-garden, 25th March, 1856.

BOARD of WORKS for the STRAND DISTRICT. To CONTRACTORS for SEWERS, BUILDERS, MASONS, PAVIORS, and OTHERS.—The Board will receive their Offers, 24, Henrietta-street, Covent-garden, on WEDNESDAY, the 9th day of APRIL next, at SIX o'clock precisely, TENDERS for the SUPPLY of MATERIALS and EXECUTION of JOBBING and MEASURED WORKS required for the SEWERS and DRAINS within the said District, for Three Years, from last January. Printed forms of Tender and Schedules of Prices, upon which the Contract must be taken, and Conditions of Contract, may be obtained at the Office of the Board, between the hours of TEN and FOUR, on payment of Is. 6d.; and no other form of Tender will be signed. Persons intending to tender, must, at the time of delivering their Offers, deposit the Sum of £20 with the Clerk, which will be returned to the unsuccessful Tenderers on the day of meeting. The contractor will be required to enter into a Contract, and find two responsible sureties to execute a joint and several bond for the due performance thereof, to be prepared at his expense. The Board do not bind themselves to accept the lowest or any Tender.—By order,
JAMES H. F. LEWIS, Clerk to the Board.
24, Henrietta-street, Covent-garden, March, 1856.

TO BUILDERS.
PERSONS desirous of CONTRACTING for the ERECTION of a PAPER MILL, to be built near the Hebden Station, on the Leeds and Bradford Railway, may see the plans and specifications at the office of Mr. BRAYSHAW, in Bradford, and tenders addressed to the undersigned, on or before the 5th day of MARCH next, specifying the price for which they will undertake the work, and the time in which they will complete the same, will be received by the Directors of the Hebden Bridge Paper Company. Mr. Brayshaw will give any information required. Tenders must necessarily be accepted.—Stanford, March 19th, 1856.

EAST LANCASHIRE RAILWAY.—The Directors are prepared to receive TENDERS for the MAIN LINE of the DEARNLEY and WORSNOP RAILWAY, also for the formation and laying down of a second Line of Rails from Strines Road Station to Egant Street, and from all the works connected therewith. Specifications and Plans may be seen at the Office of the Engineer, at the Upper Mosley Street Station.
Sealed Tenders, endorsed "Tender for Maintenance of Permanent Way and Works," to be delivered at the Office aforesaid, before the 19th day of April, at Noon.
MYLES FENTON, Secretary.
Bury, Lancashire, March 19th, 1856.

ROAD WATERING.—To CONTRACTORS. TENDERS are required for WATERING certain ROADS (about 18 miles) in the several parishes of Clapham, Putney, Streatham, and Wandsworth; the Contractor finding a sufficient horse and cart, and every other appendage for the distribution. A list of the roads to be watered, may be seen, and printed forms of Tender with the conditions annexed, may be obtained at the Office of Mr. D. W. YOUNG, 1, Thurlow-place, Wandsworth-road to whom Tenders are to be delivered or sent by post before WEDNESDAY, the 2nd APRIL, at Noon. No Tender will necessarily be accepted.

CONTRACTS.

TO BUILDERS, CONTRACTORS, &c.
SEALED TENDERS will be received from competent persons willing to CONTRACT for the EXECUTION of GENERAL WORKS, in the CONVENTUAL Church of the CONVENT (SAINT ALPHONSUS LIGUORI, LIMERICK, agreeably to plans, specifications, and details to be seen at the house of DAVID FITZGERALD, 16, Denmark-street, Limerick, every day from ELEVEN a.m. to FOUR p.m. (Sundays excepted) till the 19th of APRIL next. The Tenders to be addressed to the Rev. Lords BOG-ENOUS, Church of Saint Alphonsus, Limerick, and delivered on or before MONDAY, the 14th of APRIL, after which no offers will be received.—Security for the due performance of the work within a certain period, will be required.—March 24, 1856.

TO MASONS, PAVIORS, &c.
THE BOARD of WORKS for the GREENWICH DISTRICT will meet in the Board-room, Church-street, Greenwich, on WEDNESDAY the 9th of APRIL next, at SEVEN o'clock in the EVENING, to receive TENDERS for PITCHING and LAYING DOWN in any part of the district Cornish granite Kerb, not less than 9 inch by 5 inch, paving in Yorkshire stone and Guestwick flag paving, sett-inch pebble paving and Aberdeen dressed granite paving, also for taking up and repairing and re-paving, and taking up, squaring, and relaying York, Rockdale, or Guestwick stone pavement, when and where required in the district. The prices for the above to include labour, materials, and all other incidental expenses necessary to complete the same; the Contract to be for three years, determinable at the end of the first or second year. Forms of Tender and other particulars may be had on application to the Clerk, at the Board-room, Greenwich, any day between the hours of TEN and FOUR o'clock. All to be delivered to or sealed up, addressed to the Greenwich Board of Works, endorsed "Tender for Paving," and delivered at the Offices of the Board, Church-street, Greenwich, after which no Tender will be received. The Amount of TUESDAY, the 8th of APRIL next, and must contain the names and addresses of two responsible sureties for the fulfilment of Contract.—By order,
Greenwich, 22nd March, 1856. E. W. JAMES, Clerk.

LONDON and NORTH-WESTERN RAILWAY.—To CONTRACTORS and BUILDERS.—The Directors are desirous of receiving TENDERS for the ERECTION of a LOCOMOTIVE ENGINE SHED at WOLVERTON STATION. Parties desirous of Tendering may see the drawings and specification, and also obtain a full quantity estimate, at the Engineer's Office, Euston Station, on MONDAY, 31st inst. between the hours of TEN and FOUR. Tenders, addressed to the undersigned, should be sent in not later than TEN o'clock on THURSDAY, APRIL 10 1856. The Directors do not bind themselves to accept the lowest Tender.
CHARLES F. STEWART, Secretary.
Secretary's Office, Euston Station, March 24, 1856.

JOHN TANN'S new patent RELIANCE LOCK and FIREPROOF SAFES, have the best and cheapest safe in the world against fire and robbery. Testimonials, to be had of Messrs. WATERLOW, Birchin-lane; and at the Works, Jamaica-road. Hackney-road, Lond n. Iron Doors for strong rooms, party-walls.

WARMING and VENTILATION, &c.—Mr. S. EGAN ROSSER, C.E. successor to the late Mr. John Sylvester, has REMOVED to 6, CANNON-ROW, WESTMINSTER, and may be consulted upon all matters connected with the warming and ventilation, heat and its applications, drying and heating the process, Patent Hot Washing or Ablution Baths, horticultural buildings, stoves and cooking apparatus, chimneys, furnaces, flues and fireplaces, gas ventilation, the ventilation of ships, &c. &c.—Mr. R. will be happy to co-operate with architects engaged in the preparation of the plans of buildings, where any arrangements of the above character are required.
February 24th, 1856.

OLD STOVES and RANGES.—F. EDWARDS, SON, and CO. have constantly on hand a quantity of OLD STOVES and KITCHEN RANGES, in very good condition, which are taken down for them at establishments when they erect new work, and which are to be sold at exceedingly low prices. 42, Poland-street, Oxford-street.

JUDKIN'S IMPROVED GAS REGULATOR is the following advantages to recommend it to the consideration of all gas consumers:—
1st. It can be easily adjusted to supply gas at any required pressure below that of the street.
2nd. When once adjusted, it will admit of NO VARIATION in LIGHTS BURNING, whether they are few or many, whatever the fluctuations of pressure may be.
3rd. The light being purer by perfect combustion, the atmosphere is more healthy and agreeable.
4th. A saving of at least from 25 to 35 per cent in the consumption of gas is effected.
ADVANTAGES over other REGULATORS are as follow:—
1st. It is more simple in its construction.
2nd. It occupies very little space, having less friction, as it works only on two steel centres, which are immersed in quicksilver.
3rd. It is not liable to get out of repair, and requires less attention than a meter itself.
N.B. A Testing Apparatus has been fitted up on the premises of the Patentee, Judkin's Yard, 75, Corporation-street, Manchester, and 64, Fleet-street, London, for the purpose of demonstrating the above-named facts.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE.
Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Girders, and
STEWART'S PATENT CAST-IRON GAS and WATER PIPES.
Office, No. 7, Sun-lane London.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the public, generally, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.
R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

67, Hyde-park, Glasgow.
27, Hanover-street, Manchester.

TO IRONMONGERS, BUILDERS, &c.
PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 65, Fleet-street.

212° MILNER'S HOLDFAST and FIRE-RESISTING SAFES (non-conducting and vaporizing) with all the improvements, under their Quadruple patents of 1853-54 and 1855 including their Gunpowder Proof Solid Lock and Door (without which no safe is secure).
THE STRONGEST, BEST, AND CHEAPEST SAFEGUARDS EXTANT.
MILNER'S PHŒNIX 212° SAFE-WORKS, LIVERPOOL, the most complete and extensive in the world. Show-rooms, 6 and 8, Lord-street, Liverpool. London Depôt, 47a, Moorgate-street, City.—Keys free by post.
Sold also by HOBBS, ASHLEY, and CO. 97, Cheapside.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Fittings, Brackets, and Pendants of all descriptions for Gas fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods, Dress Rods, &c. &c.
Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at
RICHARD EVERED'S Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Lone-acre, London.

TO CARPENTERS, CARRIAGE-BUILDERS, and OTHERS.—COULSON'S NEW PATENT PRIZE GOUGES BORING, MORTISING, TENONING, &c. IRREGULAR SHAPES, and SQUARE HOLES at RIGHT ANGLES for boring, mortising, naves, felloes, nest, &c.; bevel well as straight; sets out the mave for any number of mortises required, with accuracy; and is adapted for boring at any angle, as well as vertical, by hand or power. W. C. received a silver medal at the Royal Show, Carlisle, 1855, and also highly commended by the judges, being the completest machine exhibited; is fitted with eight chisels from ¼ in. to 1¼ in.; eight worms, from 5-16ths to 1¼ in.; six drills, from ¼ in. to 1 in.; three-core drifter. A strong improved jack for centring the naves, with circle chisel and three-core drifters. W. C. warrants to send these machines out ready for use, which cannot be equalled for strength, durability, and correctness. Machines may be seen in use.—Full particulars given, and orders executed, on application to Mr. WILLIAM COULSON, 3c., Fetter-lane, E.C.

A CRANE to be SOLD CHEAP, capable of lifting 1½ tons, and in working condition.—Can be seen at Cambridge Wharf, Witten-road, Pimlico.

AUSTINS IMPERIAL
PATENT SASH and BLIND LINE can be obtained of all
ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES, IN TOWN OR COUNTRY.
Established 1774.

BATHS and HOT-WATER APPARATUS. J. TYLOR and SONS' ILLUSTRATED CATALOGUE of BATH WORK, &c. to be had on application. Estimates and Plans for Fitting them. J. TYLOR and SONS, Manufacturers, Warwick-lane Newgate-street, London.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidental fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office 143, Regent-street, London.

CAST STEEL.—Messrs. NAYLOR, VICKERS, and CO. RIVER DON WORKS, SHEFFIELD, are now prepared to execute orders for CAST STEEL BELLS, from 40lbs. to 6,000lbs. each, Locomotive Crank Axles, Tyre Bars without welding, Shafts, Cranks, Axles, and every description of heavy forgings in Steel, to pattern.—For further particulars, apply as above.

TO IRONMONGERS AND THE TRADE GENERALLY.
D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern book and price list, 1s.—55 and 56, High Holborn.

J. NAYLOR'S IRONMONGERY, NAIL, and METAL WAREHOUSE, 496, Oxford-street, near the Marble Arch.—Builders, Carpenters, Cabinet Makers, Locksmiths, and Bell-hangers, supplied at the lowest prices.

DOVER GAS-LIGHT COMPANY.—WANTED to PURCHASE a STATION-GOVERNOR, with 10-inch Inlet and outlet, to replace one with 6-inch connections.—the latter to be sold cheap. Persons desirous of supplying the New Governor are requested to send plans and specifications, with the price delivered at Dover, to
March 25, 1856. E. H. JONES, Secretary.

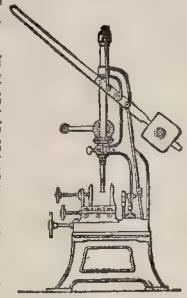
TYERMAN'S PATENT HOOP-IRON BOND,

FOR BUILDING PURPOSES.

Adopted by the Honourable Board of Ordnance, the Commissioners of Parks, Palaces, and Public Buildings, &c. &c. &c.

TARIFF OF PRICES Beyond the current Price of Hoop-iron.

Gauge.	In wide.	Per 1,000 ft
No. 18	.. 1¼ ..	7s. 0d.
15	.. 1½ ..	7s. 6d.
16	.. 1¼ ..	8s. 0d.
15	.. 2 ..	8s. 6d.
15	.. 2½ ..	9s. 6d.

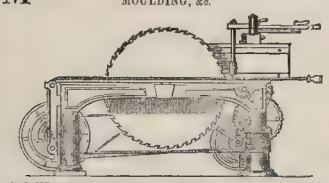


THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it a intervals of 11½ inches on both side alternately, and then sidewise each notch in succession in contrary directions on the reverse sides of the iron, thus forming reversed claws, which are so bent, that a direct end grain of the iron is presented longitudinally, offering most powerful and effectual resistance, and which become, when built into the brickwork, embedded in the structure, preventing the possibility of longitudinal escape, and a complete and permanent bonding together of the whole building is thereby obtained.

Patentee—FREDERICK TYERMAN, Architect, 44, Weymouth-street.

Sole Manufacturers—THOMAS PERRY and SONS, Government Contractors, Bilston.

London Depôt—463, OXFORD-STREET.



NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wheel-sale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

MACHINERY for SAWING, PLANING, MOULDING, &c.

SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

THE STATUE and IRON FOUNDRY,

Lower Belgrave-place, Pimlico.—Castings of every description executed at the above Works.

IRON FOUNDRY,

HARROW-STREET, LANT-STREET, SOUTHWARK.

A Discount allowed to the Trade.

ECONOMIC COOKING-STOVE.—

DEANE, DRAY, and Co. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the store and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and Co. opposite the Monument, London-bridge. Established A.D. 1700.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road,

Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, and of the most extensive dimensions, can be effectually warmed by Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c. &c. where they have fixed their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.

FIRE-PROOF CONSTRUCTION.—

FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the Kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 13, York-buildings, Adelphi.

KIMBERLEY'S NEW PATENT SCAFFOLDING BRACKET entirely supersedes the old and

ever-troublesome cords. They are made of every kind in Wrought Iron are light, very cheap, and it is next to impossible to wear them out. They are greatly admired, and require time only to supplant entirely the use of uncertain cords. Books, with all particulars, by post. The whole Building Trade admit this is an article they have required for the last century.

London Agents:—

Messrs. PUGH & CO. 13, King-street, Snow-hill, London.

See also KIMBERLEY'S Patent Lining-screws, Skylight screws, Casement Fasteners, Stock Locks, Bench Stops, &c. &c.

TO ARCHITECTS, &c.—T. SMITH, of

14, Queen-street, Oxford-street, begs to call attention to his IMPROVED SELF-ACTING WATER-BAR for FRENCH CASEMENTS, the best and most efficient yet invented. A working model can be seen at the above address, or will be sent for inspection on the shortest notice.

N.B.—Espagnolette Bolts of a superior quality, at reduced prices

CLARK and HUNT'S IRONMONGERY,

MARBLE.—NOTICE.—The ITALIAN MARBLE COMPANY have REMOVED their Office from 18, Canning-street, City, to their WHARF, THAMES BANK, PIMLICO, adjoining the east side of Vauxhall-bridge. Please observe the exact address.
WM. W BONNIN, Secretary.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab the beautiful stone now raised from the largest serpentine quarries, Chimney-pieces, Columns, Fonts, and ornamental works on view, at 20, Surrey-street, Strand.
HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent in London.

TO SCULPTORS, BUILDERS, MASONS, &c.
B. FABBRICOTTI respectfully invites the attention of Gentlemen connected with the Marble Trade to inspect his fresh STOCK, composed of statuary, vein, Sicilian, black and gold, dove, Bardilla, Siena, and Breccia, in blocks, and particularly call their attention to a large quantity of his best statuary, sixty blocks, of all sizes, just landed.
Monuments, vases, and statues, finely executed in Italy.
Carrara Wharf, Thames-bank, Pimlico.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, King's-cross, London, continue to supply the trade with all descriptions of Marble, in Block and Slab, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

STONE! STONE! STONE!—At Lowest PRICES, all kinds of Stone supplied to any extent. Quarry worked, sawn, or scrabbled to dimensions. Direct to any part by vessel or rail. A single truck load at wholesale prices.
Depôts—Victoria Stone Wharf, Isle of Dogs, and No. 3 Wharf, Great Northern Railway, King's cross.
Grindstones, fire goods, and terra cotta. Special estimates given to supply large contracts.
Address, S. TRICKETT, General Stone Merchant, Victoria Wharf, Isle of Dogs.

STONE, GRANITE, and MARBLE.—BRAMLEY FALL, CAEN,
DARLEY DALE, FARLEY DOWN,
HAM HILL, HUMBLE-STONE,
PORTLAND, and various Stones, in Block and Slab.
Yorkshire Paving, Landings, Steps, Sills, Sinks, Coping, &c.; Granite Blocks, Trams, Curbs, Pitchings, &c.
Valentia Slate Slabs, Grindstones;
Marbles, in Blocks and Slabs.
At FREEMAN'S Stone Wharfs, Millbank-street, Westminster; City-road Basin; and Deptford.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS,
MILLBANK-STREET, WESTMINSTER.
Marble of all kinds and of best quality, in block and slab, Marble mortars, &c.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace.—Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

CRUSHING STONES on RUNNERS.—For SALE, SEVERAL PAIR, with gear, iron, and marble beds, complete.—Apply (by letter), to Mr. WILLIAM THOMAS, 73, York road, Lambeth.

DARLEY DALE STONE.—This Stone, introduced by Sir Charles Barry at St. Edward's Grammar School, Birmingham, and well known as having been selected for
ST. GEORGE'S HALL, LIVERPOOL,
and numerous works, including the Railway Station, Birmingham; Borough Bank, Liverpool; Evesham-bridge; Mr. Beaufoy's Schools, Lambeth; and the Portico and Corsice of the Town-hall, Leeds; is kept in considerable quantity at the Darley Dale Stone Wharf, City Basin, London.—Apply to W. and J. FREEMAN, Millbank-street, Westminster; or GEORGE WALL, at the Quarries, near Matlock.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 246, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, and Co.), Caen-wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to supply from their Wharf, as above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE.

BATH STONE.—HENRY STONE, QUARRYMASTER, begs to inform Architects, Builders, and others, that he still continues to supply the best COMB DOWN, HAMPTON DOWN, and BOX GROUND WEATHER STONE. Delivered in the trucks at Box or Bath station on the most reasonable terms. H. S. begs to call particular attention to his Hampton Down Stone, it being of a very fine texture and rich colour, adapted for either external or internal purposes. Ashlar and Sawn Range Stone cut to order. Cargoes shipped in Bristol, and delivered to any part round the coast.—Residence, WIDCOMBE, Bath.

YORKSHIRE STONE.
GEO. VINT and BROTHERS, IDLE, near LEEDS.
Beg to inform Architects, Surveyors, Contractors, Builders, and Masons, that they can supply to any extent all kinds of YORK STONE, including Paving, Bramley Fall, Park Spring, Robin Hood, Harehill, &c. of the very best quality, direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED. RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Hodstones, Ledgers, Steps, Landings, &c cut on the shortest notice. Country orders promptly attended to.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, and for Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

PARIS EXHIBITION.—ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour, also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1848. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of loo-tables, chiffoniers, consoles, &c.; baths baptistries, altar-tablets, pilasters, columns, vases pedestals, and brackets; round tops for Bagatelle tables; wings to halls, vestibules, and dairies.—Price lists can be had on application to Mr. MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.
ENAMELLED SLATE CHIMNEY-PIECES, of elegant designs and superior workmanship, in great variety, at prices from 21s. to 10 guineas. Slate Cisterns made to any size.—J. HOWELL, Manufacturer, 5, Cook's-grounds, King's-road, Chelsea, Middlesex

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in damp situations,
FROM 2s. 9d. PER SQUARE YARD.
Country Builders supplied with Asphalte for footings and barn floors, with instructions for using it.
Apply to JOHN PILKINGTON, Poloneeun and Limmer Asphalte Office, Monument-chambers, 14, Fish-street-hill, London.
N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

TO BUILDERS and OTHERS.—2,000 yards of ROAD GRIT (has been lying in heap five years) TO BE HAD GRATIS, to clear the Premises.—Apply at Cooper's-yard, King-street, Union-street, opposite the National Schools, Borough-road.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

CROGGON and COMPANY, Manufacturers of
PATENT ASPHALTE ROOFING,
BOILER, RAILWAY, SHEATHING and INDOROUS FELT,
For Damp Walls, and Lining from Houses,
2, DOWGATE-HILL, LONDON.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.

W and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, lately removed from No. 21 Wharf, Harrow-road, to 8, North Wharf-road, Paddington, have now on sale good Garden and Screened Gravel. For terms, &c apply at the Wharf.

Contractors supplied to any extent.

TO CONTRACTORS, BUILDERS, and OTHERS FOR SALE, about THIRTY LOADS of SCOTCH FIR PLANK, from 3 to 4 inches thick. Also, about 2 000 of Larch Poles, and a quantity of good seasoned Oak Scantling, fit for immediate use.—Particulars may be obtained by applying to Mr. JOHN PUTTOCK, P.P. Horsham, Sussex.

TO BUILDERS, WAREHOUSE-KEEPERS, and OTHERS.—MAHOGANY COUNTERS, MAHOGANY BLINDS, and an ARNOTT STOVE, all very first-rate, for SALE, in consequence of alterations.—Apply to J. T. R. 3, Gresham-street, City.

TO BUILDERS, CABINETMAKERS AND CONTRACTORS.

FOR SALE.—A large quantity of dry RIGA CROWN WAINSCOT, three years old, in boards and planks of various thicknesses, from 1 to 3 inches.—For particulars, apply to MESSRS. WARRINGTON and BEETSON, Wood Brokers, New City Chambers, Bishopsgate-street, London.

EDWARD SIMMS begs to inform Builders and the trade, that he has now on hand at his manufactory (the first of its kind ever established), a large assortment of PREPARED FLOORS and MATCH BOARDING, seasoned, and ready for use, from ¼-inch to 1½-inches thick, in Waite or Yellow Deal, Oak, or Pitch Pine. Also Dry Deals, in all thicknesses, Slating Battens, Pantile Laths, Oak Cills, Plank, and Scantlings. Mouldings in clean Pine, to any design. A pattern list forwarded on application. Address, E. SIMMS, Flooring Manufactory, Wilton-road, Pimlico; and Sawing, Planing, and Moulding Mills, King's-road, Chelsea.

GREAT REDUCTION.—Yellow Deals, 3s. 6d.; Pine Plank, 3s. 9d.; 2½ Yellow Battens, 12s. 10s. per 120—12 feet.; 1-inch Mahogany, 6d.; 1 Walnut, 7d. per foot. Cartage free in Town.—T. FORMAN, 1, Walnut-Tree-Walk, Lambeth

---

OAK SASH-CILLS, QUARTERING, &c. ready cut out to sizes and lengths required, at the lowest price.

Address, E. SIMMS,

SAWING, PLANING, AND MOULDING MILLS, KING'S-ROAD, CHELSEA, AND WILTON-ROAD, PIMLICO.

COUNTER TOPS.—R. VIGERS, TIMBER MERCHANT, Kennington, Surrey, solicits the attention of builders and shop-fitters to his carefully selected MAHOGANY, suitable for Counter Tops, and to his seasoned Materials for builders, cabinet and blind makers, &c. Delivered, cartage free, to any of the London railway stations, or within three miles from Kennington Church.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry Flooring at low prices.—Southwark-bridge Wharf, Bankside.

TO BUILDERS, CARPENTERS, &c.

SAMUEL CROWHURST, Jun. begs to call the attention of Builders, Cabinetmakers, &c. to his Stock of seasoned and well-assorted Timber Goods, Deals, and Mahogany, in Logs, Planks, Boards, &c. at prices which will be found equal if not less than any advertised. Country Builders supplied on the most liberal terms.—Timber-yard, Hanover-street, Walworth; and Francis-street, Newington, near the Church.

MACHINE CARVING WORKS (Patent). Ecclesiastical and every other description of CARVING. A magnificent Gothic Screen, Carved Glass Frame, and other specimens. Tables, Chairs, Lecterns, &c. Designs and estimates at the Works, Belvedere-road, Lambeth, foot of Hungerford-bridge.

SOLICITORS.—Messrs. Dawes and Sons, Angel-court.

Insurances against loss by fire are effected by the PHŒNIX COMPANY upon every description of property, in every part of the world, on the most favourable terms.

Persons insuring with the Phœnix Company are not liable to make good the losses of others, as is the case in some offices.

Insurances with this Company expiring at Lady-day must be renewed within fifteen days thereafter, or they will become void.

Receipts are now ready at the principal offices, Lombard-street, and Charing-cross, and with the respective Agents throughout the United Kingdom.

GUARDIAN FIRE & LIFE ASSURANCE COMPANY, No. 11, Lombard-street, London.

SECRETARY—Geo Keys, esq.

ACTUARY.—Samuel Brown, esq.

LIFE DEPARTMENT. Under the Provisions of an Act of Parliament, this Company now offers to future insurers Four-fifths of the Profits, with Quinquennial Divisions, or a low rate of premium, without participation of profits.

The next division of profits will be declared in June, 1860, when all Participating Policies which shall have subsisted at least one year at Christmas, 1859, will be allowed to share in the profits.

At the five divisions of profits made by this Company, the total reversionary bonuses added to the policies have exceeded 913,000l.

At Christmas, 1854, the Assurances in force amounted to upwards of 4,240,000l the income from the Life Branch in 1854 was more than 300,000l and the Life Assurance Fund (independent of the Guarantee Capital) exceeded 1,700,000l.

FOREIGN RISKS.—The extra premiums required for the East and West Indies, the British Colonies, and the northern parts of the United States of America, have been materially reduced.

INVALID LIVES.—Persons who are not in such sound health as would enable them to insure their lives at the tabular premiums, may have their lives insured at extra premiums.

LOANS granted on Life Policies to the extent of their values, provided such Policies shall have been effected a sufficient time to have attained in each case a value not under 50l.

ASSIGNMENTS OF POLICIES.—Written Notices of, received and registered.

MEDICAL FEES paid by the Company, and no charge will be made for Policy Stamps.

Notice is hereby given, That Fire Policies which expire at Lady-day must be renewed within fifteen days at this Office, or with Mr. SAMS, No. 1, St. James's-street, corner of Pall-mall; or with the Company's Agents throughout the Kingdom, otherwise they become void.

Losses caused by Explosion of Gas are admitted by this Company.

NORWICH UNION LIFE INSURANCE SOCIETY.

PRESIDENT.—Lieut. Gen. Sir R. J. HARVEY, C.B.

SECRETARY.—Sir SAMUEL BIGNOLD, M.P.

This Society in forty seven years has issued 29 344 Life Policies, paid in claims upwards of 1,430,44l. and assigned 1,591 242. in bonuses. The accumulations now amount to nearly 2,200,000l. Its premiums are lower than those of most companies, and all the profits are divided among the assured.

For prospectuses, apply to Surrey-street, Norwich; and 6, Crescent, New Bridge-street, Blackfriars, London.

TO BUILDERS, and all Parties interested in House Property.—The Advertiser, an Agent for a respectable Fire Insurance Company, is prepared to allow TEN PER CENT. commission on the FIRST YEAR'S PREMIUM, for any amount of business introduced.—Apply to Mr. H. BOWEN, 128, High-street, Camden-town.

THE LONDON and WESTMINSTER BANK issues CIRCULAR NOTES of 10l. each, payable at every important place in Europe. These notes are issued without charge, and they are cashed abroad free of commission. The Bank also issues, free of charge, Letters of Credit on all the principal cities and towns in Europe. The Letters of Credit are issued only at the Head Office in Lothbury. The Circular Notes may be obtained at the Head Office in Lothbury, or at any of the Branches, viz:—

Westminster Branch, 1, St James's-square.
Bloomsbury ditto, 214, High Holborn.
Southwark ditto, 3, Wellington-street, Borough.
Eastern ditto, 87, High street, Whitechapel.
Marylebone ditto, 4, Stratford-place, Oxford-street.
Temple Bar ditto, 217, Strand.

The rate of interest allowed on deposits of 500l and upwards, at the Bank or any of its Branches, is now 5 per cent.

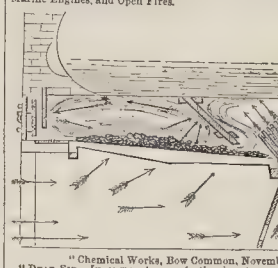
J. W. GILBART, General Manager.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUTER'S PATENT WIND-GUARD.—This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Ironmongers and Builders; and of the Patentee, at his Office, 65, Fenchurch-street, London.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an



EXTERNAL WALL

With single pulley, from 6s. each; with leading pulley, from 6s. 6d. Air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required. HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c

---

LESS FUEL, MORE STEAM, NO SMOKE.

GARDNER'S PATENT SMOKE CON-SUMER is SELF-ACTING, EASILY FIXED at a SMALL COST, IMPROVES the DRAUGHT, and SAVES FUEL. Applicable to all Furnaces, Boilers, Ovens, Locomotives, Marine Engines, and Open Fires.

"Chemical Works, Bow Common, November 9, 1855.

"DEAR SIR,—In answer to your further inquiry concerning the saving of fuel in connexion with the use of your patented apparatus, to which inquiry I was hitherto, from incomplete observation, unable to reply, I beg now to state that we are enabled without difficulty and without smoke, to command a full supply of steam, and to generate it much quicker than we could previously. We employ an ordinary furnace and feel satisfied there is a considerable saving of fuel, the precise amount of which we cannot at present determine.

"I remain, dear Sir, yours truly,

"To E. V. GARDNER, Esq." "FRED'K. ALLEN.

Apply to the PATENTEE, 24, Norfolk-street, Middlesex Hospital; or to Messrs. BURBIDGE and HEALY, 113, Dorset-street, Fleet-street.

Bakers' Ovens fitted for 5l. license included.

SELF-ACTING SMOKE-CONSUMING FURNACE.—KNOWELDEN'S PATENT. The Patentee of this Furnace offers to supply furnaces on trial, and remove them after one month, without charge, if not approved. The construction of this furnace is simple, and it may be easily repaired. The bars are the full length of the furnace. Motion is given to all the bars, each alternate bar being raised and carried forward, bearing the fuel on them; on reaching the end of the fireplace, the bars drop and return; by which continued action the fuel is distributed over the surface of the furnace from the outside hopper. References to firms that have used the furnaces twelve months:—Apsley Pellatt, esq. M.P. Falcon Glass works, Holland-street, Blackfriars, has used a 12-horse power furnace twelve months; Mr. Edward Gripper, Winchester-wharf, Bankside, Southwark, has used a 25-horse furnace twelve months. Apply to JOHN KNOWELDEN, Wellington-wharf, Clink-street, Bankside, Southwark.

The hose is Burnetticed at an extra charge of 3d. per yard Union Joints, Branch Pipes, and Jets, are also supplied.

DURABILITY of GUTTA PERCHA TUBING. Many inquiries having been made as to the durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter FROM SIR RAYMOND JARVIS, Bart., YENNORTH, ISLE OF WIGHT. —Second Testimonial.—"March 12th, 1856.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many months have now elapsed since I examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it will be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON

TO ENGINEERS, MILL-OWNERS, &c.

N. Woolwich Elastic Steam-packing (Canvas and India-rubber), at 1s. 4½d. per lb.

This entertainment, written by G. Moore, Esq will be given every morning at 3.45, and evening at 8.45, by F. L. Horne, Esq. who, with the Misses Mascall, will sing the vocal illustrations. Also, a series of splendid Dioramic Pictures of the total Destruction of Covent-garden Theatre, showing it at the time of Anderson's Bal Masqué, and the sudden breaking out of the fire, mornings at 3 evenings 7.45. Last week of the War Views, which are going to the Theatre of San Carlos, Madrid; daily at 1.30.

The Builder.

Vol. XIV.—No. 686.

THE exhibition of the competition drawings for barracks was opened at Burlington House, on Monday last; but as yet, very few persons have availed themselves of the opportunity. We need hardly say now, that we view an exhibition of this kind as full of advantage to the profession. About this element in the vexed subject of competitions there can be no question; and as to the present case, it is seldom that any similar care is taken by a committee in doing what they can do, to ascertain what are their own wants. The committee examined twenty-three witnesses on points connected with defects of the existing barracks; and their report, prior to the competition, appears to have been drawn up with care, and proper apprehension of the desired improvements, and those additions to the accommodation which have been so long demanded on the score of health, decency, and the now-admitted requirements of the soldier in regard to education and harmless recreation. At present, as it was admitted in the House of Commons, a few weeks since, by Lord Palmerston—"there can be no doubt that the barracks in this country are inferior to those of any other country in Europe." He said,—"Wherever you travel on the continent, you find that buildings of this character are more airy and spacious, more judicious in the plan of their construction, and in all respects better adapted for the accommodation of troops than in England." Some of the recently-erected buildings, though probably superior to those of older date, have been found objectionable in points of great importance. At Woolwich, the system of warming and ventilation adopted is called an utter failure. At Devonport, the yard is described as not wide enough for half a battalion, and therefore perfectly useless for the exercise of the troops within the barracks; there is no accommodation for the wives of soldiers, spite of all that has been said of the objectionable character of the present practice; and whether from leakage of the roof (through inattention of the authorities of the Ordnance to the quality of the asphalte) or from condensation of the moisture inside, the construction itself seems to be very defective.

Some of the questions as to accommodation are peculiarly difficult in the case of places of residence for soldiers. It is impolitic wholly to forbid marriages, and yet it seems to be found difficult to properly recognise them. Quoting again from Lord Palmerston's speech, on the 7th inst.:—"Every day we are reminded of the necessity of providing suitable habitations for the civil population," and it cannot be supposed that "these considerations" will not be deemed "of equal importance in the case of our soldiers." The committee, however, do not seem to have seen the possibility of accepting such view of the case; for, though they seek to provide separate accommodation for the soldiers recognised as married, that accommodation does not go beyond a single small room,—though it might have to hold a large family. There is difficulty also in providing for the sergeants (often married men), who require some degree of privacy on all accounts, and who yet must be sufficiently amongst their men in the barrack-rooms to maintain discipline: and this difficulty is one of the points that has not been got over in the plan for infantry barracks which has received the first premium.

We are not aware what length of time the adjudicators gave to the examination of the 114 sets of drawings; but though we have gone through the report and evidence with some degree of care, we confess ourselves utterly unable to vie with the ordinary skill of competition committees in getting through work of this nature, and we propose, therefore, to return to the subject in our next. We may, however, observe that there are some points to which great importance should be attached in comparing the designs; and we are not sure they have been sufficiently considered by the committee. Expense of ground and construction may be thought of secondary importance; but it is not to be disregarded. The selected design for infantry barracks would be extremely costly. The quantity of ground which it covers cannot be less than 35 acres. If such an area is *necessary*, objection falls to the ground; but if otherwise, let it be considered what would be the cost of sites of such extent in the neighbourhood of towns. Extent is also a positive disadvantage in regard to convenience and supervision.

The design which has received the second premium, occupies but half the area of the other, or thereabouts. We are not aware whether the buildings there were deemed more crowded than was desirable; but the plan has some advantages over the first in regard to intercommunication. A principle referred to in the evidence, and different from that shown in the plan which we engraved last week, on which we have received some expressions of opinion, has been adopted; and altogether this second design will deserve careful consideration. It should be remarked that there is no back entrance.

In the first design, the position of the principal gate, towards one end of the ground, is defective as to some results—as the access therefrom to the quartermaster's stores; and that from the barrack-rooms of 500 men, to the parade-ground seems insufficient. Ablution-rooms, we may observe also, should be well lighted.—The design, which has received the third premium is one in which a member of the committee is said to have had some hand. An iron and glass roof is adopted for a covered drill-ground, on to which the barrack-rooms open with galleries. Great care has been taken in the preparation of this large set of drawings. The plan, however, is defective; the distance of the kitchens from some of the rooms being far too great. There are several of the unsuccessful designs which cannot but afford most useful suggestions in points in which some of the premiated designs are deficient; and if those drawings are retained by the committee, some compensation will, we hope, be afforded for the great pains and merit which they display. The *panopticon* principle seems to have been attempted by several of the competitors; but the appearance on the plan is gained in the majority of cases without the reality,—unless it be in the design for the cavalry barracks, to which the third premium was given. Circular forms even have been adopted in some cases, without regard to their convenience for the ordinary movements of troops, in quadrangular masses. External character has not generally received much attention, though there are some important exceptions; and we shall, of course, hold it as indispensable that the future opportunity in this respect shall not be thrown away. Next week we may hope to enter a little more into analysis. Some of the competitors, we may say, are anxious that the names of the authors should be attached to the drawings.

Temple Ruins discovered at Marseilles.—The ruins of the Temple of Diana which was known to have existed at Marseilles have just been discovered by workmen employed in digging the foundation of the new cathedral.

THE LILLE CATHEDRAL COMPETITION.

It is curious to notice the different way in which architects have treated the subject: there is the expression, too, of divers nationalities, interesting to compare, but more than difficult to describe. With two or three *bizarre* exceptions, all are works of merit, and have cost much thought and labour. We will select a few, and endeavour to convey a rough idea of their beauties.

Under the motto, "Tria juncta" (7) eleven drawings, evidently of British origin (and none the worse for that), show a nave with double aisles, absidal chapels round the choir, terminating with an octagon chapel to the patron saint (Notre Dame de la Treille). There is a crypt under the altar. The west entrance is ornamented with statues, and window above. The two towers are octagon in plan, have buttresses with pinnacles, and terminating with open-work stone spires, in the florid style. The whole is a good sample of the work of the thirteenth century, but the open-work seems to partake of the fourteenth; nevertheless, the design is full of merit, and generally admired.

"Dieu en soit garde," is the motto to sixteen drawings: the plan shows the usual arrangement, single aisle on either side of the nave, gallery or triforium over the aisles; those round the choir are double, with chapels. The entrance is by three large deeply-recessed doorways, ornamented with statues in niches, &c. as at Rheims. The general character of the building partakes of Rheims and Amiens cathedrals. Great pains have been bestowed on these drawings: the tracery of choir, with details of the pavement, is a masterpiece—vaulting of deep blue spangled with gold,—and the brilliant way in which the colouring of the rest of the interior is set forth is far beyond what is usual in competition drawings. This design is known to be the work of Leblanc and Raimbaut, architects, at Rheims.

The plan following, motto (222) "Quam dilecta tabernacula," &c. is exemplified in twenty-four drawings. The west or principal front is composed of three ornamental doorways, of good design, with rose window over centre door, flanked by two high square towers of stone and brick, in horizontal courses. The vaulting of the interior is of stone and brick, and the effect produced thereby is good. Windows are lancet-headed. The detail drawings are carefully executed. Several pen-and-ink sketches, of rare ability, display views of the exterior, the organ-loft, and a portion of the cloisters. This design is English.

"L'éclectisme est la plaie de l'art," is the motto to twenty-one drawings, framed and glazed. A handsome plan shows nave with single aisles; double aisles round the choir, with chapel. There is a beauty about this plan obtained by the order and disposition of the parts, that cannot fail of being appreciated. The style chosen is the most simple, and devoid of ornament; nevertheless, it is very effective. The perspective view of the interior clearly shows the arrangements to be of a superior order. The pulpit, confessionals, stalls, &c. are not in character with the rest. Angels, saints, &c. stuck on slender sticks, all alone, do not excite admiration—rather criticism. Still this is one of the best designs submitted—it is the work of Mons. Lassus, the restorer of the Sainte Chapelle, at Paris.

"In Domino confido," marks twelve well-executed drawings: the two towers in west front are square below, octagon above, gradually diminishing, and finished with spires with ornamented bands, large enriched doorways; the numerous buttresses terminating with pinnacles around the sides and east end, complete a very effective exterior. In the interior, the columns support arches, very pointed, rich mouldings; the columns have a massive appearance, so much so, that those at the intersection of the nave with transepts have contracted the open space, and thereby materially interfere with a full view of the choir. This is to be regretted, as the details and general disposition of the plan mark it an able production. This is doubtless English.

"Fœderis Arca" is set forth in twelve drawings; three large recessed doorways, ornamented

with saints, in niches, surmounted by a row of niches containing statues, over which there is a rose window. Square towers, with spire, and small pinnacles at angles, form the principal front. The general effect of the exterior is not happy, although the details are good; the interior is preferable. The drawings of the confessional, screens, stalls, iron work, and the glass windows denote the work of one possessing great acquaintance with church furniture; even the style of the drawings is of the period, and we have no hesitation in ascribing this, too, to England.

"Ad æthera tendens," is on thirty-one drawings, very carefully made, and denoting good taste. The design includes two decorated open-work towers in front, three enriched doorways, with large window over. A very high tower, with pinnacles, &c. &c. rises from the intersection of the nave and transepts.

"Spes" is the motto of six drawings, of a very fine pile, apparently of English invention. There is great beauty in the arrangement of the plan, the chapels round the choir presenting a cluster of buttresses, with pinnacles, externally of good effect. The principal front, with its three doorways, window above, and single tower, although the popular prejudice is in favour of two, is of great beauty, captivates at first sight, and improves upon a more intimate acquaintance. The ornamental open screen in front only which surmounts the body of the nave, is pretty in design, but merely serves to give height; it stands alone, and unfortunately the effect on the longitudinal elevation is that of weakness.

"Zelus domus tuæ comedit me" has eleven drawings to illustrate a peculiar plan. At the intersection of the transepts with nave, an octagon space is shown, the columns rising to the springing of the groining of the roof. Above the arches of the gallery, are niches all round, with statues, which produce a novel and good effect. The high altar is placed at this point, the choir beyond, so that the nave and transepts serve equally for devotional purposes. The altar is raised, the choir more so: the crypt is under the choir, and easy of access. The windows are lancet-headed, single under the arches—in pairs above, with rose window over. The front is also novel in design; an immense arch richly decorated, embraces the whole of the front, between the towers, and encloses the three doorways, and large window of the west end. The towers are of open work tracery.

"In veritate confido," "Dum spiro spero," "Le monument sera l'expression d'une grande pensée d'esthétique catholique," and others, might also be noticed, as possessing merit; but here we must stop. The exhibition is now closed to the public, and the jury have possession of the place: let us hope they will arrive at a wise decision.

THE PROPOSED WAR-OFFICE, PALL-MALL.

This matter does not stand now exactly as our correspondent of last week put it. Professor Cockerell was at first regarded as desiring to quit the profession, and so was not included in the list of invited competitors. Ultimately, however, he was applied to, and accepted the invitation. Mr. Tite has declined, and Mr. George Mair has been added to the list, which now stands thus,—Sir C. Barry, Mr. Cockerell, Mr. P. C. Hardwick, Mr. Mair, Mr. Pennethorne, Mr. Shaw, and Mr. S. Smirke. The designs are to be sent in six weeks after the instructions have been issued. The selected competitor will carry out his design, and receive 5 per cent. commission; and each of the other candidates will receive 100 guineas; all the designs remaining the property of the Government. The idea originated, we believe, with Sir Benjamin Hall, who deserves credit for desiring to render such new buildings as may be required by the Government worthy of the country.*

The Thames Tunnel.—During Passion week, no fewer than 52,611 passengers passed through the tunnel, and paid 219*l.* 4*s.* 3*d.* in tolls.

* A correspondent urges that the matter should be thrown open to public competition.

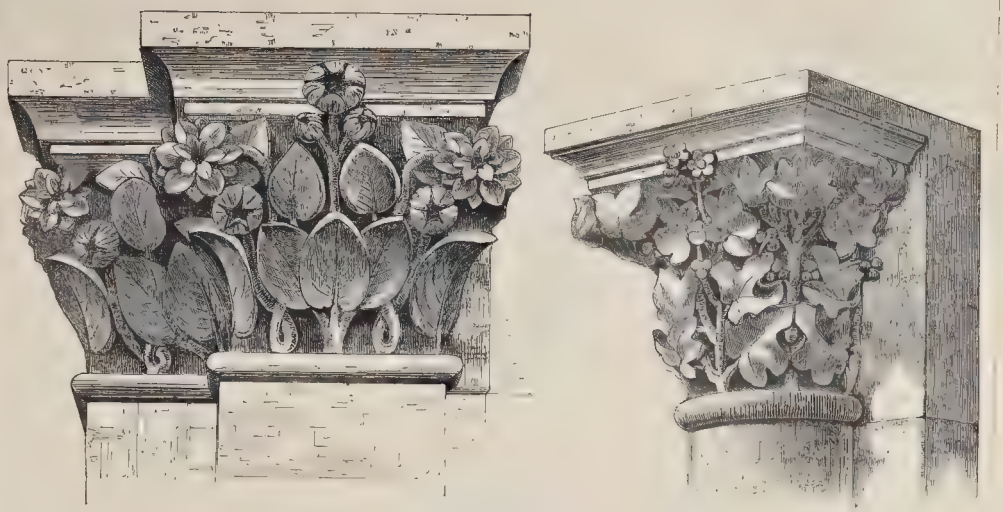
ARCHÆOLOGICAL STUDIES IN JERUSALEM.*

With the family of Herod the historical importance of Jerusalem ceased for a time, and it was only when Christianity became the religion of the Roman empire that it again rose into importance. From the time of Constantine to that of Heraclius, the whole of Palestine, and especially Jerusalem its capital, might be considered the head quarters of Christianity. It was given up by the Roman emperors to religion, and was covered with churches, monasteries, and convents. The history of that period gives, as the most prominent names in the country, those of Saints Jerome, Eusebius, Paula, Saba, and many others. The monuments of that period, however, are scarce. We have a church in Jerusalem, which, as far as we can conjecture, is of the time of Justinian. The present mosque El Aksa, we are told, was begun by one of the Patriarchs of Jerusalem, and finished by Justinian himself: this was about the middle of the sixth century. I have not been able to enter it, but I believe it has been disfigured by subsequent constructions, both during the Latin and the Mahomedan occupation of Palestine. The only authorities we can follow in the matter are Procopius, and the modern views of Mr. Catherwood. It appears to be of the basilican form, and terminates with a transept: the apse, which has been destroyed, must have been attached to the transept without an intervening choir.

At Bethlehem (six miles from Jerusalem), there is one of the most complete basilicas of the Byzantine times. It is more than 200 feet long, with five naves divided by four rows of columns, directly united by an entablature. It has a very magnificent transept, and terminates in an apse, both at the eastern and at each end of the transept. This church is amply illustrated in the work of Canina, on *Christian Temples*. You will there see what a marvellous instance that church presents of the Greek school of mosaic art, which, however, is of later date than the building. The monuments of this period in the Holy Land may be considered as the cradle of the Romanesque school of Christian architecture; for though I speak of them as Byzantine, these buildings have not what we know architecturally as the Byzantine character of the Romanesque: they possess more of the character of the Roman Basilica, like many existing churches in Constantinople itself. There is at Gaza a church attributed to the Empress Eudoxia. I have not been there, but from the descriptions of it given to me by learned visitors, I believe it to be a work of that period. I may mention also the church of St. John the Baptist, at Damascus, one of the most wonderful monuments of that kind. It is 400 feet long.

Four miles south-west from Jerusalem, we have a most interesting ecclesiological monument (one of the earliest), in a complete tesselated pavement. This is not of the kind we generally see in Romanesque churches, and of which we have a specimen in the sanctuary of Westminster Abbey; but it is made of square pieces of marble, and resembles the specimens found in the Roman baths rather than in churches. This pavement is in the church of the Holy Cross, on a spot which was of no importance before the Christian period: we must, therefore, recognize it as a Christian work, and the emblems introduced in it bear out that view. It follows the shape of the church, which is of the usual Basilican form, consisting of a nave, side aisles, transept and triple apse: in the middle of the transept, under the lantern, is a magnificent wheel of mosaic pattern, 30 feet in diameter, containing all kinds of Early Christian emblems, the lotus, the peacock, the fish, &c. The rest of the pavement which covers the whole church, is simply of white tesseræ, or scored with thin lines of black dadi,† in a lozenge pattern: the pavement of the nave has a border or frame of a guilloche pattern of several bands. This church is mentioned by Sæwulf, an English writer of the twelfth century, in an account of his pilgrimage, as not having been destroyed by the Saracens, while the surrounding buildings and the cells of the monks were laid waste. It is a plain church, having square piers and slightly pointed arches, the apses, as usual in Palestine, being semicircular in plan, and slightly pointed in elevation. It is, in fact, a Transitional church, the pavement being of the Byzantine period, and the building about it of the school which we shall have to examine presently.

A better specimen of the Transitional style, however, is the *Church of the Holy Sepulchre* itself, which we all connect with Jerusalem as its chief monument. In its present state, the Church of the Holy Sepulchre is in arrangement what the Crusaders left it, but the details of the church are not altogether of the time of the Crusades. If we examine its capitals, we see the patchwork it is made up of. In the gallery, above the part known as the Arches of the Virgin, are two rows of pillars, corresponding with each other. Those on the one side consist of Byzantine shafts, fitted more or less to Byzantine caps, but on the other side the pillars are rude imitations, executed in the eleventh century; being probably a restoration by Constantine Monomachus, and showing the period most obviously.



With regard to the primitive shape of the Church of the Holy Sepulchre, I differ from the conclusions of Professor Willis. He starts with the explanation of Eusebius, but he has put forth very mistaken notions in his interpretation. He conjectures that the Emperor Constantine began by placing the Holy Sepulchre in an open court-yard behind the Basilica. Eusebius mentions the sacred cave, or Holy Sepulchre, as the head of the whole work; and he again uses the word in his description of the great apse, which must make us conclude that the sepulchre was the centre of that great apse, which he speaks of as being so much ornamented. That would show us that Constantine built his church on the general form of the Roman Basilica: we should have the apse at the west-end, which was then the altar-end of the church; because in the basilicas the priest had his face towards the people, and to the east. When Eusebius speaks of the Basilica being to the east of the sacred cave, he evidently can only mean the nave and aisles; since he speaks of the magnificent ceiling which Constantine placed over it, as covering the whole of the Basilica, but that could not cover the apse. If he used the word Basilica to mean the nave and aisles in speaking of the ceiling, he might use it in another part in the same sense. The present plan of the church leads us to that conclusion. We know that when buildings are restored, the old foundations are used again in erecting the new building; and the first glance at the plan of the Holy Sepulchre will give us the outline of the basilican form. Professor Willis remarks that the Basilicas at Constantinople are described as dromical, that is to say, having the same outline that the Hippodrome had, a rectangle terminated at one end by a semicircle of the same width. After this church had been destroyed by Chosroes, it was repaired by Modestus, whose means certainly were very limited, and he only rebuilt it in part, and covered over the Holy Sepulchre by completing the circle, one-half of which was traced out already by the great apse. In fact, the remaining part of the circle, which we know to be the present form of the nave of the church of the Holy Sepulchre, is only given by the piers of the central part, and in no way in the general outline or in the aisles.

The holy sanctuaries in this church are, after all, only three in number,—the Holy Sepulchre, the Calvary, and the Prison of our Lord. Now the church consisting of five naves, the Calvary would come exactly in the inner lateral nave on the south, and the Prison of our Lord in the outer lateral nave on the north. I make no allusion to the fourth sanctuary—that of St. Helena, which must have been always a complete church in itself. It has all the parts of a good old Basilica,—nave, aisles, three apses, &c.; the southern apse, on a lower level than the rest, being the spot where the cross was found.

Just at the entrance of the Ethiopian convent, over the subterranean church of St. Helena, I found an arch, nearly complete, of

* The following is the continuation of Mr. Wigley's paper, read at the Institute of Architects, February 25. See p. 159, *ante*.

† Dies.

WORKMEN'S CAPITALS, TRINITY COLLEGE, DUBLIN.

Byzantine character, which, I believe, must be attributed to Constantine, and seems to have been one of the arches of the atrium in front of the basilica. There is only just room for a good-sized atrium between that arch and the remains of columns which still exist, and which have been identified by Dr. Schultz and others, as parts of the propylæum of the atrium of Constantine's church of the Holy Sepulchre. There is only just space again between the arch and the Holy Sepulchre for a good basilica: the Holy Sepulchre, therefore, was inside the church, and indeed the head of the whole work.

Having so far given you an explanation of the church as a Byzantine specimen of the architecture of the Holy Land, I will now refer to it as an example of the Crusaders' period. The Crusaders found it consisting of the round church of the Holy Sepulchre, properly so called, and a few scattered chapels, one covering Calvary, and another the Prison of our Lord. They proceeded to arrange the church after their own ecclesiological fashions, and reversed the sanctuary, placing it towards the east, where the nave of Constantine had stood, and constructing the choir according to the manner of the time, in which the priest turned his back to the people. They afterwards made a transept, the southern end of which is now the generally known façade of the church of the Holy Sepulchre, and used the round church as the nave of the newly-arranged cathedral.

The doorway displays the true features of Pointed architecture. This brings at once to our mind the vexed question of the origin of Gothic architecture. It is remarkable that we are now coming to a full series of Pointed churches, all dating from the three first quarters of the twelfth century. They could not have been built later, since the Latins only occupied Jerusalem from 1099 to 1187.

I am the more convinced that our Western Gothic is derived from the Holy Land, because it is the only country which (at that very period when we all know that fashion grew up) had sufficient influence to introduce Gothic architecture in so many countries at once. The Holy Land was the scene of the "universal exhibition" of the twelfth century for Christendom, and the point where all European nations met on common ground, and formed themselves into one common type, and one common nation. The great results of such a meeting are evident in scientific discoveries. The Assizes of Jerusalem are the first modern code of law in existence; and we may well conclude that in architecture also the Latins devised one common type for themselves. Mr. Thomas Hope, in his Historical Essay on Architecture, has very skilfully delineated the progress of almost every variety of architectural style; but he seems to leave a *lacune* to be filled up between a Byzantine monument which he considers the first of that kind,—the aqueduct of Justinian the Second, where pointed arches were used as a fashion, and the time when they became commonly used in the West. He conjectures that the Mahomedans took their Pointed architecture from the Byzantines, and I agree with him. The Arabs made ample use of it several centuries before it was used in the West. There are several Arab monuments in Damascus and Cairo, which can be traced to the ninth and tenth centuries.

And to corroborate, as it were, my theory, that it was in the Holy Land the western nations became acquainted with the Pointed arch, we see that wherever in other countries the same meeting took place between the Eastern and Western schools, the same effect was produced, namely, the engrafting of the details of the Romanesque schools upon Arabic architecture. We see that in Spain and in Sicily. In Spain there are two distinct styles of Gothic—the northern and the southern, the latter being indigenous, whilst the northern style was introduced from France. In Sicily, where the Normans met the Arabs, they formed the same amalgamation. This was in the century which preceded the twelfth century. But we cannot, with Mr. Gally Knight, trace to Sicily the origin of such a simultaneous school spreading all over the West. Sicily never was a fashionable country; but the Holy Land has been, and it is the only one we can mention as a centre from which such a general fashion could spread all at once. There is, perhaps, one exception to the assertion that all the churches which the Crusaders built were in the Pointed style; but that very exception confirms my views. It is the church commonly called the Church of the Knights of St. John, which is built in the Norman Romanesque style, displaying billet mouldings, and all the other details with which we are familiar. We must reflect that this building, though of *about* the time of the Crusades, must have been erected a little previous to them by the merchants of Amalfi, who founded the hospital, which became the birth-place and head-quarters of the order, about forty years before the Crusades. The merchants came from a part of Italy which was then under the Norman sway. There are some instances of architecture similar to this church in the district of Amalfi itself, and it is no wonder that these people should erect in Jerusalem an isolated instance of their own noble style.

In studying the Jerusalem of the Crusades we are more fortunate than in other archæological investigations, owing to the researches of a friend of mine, M. de Maslaterie, Professor of the Ecole des Chartes, at Paris, who has brought to light a most valuable description of Jerusalem in a Norman Chronicle of the end of the twelfth century. This was published by Comte Beugnot in his edition of the "Assizes of Jerusalem;" and nothing can be more interesting than the fact of our being able to go about Jerusalem with this Chronicle in our hands, identifying almost every spot described in it.*

WORKMEN'S CAPITALS, TRINITY COLLEGE, DUBLIN.

Some mention was made in our pages recently of the capitals arranged and sculptured by the workmen for the new museum at Trinity College, Dublin (p. 143). Let us repeat that to one Englishman, Mr. Roe, of Lambeth, assisted by the native talent of three brothers, workmen, the O'Sheas, of Ballyhooly, county Cork, the whole of these sculptures are owing. "The ornature is for the most part wreathed in foliage—the oak, the ivy, acanthus, shamrock; lilies, lotuses, birds, and, in fact, every variety of wreath—and these so diverse, so diffuse, so graceful, that the very diversity establishes its beauty."

Above we give engravings from photographs of two of the capitals.

REVOLUTIONARY ARCHITECTURAL PRINCIPLES.†

We are told that it is the object of one of Mr. Ruskin's most earnest, elaborate, eloquent, and popular works, to—

"Determine [for every architectural effort] "*constant, general, and irrefragable laws of right*" to "*command an honest architecture.*" We are warned, with all possible solemnity, of the criminality of "the suggesting of a mode of structure other than the true one;" that "that style of building is generally the noblest which discovers to the intelligent eye the great secrets of its structure;" that one of the immoralities of architecture is "*direct falsity of assertion* respecting the nature of material;" that

* The subject was resumed at the next meeting, to which we shall refer.

† See p. 161, *ante*. The editor will please consider himself not necessarily bound to the opinions expressed.

"the moment iron, for instance, in the least degree takes the place of stone, or if it be used to do what wooden beams would have done as well, that instant *the building ceases to be true architecture;*" that "the system of intersectional mouldings has been *the cause of the downfall of Gothic architecture.*" The Lamp concentrates its rays in the general exhortation, "*Do not lie at all.*"

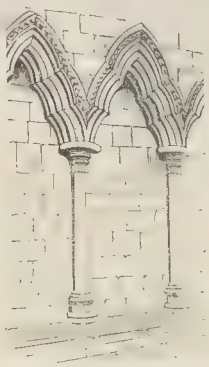
We have here, I presume, a signal specimen of what the Westminster critic calls "restoring to honesty, manliness, and veracity." I trace it beyond critical reviews. It has found its way into professional treatises, and even leading articles of "the leading journal." This last fact is proof enough that it has begun to impregnate the popular mind.

I wonder not: it sounds too honest and straightforward not to produce an effect. I shall be no less honest and straightforward in asking a question or two concerning it. *Will it bear the test?* Is it the expression of sound architectural good sense? or must we reluctantly class it with Puritanism, Fanaticism, Quakerism, or Radicalism? I shall not shrink from the question on the ground of *principles;* but I shall not scruple to put it first on that of *consequences.* What if it involve the annihilation of every existing style which all mankind, its author himself included, are accustomed to take for architecture?

To make our survey complete, we may begin with another sentence, which, though not from the same "Lamp," is no less the utterance of the same authority:—

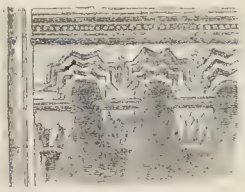
> "The feeling of the Renaissance is a feeling compounded of insolence, infidelity, sensuality, and shallow pride."—*Pre-Raffaelitism*, p. 27.

There can be no possible doubt of the result of such a sentence on all "constant, general, and irrefragable laws of right." We may say, without a moment's hesitation,—there go, at one dire sweep, the Brunelleschis, Bramantes, Michelangelos, Sansovinos, Sanmicheles, Sangallos, Scamozzis, Fontanas, Palladios, of Italy, the Holbeins of Germany, the Perraults of France, the Inigo Joneses, Christopher Wrens, Vanbrughs, and Chamberses of England; in short, all the great and noble architectural names of at least three centuries, together with all artistic impulses—synchronical, at least, if not actually connected, with the Reformation.



Of what is commonly called Elizabethan we need take no separate account. It was but a phase (I know not who will call it the best or purest) of the resurrection or Reformation impulse: with Mr. Ruskin it is simply hideous.

Let us breathe a moment. We have disposed of modern architecture *in toto.* I say disposed, for none can question as to an "*honest*" use of "irrefragable laws of right." If any think Mr. Ruskin a cold sentimentalist, he has but to hear his exhortation to the "gude folk" of our modern Athens:—"Introduce your Gothic line by line and stone by stone; never mind mixing it with your present architecture" [the very concession shows the total absence of tolerance]; "your existing houses will be none the worse for having little bits of better work in them."—*Edin. Lect.* p. 102.



The irrefragable laws do not stop at modern classic. The reader will remember the sentence about "knocking down a couple of pinnacles at either end of King's College Chapel." That order takes us back to the "Seven Lamps;" beneath whose mystic light we stumble on another sentence about "*our detestable Perpendicular*"

There can be no more hesitation as to consequences in this than in the former case. We have seen, in fact, in the preceding letter, how much of the characteristic ornaments and pervading features of this repudiated style are, more or less directly, at variance with the great cardinal principles of nature. The result is plain: we have no need to quote awful records, but may take up our own estimate, and say, "There go our William of Wykehams, our Waynfletes, and our Wolseys," with architectural consequences, "dreadful to hear, and dreadful to tell"—all, I think, but a transept of Winchester Cathedral,—some two-thirds, at least, of Canterbury,—something like the same portion of York,—I know not what not of Gloucester,—the east chapels, certainly, at Peterborough,—to say nothing of such things as King's College Chapel, at Cambridge; St. George's, at Windsor; or Henry the Seventh's, with its flying buttresses, at Westminster.

This looks, indeed, very like "the downfall of Gothic architecture." But this is only the "Perpendicular;" we are but yet at the middle of the fifteenth century. Let us go farther back, to the very purest specimen of Gothic the world can show us,—I mean our own Early English. What I am about to challenge is so critical, that I must present it to the actual sight of the reader. Here is a little fact from Carlisle.

No one will deny that this graceful shaft makes architectural pretension to the support of the superincumbent arches. I call on all the Pre-Raffaellites in the world to deny, if they can, that on the asserted irrefragable principles of constructive honesty, such pretension is nothing more or less than *a downright lie.* The mouldings are built into the wall, and form a part of it; the shaft supports nothing,—in most cases not even its own capital! No need of turning mason to know all this. Here is another specimen, no less familiar to the simplest lover of Gothic architecture.

Thanks to time and Mr. Britton, all may know the "honest architecture" of the monks of Croyland. It is needless to say that this astounding falsehood is no solitary one. Look and listen, and you shall hear its echoes on many a wall. Not an instance of that purest, loveliest—I had almost said holiest of styles—not one of all those beautiful arcades that *characterize Gothic architecture*—not one, certainly, of those innumerable detached shafts that people our Gothic walls, but makes the same precise pretension, and tells—on Mr. Ruskin's "honest architecture" principle—each its separate and emphatic lie. You have but to see Britton or Rickman, and look for Durham, Lincoln, Wells, Peterborough, Salisbury, Exeter, or almost any of our cathedrals, to find sumptuous chapter-houses, majestic towers, and reverend façades literally masked in this system of constructive falsehood. "What might we not say of Byzantine and Lombard churches?"

This of detached shafts: what of shafts *attached?* What must the architectural moralist pronounce of a pillar which is no pillar, but only an edging or moulding in the solid wall? What but an architectural sham is that single elongated column, supporting a vaulted roof? Can it stand a moment before the precept, "*Do not lie at all?*"

Even this, again, as regards the shafts only; but *what of the arch?* We all know the constructive meaning of the word "arch." What shall we say of an arch cut out of a single block? Is that an honest or a lying arch? Is it anything else, on the irrefragable principles, than a barefaced sham—a constructive falsehood? I leave those who "love the studious cloister" to compute the damages.

But look a moment at any Norman wall that comes first to hand. Here is another fact from Carlisle:—

Observe those clusters of shafts, and the arches that spring from them. Will any one be bold enough to tell us that this placing the *main support upon the weaker,* this implying that the inner arch supports the outer, where it has but a parasitic existence, and derives all its stability from the abutment of its impost upon that of the arch that surmounts it, is not an inversion of constructive logic? an arrangement purely hypocritical?—in fact, a lie? But this is just the pervading arrangement of Norman work.

But we have not closed the account: these are lies in stone. What of *arches in wood?* Look at Gothic woodwork; I speak not of this style or that, but of all Gothic work in wood without distinction. Think of a *professing arch cut out of a simple board!* and then go in honest daylight through the first Gothic cathedral within your reach and count the cost. Do not pass unnoticed the baptismal font, though that, of course, is stone,—but look to the organ-loft, rood-screen, or prebendal stalls, you may find of wood. Perhaps the "communion-table" may be an honest "table," and not an "altar." If so, it will be also of wood. Go next to the bishop's throne, casting back, perhaps, an oblique glance at the stone or marble that records a prelate who once sat there. You shall observe that one and all these things are positively *Gothicised by gratuitous arches;* that, in fact, from holy baptism to holy burial, the holy prelate was architecturally ensconced in one continuous system of hypocritical arches and lying pillars.

Could all these things but find a tongue, and be converted to Pre-Raffaellitism, what strange noises would mingle with the "confession" in our cathedral services! If such building is really to be styled "*Christian,*" and held to consistency, would not some poor innocents be tempted to cry, "Save us from our Godfathers!"

I have no heart to go into the multitudinous dishonesties of Mr. Ruskin's special object of delight, the "Flamboyant." Perhaps some future edition of the "Seven Lamps" will explain the moralities of that twisted column, with its belougings, at p. 94 of the first edition. There can, indeed, be few of the "Stones of Venice" but must begin to feel uneasy in their sockets.

But we have not done yet with our own Gothic: here is something no less pervasive and inseparable. We read in the sixth chapter of the second volume of the "Stones of Venice," that the fifth great Gothic element is "*Rigidity,*" and of this element we have the following explanation:—

"I mean not merely stable, but *active* rigidity,

. . . . which gives stiffness to resistance. Egyptian and Greek buildings stand, for the most part, by their own weight and mass. . . . . but in the Gothic vaults and traceries there is a stiffness analogous to that of the bones of a limb, or the fibres of a tree, *an elastic tension.* . . . . . *writhed into every form of nervous entanglement*; but, even when most graceful, never for an instant languid."

No one will dispute, I presume, this account of Gothic architecture, and few, perhaps, but will wonder, after learning that "*repose*" is so indispensable a quality, that "there is *no art, no pursuit whatever, but its results may be classed by this one test alone*,"*—still more, after hearing Laocoon anathematized for want of repose within the group of enormous reptiles, and Michelangelo eulogized for his "quiet treatment of the plague of serpents," to find the stones of a building complacently described as "jutting," "starting," "knitting themselves," and "wreathed into every form of nervous entanglement." (Ibid.)

This, however, is not the point. I suppose it will be granted that stones in a building can only stand, save by virtue (if we may use the word) of iron cramping, or such like disingenuous contrivances, "*by their own weight and mass;*" and that all such words as starting, knitting, writhing, and elastic tension describe just so many qualities as, by their nature, stones cannot have. Shall we, in pity, put out the "Lamp?" Shall we forget the irrefragable precept? Shall we forego "the honest architecture?" or shall we see all "Christian" practice put to shame before the virtuous heathenism of Greece and Egypt? If not, we must resume our formula, and say, "There go," &c.

But, turning now from these and the late catastrophes, what are we to say of Grecian building? Here are no Dædalean artifices, labyrinthine mysteries, false pillars, lying arches, or feats of bravery. The parts, few and simple, invite inquiry. All looks like a mathematical problem, whose very essence is the intrinsic. Yet, beneath that fair exterior, what a mockery of architectural truth! That oblong building is *not* the petrified wooden hut every one of all its members would say it is. The column is *not* a tree, but a succession of marble strata. The echinus is *not* the stump of the branches. The abacus is *not* a tile, nor does it keep the column from rotting. The architrave is *not* an architrave (principal beam), for it is no beam at all; nor are the triglyphs the rafter ends; nor the guttæ wooden pegs, that help to keep them upright. We know, of course, that they are not, just as we know that intersectional mouldings do not intersect, or that "your humble servant" at the end of a letter, does not affect the personal independence of the writer. All this alters not the rule before us, or the "irrefragable principles." The Parthenon is one conglomerate of false construction from top to bottom,—a series of structural lies we need no Vitruvius to lay open.

Now all this is the more remarkable, since it not only includes the principal features in a building, the name of which has been long synonymous with perfection, but characterizes a style *out of which all subsequent architecture has been developed.* There are few things more demonstrable than the genealogy of architecture; and—the use of the arch alone excepted—the precise points of departure, even of the Gothic style. We may add, therefore, to our account of damages, and say, "There go the Parthenon, the Propylæum, the Temple of Theseus, those of Sunium, Pæstum, and every other fragment we honour with the name of Doric; *and there go 'all that it inherits'*"—seeing that all other Classic styles are but modifications, more or less, of the same falsehood. "*Quod non fecerunt Barbari*," as the Italians say, has been done by a single "Lamp."

There remain the Egyptian, Assyrian, Chinese, and the wig-wam; but these are out of our category. Mr. Ruskin has no more affection for these than for the Renaissance, "accursed of deliberate purpose:" his simple advice is, "Stick to your Gothic." The consequences, therefore, are complete. Some may believe him teeming with another architectural universe: we are as yet without the symptoms. For myself, all I can discover at present is a heap of ruins covering the body of Samson, and a Westminster Reviewer scratching on a broken tablet—"To Mr. Ruskin belongs the merit of recalling to manliness, veracity, and morality, pursuits too long given over to Dilettantism and Conventionalism."

We will not end with personal pleasantries: the true conclusion is plain enough. Architecture appeals to æsthetic feelings, and must be read and understood on æsthetic principles. To bring it to the bar of constructive logic, and catechise and sophisticate it with questions of truth and falsehood, is beside the mark. This is just the "*summum jus, summa injuria.*" No doubt, your verdict will be a grave one; it will but bring you within the prohibition, "*Be not righteous overmuch.*" You may not, perhaps, "destroy yourself:" you will most infallibly destroy architecture.

As to "the noblest building" being "that which discovers the secrets of its structure," it may be permitted the most scrupulous amongst us to remember that that noblest of all material fabrics, the human body, does *not* discover, but, on the contrary, conceals its structural peculiarities; nor is there an individual amongst us, save, perhaps, the medical student, who would not stand aghast at the bare suggestion of those "great secrets." We may reverse the aphorism as regards other fabrics, and say, as a general rule, that, in exact proportion as you approach the æsthetic and expressive—in proportion, that is, as you have not to do with a mere utilitarian machine—in the same precise proportion should you rather conceal, disguise, lose sight of, than suggest the mere necessaries of construction, and leave your building to tell of better things.

But we touch here one of the many points at which all I mean by "Pre-Raffaellitism," goes to the extinguishment of all we mean by a "fine art."

I need inform no reader of the "Seven Lamps," that their ingenious author not only does not intend, but does not foresee these consequences. On the contrary, in the very act of stating principles, he endeavours to escape results. This does not, I conceive, affect the issue. The question is not one of personal intention. "Irrefragable rules of right" cannot bend, twist, and snap themselves short at the beck of convenience or of individual humour. If they be *rules of right*, they must be taken "*for good and all.*" The only question as to particular cases is whether they come within the law. For instance, we read—

"I see not how we can help allowing Brunelleschi his iron chain round the dome of Florence; but *we must find a rule that will enable us to stop somewhere.* This rule is, I think, that metals *may be used as a cement*, but *not as a support.*"—*Lamp of Truth*, p. 37, of second edition.

Now is this a rightful treatment of rules of right? *First*, to make a rule that shall give us convenience of license and restraint? *Secondly*, to draw a nice distinction between iron cement and iron support? *Thirdly*, to condemn, in broad, unmitigated terms, all "structural deceit," and then allow an invisible iron chain round the whole of a dome, under the curious title of "cement." What mean we by structural deceit, but "the suggesting a mode of strength and stability other than the true one?" What is the suggested construction of this far-famed dome, but its being supported in mid-air by the scientific employment of solid masonry? Whisper that the whole would tumble to pieces if you did but cut an invisible girdle; and what would be the reply of Mr. Ruskin's irrefragable right?

But "we cannot help allowing" it. Why not? Because the dome would not stand without it. What need, then, for the dome to stand at all, if it can only stand on a structural lie? This is just the sum and substance of the whole matter. "Do not let us lie at all."

But there is a distinction, it seems, between intelligent and non-intelligent spectators.

"The architect is not bound to exhibit structure, nevertheless that building would be generally the most noble which revealed to the *intelligent* eye the great secrets," &c. (p. 32). And again, "There is no deceit, if the weight to be borne is necessarily unknown, to conceal also the means of bearing it, leaving only to be perceived so much of support as is adequate to the weight supposed."—(P. 34.)

No doubt—provided only that the ignorance is absolute and conscious. But what of the different degrees of "supposition" in different spectators? "The weight of a roof is a circumstance of which the spectator generally has no idea: nor is concealment of the support of the external buttress reprehensible so long as the pillars are not sensibly inadequate to it." How far the "*not sensibly inadequate*" can be substantiated for slender shafts seemingly supporting Gothic roofs, I leave to the reader. For myself, I cannot modify rules of architectural right and truthfulness by the supposed intelligence or simplicity of the bystanders. That were a strange rule for *not lying at all*, which excused the deceiving of the simple by the hint that *the knowing ones were in the secret.* Architecture does not profess to speak to architects only: you must have one broad rule for gentle and simple, or you are not "commanding an honest architecture." Either give structural *carte blanche*, "asking no question for conscience sake," or allow no such thing as suggesting, concealing, or otherwise playing with stern realities.

As to the duty of observing architectural morality, I have, of course, no more doubt than as regards morality of any other kind. The question is, what *is* architectural morality?—a question I must reserve to another letter. At present, all I affirm is, that if the "Lamp of Truth" morality be held irrefragable, the result must be the dismemberment of all existing architecture, Gothic and Classic alike, without distinction.

LENY.

* "Modern Painters," part iii. sec. 1, chap. viii.

EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

THE present collection in the Suffolk-street Galleries—843 pictures and three pieces of sculpture—would seem to exhibit about the same amount of excellence and of mediocrity as is usually found here. Pictures which show both high purpose and superior technical skill are of course few, but there are many which show hand power with the simple purpose of pleasing, and succeed; and some few which show a noble intention inefficiently set forth. How much might be said as to the choice of a subject by painters;—how much ought to be said. Those who have the power to awaken noble emotions, to make evident great truths, or to pin down faithfully the beautiful aspects of ever-changing nature are but few: let them be honoured when found. All may not wisely attempt these paths, but each may exhibit a good intention, and whispering "*Excelsior*," work on hopefully.

Mr. Hurlstone is strong in the present exhibition: his "Neapolitan Peasant Boy" (313) is particularly good. No. 199, "Tenants of the Forum Romanum" is characteristic: a little more attention to the structures in the background, which are mere caricatures, out of upright, would make it more valuable. The inability on the part of many of our artists to draw buildings upright is very curious. Mr. Pyne has some beautiful Italian landscapes, especially (65) "Il Castello D'Ostia, Campagna di Roma." (38) "Bathing Buffaloes" is disfigured by the straddling man on the left side. The place of honour in the large room is occupied by the best landscape Mr. West has yet painted (244), "Caves in the Lias, South Wales." With attention to truth, it is invested with a sentiment. Opposite to it is a large picture by Mr. J. P. Pettitt, "The Druids' Temple, Cumberland" (130), also a very excellent landscape. "False Security," by G. G. Bullock (174), should have been on the line. The face of the sleeping girl is lovely, and the painting of the flesh excellent. Mr. Gosling has not improved: we prefer his (113), "The By-way," to his larger and more ambitious work, "The Wild Wood." The author of "Modern Painters" says,—"All great art is delicate art, and all coarse art is bad art." Mr. Gosling, Mr. Zeitter, and some others, would scarcely like to be tried by this canon. Mr. Clint has some striking effects of sunlight, and Mr. J. Cobbett has improved by the study, we should think, of French pictures,

—as, for example, in the "Return from a Bal Masqué" (318). Mr. Henzell exhibits several very clever pictures—(159), "On the Welsh Coast," "Drying the Nets" (392), and others. (466) "The Old Avenue" is a charming specimen of Mr. Woolmer's art, more cleanly and carefully painted than usual. It is preferable to his larger work. The Thames is largely indebted to Mr. H. J. Boddington. The sky and middle distance in No. 11 are charmingly painted. He does not, however, confine himself to the Thames. One of his best pictures is "A Summer's Morning—North Wales" (100), and a beautiful picture it is. Mr. Baxter's "Lily" (46), "Autumn" (317), and "Ursula of Valetri" (107), by Buckner, are works to be coveted. Mr. Underhill has stepped out of his usual path, and exhibits, amongst other things, three life-sized figures, under the title of "Music" (48), which has good qualities. Let us further mention for examination (18) "Elizabeth Castle, Jersey Coast," by J. J. Wilson; (25) "The Hay Field," J. J. Hill; Portrait of Sir John M'Neill, J. R. Swinton; (178) "Welsh Children Wool-picking;" and (479) "Home through the Heather," both by E. J. Cobbett; (223) "River Scene," T. F. Wainewright; (275) "Scene near Dolgelly," J. Syer; (403) "The Weald of Sussex—Chanctonbury Downs in the distance," G. Cole: (419) "The Rheinfels," by Nieman; (553) "The Wandering Boy," R. Hollingdale; and some small pictures by T. Roberts. In the Water-colour Rooms we may point out some clever and pleasing views of buildings by J. Dobbin; "Grapes and Quince," by Miss Steedman; (674) from Henry IV. by R. W. Chapman (the mixture of fear and brag well represented); "Abbeville," by S. Read (785), "Lassie at the Burn" (836), by J. Bouvier, sen.; and a likeness by Mrs. Croudace of one to whom the present generation is much indebted, Mrs. Loudon.

Let us add that, at the private view, forty-six pictures were sold, realizing about 1,500*l.*

STYLE FOR MODERN BUILDINGS.

YOUR correspondent who (very unnecessarily) signs himself "An Amateur,"* in his endeavours to draw a comparison favourable to the Gothic style, tells us that there is a club-house being built of Roman architecture, in Regent-street, of which the cornice is just like one he has seen in some Encyclopædia. Is that put forth as a powerful argument against the Classic style? Is there a cornice at the Houses of Parliament, or at any other correct modern Gothic building, which may not find its exact counterpart in many an old building?

But he lays the greatest stress on the superiority of Gothic fenestration over Classic. If there is one point of comparison more than another that suits his argument *least*, he has here hit upon it; for every architect will admit that, in Gothic buildings for domestic purposes, his windows give him most trouble. The stone mullions and tracery are perfectly well adapted to their original purpose of receiving the glass, and giving strength to a large surface of lead lights: and as long as the window is limited to the purpose of giving light, all is well; but we of the nineteenth century have as great a desire for *air* as for *light*, and the consequent necessity for making these glazed windows to open gives us no end of trouble. Sometimes we make the spaces between the mullions open casement-fashion; but casements are unsuited for exposed situations, and rarely keep out wind and rain: most elaborate and expensive expedients are resorted to at the Houses of Parliament; but, even if effective, they are out of the question for ordinary occasions by reason of their costliness. Sometimes sashes hung on lines and pullies occupy the spaces between the mullions: these are perfectly effectual, but they need a wooden-cased frame behind the stone mullions and transoms, thus making the whole masonry of the window little better than a mere sham, obscuring light, and answering no useful purpose; but whatever scheme for glazing is adopted, the tracery head remains a hopeless difficulty: thus, usually, the upper half of every pointed Gothic window is utterly useless as regards *air*.

I should add that the orthodox width between the mullions prevents people from looking out without incurring the risk of grazing off their ears: and as to looking out and enjoying an easy lounge at an open Gothic window, with one's elbows on the cill, the thing is impossible, and not to be done.

I am not about to enter into the controversy as to the relative merits of the case *in re* Classic *v.* Gothic. Much is to be said on both sides, but certainly the "Amateur" must study his Encyclopædia more deeply before he is qualified to take a brief on either side.

AN ARCHITECT.

* See p. 142, *ante*.

THE LATE MR. MACKENZIE, CITY ARCHITECT OF PERTH.

WE regret to record the sudden and unexpected death of an amiable man, and very worthy member of the architectural body,—Mr. Mackenzie, of Perth. Although for some time back he had not been well, still there was nothing that gave his family or physician any uneasiness, but, on the 15th of February, he expired after a few hours' illness at his residence, Bankhead, Perth.

He was for more than thirty years city architect of Perth, and during that long period has designed and executed numerous works throughout the country. In ecclesiastical architecture he has designed and carried out no less than from forty to fifty churches, and in the other branches of the profession his handiwork may be seen in various public buildings, mansion-houses, and villas. In the architecture of the farm he had considerable reputation, and some years ago the Highland Society of Scotland awarded him their medal for his designs in connection with such buildings.

Possessing a thorough practical knowledge, and a clear judgment, he was much sought after when evidence of importance had to be given, either before Parliamentary committees or others, and his loss will be long deplored where his usefulness was so highly appreciated. We believe the business will now be carried on by his son.

ARCHITECTS' COPYRIGHT: COPYISM IN PRESTON.

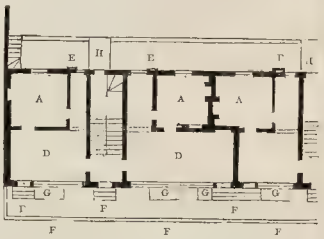
ALLOW me to bring before the members of the architectural profession an instance of the most flagrant piece of copyism I ever met with. Being in Preston a short time ago, from the frequent "honourable mention" that had been made in the Preston newspapers of a building then in course of erection there, for the purpose of a joint-stock bank, I went to look at it. I at once recognised the design for the front to be as nearly as really possible a *fac simile* of the Imperial Assurance Offices, in London, as published in the eighth volume of the *Builder*, for 1848. On inquiry, I found the thing had been done by a surveyor of the town, entirely without the knowledge of the architect of the Imperial.

No doubt the directors of the bank, in ignorant bliss, are paying for an original, though they get but a copy.

R.

LODGING-HOUSES, VAUXHALL-ROW, LAMBETH.

ERECTED FOR THE DUCHY OF CORNWALL.



WHILE we would lay bare the miserable condition of the dwelling-places to which the poor of the metropolis are in too many instances condemned, and make evident the evils resulting from it, we at the same time gladly record the endeavours which are being made in various quarters to provide some remedy for the evil.

About two years since, there stood upon the site whereon these new lodging-houses have been erected, twenty houses, each floor of which was occupied by weekly tenants, and, in many cases, whole families were crowded into a single room,—there was no drainage, and the basement stories were little better than cellars.

So soon as the Duchy of Cornwall obtained possession of this property, it was determined thoroughly to repair and remodel the whole; but upon a careful survey being made it was found that its state was not such as to justify any large expenditure upon it, as the object which the Duchy had in view, viz. the improvement of the dwellings of the poor in that densely-populated locality, would even then not have been accomplished, and it was therefore determined to clear the site and erect upon it a range of buildings which would afford the working classes habitations of a character more suitable to their wants; due regard being had to drainage, ventilation, and other social necessities.

The entire frontage of the property is 320 feet. The new dwellings have been arranged in flats, and of various sizes, so as to meet the means and requirements of tenants; there being on the first and second floors nine small sets, with living-room and bed-room, two larger sets, with living-room and two bed-rooms, and three sets with living-room and three bed-rooms,—twenty-eight sets in all. Each set of rooms has a separate water-closet; also a scullery with sink, and water laid on; a dresser and cupboard in the living-room, a coal closet, and a dust-shoot leading to a dust-bin in the back yard. These are shown in our plan.

On the ground-floor there are thirteen shops, ten of them having a parlour attached, and each of the three others having two additional rooms. We here give a plan also of one of these shops.

On the basement story there are thirteen sets of rooms with similar accommodation to the first and second storys, and these are intended to be let with the shops. The average size of the living-rooms is 14 feet 6 inches by 10 feet 6 inches, and of the bed-rooms, 11 feet 6 inches by 10 feet 6 inches. The height of the ground-floor is 11 feet, and of the other three storys, 10 feet. There are seven stone staircases, each serving two sets of apartments on each landing. The buildings are fireproof, according to Messrs. Fox and Barrett's principle.

There are wide areas to the front, over which a terrace, 7 feet in width, extends the whole length of the buildings; also, a continuous area at the back, 6 feet in width, and a spacious general yard in the rear, with carriage-gates in the boundary-walls to admit carts for the removal of dust, &c.

The total number of dwellings is fifty-four, and the cost of the whole was under 12,000*l.*

The plans and specifications were prepared by Messrs. Hunt and Stephenson, under whose superintendence the works have been executed by Mr. Grimsdell.

The outlay altogether, including the value of the site, has been about 16,000*l.* and it is at present uncertain what rental will be obtained; but as the Duchy of Cornwall has a large property in Vauxhall and Kennington, the object has been not so much to seek an investment as to take the lead in improving the dwellings of the poor, in the hope that other owners of property will be induced to follow the example.

His Royal Highness Prince Albert, as president of the council of the Duchy, has shown a lively interest in the progress of the scheme, and suggested many valuable improvements upon the original design.

We may take this opportunity to mention that Mr. Hunt has been appointed government surveyor of works and public buildings (without being required to give up his private practice), in the place of Mr. Inman, resigned.

Reference to Plans.

A. Living-rooms.
B. Bed-rooms.
C. Sculleries with sinks, water, safes, coal-closets, and dust shoots.
D. Shops (ground-floor only).
E. Dust shafts.
F. Steps.
G. Area gratings.
H. Landings across area.

LODGING-HOUSES, VAUXHALL-ROW, LAMBETH, ERECTED FOR THE DUCHY OF CORNWALL.—MESSRS. HUNT AND STEPHENSON, ARCHITECTS.

Plan of One-pair Floor and Two-pair Floor.

CHURCH-BUILDING NEWS.

Little Braxted.—Three tenders for restorations to the parish church having been sent in, that of Mr. Gardner, of Great Coggeshall, being the lowest of the three, was selected. The amount of the tender is 420*l.* The architect employed is Mr. Ewan Christian. About 60*l.* of the requisite cost still remain to be subscribed.

Bristol.—At a meeting of St. Mary Redcliff Vestry held on Tuesday in last week, a letter from the bishop of the diocese was read, in which his lordship says:—"Respecting the present condition of the interior of your noble church, St. Mary Redcliff, I feel more and more uneasy at the imperfect state in which the sittings and accommodation, particularly those destined for the humbler classes of the congregation, still continue. The high pews which used to encumber a large part of the spacious area have given place to far more convenient and appropriate sittings, and this part of the work reflects credit upon the taste and liberality of the parishioners and others; but I grieve to find that the funds are exhausted, and the works stopped at the very point where church accommodation for the families of the poor, and pupils of your schools is most imperatively demanded. It seems to be determined that the two transepts shall be devoted entirely to free sittings for the poor and for the schools, and that the cost of this work, to be performed in the manner agreed upon, would not exceed 300*l.*; a sum which at present there was no prospect of realising. * * * * The object of this letter is to offer you the estimated sum for fitting up the transepts for the poor and the schools, on condition that this work shall be undertaken and completed without the least delay." The Vestry, therefore, resolved unanimously, in compliance with his lordship's expressed wish, that the matter be referred to the Repewing Committee, with a view to the work being proceeded with immediately.

Wrexham.—The erection of a new church in this place is about to be proceeded with immediately, the site being a space of ground in the Hope-road, near to the Militia Barracks, now in course of erection. The contract has been entered into by a Liverpool firm, whose estimate we understand is considerably below the other tenders.——A Catholic chapel is about to be commenced not far from the intended new church; the contractors for the building of this being also from Liverpool.

Stonyhurst.—A large building is about to be erected at Stonyhurst College, consisting of chapels, refectory, &c. to complete the north side of the quadrangle of the establishment. A considerable extent of old buildings are being removed from the intended site of the new erections. The masonry will be done by Messrs. Cooper and Tullis, of Preston.

Glasgow.—The cathedral has now reached nearly a final stage, in its progress towards restoration. All that remains to be done (if not by this time also effected) is the removal of the pulpit, pews, and galleries from the choir, or Inner High Church, and the substitution of stalls and benches in cathedral style. The immense unsightly window, which rose above the rood loft or organ gallery, and which shut in the nave from the choir, has been completely removed, and the "pow-headed" windows, which separated the latter from the Lady Chapel, have also been taken away—and thus the eye can now range over the whole interior from east to west. It is not yet decided whether or not there shall be a temporary moveable screen between the nave and choir, but in the meantime it will be tried without it. The new seating is constructed in the cathedral form. The walls, north and south, are lined with carved stalls, fitted up in divisions or elbow seats. The wood-work to the back is designed and executed in the Gothic style, so as to be in keeping with the general architectural features of the cathedral. The area is fitted up with seats or benches, having carved tops. Irrespective of a small gallery, there is accommodation for about 1,000 sitters. This gallery is erected partially over the rood loft, and projects into the church. The pulpit is reared a few feet nearer the centre of the church than before. It is placed upon a large open platform raised 18 inches from the level of the floor. It rises from an octagon column. The pulpit itself is also an octagon, each compartment being filled in with carved tracery, surmounted by a cornice highly ornamented. It is ascended from behind by a light wainscot stair, with a malleable iron bronzed railing, ornamented with foliage. The pulpit is of oak which formed part of the original structure of the cathedral, about 700 years since. The passages are floored with tile—red, blue, and yellow. These renovations have been worked out from designs by Mr. Mathieson, of the Board of Works; sanctioned and revised by Mr. Burn, as chief architect of the Commissioners of Woods and Forests. These recent improvements, including the heating apparatus, will cost about 4,700*l.* Of this sum the Corporation will pay about 2,300*l.* being the cost of re-seating the church as described. In all, about 16,000*l.* have been expended since the renovation of the cathedral commenced, some fifteen years ago. In its improved form, the cathedral will be opened to the congregation of the Rev. Principal Macfarlan on Sunday next. ——The Pollok-street United Presbyterian Church was opened on Monday before last. The style in which it is built is a mixture of the Italian and Grecian: it is seated for 1,000 persons, and is lighted from a large lantern above. The entrance is by a flight of steps, at the top of which is a spacious lobby, with two stairs leading to the gallery. Besides furnace-room, there are waiting-rooms, &c and adjoining the church a hall capable of holding 200 persons. Mr. J. D. Peddie, of Edinburgh, is the architect.

Omagh.—The Second Presbyterian Church of Omagh, in county Tyrone, Ireland, erected in 1752, having become dilapidated, and too small for the congregation, a committee for considering the subject find it necessary to have a new church erected in its stead, and have removed the old building, and made arrangements for erecting a building of larger dimensions. The foundation-stone of the new church was laid on Friday in week before last. The site is at the west end of the town.

PROVINCIAL NEWS.

Oxford.—The deanery of Christ Church has been in course of alteration and decoration for some months past. The alterations are of an extensive character. The chief of these has been made in the entrace-hall. The oak staircase, erected about twenty years ago, has been adapted to the style of the exterior of the deanery, with newels and balusters, having tracery heads in oak. Between the oak balusters are uprights of iron, terminated by *fleur-de-lis* spear heads, coloured and gilded. On removing a portion of the old wall, towards the close of the alterations, a specimen of the original newel and hand-rail was found, the similarity of which to the new work is considered remarkable. The face of the wall is divided, by oak framing, into panels hung with paper, in which purple and gold are the predominating hues. The timbers of the ceilings, which are exposed to view, are moulded, and rest on a carved cornice. The space between the timbers is covered with a blue ground, upon which is stencilled a device in vermillion and gold. The architraves to the doorways are surmounted by figures in oak representing some of the most eminent deans of Christ Church. The floor is laid with Minton's encaustic tiles, with bands of grey stone, arranged in patterns, and bordered with black marble. The staircase is lighted by means of lamps, supported by lions rampant crowned (the dean's crest), placed on the tops of the newels. The lamps consist of standards of twisted brass and copper, with metal imitations of the convolvulus flowers and leaves, embracing opal glass shades. The picture gallery, opening to the staircase by an archway, presents to view a combination of colour. In the drawing-room two of the original windows in the north front have been reopened, and, with the other parts of the room, have been fitted up with oak. The cornice is moulded, carved and coloured, and heraldic devices are blazoned in the hollow above the cornice. The general ground of the paper is a subdued green, with a regular design in white and gold. The hangings are of crimson velvet, lined with satin of the same hue, and having a border characteristic of the architecture of the room. The dining-room walls are papered to harmonize with the portraits of former deans which adorn its walls. The cornice is tinted in colours, and the frieze decorated by geometrical figures, in various tints and gilding. The sideboard is an architectural work; the carving, like that of the staircase and drawing-room, being an imitation of natural forms, foliage, flowers, and fruits. The minor staircases have been re-arranged, and additional sleeping apartments thereby obtained. The kitchen department has been altered and made complete, and a new larder and servants' hall, with other deficiencies, have been supplied. The hall, picture gallery, and other passages, are warmed by hot water. The works, to the staircase and drawing-room, have been carried out by Messrs. Baker, and the decorations by Messrs. Trollope, of London. The general alterations were made by Mr. Hudson, the sideboard by Mr. Herbert, and the painting by Mr. Hill, all of Oxford. The figures of the deans and the lions were executed by Mr. Phyffers, and the whole of the work has been completed from the designs of Mr. John Billing, of London.

Ryde.—The new pier-head here is to be proceeded with forthwith, so as to be completed by the end of June next. The cost will be upwards of one hundred pounds. The breadth of the pier-head will be about 280 feet, the length being 120 feet, or nearly double the present size.

Westbromwich.—The tender of Mr. J. S. Ferguson, of Nottingham, builder, to erect and complete the new union workhouse for this union, according to the design and specification of the architects, Messrs. Briggs and Evoral, for 13,950*l.* has been accepted. Mr. Ferguson's was the lowest tender, the highest of nine others being 20,830*l.*

Cardiff.—Houses have been rising in the environs of this town of late, according to the local *Guardian*, as if it were by magic. Masons, carpenters, tilers, plasterers, plumbers, glaziers, &c. are busily employed in every quarter. There is so much building going on between the West Bute-dock and the Glamorganshire Canal that there will not be a foot of spare ground left to build upon in the course of a short time. Gaps and vacancies in the new streets are being rapidly filled up, thus giving an appearance of uniformity in the lower part of the town. Two new chapels are in course of erection in London-square, for the Wesleyan and Calvinistic (Whitfield) Methodists. The chapels are built within about a dozen yards of each other. The formation of the Cardiff Boulevards, upwards of a mile in length, is progressing with rapidity on the East-moors: 130 trees are already planted, in double rows: the total number of trees will be 280. Great streets are in contemplation here. The space will be raised up with ballast from the ships, and the road will be made level with the Rhymney Railway; and a bridge carried over the South Wales line, near Adamsdown, to form the principal entrance to the upper part of the town from the eastern side. In the course of a very few years still greater improvements, and an eastern suburb to the Newtown, are expected.

Llandaff.—Workmen have been employed to excavate the ground for the erection of a new college, near Llandaff, for female orphans of the clergy, in connection with Hord's charity, &c. It is said that the building, when completed, will cost 20,000*l.*

Manchester.—A wholesale fish-market is in course of erection here, on a site between Ducie-street, Strangeways, and the Victoria Station at Hunt's-bank. Considerable progress has already been made with the building and its approaches, and it is expected, according to the local *Courier*, that the new market will be finished in about two months. Rails will be laid down to take the fish trucks from the station to the market. The market is being built by Mr. R. Neill, of Strangeways. There will be a row of seven arches to serve as stores for the fish, measuring about 30 feet by 15 feet each, and 12 feet high, with open grating for light and ventilation over

the doors. There will be a covered market in front of these arches, and a large open space for the accommodation of carts, &c. with two entrances from Ducie-street, each 18 feet wide. The market will be erected by the Yorkshire Railway Company, and leased by the market's committee for twenty-one years, at the annual rental of 200*l*.

Keswick.—The ceremony of cutting the first sod of the Keswick Waterworks took place recently, near Ormathwaite, in Underskiddaw, the site of the intended reservoir. Probably by midsummer the waterworks will be in operation. It is intended that cottages, the rent of which is under 5*l*. shall be supplied at a penny a week. The reservoir, when completed, will contain 100,000 gallons.

POPISH PLANS FOR PROTESTANT CHURCHES.

IN your report of the proceedings of the Institute, on the 11th ult. appear Mr. Tite's remarks on the unsuitableness of mediæval architecture for Protestant purposes; and Mr. Scott's long letter in reply. Mr. Scott's mode of dealing with the question reminds me very forcibly of our old town crier, at Chichester, who, on Sunday, assumed the title of "reverend," and held forth to his admiring followers. Our reverend friend, Baxter, not being very well up in his orthography, or always very clear in his thoughts, was in the habit, whenever beset by difficulties of this kind in his pulpit, of laying down his spectacles, and calling out in a stentorian voice to his *locum tenens*, —"Budden, Budden, snuff the candles, and turn them boys out;" the diversion thus effected enabling the preacher to skip over what had puzzled him.

The very important question started by the chairman is treated quite *à la* Baxter. "Mediæval architecture Roman Catholic?" says Mr. Scott. Well, alter that pulpit and shift that reading-desk. By trifles of this character, through nine-tenths of his epistle, he essays to change the current of his readers' thoughts, and at last returns to the charge, in the following terms:—"So we are to go into Italy to learn Protestantism! The Popes, then, were sadly mistaken when they built St. Peter's. Little did they think they were erecting the type of Protestant architecture."

There's many a true word spoken in jest, Mr. Scott. It may be an unpleasant fact, but it is a fact notwithstanding, an indisputable one too, that *all* the early churches, up to the nineteenth century, are purely Protestant in arrangement, and that the chief of these important witnesses for the truth are in the custody of the Pope at Rome. It is a fact, also, that St. Peter's itself, at the head-quarters of Popery, is nearer the Protestant type than any of the mediæval structures. How came this to pass? Why, the reason is clear as crystal—that there was pre-Protestantism at Rome *before* Popery.

Old Rome contained some 400 temples: its people had no conception of religion, except in connection with temple rites and arrangements. Although the Jews had but one temple, yet to them also was that the embodiment of all their ideas of worship. Would, then, Jew or Pagan, in becoming Christian, even so much as dream of giving up the temple type, if their new creed admitted of its retention? That they did give it up, and choose another arrangement (though retaining the same *style* of architecture), as different from that of the temple as a horse from an eagle, is overwhelming proof, that in their opinion, the time for temples with their rites, altars, and priests, had passed away for ever. Call it by what name you will, the primitive Christian Church was nothing but a large room —its old familiar designation was "Conventus," — the meeting-house. The president, elder, or minister, as he was indifferently called, sat on a slightly-raised platform, with a cancelli, or low open railing, on its edge. There was no screen between the elder and his brethren, the people; and in the *midst* of the latter stood the communion-table, which was always of wood and moveable. What an astounding change was this from all previous Jewish or Pagan customs! This change was clearly a sudden disruption of all old thoughts: it was verily a new dispensation; and the architectural arrangements for the old and the new religion thus became, at the very outset, as wide as the poles asunder, old precedents being not merely shaken off, but wrenched off.

The change from primitive Christianity to Popery was, on the contrary, the gradual work of many ages; and it thus happened, that in Italy they continued for nearly 1,000 years to build churches on the original model, though that model was no longer suitable to the religion taught in it; while, away from Italy, in countries of new converts, where no architectural precedents existed to fetter the imagination of the builders, and the architects being then chiefly *priests*, the new churches were arranged to suit the peculiar requirements of the Popish system; and nothing can be more striking than the contrast between the plans of these new structures and of those old ones still in the custody of Rome. The doctrine of Transubstantiation was the chief cause of this extraordinary change of arrangement in ecclesiastical structures. As the Popish view of the Sacrament gained ground, the chancel, or elder's platform, on which the communion-table never was originally placed, became gradually lengthened and separated from the people by screens. The chancel, in fact, was converted into a mock temple, containing, as in the real temple of old, only the priests and the altar; while the nave was made to correspond in use with the temple porticos, in which the people assembled to witness, through the gates of the holy place, the performances of the priests within. A mediæval cathedral is in truth a cross between two opposite systems of arrangement and two different systems of religion.

The doctrine of Transubstantiation cannot, of course, be discussed in your columns; but this much may be said about it, that no antiquarian versed in the architectural history of temples and churches can possibly, if sane and honest, imagine for one moment that the early Christians, if they had had any knowledge of such a doctrine, could by any possibility have given up the temple models, so admirably adapted for its display, or have eschewed altars for wooden tables.

It is now some years since that I made the discovery and announced the fact in your columns,—that there is not a single church in existence, erected before the tenth century, that contains any one original feature characteristic of Romish views. If any one of these old structures now displays a Virgin Mary niche, altar, saint chapel, screen, or chancel, in the modern or Popish acceptation of the term, then I affirm and pledge myself to prove, that all or any of these things are additions of comparatively late date. A Protestant was recently conversing with a Jesuit on the subject of Transubstantiation, who said in reply, "Really, my friend, you have done me a most signal favour: you have so clearly demonstrated the utter absurdity and groundlessness of my views on this doctrine, that my belief in it in future will be an act of the sublimest virtue." I have endeavoured to render this sort of service to those who are building churches for Protestants on Popish plans. I am sadly afraid, however, that the sublimity of their faith may be somewhat tarnished by the great pecuniary advantage to be found at present in its profession. Though objecting to mediæval arrangement, I share in Mr. Scott's admiration of the mediæval style; but it is certainly very provoking to find people so absurd as to call the latter Popish or Protestant: style is but the tongue of architecture, and speaks all creeds. What on earth is there to prevent us from using the one without the other? Does any one doubt this? Then let him study the origin of roast pig. Charles Lamb tells us, that in China, for many years, they kept these animals without any culinary knowledge of their virtues. In course of time a house was burned down, and the owner, poking about among the ruins, thrust his finger into something soft, which proved to be a martyred porker; and on licking the said finger, experienced such a delicious flavour that it inflamed him to madness. Getting another pig into another house, he burned that also to enjoy another feast; and house-burning became the rage to an alarming extent, until the fortunate discovery was made that roast pig could be obtained on easier terms. Like roast pig, mediæval architecture is truly admirable; but we need not, to obtain it, outrage common sense and common honesty, or destroy our common Protestantism by adopting Popish plans, of which the style is but the accidental accessory.

JOHN ELLIOTT.

MEETINGS AND LECTURES.

Norwich School of Art.—A *conversazione*, originating with the students of this school, was held on Tuesday evening in last week, at the apartments of the institution, when upwards of 200 persons attended. Mr. Nursey, the head master of the school, was requested to take the chair, and the meeting was addressed by the Mayor of Norwich, and by Sir S. Bignold, M.P. Mr. Barwell, Mr. Havers (a student), and other gentlemen. The Mayor addressed the students. One mind, he remarked, was improved by the study of geography, another by the study of history, stimulated by laudable emulation and praiseworthy ambition. The day was coming when it would be the pride of statesmen to cultivate the intellectual capacities of the people, to enable them not merely to read, but also to understand and profit from what they read. One of the best schools for students, after they had generally cultivated their mind, was the school of nature. There they had an endless field for study and imitation. There they were interested with the beautiful, charming, and seductive mantle of green, with which they generally were met in the view of a landscape, bringing out the endless variety of colours with which nature was decked. Yet there was no confusion, all was beauty, all was order, and perfection. It was impossible for them to study nature with open eyes and open minds, seeking for information, without improving in their studies. After the *conversazione* was ended, the company adjourned to the exhibition-rooms, where various works of art were collected for the occasion.

Manchester School of Art.—The annual *soirée* given by the students of this school took place in the Town-hall, King-street, on Thursday evening in last week. The room was decorated with art-works of various kinds. The chair was taken by the president, Mr. E. Potter, who addressed the meeting, as also did Mr. Hammersley, the head master, Mr. Salomons, architect, Mr. Robinson (a student), and others. The president, in his address, remarked that the school cost about 1,000*l*. a year to carry it on, and of this sum 700*l*. a year was raised by subscription and Government aid, and only 300*l*. or 400*l*. was received from the students. He regretted that art did not pay for its own education: almost every other business and profession seemed able to educate its pupils so that they might obtain a living, but Art was an exception. The reason was, that the public did not support it as they should. What was wanted was an order for a good 1,000*l* worth of paintings and drawings, so as to encourage and bring out young artists. He believed that an effort would shortly be made in this district upon a very large scale to promote art.—Mr. Salomons, in the course of a few remarks, said that although he had devoted himself to one of the sister branches of art, he had derived immense benefit from the study of the other branches, especially painting. If they referred to the Middle Ages,—to the Italians more particularly,—they found that the great painters, such as Michelangelo and others, were sculptors as well as artists, and he knew that those painters who had studied architecture sometimes found curious mistakes in artists' works who were ignorant of architecture.

Lecture on Scientific Errors at Newcastle.—Dr. E. Lankester recently delivered a lecture on this subject to the Literary and Philosophical Society of Newcastle-upon-Tyne. One of the chief classes of scientific errors treated of related to physiology, and to sanitary science in particular. He could not see any reason why the great masses of the people ought not to live to the age of seventy, as it was never the intention of the Creator that one-half should die while young, as at present. This undoubtedly arose from not knowing the laws of physiology. It had been shown that the mortality of large towns, say, for instance, London, was at the rate of from between thirty-one and thirty-two to every thousand; while in the district of Northumberland it was only fourteen to the thousand, which was an enormous difference. The cause was obvious: it was the existence in large towns of densely-populated lanes and alleys, where ventilation was impeded, and the residents placed altogether in a condition where the laws of life were disobeyed, thus causing suffering, disease, and death. There was no reason why the condition of the people in large towns ought not to be even much healthier than in any of the villages of Northumberland. The lecturer then alluded to the establishment of model lodging-houses as the means of attaining such an end, stating

that already the London model lodging-houses had not only saved hundreds, but thousands of lives. Why did not the several town councils, corporate bodies, and others in authority, take the initiative in the matter? The only ground upon which he excused them was that of ignorance. If it were otherwise, he had no hesitation in saying that their conduct was so culpable and criminal as to justify their being cited before the tribunals of the country and tried for manslaughter. One thing was to him most puzzling, and that was, that while the gaols and prisons of the country were erected upon the best possible models to improve the health of the prisoners, while the diet was selected with the best possible care and skill, so as to prolong life, the great masses of the honest and industrious classes were comparatively neglected in this regard. In allusion to the influence of want of ventilation as a cause of consumption, whether in close lanes and poor dwellings, or in the smothering downs and close curtains of the rich, the lecturer narrated a remarkable instance of great improvement effected in the health of the residents of a village in Switzerland by the alteration of the construction and situation of the cottages, and stated that previous to the change the inhabitants were notorious for dying of consumption, while afterwards it became one of the healthiest villages in the country. The poor could not help themselves in this matter, as they could not pull down and rebuild the dwellings situated in close lanes and alleys, and, therefore, what individuals could not do ought to be set about by communities; that is, either by the government or corporate and other local bodies. It was only by public opinion being brought to bear upon such bodies, that such improvements would be effected, and thus disease would be prevented, health enjoyed, and the lives of the masses prolonged.

Free Lectures to Working Men at Cheltenham.—Dr. E. L. Humphreys, head master of the Grammar School of Cheltenham, last week delivered a lecture in the town-hall of this town, titled, "Religion, Science, and Labour distinct, but never disunited," being the completive lecture of a series given in connection with the Working Men's Improvement Society of Cheltenham, of which the lecturer is president. In the course of his very able and excellent lecture, Mr. Humphreys adduced some of the more striking results of the union of science with labour:—The gas, he remarked, that now lights up our streets with a brightness almost equal to that of the noonday sun—what a contrast does it present to the links of pitch and rosin that cast a murky and uncertain glare upon the footways of Paris and London 200 years ago! Nay, even the very lucifer-matches with which we light our candles, what an advance upon the old, tedious process of flint and steel, which many of us are old enough to remember! Again, the various processes of fixing dyers' colours, of giving to cotton a more explosive power than gunpowder, and those still more important discoveries by which we can purify the air we breathe, and diminish to a marvellous extent the average of human deaths—all these are striking instances of the great results accomplished by the union of science with labour, and they are moreover proofs that we are rapidly approaching, if indeed we have not already entered, that period of wonderful transition, when all nations must speedily acquire the levels due to their several amounts of intellectual—that is, practically intellectual—development; or, in plainer terms, the levels due to the relative proportion of skilled and unskilled, or brute labour, in their respective industries; and this brings me directly to the point upon which I desire just now to fix your attention. Local and physical advantages and peculiarities having now become so much less valuable and important than formerly, it follows that the rivalry for commercial and consequently for political supremacy is a strife between the intellect of one nation and that of another; and that, in such a contest, involving as it does not the mere glory of an intellectual superiority, but the solid substance of wealth and power, the intellectual cultivation alone calculated to be available, must be practical as well as theoretical. While some persons dogmatise in theories, others point triumphantly to the visible and palpable results of practice. But the fact is, that the one is unsatisfactory, and the other wastes its energies, unless they both co-operate in a liberal and friendly alliance. Theory is, in reality, but the rule, of which practice is the example; and accordingly we find that the majorities of the great scientific discoveries, of which our generation seems to be the great and prolific era, have either actually been made by theorists, or suggested by the hints and analogies which theorists have thrown out for the consideration of practical men. Here, again, you see the debt that labour owes to science.

Lecture at Louth on Warming Buildings.—The Rev. G. C. Hodgkinson, head master of the Grammar School at Louth, delivered a lecture on Tuesday in last week, at the school lecture-room, "On the Diffusion of Fresh and Warm Air through Buildings." In treating of the first part, he endeavoured to show the audience that they lived at the bottom of an atmospheric ocean; that the quantity of air expelled from the lungs of an adult was of the same volume as a large orange; and that it contained a quantity of carbonic acid, 14 to 20 cubic inches being expelled in twenty-four hours. He pointed attention to its deleterious effect on the constitution, and advocated the insertion into chimnies of a tube, by which the products of gas-burning might be conveyed away, leaving space in the upper part of the rooms for fresh air. In speaking of fireplaces, the lecturer condemned, erroneously, perhaps, the present fashion of low grates, as being extremely absurd; and recommended fire-brick backs to grates, as economising fuel. Stoves without a flue, so much advertised (self-consuming stoves, as they are attractively but most falsely called), were strongly and most properly characterised as being machines for throwing the most deadly poison into a room. Waste and saving of fuel, warming by hot water, and other cognate subjects, were also discussed, and how to make "fires at half price," as suggested in the *Builder*, was told.

DECORATIVE ART IN SCOTLAND.

HALL OF ST. MARK'S LODGE, BUCHANAN-STREET, GLASGOW.

THIS hall has been of late entirely redecorated and ornamented, and a correspondent praises the harmonious arrangement of colour, and the appropriate sentiment everywhere prevailing. When the lodge acquired their present premises, they threw the front suite of rooms into one, elevating the ceiling by a cove, at the expense of the attic floor, and provided a suitable kitchen, as well as a comfortable dwelling-house for their "Tyler."

The hall, which can accommodate above 100 members at dinner, is said to be arranged on masonic principles. The ceiling is painted in blue, and clouded, and has golden stars of the various constellations: the pateræ and mouldings are hatched in gold, and a trellis ornament introduced, thereby adding height to the ceiling. The cove is flatted a pale cerulean tint, with a spiral ornament at the neck moulding. At either end and sides of the cove are the emblems of their patron and titular saint and various devices understood by the initiated. These are enclosed in scroll, and finished in gold and silver. The cornice is stencilled with tints of pure colour, relieved by burnished gold.

The walls are disposed in panels of deep crimson, broken up by Etruscan brown morocco pilasters and styles, which are again divided by a border or fielding of green, and these panels are distinguished by the national insignia of the thistle, rose, and shamrock, mingled with the masonic star, with ornamented corners at the angles; and the whole are finished in plain and burnished gold, picked in with colour. The different orders of architecture find their place in columns of painted verd-antique marble, with their respective insignia of square and compasses, level and plumb-line. The woodwork of dark oak is inlaid (marqueterie) with characteristic ornament. These decorations were executed by Brother Haire, of the firm of Hugh Bogle and Co.

VANDALS IN THE NORTH.

WE are called upon to remonstrate against the barbarous doings of a contractor in Morayshire, who has had the wretchedly bad feeling to split up a Druidical rocking stone connected with what was ten years since one of the most complete Druidical circles in existence, either in that district or elsewhere. And it is dreaded that the destruction of the rocking-stone is but a prelude to the total extinction of the interesting remains which some years since, as described by the editor of the *Forres Gazette*, comprised an outer circle of twelve great stones, standing in a circumference of 2.0 to 300 feet, an inner circle of nineteen larger stones and forty-one smaller, and two immense boulders on the south side—one a Cromlech or altar-stone, and the other the Logan or rocking-stone, which latter was rhomboidal in shape, broad above and tapering below, and must have weighed from nine to ten tons. It was nicely poised in the usual way on another boulder, which doubtless is about to suffer the fate of its associate of centuries, in order to enable a nineteenth century contractor to complete some hairsplitting, underbidding contract for farm buildings, probably by connivance or suggestion of his employer, the tenant on the land, which belongs to Lord Cawdor, who surely will compel these barbarians to undo what they have done, as far at least as their wit will enable them, although we much fear it is beyond their ability, even by iron clasping, so to set up and balance the Logan again, as to restore its responsiveness to the touch of the finger, which, according to the editor of the paper just named, caused it to vibrate six inches on each side, and continue to do so some five or six and twenty times.

The Moyness temple, as it is called, is not the only Druidical and other antiquity in the same part of Scotland, on which Vandal hands have of late years been laid. Ten of these temples lately existed between Elgin and Nairn, not one of which now remains. Twelve old castles in Moray have been demolished and swept clean away since the beginning of the present century. It is lamentable to think that such an utter want of all taste, feeling, and enlightenment, should still exist in Britain, and that it is not in its northern moiety alone that this is the case.

THE ARCHITECTURAL MUSEUM.

THE lectures for the summer session, 1856, have been arranged for. On April 7th, the presentation of the prizes for stone and wood carving will take place. On the 21st there will be a lecture on brick-work, by Mr. G. Aitchison; May 12th, on decorative painting of the thirteenth, fourteenth, and first half of the fifteenth centuries, by Mr. G. Scharf, jun.; May 26th, on the varieties of stone used for architectural carving, by Mr. C. H. Smith; June 9th, on ornamental lead work, by Mr. W. Burges; June 23rd, on the application of natural foliage to architecture, By Mr. J. K. Colling; and on July 2nd, a *conversazione*.

Prizes of 10*l.* each for stone carving and wrought-iron work will be offered during the present year.

The tail-piece is a representation of the ingenious seal of the museum recently adopted.

PICTORIAL AND OTHER "ENTERTAINMENTS."

The Polytechnic Institution.—Mr. Pepper is unceasing in his endeavours to provide instructive entertainment for the public. He has lately obtained three mirrors of very large size, and by means of the electric light, shows some curious experiments. By one of the batteries used, when we saw the experiments, about 20 feet of platinum wire were made instantaneously redhot. Without jumping to the conclusion that the galvanic arrangements at Coventgarden Opera-house had anything to do with its destruction, we see at any rate a cause for a like catastrophe. The new entertainment of Kenilworth, with a sensibly written version of the story, by Mr. G. Moore, includes several very cleverly painted dissolving views; though some of those that show architecture are quite the reverse. The full value has yet to be given to dissolving views. During Passion Week, Mr. Pepper delivered some illustrated lectures on astronomy, lucid and excellent.

The Panoplicon.—Here, too, an educated eye is wanted to supervise the views, and we should not then have a representation of St. Paul's with a *dome*, in illustrations of "Whittington," and other notable anachronisms in style, observable. However, this is not to depreciate: there are many amusing and pleasant entertainments here well deserving a visit. A commemoration of Haydn is proposed for the 31st, his birthday.

Miss Horton's Illustrations increase in effectiveness and popularity. We cannot speak too strongly of the artistic ability shown by this lady. Some of her impersonations are marvellous.

Great Globe, Leicester-square.—At the Great Globe valuable information is pleasantly furnished to the public. Last year we could watch the siege operations on the plateau of Sebastopol; and Cronstadt and Sweaborg were made familiar to all: now the visitor can travel from England to the Crimea by means of a large diorama, painted by Mr. Marshall, and get instruction as he goes. Amongst the views, some of which, by the way, have been seen before, ar

pictures of Hamburgh, Berlin, Dresden, Prague, Ratisbon, Vienna, Pesth, Buda, and the line of the Danube to Balaclava, and Constantinople. The home route is up the Adriatic to Rome, Venice, the Lago Maggiore, across the Alps by Monte Rosa; the Galleries of Isella and Gondo, Interlachen, the Jungfrau, Geneva, and up the Rhine to Cologne and Dover. The collection of arms and trophies, the models of siege works of Sebastopol, Sweaborg, Cronstadt, and the Baltic, will be made doubly interesting by these pictorial representations; whilst the Great Model of the Earth serves not only to show the special spots of interest, but the world itself, in relation to the great events of our age. This is unquestionably a very valuable exhibition, and we were glad to see it crowded on Easter Monday.

COMPETITIONS.

Liverpool Free Public Library and Museum.—The number of applications for the "instructions and conditions" for the forthcoming competition, designs has been so much beyond what was anticipated, that the committee, to spare, as far as possible, unnecessary expense and labour to the parties competing, have decided that, in the first instance *sketches* of the proposed design shall be submitted, in pencil or ink, slightly tinted, to consist of a plan of each floor, a section, and an elevation of the principal front, or a perspective sketch, if preferred. These are to be drawn to a scale three times the size of the lithographic plan of the land already furnished. These will be taken into consideration by the committee; and, on the principles laid down in the "instructions," they will make a selection of any number not more than twenty nor less than twelve, which they may consider most suitable for the purpose. The authors of those selected will be the only ones entitled to compete for the premiums under the instructions sent out. The plan would have had our unqualified approval if it had been announced in the first instance. As it is, the change will be prejudicial to those who have made progress with their drawings.

Landscape Gardening.—The premium for the best design for laying out ornamental grounds at St. John's-wood, for Mr. Alexander Devaux, has been awarded to Mr. B. P. Wilme, landscape gardener and surveyor.

THE METROPOLITAN BOARD OF WORKS.

A MEETING of this board was held on the 19th inst. at Guildhall, when a deputation from Brompton, consisting of Sir E. Belcher and other residents, waited on the board to present a memorial in reference to the long-wished-for formation of an opening through the north end of Brompton-square, leading to Hyde-park, and where an obviously requisite and useful thoroughfare is unnecessarily blocked up to gratify mere private feeling.

Sir Edward Belcher said he had little, if anything, to add to the memorial, and merely reiterated the inconvenience to which the inhabitants and persons attending All Saints' Church were subjected, in consequence of the very circuitous route by which it was approached. He believed that 150*l.* would accomplish all they desired. They could not now have a carriage-way, as houses were already built in the way; all they wanted was a foot-way. The parish, he had no doubt, were prepared to proceed with the improvement, if the sanction of the board were obtained. The petition was received *nem. con.*

Mr. Seeley's motion as to the permanent situation of the offices of the board was, after some discussion, amended, and agreed to by a majority of 27 to 9. The motion was to the effect that the resolution of the board, on 14th January last, adopting the report of the committee on the site of offices, and referring it back to the committee to prepare plans for the adaptation of the premises in Greek-street, as recommended, and submit such plans to the board for approval, be altered in manner following, viz.—that having reference to the report of the committee as to the site of offices made on 14th January, in which the expediency of enlarging the house in Greek-street is rested on the difficulty of obtaining a site or premises in a more central neighbourhood, it be an instruction to the committee to suspend the adoption of any definite plan for the enlargement of the house in Greek-street, until it has ascertained whether it may not be practicable to obtain a site either near the Sessions House, Clerkenwell, or in Giltspur-street, adjacent to Christ's Hospital, or on the vacant ground in Farringdon-street, or in Bridewell Hospital, or in some equally central situation. The amendment consisted in merely leaving out the names of places, and inserting instead the words, "to a place in some more accessible situation."

On the subject of the Committee of Works, Mr. Wilkinson moved the following resolution:—"That it be referred to the Committee of Works and Improvements to take into consideration and report upon a comprehensive plan for making, widening, and improving streets, roads, and ways, for facilitating the passage and traffic between different parts of the metropolis." Some discussion took place on this subject, in the course of which Mr. Turner moved, as an addition to the resolution, the words, "And also for providing or securing open spaces for the health and recreation, or otherwise, of the inhabitants thereof."

Mr. Leslie objected to the motion, remarking that if they entered into such questions, it was his opinion that the board would fail; that the Act of Parliament had referred to them one great improvement, and had limited the time in which it should be done to sixty months; and five per cent. of that time was gone, while they had not yet got a plan for doing the work required of them, namely, cleansing the Thames; and if the board was to be diverted from its duty by such questions as they had before them, they would fail, and would be putting out an invitation for schemes of improvement all over London, while the great subject for which they had been appointed would slip through their fingers. The first thing they did at every meeting should be to call upon Mr. Bazalgette, their chief engineer, to report as to the progress he had made as to the plans for the improvement of the main sewerage of the metropolis, for nothing would gain them so much approbation from those who sent them there as to be intently devoted to cleansing the magnificent river Thames of the filth and sewage of London. Several other members of the board having expressed their opinion, the amendment of Mr. Turner was carried. Mr. H. L. Taylor then moved, as another amendment, to add the words, "and that it be an instruction to the committee that no schemes be received or entertained by them, unless referred to them by the board." The amendment was adopted, and afterwards was embodied with the original motion, and unanimously agreed to.

A financial statement was then laid before the board, showing a total general balance of 40,037*l.* odds, and some other business was transacted. The board, having sat six hours in all, then adjourned.

ARCHITECTS' CERTIFICATES.

IN a case tried at the Dorset assizes, on March 13, before Mr. Justice Crowder, the plaintiff was James Brown, a working stonemason, at Southampton, and the defendants were John and Robert Coltman, builders and contractors, of Ringwood. In 1853, the defendants contracted to repair and restore Ringwood Church, for the sum of 3,659*l.* and they sublet the brickwork and masonry to the plaintiff, at the sum of 1,765*l.* In the course of the work, it was proposed that the tower should be shored up, and it was agreed to allow plaintiff 50*l.* for that purpose. Upon further examination, it was found that the tower must be taken down entirely and rebuilt, and the plaintiff offered to undertake this work for 900*l.* The defendants declined this offer, but went into details, and agreed to pay plaintiff 751*l.* 11s. 9d. for the work, less the 50*l.* which was to have been paid for trussing. In addition to this, there were some works to be done to the nave arches, for which 151*l.* were allowed. In all, the "extras" amounted to 1,288*l.* 11s. 6d. besides the 1,765*l.*; and of these sums the plaintiff had received rather more than 2,500*l.* leaving 550*l.* 17s. 6d. the amount sued for.

For the defendants, Mr. Sergeant Kinglake objected, that in the contract, the plaintiff was stopped from receiving any instalment on account of the works, until they were certified by Messrs. Francis, the architects, and that any dispute between the parties was to be referred to these gentlemen.

For the plaintiff, it was replied that the clause requiring a certificate applied only to the work originally contracted for, and did not cover "extras."

But it appeared in the contract for the sub-letting it was agreed that the said James Brown shall and will abide, perform, and keep all other covenants, clauses, and agreements contained in the aforesaid indenture entered into between John and Robert Coltman and the churchwardens and overseers of Ringwood, in every respect as if the same were herein repeated.

The judge asked if it was an admitted fact that there was no certificate, and inquired if there was any objection to refer the matter to the architect?

Mr. Slade.—We don't object to anybody else.

The Judge.—And on the other side they object to everybody but Mr. Francis. If you could arrange to refer it, and avoid further litigation, it would be better.

The learned counsel being unable to come to terms, the Judge said—Then I shall decide that it requires the architects' certificate. I think the matter had better be referred to them.

It was then arranged between counsel that plaintiff should be nonsuited,—that the cause should be referred to Mr. Francis, and all matters in difference on the usual terms, with leave reserved to set aside the nonsuit, and enter verdict for such sum as is awarded, if any, with leave also to move the court to decide upon a document dated the 31st October, whether it is a certificate within the agreement, and its effect. Costs of the cause to abide the event.

Notices of Books.

VARIORUM.

THE treatise on Optics, in Dr. Lardner's "Handbook of Natural Philosophy," published by Walton and Maberly, of Paternoster-row, has been issued. Amongst the new matter in this standard and interesting volume, is a section on the Stereoscope, in which the why and wherefore of the startling effects of this new source of amusement are lucidly explained. It has often struck those curious in stereoscopic science, that its handy exhibitions are even more forcible and real-looking in their apparent solidity, than realities themselves. This is actually the case, and is strictly and scientifically explicable. Objects "in the round," or solid objects, when very near to the eye of the spectator but still at visible distance, are seen in two somewhat different aspects by the two eyes, although the two images are resolved into one in vision itself. The right eye sees always a little more of the right side of the object than the left eye does, and *vice versâ*, the left eye always sees a little more of the left side of the object than the right eye does. The eyes, in looking at a solid object placed at hand, in fact, shoot round the corner, as it were, like the Irishman's gun; but as the spectator recedes to a distance from the object, this power diminishes, the "binocular parallax" ceases to be "sensible." When, therefore, as in the stereoscope, the two photographic representations, which respectively correspond to the right and left aspects of the solid body, are so placed, and the light from them so refracted by the lenses, as to represent the object as one at a considerable distance; the "parallax" is more "sensible" than it ought to be; the eyes see, as it were, further to the right and left of the object than if it stood in nature at the representative distance; for the two cameras in which the two "simulacra," if we may so call them, of—say a large building, were struck off, were probably separated from each other by a space of 50 inches or so, while the distance between the two eyes of a human being is only a twentieth part of that space, and yet these two eyes thus obtain all the parallactic advantage, as it were, of being 20 inches apart, in looking right and left at the *distant* edifice. The stereoscopic *effect* of reality in seeing objects "in the round" is thus in fact an exaggeration or intensification of nature, and hence the startling and wonderful appearance of solid reality. The explanations given by Dr. Lardner relate, of course, not only to this exaggeration, but to the entire principle of the stereoscope; but we must refer our readers for farther *light* on this and many other curious and interesting subjects, to the volume itself under notice.——The American "Annual of Scientific Discovery, or Year-Book of Facts in Science and Art, for 1856," (Gould and Lincoln, Boston,) has just been published in this country. This is a valuable work, based on Mr. Timbs's excellent idea. If asked which is best, we should be inclined to say—both. —— Mr. Scharf's paper "Artistic Notes on the Windows of King's College Chapel, Cambridge," read at a meeting of the Archæological Institute, is now published in their journal, with several illustrations.

Miscellanea.

MONUMENT TO TURNER, THE ARTIST.—The vice-chancellor has directed the trust of 1,000*l.* by Mr. Turner, "to erect a monument to his memory in St. Paul's cathedral, among his brothers in art," to be executed by setting apart the sum destined for that specific purpose.

LONDON-BRIDGE.—You will much oblige me by calling "Englishman's" attention to the fact that the alteration he proposes for London-bridge is nearly the same in every feature as those submitted to you by me in February, 1855: your notice of the plan in question will be found in Vol. XIII. p. 60.

M. T. O'KEEFE.

GUN WADDING FOR THE STAGE.—Touching the letter on this subject, we have received several communications. Messrs. Deane have forwarded us a sample of a cheap material, which seems as if it would answer the purpose and is certainly worth inquiring into. Another writer, J. D. P. suggests that the thinnest and most flexible tin or lead might be available.

CLOYNE CATHEDRAL.—At the March meeting of the very active and thriving Archæological Society of Kilkenny and the south-east of Ireland, Mr. E. Fitzgerald, of Youghal, Architect, sent a communication to the Society, the facts stated in which excited the surprise and indignation of the meeting. The communication stated that Cloyne cathedral was at present under the process of partial restoration. New stone mullioned windows of good execution had been inserted into the choir, and a small portion of the galleries which still block out the light and impede the proper ventilation of this part of the church had been taken away; but much still remained to be done in removing excrescences from its interior. "From all appearances," continued Mr. Fitzgerald, "the west end is of the transition period dating towards the close of the twelfth century; yet here the restorers have made a most laboured and successful attempt at placing it before future visitors in the Brummagem or mushroom fashion of the nineteenth century; that is, as far as stucco and cement could do it; for the whole has been completely cemented over, cut stone, mouldings, foliaged capitals and all!! Even the sculptured human heads which formed the terminations of the hood mouldings over the great entrance door were knocked away, and replaced with a pair of bearded casts seemingly made from one mould."

ECONOMIC MUSEUMS: EXHIBITION AT BRUSSELS.—Mr. Twining, the originator of the idea of forming permanent Museums of objects tending towards the improvement of the condition of the working classes in all that relates to their physical and general welfare and comfort, is zealously engaged at present in the promotion of an Economic Exhibition in Belgium, which is to open at Brussels on 25th August next, and in aid of which the Society of Arts, Adelphi, of which Mr. Twining is one of the vice-presidents, has appointed a committee, with whom intending exhibitors can communicate, till 1st June, through the Secretary, Mr. P. Le Neve Foster. The Belgian Exhibition is to be held in connection with the Philanthropic Congress, which meets at Brussels this year, as in 1855 at Paris, where also an Economic Exhibition, it will be remembered, was organized, with the countenance and aid of the French Government. In the present instance also the exhibition will have the support of the Belgian Government, who are to admit its objects duty free unless sold, and to convey them along the state railways under a remission of 50 per cent. on the charges of transport. The products which claim admission to an Economic Exhibition comprise plans, models, materials, and the various processes connected with building; furniture and household utensils; clothing and linen; food, and the various processes involved in its preparation; tools and instruments for handicraft occupations, both industrial and agricultural; worship, physical and moral education, instruction, and recreation. The *Labourers' Friend* publishes lists of various objects in detail, classified under these several heads. The Society of Arts is engaged in forming an English Economic Museum of articles, models, drawings, and publications, tending to promote health, comfort, and economy among the industrial classes, and to illustrate their present condition in various parts of the world. The Library department is intended to be a comprehensive one, for reference, in accordance with the philanthropic objects of the museum itself. The whole scheme merits the general co-operation of all who feel interested in the improvement of the condition of the working classes; and all such friends and promoters of so good a cause may be referred, on the subject, for further information, to Mr. Twining, at the Society of Arts, John-street, Adelphi; or to Dr. Wyld, of Great Cumberland-street; both of which gentlemen also receive contributions in the name of the Council of the Society of Arts.

PROJECTION CASES IN METROPOLIS.—Things about us are subject to constant change,—house property is no exception,—houses that have been used as private dwellings from various causes cease to be desirable as private houses, and are converted into shops, increased space is almost a *sine qua non* in these matters; and where a space or fore-court exists, it becomes very desirable to get this enlargement. The Building Act does not declare such projections to be illegal or contrary to the Act, but simply requires the determination of the "Metropolitan Board of Works" on the matter; *primâ facie*, therefore, it may be assumed that projections are admissable. No clause in the Act declares anything to the contrary.

TEMPORA MUTANTUR.

ALUMINIUM AND THE ELECTRIC LIGHT.—The new metal which excited so much attention lately as a hopeful cheap substitute for silver, has by no means fulfilled the public expectation as yet, mainly from the cost of its production. Still, however, the endeavour to economise the means of its evolution from clay-proper or alumina is being persisted in, and the desire to produce it at a moderate cost has already contributed much towards the cheapening of previous processes, whereby other metalloidal substances, particularly sodium, required to be evolved from their alkaline or earthy oxides. A new step has just been made at Lyons, by Messrs. Lacassagne and Sheers, who have invented a galvanic battery, in which the usual fluids are replaced by anhydrous salts in a state of igneous fusion, and by means of which alumina is reduced into aluminium, while the electric light is evolved in the course of the process. The inventors are also trying their hand at the regulation or steadying of the electric light. M. St. Clair Deville, we observe, has been assisting at a lecture on the subject of aluminium at the London Royal Institution.

EXHIBITION OF INVENTIONS AT SOCIETY OF ARTS.—The eighth exhibition of recent inventions collected by the Society of Arts is now open. It comprises 221 objects, under the heads,—motive machines, including railway mechanism; manufacturing machines and tools; building contrivances and materials; philosophical instruments and naval and military mechanism; agricultural implements and saddlery.

ELECTRO-TELEGRAPHIC PROGRESS.—A charter has been granted by the King of Sweden to an American citizen, Mr. T. P. Shaffeer, to lay down a submarine telegraph wire between the coasts of North America and Norway, within ten years from this time, the capital to be ready within half that period.

THE NEW PARK AT GLASGOW.—The West-end park of this city draws towards completion. The approaches and streets on the north side of the hill are being made, and new terraces and other building works are in course of erection. Full-grown trees are being transplanted by Mr. Barron's process. A handsome weeping elm, thirty years old, and measuring 4 feet 6 inches in circumference at the trunk, has just been successfully removed from the site of the Old Botanic Garden (now being built on). The mass of roots and ball of earth carried along with it measured 10 feet by 8 feet, and 3 feet in depth, and the whole was taken a distance of 1,100 yards in an upright position by a machine drawn by 120 men. The weight thus transported was estimated at about 9 tons.

FALL OF A CHAPEL AT PRESTON.—St. Mary's Catholic Chapel, Friargate-hill, suddenly fell down, and became a mass of ruins, on Thursday in last week. Several workmen have been employed for some time at the building, preparatory to its enlargement. They were about to widen it, and for that purpose intended to take out the side wall. A large quantity of earth had been dug away from the wall, and it is supposed that this weakened it, and was the immediate cause of the destruction of the building. The two gable ends are still standing, but in a dangerous state. Most fortunately, none of the men employed were injured. In a district where so many buildings fall, as in Lancashire, the utmost care and consideration should be given before in any way weakening walls or depriving them of any portion of the support which may be barely sufficient to sustain them.

MASONS' STRIKE AT HAWICK.—The journeymen masons here lately presented a petition to their masters for a half-holiday on Saturday, or for wages at the rate of time and half-time, when obliged to work on Saturday afternoon. The masters readily agreed to the half holiday, on condition that the three hours thrown off were worked up during the week, or a proportionate deduction made from the wages. They would not consent, however, to the extra payment unless for time after SIX P.M. The workmen were not satisfied with these concessions, and have struck work. The masters, who feel annoyed at the sudden stoppage of work without notice, are not likely, it is said, to give in, as building prospects this season are not very promising in Hawick; and certainly they are not likely to be improved by a suicidal act such as this, of the workmen dependant on the promotion of building works.

DEATH FROM FALL OF A CHIMNEY.—Pendleton Priory, recently occupied by Sir Elkanah Armitage, was being demolished, and the chimneys were negligently left till last instead of being removed first: a labourer was on a ladder reared against the wall, when the top part of a stack of chimneys fell upon him, causing his almost instant death. A contractor was also severely injured. The house had been sold by auction, and one of the conditions of sale was that the demolition should proceed "regularly downwards." The accident is attributable to the non-observance of this rule.

CHELMSFORD RAILWAY STATION.—We are informed that the designs for this station have at last been decided on. The present inconvenient structure will be removed, and two additional lines laid: the offices are to be on either side, and a new house for the station-master on the down side will be erected.

RIGHTS OF WAY AT KENSINGTON.—Considerable excitement has recently been manifested in the town of Kensington, in consequence of the stopping up of a footpath opening a way between a large and populous district of the parish and Kensington Gardens. For years the inhabitants had been urging on the Government to concede to them this great public convenience; and, last year, the Office of Woods, so soon as they got possession of the grounds, with great consideration for the comfort of the inhabitants, made a footpath across it, and threw it open for the general benefit. The Board of Ordnance, it is now understood, have again acquired possession, and their first act has been to close the footpath, and to put the Kensington public to great inconvenience.

NORTH LONDON INDUSTRIAL HOME.—In your paper of 8th December last, under the heading, "A Word in Season," you noticed in kindly and very favourable terms the above Institution. I am neither locally nor personally interested in its success, but *homo sum*, &c. &c.; and I am sorry to see an appeal in the *Times* in confirmation of my own fears, that it was going to ruin for want of funds; and it is not the least disagreeable feature in the case, that it is dragging down with it to insolvency one or two of its early supporters, who have become mainly responsible for its debts. It has occurred to me that some of your readers, with a bank-note saved out of a tour, or unexpectedly won in some way, might like to devote it to the good cause.—W. B. R.

AUSTRIAN RAILWAYS.—According to the Vienna correspondence of the *Times*, it appears that the treaty for the sale and concession of the Austrian railways in Italy, to the section of capitalists headed by Messrs. Rothschild, has been definitively arranged. They are to purchase 273 English miles, which are already completed, and to undertake 223 miles which remain to be constructed, in addition to the Central Italian line. The total network to come into their possession will therefore comprise about 680 English miles. The company are to pay for the finished lines 2,400,000*l.* by instalments spread over six years, with 660,000*l.* additional in case the average profits during that time shall exceed 7 per cent. The whole capital required is estimated at 10,000,000*l.* on which the Austrian Government guarantees 5 per cent.

TO CORRESPONDENTS.

"B and B" contrary to our practice. If the letter contains any misstatement, it may be corrected. It is found to, we are told, on Mr. Gotto's report.—"W. W. S."—"A Subscriber."—"C. B. B."—"Bow Bells."—"One"—"W. W."—"J. W."—"C. R. S."—"Rev. J. G."—"B. P. W."—"J. S."—"C. L."—"J. B."—"W. H. T."—"G. S."—"Dr. G."—"G. T. J."—"T. H. H."—"J. L." (thanks).—"F. Y. H." "H. W. B."—"G. T."—"W. B."—"Ogeus" (a communication to head-quarters would be referred to the office of the Company).—"W. D."—"Frank" (the height of St. Paul's from the pavement of the street to the top of the cross is called 4 4 feet).—"H. W." (shall appear).—"J. A. P."—"C and B"—"W. B. R."—"T. M."—"D. C."—"D. N."—"T. T. jun."—"J. M."—"W. H."—"A. M. G."—"H. P."—"J. S."—"E. A. H."—"E. W. C."—"R. W. A."—"J. A."—"J. B. N."—"R. W. R." (is not quite correct: the scale was merely suggested, not stipulated).—"R. W. A." (ditto).

NOTICE.

FROM and after the 1st January, 1856, the *entire postage* upon all newspapers sent to France, and Foreign countries *vid* France, must be prepaid: the stamped copy of the paper is of no avail.

ADVERTISEMENTS.

BOROUGH of READING.—LOCAL BOARD of HEALTH.—Notice is hereby given, that the Local Board of Health for the district of the Borough of Reading, in the county of Berks, require a fit and competent person to execute the duties of SURVEYOR and INSPECTOR of NUISANCES, under the Public Health Act, within the said Borough. The officer to be appointed must possess a thorough and practical acquaintance with works of drainage, sewerage, road-making, and paving; he must be competent to take levels, to prepare plans, sections, drawings, and estimates, and to superintend the execution of all works of the description above referred to, or which may fall within the duties of the office of Surveyor and Inspector of Nuisances, under the Public Health Act, or the Bye-laws of the Local Board. The public lighting of the borough being under the management of the Local Board, the officer will be also required to superintend the same, and to see to the execution of their contracts by the gas companies who supply the gas to the public lamps. The office will be required to devote his whole time to the service of the Local Board. His salary will be 300*l.* per annum, and he will have a convenient residence attached to the store premises of the Local Board, in which he will reside free from rent and taxes. Any further information respecting the duties of the office may be obtained on application to the Clerk to the Local Board. Candidates must send written applications for the office, with testimonials of qualifications and competency and with particulars of age and previous occupation; and all applications must be sent to me, endorsed, "Application for Office of Surveyor, &c." on or before TUESDAY, the 8th day of APRIL next. By order of the Local Board,

THOMAS ROGERS, Clerk.

10, Friar-street, Reading, 20th March, 1856

HOUSE PAINTERS and PAPER-HANGERS WANTED.—Apply to Mr. W. HOLLAND, Decorator, &c. Warwick.

AN ASSISTANT WANTED, in an Architect and surveyor's Office in the country. A young man who has served part of his time, and can produce satisfactory testimonials, stating age, and salary required, Address, A. B. Mr. Johnson's, Bookseller, Wisbech, Cambridgeshire.

SURVEYOR'S ASSISTANT WANTED, capable of making fair and working drawings, taking out quantities, and measuring works.—Direct, stating age and salary required, to X., Mr Higgs's, Library, Richmond, Surrey.

TO PAINTERS AND DECORATORS

WANTED (in consequence of the sudden death of the late foreman), a FOREMAN, who is thoroughly acquainted with the practical parts of the painting and decorative business. He must be of good address, an active man of business, write a good hand, and be competent in measuring, sketching, and estimating. Satisfactory references as to sobriety, honesty, and competency, both practical and theoretical, will be required. No one need apply unless he has previously filled a similar situation.—Applications to be made to Mr H. J. BUCHAN, House Decorator, Southampton, stating age if married, rate of wages required, and full particulars of qualifications.

TO BUILDERS, SURVEYORS, LAND-AGENTS, AND OTHERS

WANTED, by the Advertiser, aged 22, an ENGAGEMENT in a London Office; is a fair architectural draughtsman, conversant with builders' accounts, and the general routine of an office. Amount of salary not so much an object as permanent employment with a respectable firm.—Address, X. Y. Crosby Hall, City.

WANTED, a GOOD SMITH; one who has had experience in fencing, railing, and gate work preferred. None need apply who cannot produce satisfactory references in character.—Address, A. B. Messrs. Saunders, Brothers, Bankers, 104, London-wall, City.

TO PLUMBERS.

WANTED, a Person about 30 or 40 years of age, in the above trade, who thoroughly understands his business, and is willing to take time at other work, at a Plumber and Builder's in the City, requiring a constant hand. A good reference as to competence and sobriety will be required. Wages 6d. per hour for the time actually employed in work. Employment to the amount of 30s. per week will be guaranteed.—Apply by letter to F. G. F. Mr. Sauzé's, No. 47, Aldermanbury, City.

TO UPHOLSTERERS' FOREMEN

WANTED, one who thoroughly understands his business.—Applicants to be made by letter only, giving references as to ability and stating amount of wages required.—Address, Y. Z. Mr. Mabley, 144, Strand.

WANTED, by an Architect in the City, a DRAUGHTSMAN, who has served part or the whole of his time to an Architect. As good opportunities will be afforded for learning a general practice, only a small salary will be given.—Apply by letter, stating last engagement and salary required, to S. E. Office of "The Builder."

WANTED, in the Roman and Portland Cement Works, Faversham, Kent, a Young Man as UNDER FOREMAN. Preference will be given to one who has had some experience in machinery. A reference for character required.—Apply by letter, to Mr. C. J. HILTON, Faversham, Kent; or personally, at 8, Upper Thames-street, City, on Wednesday next, from Three till Five.

TO CLERKS OF WORKS.

WANTED immediately, a CLERK of WORKS to superintend the erection of farm buildings. One who has been engaged on works of a similar nature, and understands getting out working drawings and details would be preferred. Address, stating previous engagements, salary, &c., to E. C. 5, Selwood-terrace, Brompton.

TO PAINTERS, &c.

WANTED, as FOREMAN, twenty miles from London, an intelligent and respectable Man, a good WRITER and GRAINER and capable of managing the hands and books.—Apply by letter, pre-paid, stating wages required, age, reference, and every particular, to A. B. 6 and 7, South-eastern-arcade, London-bridge

TO PLUMBERS, GLAZIERS, &c.

WANTED, a respectable THREE-BRANCH HAND; reference required. Also, a LABOURER, who would make himself generally useful; both for a constancy.—Apply to J. B. 8, Crescent-mews North, Burton crescent.

TO ARCHITECTS, ENGINEERS, &c

WANTED, by a respectable Young Man, a good draughtsman and colourist IMMEDIATE EMPLOYMENT. Salary not an object.—Address, J. T. C. 53, Albert-street, Barnsbury-road, Islington.

TO CARPENTERS AND BUILDERS.

WANTED, to place a strong, healthy LAD, 15 years of age, as an IN DOOR APPRENTICE, to learn the above trade. He has had a fair English education. Some knowledge of drawing, surveying, and levelling, having been for the last year in an Engineer's office. The country preferred.—Address, with full particulars, to A. B. Ingram's News office, 38, Charl s-street, Westminster.

TO MASTER PLUMBERS OR BUILDERS.

WANTED, by a respectable Young Man, a SITUATION as PLUMBER'S ASSISTANT. Wages no object of permanent. Address, W. M. 19, Stockbridge-terrace, Pimlico.

TO ARCHITECTS AND BUILDERS

WANTED, a SITUATION as CLERK of WORKS or FOREMAN of WORKS, by an experienced practical man, having filled similar situations of the kind in some of the largest firms in London. Every satisfactory reference can be given.—Address, J. A. Office of "The Builder."

TO ARCHITECTS AND SURVEYORS.

WANTED, by a respectable Young Man, of business habits, a SITUATION in the Office of one of the above. Is a good draughtsman, colourist, &c., and having been in the profession above seven years, he practically understands the requirements of an Architect's or surveyor's office. The most satisfactory references can be given, and a moderate salary only required. A respectable Builder's Office not objected to.—Address, X. Z. 38, Huntington-street, Barnsbury-park

TO PLUMBERS AND BUILDERS

WANTED, by a Young Man, a SITUATION as PLUMBER; and would fill his time up in the branches connected with the trade, if required. Good reference. Town or country.—Address, H. B. 27, Grafton-street, Blackfriars-road

WANTED, by an active practical Carpenter and Joiner, a SITUATION as an or out-door FOREMAN, or to take charge of Building Works for a gentleman. Town or country.—Address, A. B. 2, Gloucester-terrace, Vauxhall-road, Pimlico.

WANTED, by a Gentleman who is a good and quick DRAUGHTSMAN, a SITUATION in an Architect's office. If required, he can design in the Gothic style, that having been his chief study.—Address, Z. Y. X. Office of "The Builder."

TO ENGINEERS, CONTRACTORS AND OTHERS

WANTED, by a Practical Workman, aged 35, in Fitting or Fixing Iron Roofs, Stone Tanks, Bridges, &c. as CONTRACTOR or SUPERINTENDENT, with good reference and security for any of the above work.—Address, S. W. E. 14, Salisbury-place, Stepney.

TO ARCHITECTS, &c

WANTED, by the Advertiser, a SITUATION as an ARCHITECT'S OFFICE, in either town or country, as JUNIOR ASSISTANT.—Address, M. N. Office of "The Builder."

WANTED, a RE-ENGAGEMENT as Working Shop, or Out-door FOREMAN, by an experienced practical JOINER; well up in all kinds of work; with good testimonials.—Address, A. D. W. 3, Albion-street, South-grove, Bow.

TO BUILDERS AND OTHERS.

WANTED, by a respectable person, a SITUATION as CLERK in an Office, and is fully acquainted with book-keeping, measuring works, estimating, time-keeping, &c. being competent for the same. References will be given by the late employer for his integrity and sobriety. Terms moderate. Would have no objection to partial employment or otherwise in town, or a short distance therefrom.—Apply by letter, prepaid, to JOHN ——, at Mr Miller's, Sadbuer, 6, Bridge-road, Lambeth.

TO CARPENTERS AND BUILDERS.

WANTED, by a Young Man, CONSTANT EMPLOYMENT as Carpenter and Joiner. Is a fair bench hand, but would be for improvement in carpentry and fixing line. Any part of town, or a good country job or shop.—Direct, A. Office of "The Builder."

TO GRAINERS

WANTED, by a Youth, 18 years of age, to ARTICLE HIMSELF to a good GRAINER, at the west end of the town. Has served three years to the trade.—For particulars apply to A. SHIRLEY, Baker, 34, Aylesbury-street, Clerk-well

WANTED, a RE-ENGAGEMENT, as SHOP or OUT-DOOR FOREMAN, by an active Man, who can be well recommended by an architect in London, under whom he has carried out a gentleman's mansion. Has also been employed upon church work, under two of the leading ecclesiastical architects of the present day. Address (pre-paid), to L. S. D. 9, Charlotte-house-lane, London.

TO CARPENTERS AND BUILDERS.

WANTED, by a Young Man, aged 21, a SITUATION as IMPROVER to the BENCH, or as JUNIOR CLERK; has served four years and a half to the trade; steady and respectable. Wages no object. Address, X. Y. 120, Drummond-street, Euston-square

TO ARCHITECTS AND OTHERS.

WANTED, a SITUATION as CLERK of WORKS, by one having a thorough practical knowledge of building, measuring up works &c. Can make working drawings and has had experience in drawing page works.—Address, J. B. 131, Albany road, Kent-road, London

TO BUILDERS AND PLUMBERS.

WANTED, a SITUATION as PLUMBER, PAINTER, and GLAZIER, by a Young Man, aged 20.—Address, H. K. 118, Borough-road, Southwark.

TO BUILDERS AND PLUMBERS

WANTED, a permanent SITUATION, by a Young Man, aged 23, as PLUMBER. Can fill his time up in painting and glazing.—Address, J. N. No. 55, St. Martin's-lane, Charing cross.

WANTED, EMPLOYMENT in SURVEYING and LEVELLING towns, parishes, or estates, or to assist in preparing plans and sections for drainage or other works. Has had experience in the same, and will provide own instruments.—Address, Mr. BOND, Guildford, Nor hamptonshire.

WANTED, EMPLOYMENT, by a Young Man, as PLUMBER, WRITER, GRAINER, &c.; 1l. 1s. per diem, 16l. per annum.—Address, W. C. P. 15, Newcastle-court, Temple-bar.

TO BUILDERS, CONTRACTORS, &c

WANTED, to keep the Stock and Prime-cost Accounts, or a similar SITUATION in the Office, by an experienced CLERK, who is about leaving an extensive London firm. His references are unexceptionable.—Address, T. HOME, 11, West-square, St George's-road, Southwark

TO ARCHITECTS, &c.

THE Advertiser is desirous of obtaining a SITUATION in an ARCHITECT'S OFFICE, either in town or country. Has devoted the greater part of his time to the study of Gothic architecture, and is fully competent to undertake the entire management of that branch. Has had four years' experience, is a good draughtsman, and can furnish unexceptionable references.—Address, post-paid, B. G. 23, Bayham-terrace, Camden-town, London.

TO ARCHITECTS.

THE Advertiser, who has had general experience, and is accustomed to make out per pective, finished, and detailed drawings, and has a knowledge of water-colour, is desirous of meeting with a PERMANENT ENGAGEMENT as ASSISTANT.—Address, A. B. 22, Everett-street, Russell square

TO ARCHITECTS AND SURVEYORS.

THE Advertiser, who is a neat architectural draughtsman, well acquainted with the routine of an office, and has been accustomed to town surveying, is desirous of an ENGAGEMENT.—Address, X Y Z 1, Albion terrace, De Beauvoir-square, Kingsland

TO the PROFESSION.—An ASSISTANT, unfortunately involved in a suit respecting disputed property and committed to the Debtors' Prison for Surrey, earnestly solicits drawing and tracing to do at, or any other office work, which can be given out, in order that he may be enabled to maintain himself and family. The case will bear the fullest investigation, and is earnestly hoped that it will not be overlooked in vain. Advertiser is thoroughly competent both as a draughtsman and surveyor, and any work with which he may be entrusted, will receive careful attention, as well as prompt ude in execution.—For letter or interview, address, Mr. BROWN, Debtors' Prison, Horsemonger-lane Borough

TO BUILDERS, CONTRACTORS, &c.

OFFICE CLERK.—WANTED, by a person who has filled the above situation with present employer last ten years, leaving only from his retiring from business.—Address, J. C. 8, Stafford-street, Lisson grove.

TO ARCHITECTS.

A NEAT and expeditious DRAUGHTSMAN, is desirous of an ENGAGEMENT. Accustomed to the getting out of perspective, finished, working and detail drawings &c. and the general routine of an office. Good references. Salary moderate.—Address, C. D. 9, Elizabeth-street South, Pimlico

TO SURVEYORS, BUILDERS AND OTHERS

A YOUNG MAN, aged 22, who has been for five years in the office of a Surveyor in London, seeks an ENGAGEMENT as CLERK, &c. No objection to the country. Address, with full particulars, to W. T. M. Post-office, 252, Oxford-street, London.

A BUILDER'S CLERK, thoroughly conversant with measuring and estimating, detail drawings, and accounts, is open to an ENGAGEMENT. Satisfactory testimonials and reference may be had on, and security if required. Address, A VICUS, Retreat Cottage, Dorking, Surrey.

TO NOBLEMEN, GENTLEMEN, SURVEYORS, AND OTHERS.

A GENTLEMAN of experience, respectably connected, is desirous of an ENGAGEMENT, as general AGENT and COLLECTOR to an ESTATE for BUILDING, or in some such capacity, where a thorough knowledge of surveying, building, &c. can be of advantage. Is only employed. Has been similarly engaged on one of the largest estates in the vicinity of London, and is prepared with the highest testimonials, and references to any amount.—Address, AGENT, Office of "The Builder."

TO CONTRACTORS AND BUILDERS.

A S GENERAL FOREMAN, an experienced person is OPEN for an ENGAGEMENT. Has been employed by a late London Firm on heavy contracts for the last ten years. Can be well recommended. Address, A. B. Post-office, Brixton, Church.

TO BUILDERS AND OTHERS

A GOOD PRACTICAL CARPENTER and JOINER wishes to meet with a CONFIDENTIAL ENGAGEMENT. First-class references. Security if required. Direct to KING, 14, Ledbury-road, Westbourne-grove West.

TO ARCHITECTS

AN ARCHITECT'S ASSISTANT desires a RE-ENGAGEMENT in an office where a knowledge of colouring would be valued in addition to a good knowledge of architecture generally. Salary moderate.—Address, Q. E. D. 30, Nelson-street, Greater

IMPROVER.—To SURVEYORS, &c.—WANTED, by the Advertiser, a SITUATION in the above office, where there is a good opportunity for improvement. Salary no object. Address, X. Y. 21, Portman-street, Portman-square.

TO BRICKMAKERS AND OTHERS

A BRICKMAKER, who thoroughly understands his business, wishes an ENGAGEMENT, contract or otherwise. Can be well recommended.—Direct to A. B. No. 18, Charlotte street, Bagnigge-wells-road, St. Pancras, London.

TO NOBLEMEN AND GENTLEMEN, PROPRIETORS OF ESTATES.

A YOUNG MAN, a BUILDER and SURVEYOR, is desirous of an ENGAGEMENT on an estate, to superintend the repairs, &c and collect rents if required. A permanency is the Advertiser's chief object. The most satisfactory reference and testimonials may be relied on, and security given. Address, Y. W. P. 51, High-street, Poplar.

TO LIME, TILE, BRICK, AND CEMENT MERCHANTS.

A YOUNG MAN, aged 26, who has had nine years' experience in the above trades, DESIRES EMPLOYMENT. He is capable of keeping books by double entry, and is used to collecting. Satisfactory reference as to ability, integrity, &c can be given.—Address (pre-paid), W. H. Palmer's Library, 37, Lamb's-conduit-street.

A YOUNG MAN wishes to get EMPLOYMENT as a JOBBING CARPENTER. He is willing to make himself generally useful.—Please to address to E. S. No. 15, Upper Lisson-street, St. Mary-le-bone.

TO ARCHITECTS, BUILDERS, STATUARIES, &c.

AN experienced Architectural and Monumental Carver wishes for EMPLOYMENT.—Apply to G. B. 17, North-street, Westminster.

AN experienced Plumber and Gas-Fitter is desirous of meeting with a PERMANENT SITUATION. Address to R. W. No 22 New Millman-street, Gray's-inn-road.

TO CONTRACTORS AND OTHERS.

A PRACTICAL BUILDER'S CLERK is open to an ENGAGEMENT; thoroughly acquainted with the whole routine, together with making finished or working drawings, superintending, &c. The country not objected to.—Address, H. Y. 14, Thornhill-place, Caledonian-road, Islington.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

A PRACTICAL and experienced Draughtsman, Quantity Taker, Estimator, and Measurer, aged 31, having been employed upon extensive works, and on his own account, meeting with losses, seeks an ENGAGEMENT where confidence is required, upon moderate terms.—Address, J. W. care of 46, Brewer-street, Golden-square.

TO SURVEYORS, BUILDERS, AND OTHERS

AN Experienced, Practical Middle-aged Man, proficient in, and accustomed to Measuring, Estimating, Taking on Quantities, Book-keeping, Superintending Works, &c. is desirous of an ENGAGEMENT. Terms moderate.—Address to H. W. at Mr. Brown's, No. 1, Avery-row, Bond-street.

A GENTLEMAN who has lately completed his Articles with an Architectural firm in one of the leading provincial cities, and who is a neat and fair Draughtsman, is desirous of an ENGAGEMENT in an Office in Town. Salary not so much an object as improvement.—Address, F. L. A. Box 156, Post-office, Bristol.

A YOUTH, of good education, aged 16, wishes to obtain a SITUATION in the office of a Surveyor and Architect, where he would have opportunity for improvement, with a small salary. He is a good draughtsman, and understands plane surveying.—Apply to G. N. 5, Albion-place, King's-cross.

AN EXPERT and EXPERIENCED Draving, Measuring and Estimating CLERK, is OPEN to a Partial or permanent ENGAGEMENT. Address, W. G. 5, Rhebiol-terrace, St. Peter's-street, Islington.

TO BUILDERS, PAINTERS, BREWERS, AND RAILWAY COMPANIES.

A RESPECTABLE MAN, who has had considerable experience in the superintending of painting, glazing, and paperhanging, wishes for an ENGAGEMENT. Can measure work and make out accounts. Age 40. Can be well recommended from his last place.—Address, 252, H. M. Commercial Coffee-house, Bishopsgate-street.

A FIRST-RATE and expeditious PLAN DRAUGHTSMAN, ORNAMENTAL WRITER, and COLOURIST, is open to an ENGAGEMENT, to make finished plans of town improvements, estates, railways, docks, mines, canals, roads, and projects of every kind. Has been employed by the most eminent engineers, architects, surveyors, and the Government for 18 years.—Apply by letter to R. THEODORE, 4, Trafalgar-square

METROPOLITAN LOAN COMPANY, Established 1833.

1, CRAVEN-STREET, STRAND, LONDON.

Loans are advanced in amounts varying from 10l. to 100l. repayable weekly or otherwise, as may be agreed upon, at a discount of 3d. per cent for twenty-five weeks, and for 50 weeks at 5 per cent. Forms may be had, price 2d.; if by post, three postage stamps to be enclosed. ROBERT NORTON, Secretary.

MONEY.—1,000l. 2,000l. or 3,000l. to be LENT, by Trustees, on MORTGAGE of FREEHOLD PROPERTY, at 5 per cent per annum. The security must be undeniable.—Application, with particulars, by letter only, to W. B. Devonshire Villa, New-road, Hammersmith.

11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. This internal stucco may be painted or papered within a few hours of its application, and rooms be thus made dry and habitable immediately.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.

These cements set under water in a few minutes, and are not affected by extreme heat or cold.

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not recreate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements used at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

BATH, PORTLAND, and ROMAN CEMENTS GROUND and LUMP HYDRAULIC BLUE LIAS LIME.

The LONDON and WEST of ENGLAND CEMENT COMPANY can offer to the trade the best Hydraulic Cements, at reduced prices, the material being excavated in its pure and unadulterated state, from quarries on their own property. The Company particularly recommend a trial of their XXXX Bath Cement, as far superior to any article now in the market. These cements can be sent by rail or shipped from their wharf, direct to all parts.—Agents required, and a liberal discount allowed. Orders received by Mr KIALLMARK, No. 50, Old Broad-street, City, or by RICHARD WINTER, Cement Works, Dunball, Bridgwater.

BATH CEMENT.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

PORTLAND CEMENT.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable. Orders received at Great Scotland-yard, and at the Works.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccos dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by T. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 8, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

TO BUILDERS, CONTRACTORS, SHIPPERS and Others.

G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland yard, Westminster.

DAVIES and NORMAN, Agents.

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

SOUTHAM BLUE LIAS LIME DEPOT.
Glazed Stoneware Sewers Pipes
Bricks, Tiles, and Cement Merchants,
TATHAM and CO
14, South Wharf, Paddington.

FRONTS of HOUSES.—GREENE and CO'S PORTLAND CEMENT WASH will not recreate, and equal to Oil Paint for durability. In casks of 1 cwt. for 15s. LIME WALLS GREENE and CO'S LIME SOLE ION PAINT, a guaranteed remedy, sold in quantities to cover 300 square feet, for 12s.—To be had only of the Inventors, GREENE and CO. 22, Norfolk-street, Islington.

BLUE LIAS LIME.—CHARLES NELSON begs to inform Engineers, Architects, Contractors, Builders, and the Trade in general, that he is prepared to supply direct from the Works in his own boats to any part of the Thames, River Lee, on any canal or by rail to all parts of the Island in large quantities of the above GENUINE HYDRAULIC LIME now so extensively used.

Quality, Weight, and Measure may at all times be strictly relied on, references in proof of the above can be given.

N.B. The Captain of the Boat will always bring with him the Grand Junction Canal Note, from which the contractor will be enabled to know exactly what weight of Lime he is paying for.

All orders addressed to the
LONDON DEPOT, 14, SOUTH WHARF, PADDINGTON.
Will be promptly attended to, and any further information can be obtained from them

Works, Stockton field, near Southam, Warwickshire.

PORTLAND CEMENT.
CHARLES NELSON, having completed his works for the manufacture fine white Cement, can supply Contractors, Builders, &c. with a very superior article. The manufacturing department being under his own immediate superintendence, he can confidently recommend it for all works in which Portland Cement is used, and only requires a trial to ensure approbation.

Orders, addressed to
London Depôt, 16, South Wharf, Paddington,
BLYTH, BROTHERS, Sole Agents,
will meet with immediate attention
Manufactory Ennerdale Mills, Warwick.

PLASTER of PARIS.—MESSRS. BLYTH, BROTHERS, beg to acquaint the trade, that they have made a considerable reduction in price; the quality they are now manufacturing cannot fail to give entire satisfaction. Samples and prices forwarded to any part of England, or the metropolis. No extra charge made to any wharf or railway station in London. Any further information can be obtained at their Works, Baldwin's-place, Gray's-inn-lane, Holborn; or at the Blue Lias Lime Depôt, 16, South Wharf, Paddington.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. to whom the Prize Medal was awarded in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side).
NORTH HALIFAX and HOLLINGTON.
WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the Hollow.

Large Grey Stone, or Grey Chalk, free on board at Works, 1s 9d. per ton.
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 8, South Wharf, Paddington-basin, London, March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf and mine, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations should be given a few days before required.

GIBBS, CANNING, and CO'S BLUE VITRIFIED BRICKS, PIPES JUNCTIONS, BENDS, and FIRE GOODS.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

GREAVES'S BLUE LIAS LIME.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

NOTICE.

SOUTHAM HYDRAULIC BLUE LIAS LIME.

WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump, into boats, at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

JOHNS and CO.'s PATENT PERMANENT STUCCO WASH (perfectly non-absorbent) STUCCO CEMENT, STUCCO PAINT. CLARK and BENGOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent road. Office, 4, George-yard, Lombard-street.

BRICKS.—White and Red Facing Bricks, and Hard Clinkers, for paving stables, &c. can be delivered by Thames or Eastern Counties Railway, at 15 per cent. under the usual prices. Apply to W. and W. WRIGHT, Springfield, Essex.

THE PATENT BRICK-MACHINE COMPANY invite orders for their IMPROVED MACHINES, the only ones that manufacture solid bricks equal to hand made, will shrink by heat as like as a hand made London, accessible by railway, where it may be seen at work with bricks of last season.

H. C. MOUNT, Secretary.
37, King William-street, City, February, 1856.

WHITE SUFFOLK and RED FACING BRICKS
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.
KENTISH RAG-STONE of the FINEST QUALITY.
MILLS and PRICE, 8 ADELAIDE-PLACE London-bridge

IMPORTANT to BUILDERS.—GREAT REDUCTION in the PRICE of BRICKS.—BRICKS delivered by any part of the River up to Battersea-bridge, at the following prices, viz. Grey Stocks, 28s. per thousand; Grizzles, 30s. per thousand; Red Stocks, 30s.; Place, 13s. to 15s. per thousand. Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock and be judge for themselves.

Malm Place half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

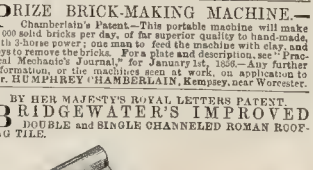
Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Brick-coverings for sheds, &c. of good quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

THE BEST HERTFORDSHIRE MALM SECONDS;
THE BEST WHITE SUFFOLK and RED FACINGS:
DEEP RED RUBBING BRICKS.
Also COWLEY and KENT STOCKS, in any quantity.
J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY
(Within a short distance of the five bridges).
THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.
Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

WHITE SUFFOLK PERFORATED BRICKS.—Messrs. J. EASTWOOD and SONS take this opportunity of informing their customers and the trade, that they have made arrangements for the Manufacture of White Suffolk Perforated Bricks. In curing defects common to bricks of this description, care has been taken to produce them of a true and perfect shape, of an even and beautiful surface, and free from fire-flaws.—J. EASTWOOD and SONS, Belvedere-road, Lambeth.



BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Flints for building and pottery work, Foundry Loam, Whiting, Whiting Sand for asphalte, Land Drain Pipes, Patent Drain Pipes, Gas Soil for brick making, &c. &c. sent by barge from Messrs. MEEson and GOLDS Wharf, Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and Southend and Eastern Counties lines, or near railway connected with them. Vessels of 300 to 600 tons can load alongside the wharves at Grays, at MEESON and CO.'S wharf and kilns, Bow-bridge, Stratford, Essex. The above-named article can be procured, as well as all kinds of fire goods, both Welsh and Newcastle. Fire-clay, Flare-burnt Lime, and Marble and Temper Lime; and here lime is packed in hogsheads, casks, bags, &c. for exportation.

General Office—No. 12, GEORGE-YARD, LOMBARD-STREET. Letters addressed to Grays, Essex, will meet with immediate attention.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20 000 solid bricks per day, of a superior quality to hand-made, with 3-horse power; one man to feed the machine with clay, and boys to remove the bricks. For a plate and description, see "Practical Mechanic's Journal," for January 1st, 1856.—Any further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

BY HER MAJESTY'S ROYAL LETTERS PATENT.

BRIDGEWATER'S IMPROVED DOUBLE and SINGLE CHANNELED ROMAN ROOFING TILE.

W. BRIDGEWATER begs to call the attention of the trade to his improved and superior method of manufacturing Roofing Tiles, whereby they can be produced cheaper, stronger, lighter, less liable to be damaged by the heat of the kiln in burning, or injured by the effects of the atmosphere; can be made either by Moulding or by Extrusion-pipe Machines, from any description of clay, by the most inexperienced hand, and of larger dimensions than any other method. The fit is so exact that no pointing or mortar is required to be used, consequently, greatly improving the external appearance. Parties desirous of manufacturing the above can be supplied with the necessary apparatus upon applying to the Patentee, at his residence, No. 1, Portland-street, Cheltenham, who will be willing to grant a limited number of licenses for their manufacture on royalty or otherwise.

N.B. By this process the strongest and most tenacious description of clay can be made to produce a very superior Roofing-tile, at a much less cost than by the ordinary way of making.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for the WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade terms, "Patent Terro-Metallic," is the exclusive right of the Proprietor, and, thirdly, that the "Reports of the Juries," page 581, of the Great Exhibition, rank the Manufactories known as Peake's, Terro-Metallic, "Tunstall, Staffordshire, as the first of the kind in the world.

PATENT PAINT for BUILDERS and IRONFOUNDERS.—The LONDON PATENT ANTI-OXYDE PAINT has been specially chosen by the Government Engineers as the best, cheapest, and most durable that has ever been discovered. Address to Mr. DEANE WALKER, at the Office of the Company, 28, New Bridge-street, Blackfriars, where every information is afforded.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide place, London-bridge.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 1, Adelaide-place, London-bridge. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and complete job is obtained. The invention has been tested by four years' extensive use with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses, is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvetoft, near Rugby; or in Lond.n, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

TO BRICKMAKERS, BUILDERS, &c.—TO BE LET, an extensive BRICK YARD, capable of producing a large quantity of bricks, having four kilns. Three will burn 40,000 each (being arched), and one open will burn 30,000. Also, steam-engine, two boilers with machinery, and patent brick machines for the making of patent steam bricks. There are also sufficient sheds and floors to carry on the making of hand bricks and tiles, with two clay houses and roll ers. Four sheds are fitted. Every requisite in plant, tools, moulds, &c.—For particulars as to terms, apply to Mr. S. CARTLEDGE, at the Brickworks, Mapperley, near Nottingham

TO TILE MANUFACTURERS.—TO BE LET, the OWENSTOWN TILE-YARD, the property of His Grace the Duke of Leinster, situate near Maynooth, eleven miles from Dublin, and a short distance from the Royal Canal. The works include four kilns for burning tiles, four large drying-sheds, a machine-house, forge, pug-mill, tile-making machine, and two burners' cottages, with a small portion of land attached. Good prices are to be obtained in Dublin for the produce of a tile manufactory.—Apply by letter, post-paid, to F. ARTHUR TRENCH, Esq. Newlands, Tallaght, near Dublin.

TO BUILDERS.

A PRACTICAL PERSON is willing to join a BUILDING BUSINESS. Will embark 400l. Respectable reference given and required.—Address, L. R. 3, Bedford-road, Clapham.

PARTNERSHIP.—An Architect and Surveyor, who is desirous of extending his professional engagements, is willing to PURCHASE a SHARE in the Practice of any Gentleman wishing to withdraw from the more arduous duties thereof.—Apply by letter, in the first instance, to S. B. F. care of Mr. Bishop, 11, Red Lion-square.

THE Advertiser, who will shortly conclude his present engagement, is anxious to meet with a gentleman requiring the assistance of an ACTIVE MANAGER, with a view to a PARTNERSHIP, or an efficient, practical, and artistic ASSISTANT. He is thoroughly versed in every minutia of constructive detail, and in the manipulation of all kinds of building material (including iron, in which he has had considerable practice), is a clever artist, excellent in design, detail, and ornamentation, and is thoroughly efficient in land and building surveys, levelling and plotting, setting out and measuring up works, general estimating, and accounts.—Address, X. W. P. 23, Brunswick-street, Islington.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders for post-prompts receive most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

TOTTENHAM.—TO BE LET, a FIELD, containing Six and a half Acres of excellent Malm Brick Earth, situated by the side of the high road, five and a half miles from London. The bricks made in this field have always found a ready sale.—For terms and other particulars, apply to Mr. A. RICHARDS, Auctioneer, Tottenham

TO MANUFACTURERS AND OTHERS REQUIRING WATERSIDE PREMISES

TO BE LET,—LOCKE'S WHARF, Edmonton, on the navigable river Lea, near the Railway Station, and seven miles by road from London. It comprises two acres of ground, having upon it numerous Sheds, four Cottages, and an Extensive Frontage to the river. There being very few houses in the vicinity, no manufactory could be objected to.—For further particulars, apply to Mr. A. RICHARDS, Auctioneer, Tottenham.

TO ARCHITECTS, &c.—TO BE DISPOSED OF, on moderate terms, an OLD-ESTABLISHED PRACTICE, in a fashionable watering-place in the south of England.—Address, DELTA, Ivy House, Albion-place, Southampton.

TO PLUMBERS, PAINTERS, GLAZIERS, and WINDOW-GLASS CUTTERS.—A snug little BUSINESS, in a public thoroughfare, TO BE DISPOSED of very cheap, owing to a death in the family. Established six years. Rent and taxes 28l. per annum.—Apply to M. W. Bridewell Wharf, Blackfriars.

TO PLUMBERS, GLAZIERS, PAINTERS, and PAPER-HANGERS.—(THOMAS COLLINS, deceased, late of Greatbridge, Tipton, in the County of Stafford.) TO BE DISPOSED OF, the BUSINESS in the above branches (carried on by the deceased for upwards of twenty years), together with the new and useful STOCK IN TRADE. The house and premises are well situated, and adapted for the trade, as in the immediate vicinity of a thickly populated district, and adjacent to extensive works of all kinds.—To treat, application is requested to be made to the Executor, Mr. THOMAS CHURCHILL, 1, Princes-end, near Bilston, Staffordshire

NOTICE.—All persons having any demands upon the estate of THOMAS COLLINS, deceased, late of Greatbridge, Tipton, are requested to send in to me their claims and particulars; and all persons indebted to the said Thomas Collins are requested forthwith to pay the same to me. THOMAS CHURCHILL, Princes-end, near Bilston, the Executor.

March 11th, 1856.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheels ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and hegged on a new system which gives superior tone and facility for ringing

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 4s. per foot superficial together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 9, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

PAPER-HANGINGS.—To BUILDERS, PAINTERS, and the TRADE generally.—TRUMBLE and CO. Manufacturers, Leeds, beg to call the attention of the trade to their immense STOCK of PAPER-HANGINGS, at No. 3, Oxford-street, London, consisting of Gold, Flock, Satins, Oaks, Marbles, Granites, and Machine Goods. The whole being their own manufacture, can supply on the very best terms.

PAPER-HANGINGS. — JEFFREY, ALLEN, and CO. beg to inform the trade, they have a large selection of Paper-Hangings of their own manufacture, of all qualities, and at very low prices. They confidently invite attention to their best papers, which in price, style, and colouring, are equal to any that can be manufactured.—J. A. and CO. are the sole proprietors of the Gutta Percha Paper, an efficient remedy for damp walls. — Factory, 116, Whitechapel; Show-room, 500, Oxford-street.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSSE'S WHOLESALE WAREHOUSE, 22 GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

PATENT TERRA-COTTA. Tracery for Parapets and Terraces, Mullions, Pinnacles, Moulded Bricks, Casts of Arms, Crosses, Label Mouldings, Friezes, Trusses, Vases, Balusters, Capitals and Bases of Columns, Paving, Facing Bricks, Coping, Kitchen and other Sinks, Chimney Shafts and Tops, and numerous other Articles, manufactured by J. M. BLASHFIELD, in Patent imperishable Terra-Cotta, at Milkwall, Isle of Dogs; and sold at No. 1, Wharf, Praed-street, Paddington-basin

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO., Wholesale Agents, 93, King William-street City; and by the Manufacturing and Painting Agent, Mr. FREDK. BRABY, Fitzroy Works, Newroad. In Manchester and Liverpool, by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21 and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in Lond.n, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

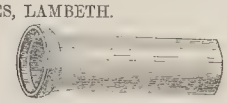
TO BE SOLD very cheap, a powerful HYDRAULIC PRESS, secondhand, in good condition, with 10-inch ram-head and follower, each 4 feet 6 inches by 4 feet 6 inches. Range between head and follower, 5 feet. Also a pair of PUMPS, with hand lever, the plungers 1 inch and 3 inches respectively.—Apply to Mr. FREDERICK RANSOME, Patent Stone Works, Ipswich.

TO WATER COMPANIES AND PLUMBERS

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.



JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

GREAT REDUCTION IN GLAZED STONEWARE PIPES.

STEPHEN GREEN,

IMPERIAL POTTERIES, LAMBETH.

S. G. wishes to call attention to his WHOLE and HALF-SOCKET PIPES, made on the principle of PILBROW'S IMPROVED REBATED SOCKET-END, which fully secures a joint free from obstructions, and meets the demand for removing Pipes at any point.

5s. 6d. each; if fitted with PATENT AIR-TIGHT VALVES, 1s. 6d. each extra.

Also to his IMPROVED REGISTERED CLOSET-PAN, with an impervious White Glaze inside, and formed to insure a Flush of Water over the entire Internal Surface. Made with or without STEPHEN GREEN'S PATENT AIR-TIGHT VALVE on the top of the Trap.

N.B. Prospectuses, with Prices and Terms, forwarded post-free, as also Prospectuses of STEPHEN GREEN'S PATENT SELF-ACTING FLUSHING CLOSET, complete, with seat and Riser, &c

REDUCTION IN THE PRICE OF CLOSET-PANS.

DOULTON AND WATTS,

LAMBETH POTTERY, HIGH-STREET, LAMBETH,

Have reduced the Price of their PATENT ENAMELLED CLOSET-PANS WITH TRAPS, to

5s. 6d.

These Pans, therefore, which have a strong Vitrified Body, as well as a White Interior Glaze, may now be obtained at the price of the common best description of Chamber-pans.

B. FOWLER & CO.'S PORTABLE PUMPS,

3-inch to 9-inch Barrels,

Plain or Sliding Telescope Suction,

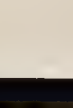
ON HIRE.

SINGLE AND DOUBLE PUMPS, all sizes, to any depth, for Hand or Steam Power.

Patent Double-action and General Pump-makers, Builders' Smiths, &c.

WHITEFRIARS-STREET, Fleet-street.

TO BUILDERS AND PLUMBERS.



The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

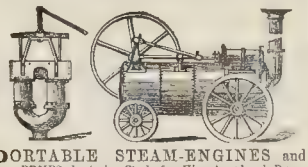
By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than Pumps made on the old plan.

Fire and Water Engines for raising fluids from a depth not exceeding 33 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER and SONS, 8, Crescent, Jewin-street, London, Manufacturers and Patentees.

TO BE DISPOSED OF, SIX PILE-ENGINES, in good condition. May be seen at the Lambeth Water Works, Brixton-hill.—For price, apply to Mr. RIGHARDS, in the ground.

R. RICHARDS and CO.
PUMP MANUFACTURERS and ENGINEERS.



Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.
PUMPS ON HIRE.
Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

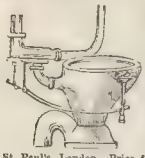
N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 3s. per doz. painted.
Ditto .... 4s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side.

TO BE SOLD, a Portable 9-horse power ENGINE, with boiler attached (Gough's Patent), mounted on frame and railway-wheels; it has till lately been used at the Grimsby Docks for pile-driving and pumping, and is in good condition. Price 80l.—Apply to WM. SIBSONS, 8, Station-terrace, Hull.



PUMPING and WINDING ENGINE.—TO BE LET on HIRE, or for SALE, a nearly new strong and simple PUMPING and WINDING STEAM ENGINE, of 10-horse power, by Medwin and Hall, with a pair of 10-inch pumps and all the driving gear complete. The contractor for whom it was fitted up will make a considerable sacrifice on the cost price, or let the whole on hire.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, 92, Blackfriars-road.

TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES.

FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.
W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

WILLIAM GILBERT, Tividale Pottery and Blue Tile Works, near Tipton, Staffordshire.—The BLUE WARE SANITARY PIPES made by W. GILBERT are the only GLAZED pipes of the kind manufactured in England. They are well vitrified, smoothly glazed, and very durable, being subjected to intense heat in the kilns. Being moulded by machinery, they are as smooth and straight as stoneware pipes; will bear a greater pressure, and endure in the drains a longer term than any other material. The sockets are deep, and made much stronger than the body of the pipe, so as to resist all unequal pressure under ground. These pipes are cheaper than stoneware, and may be had in 2 feet lengths, of 2 in. 3 in. 4 in. 6 in. 9 in. 12 in. 15 in. and 18 in. bore,—with all kinds of syphons, junctions, bends, gullies, and sink grates to match. Fire-clay chimney-pots of 100 patterns. Glazed stoneware sewerage pipes, &c. &c. Terra-cotta clay brackets, trusses, vases, fountains, busts, statues, pedestals, &c

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 23, Old Fish street, near St. Paul's, London.—Price for Closet and Apparatus complete, from 35s. and perfect action guaranteed.

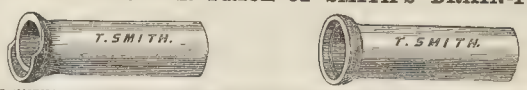
GREAT REDUCTION in the PRICE of PARRY'S superior STONE-GLAZED DRAIN-PIPES. Manufactory, Church-street, Deptford, Kent.
N.B. All kinds of Red Drain-pipes. Established 1701.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE
No. 7.

is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 208 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,
THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.
N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price complete, 13s. 6d. each

SUPERIOR STONEWARE GLAZED PIPES of a quality not to be surpassed.—E. and W. STURGE respectfully invite attention to the very superior character of their stone pipes, which they are confident are such as must give great satisfaction, the price being also lower than many in the trade, viz. 35 per cent. discount off the list for cash. Junction Bends, &c. Pans and Traps of the first quality, Yorkshire Paving, Sinks, Slills, &c., all at low cash prices.—E. and W. STURGE, Bridge Wharf, City-road.
N.B. A small extra charge is made upon goods required to be delivered.—October 1, 1855.

JOHN DOULTON, BROTHERS, AND CO.
LIVERPOOL POTTERY,
ST. HELEN'S.
STORES—70, SOHO-STREET, LIVERPOOL.



MANUFACTURERS OF
DOULTON'S STONEWARE PIPES. | DOULTON'S INVERT BLOCKS FOR SEWER BOTTOMS.
DOULTON'S HALF-SOCKET PIPES. | DOULTON'S PATENT JUNCTION BLOCKS.

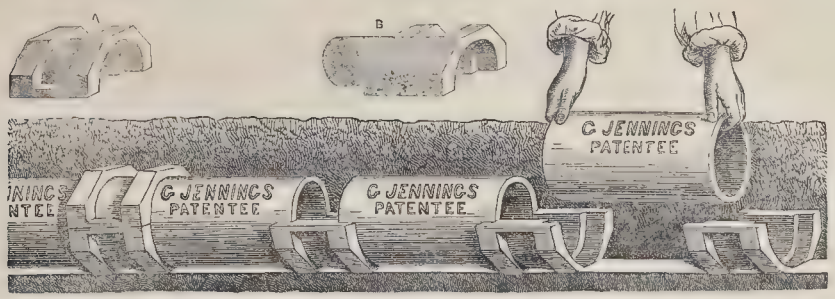
HALF-SOCKET PIPES same prices as whole Sockets, by the use of which, Drains may be readily examined, and Junctions INSERTED, IN THE EVENT OF REQUIRING FURTHER CONNECTIONS.
Drawings, with Prices, will be forwarded free, on application.

GREAT REDUCTION in PRICE of STONEWARE DRAIN-PIPES.



WILLIAM NORTHEN,
UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH,
Begs to call the attention of Surveyors, Contractors, Builders, and others, to a very great REDUCTION in the PRICES of his
GLAZED STONEWARE DRAIN-PIPES.
LISTS OF PRICES FORWARDED ON APPLICATION.

KINSON POTTERY AND CLAY WORKS, POOLE, DORSET.
DEPOT, 2 AND 3, HIGH-STREET, LAMBETH.

Manufacturers of every description of Sanitary Glazed Sewage Pipes, Bends, Junctions, White Glazed Closet Pans, Gas Retorts, Fireclay Blocks, Tuyeres, Fire-bricks, &c. &c.
The Fire-Bricks made from this Clay at this estate have been tested, and proved to be in every respect equal to those of Stourbridge and Newcastle.
DRAWINGS AND PRICES MAY BE HAD OF J. COX, AS ABOVE.

JENNINGS'S PATENT DRAIN-PIPES.

THE PATENT CHAIRS AND SADDLES above shown are to a line of pipes the SAME SUPPORT AS SLEEPERS TO A LINE OF RAILWAY, the base of each Chair being BROAD and STRONG. The pipes are simple cylinders, of uniform thickness, made without the usual socket; the drying and burning, in consequence, is much more perfect. Pipes thus made and connected will be found to BEAR ANY PRESSURE, and are in no way liable to derangement. The laying of these pipes, and the making of the joints, IS DONE AT ONCE, EACH PIPE BEING BEDDED AS IT IS LAID, and the space between allows the workman to strike up the joint, and the superintendent TO SEE that every pipe is ACCURATELY LAID and PROPERLY JOINTED.

A shows one of JENNINGS'S PATENT SADDLES OR COVERS, by means of which examinations are effected; B shows one of the PATENT JUNCTION COVERS, by which connections are made to finished lines of pipes, it being only necessary AT ANY TIME to remove a PLAIN Cover or Saddle, A, and substitute a Junction Cover, B, the Junction being THE SIZE of the Branch Pipe.

The favour with which these pipes have been received will no doubt give rise to many imitations, as it is much easier to COPY than to INVENT; but GEORGE JENNINGS hopes his sanitary patrons will give HIM CREDIT for being THE FIRST TO SHOW HOW JUNCTIONS MAY BE INTRODUCED, OR EXAMINATIONS MADE, TO FINISHED LINES OF PIPES. These important improvements, as above shown, are PATENTED; and GEORGE JENNINGS would caution those who desire TO PROFIT BY HIS IDEAS, NOT TO INFRINGE HIS PATENT RIGHTS, as they will not be allowed to do so with impunity, although he feels confident the ORIGINAL, for its SIMPLICITY and EFFICIENCY, will be preferred to any copy.

Prices of JENNINGS'S Drain Pipes, per foot run, including the Patent Chair and Saddle, are as follows:—4-inch, 6d.; 6-inch, 8d.; 9-inch, 1s. 1½d.; 12-inch, 1s. 10d.; 15-inch, 3s.; 18-inch, 4s.; with the usual discount to the Trade.

JENNINGS'S PATENT DOUBLE-SEATED VALVE-CLOSET.

Architects describing this Closet in their specifications will have a PERMANENTLY GOOD VALVE CLOSET, NOISELESS, and FREE FROM COMPLICATION. The Patentee has such confidence in its DURABILITY and EFFICIENCY, that he will guarantee every Closet for SEVEN YEARS.

JENNINGS'S IMPERISHABLE EARTHENWARE CLOSET AND TRAP.

This Closet has a large water surface, has no back to soil, is imperishable in its material, and the Trap and Closet is combined in one piece, suited alike for the PALACE or the COTTAGE.

JENNINGS'S IMPROVEMENTS IN LIFT AND OTHER PUMPS.

These Pumps would well repay a visit to Jennings's factory, where may be seen Jennings's Lavatories, Urinals, Sluice Valves, Fire and Steam Cocks, of every size; Shop-Shutter Shoes; Gully, Area, and Sink Traps, and other sanitary goods.

Or Illustrations and Prices can be had free by post, if two stamps are enclosed to

GEORGE JENNINGS, SANITARY ENGINEER, 29, GREAT CHARLOTTE-STREET, BLACKFRIARS-ROAD, LONDON.

WILLIAM INGHAM AND SONS,

WORTLEY FIRE-BRICK, GAS RETORT, SANITARY PIPE, AND TERRA-COTTA WORKS, NEAR LEEDS, YORKSHIRE,

Manufacturers of Glazed Sanitary and Water Pipes, from 2 to 36 inches diameter; Invert Blocks for Sewer Bottoms, Closet-pans, Fire-clay Gas Retorts, Fire Bricks, Chimney Tops, Crucibles, and a variety of Articles in Terra-cotta.

Leeds Stores—Albion-place, Albion-street.

W. I. & SONS beg to inform Architects, Engineers, Contractors, Iron Masters, Builders, &c. that the whole of the above-named Articles are manufactured from the celebrated Wortley Fire-clay, and they (having worked the same for upwards of thirty years) can furnish first-class references.

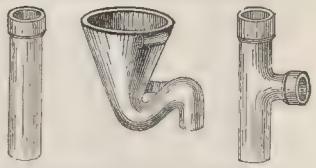
SALT-GLAZED STONEWARE PIPES, BENDS, JUNCTIONS, CLOSET-PANS, TRAPS, &c at the

NEAR POOLE, DORSET.

These Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree of hardness, are very far superior to the best ware hitherto manufactured in Hants and Dorset; they are made of clay of the finest quality, the produce of the estate, and will bear comparison with any Pipes in the kingdom, and can be had upon application to THE AGENTS:—

Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth, London;
Mr. J. S. HUDSON, the Pottery, Bournemouth, Poole;

Where a large stock is always kept on hand.



AYLESFORD POTTERY COMPANY,

BELVEDERE-ROAD, LAMBETH.

MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

The above Company having now been in existence for nearly seven years, and having during this period supplied DRAIN PIPES, &c to some of the largest Works in and around London, viz.: The New Cattle Market, Wellington and Chatham Barracks, Deptford Dockyard, Her Majesty's Commissioners of Works, &c. and in all instances parties using them expressing themselves satisfied therewith,—take this as a fair test of the quality of the articles supplied by them; and as they now feel themselves established as Potters, beg to offer their goods to Contractors, the Trade, &c. of a first-rate quality and manufacture, and at the lowest possible prices, NOT BEING IN ANY WAY CONNECTED WITH THE LONDON POTTERS' ASSOCIATION.

GREAT REDUCTION in the PRICE of STONEWARE POTTERY from this date

VICTORIA POTTERY, LEIGH, near SOUTHEND; London Establishment, Falcon Wharf, 80 Bankside.—DAVID MOUNTAGUE, Manufacturer of every article of Lambeth POTTERY, having now further reduced the prices, begs to offer to consumers and others, STONEWARE PIPES, &c. &c. on the most advantageous terms. The new lists of prices will be forwarded on application as above.—Feb. 11, 1856.

PATENT DRAIN-PIPES, UNGLAZED, manufactured by ARTHUR C. FRANCIS and CO. Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Nine Elms, London, and at all their Warehouses.

PRICES.

3 inch bore, in 2 ft. 6 in. lengths, at					3d. per foot.
4	"	"	"	"	4d. "
6	"	"	"	"	6d. "
9	"	"	"	"	9d. "
12	"	"	"	"	1s. 3d. "
15	"	"	"	"	2s. 6d. "

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture, and it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c &c.

UNDERHAY'S PATENT REGULATOR CLOSETS for constant or intermitting supply, dispense with Cisterns, Service Boxes, Valves, Levers, Cranks, Levers, &c. &c.; much time is saved in fixing, and a better flush of water obtained in use.

Fan, Valve, Self-acting, and Servants' Closets, on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed. 3,000 of them have been sold, and no instance of failure has occurred.

These Stop-Valves are cheaper, stronger, and more ornamental, than any other. Many thousands are in use, and greatly approved of.

Manufactured by
CHARLES BOTTEN and SON,
Brass Founders, Crawford-passage,
Clerkenwell, London.

SALES BY AUCTION.

In the Western Suburbs of London and Parish of Kensington, singularly valuable Freehold Lands, offering very choice and beautiful Sites for Building

MESSRS. DANIEL SMITH and SON will (unless an acceptable offer shall be made for the entirety subject to Auction) offer the MARYLEBONE PARK Estate, and on TUESDAY, the 8th APRIL, 1856, at TWELVE precisely, in lots of from three to four acres each, presenting beautiful sites for the erection of respectable villas, about TWENTY ACRES of rich and FREEHOLD PASTURE LAND (time to be nine undulating inclosure, within a few minutes' walk of the Harrow and Bayswater roads, where several capital villas have been recently erected detached from any houses or other buildings, and commanding some extensive and cheerful scenery. It would be a peculiarly desirable spot for public institutions, and the Estate is intersected with plans, may be had at the Auction Mart; of Messrs. R. M. and F. Lowe, Solicitors, Temple; of Mr. W. Sim, Architect, 39, Elgin-crescent, Notting-hill; and of Messrs. Smith and Son, Land and Estate Agents, in Waterloo-place, Pall-mall, who are fully authorised to treat for the whole or any part thereof. A valuable farm adjoining may be purchased if a large extent should be required.

SWINTON IRONWORKS. By

MESSRS. OLIVER and SON, at the PRINCE of WALES' HOTEL, in Masbro', in the County of York, on WEDNESDAY, the 2nd of APRIL, 1856, at FOUR o'clock, in the afternoon (unless disposed of in the meantime by private contract, of which notice will be given), as may be agreed upon at the time of sale, and subject to such conditions as shall be then and there produced, all those valuable and extensive IRONWORKS known as the "Swinton Ironworks," 5 miles from Rotherham and 11 miles from Sheffield, having a wharf and frontage to the River Don Company's Canal, for a short length of the works, with water communication to Rotherham, Sheffield, Doncaster, Hull, &c. and near the Rotherham and Swinton Railroad, consisting of two blast furnaces, four stone boilers, and other requisite iron work for the Railway. The works consist of sixteen puddling furnaces, two ball furnaces, two mill furnaces, one annealing furnace one 30-horse non-condensing beam engine, setting plate mill, and one hammer complete, will stone built engine house, large brick cistern; one other portable beam engine, 14-horse power, driving finishing hammer, and other portable engines, consisting beam engine, 36-horse power, driving bar mill, with all wheels, gears, water Lashes, floor plates, working tools, in the most complete working order; smiths' shop, two hearths, two pairs of bellows, with all tools complete; roll turners' shop, with two lathes, one 21ft. 18-inches machinery, driven by one six-horse high-pressure engine, with a boiler and other lathes. Foundry, with air furnace, capable of melting fifteen tons; two capolo cranes, crane and bull ladels, moulding boxes, sand, &c. all in complete working order for all the gear, wheels, &c. in the forge; dry-house fitting-shop, model-makers' shop, joiners' shop, boat carpenters' shop, melting furnace (ten holes), counting-house, three cottages, coal pens, pens for ore and scrap iron, with coking furnaces (twenty), and other warehouses and out-buildings. Also one close or parcel of Land adjoining, comprising about 3 acres. Also eighteen stone-built cottages, at High Town, in the township of Swinton, and near the works, with a valuable Stone Quarry. Also a large and substantial stone-built House, at Kirk Imps, close to the railway station, well adapted for an inn, with two cottages, stabling for ten horses, with hay-lofts and carriage-house, built as to be easily converted into cottages.—To view the Premises, apply to the Manager, Mr. Coos; for further particulars, apply to Davies and Cudworth, Solicitors, Leeds. N.B. The vendors are still open to sell private, the Premises.

SALES BY AUCTION.

TO BUILDERS, CARPENTERS, AND OTHERS. TO BE SOLD by

J. H. GREENACRE, by Order of the Directors of the East Dereham Corn Exchange Company, on THURSDAY the 10th day of APRIL, 1856, at ELEVEN o'clock in the FORENOON, on the Premises in Lot, the MATERIALS of the Dwelling-house and Shops and Shed in the Market-place and in Church-street, in East Dereham; now or lately in the occupations of Mr. Barton, Mrs. Tuneate, Mr. Neal, Mrs. Catton, and Miss Halsted. Conditions will be produced at the time of sale.

PAUL'S HOUSE, TAUNTON.

MR. KINGSBURY has been instructed to SELL by AUCTION, at PATTISON'S CASTLE HOTEL, Taunton, on TUESDAY, the 8th day of APRIL next, at TWO o'clock in the afternoon, all that excellent FREEHOLD MANSION, called "Paul's House," together with the COTTAGE, and extensive SHRUBBERIES, GARDENS, and GROUNDS adjoining the same, containing by admeasurement 3a. 3r. 14p. in the parish of Bishop's Hull. The mansion is situate in a healthy portion of the town, agreeably secluded in its lawn and shrubberies, and within a few minutes' walk of the market-place. It is replete with spacious entrance and dining rooms, library, breakfast parlour, housekeeper's and butler's rooms, kitchen, laundry, china closets, &c., twelve bed-chambers and dressing rooms, and is amply supplied with every convenience: it has walled gardens, productive of fine vegetables and fruit, stables for two horses, harness-room, coach house, &c.; brewhouse, extra stable, cow houses, piggeries, and all manner of other requisite offices, at a judicious distance, combining, as a whole, most commodious, comfortable, and capable of being at once inhabited, with a trifling outlay. To a person desirous of making a building speculation, the auctioneer begs to call particular attention, as the house is so pleasantly separated from the other portions of the property, and a street carried across the field, forming a double frontage from Tower-lane to Bridge-street opposite the New Shire-hall, and the other building frontage of upwards of 100 yards, facing the Crescent-field, in that most improving part of the town leading towards the village of Bishop's Hull. And in the event of the property not being sold in one lot, it will be offered in smaller portions as above put up into lots, so as to enable any purchaser to buy the building or plantation that may suit his views and means. Further particulars may be had of Messrs. Bevan and Sons, Solicitors, Bristol; of Messrs. Bevan and Sons, Solicitors, Exeter; of Messrs. Bevan and Sons, Solicitors, Hammet-street, Taunton, March 10, 1856

TO TIMBER MERCHANTS, CABINET MAKERS, COACH-MAKERS, BUILDERS, & OTHERS For absolute SALE by AUCTION under an Agreement, on WEDNESDAY, 2nd APRIL (unless previously disposed of), at HALF-PAST TEN for ELEVEN o'clock precisely, in the PREMISES, Old Bethnal Green-road, the entire STOCK IN TRADE of Messrs. R. COLLING and SON, Timber Merchants, consisting of 46,000 Feet of Hoop Iron and Cuba Mahogany, in Planks and Boards, Cedar and Rosewood in Planks and Boards, and Mahogany and Rosewood Veneers, of large quantities of well-grown timber, pure stocks of deals, dealends, battens, and staves, horse, cart, and other gears, to be had on the day previous; and on the morning of sale the premises will be open for inspection, and the Messrs. Colling will be in attendance to show the property. Brokers and Auctioneers, 13, Pioneer-hall, 194, Broad-street, City.

FREEHOLD BUILDING LAND, HOLLOWAY.—TO BE SOLD, or LET, about EIGHTEEN ACRES, in large or small Plots.—Apply to Mr. PEACHEY, 12, Salisbury-square.

FREEHOLD.—WANTED to PURCHASE, a BLOCK of OLD HOUSES or a vacant space of Ground, having a superficies of about 40 yards by 36 yards, to be situate within the four following lines:—Bedford-row, Guilford-street, Wes-minster, on the south, the Parks on the west, Regent-street on the north, and Regent-street, Charing cross, and Parliament-street on the east. A Frontage to Regent-street would be preferred, but it is not absolutely essential. Particulars to be addressed to Messrs. WATKINS and HOOPER, Solicitors, 11, Sackville-street, Piccadilly

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Messrs. MORGAN and PHIPPEN, Architects, 3, Danes-inn, St. Clement's, Strand.

FREEHOLD GROUND, Fetter-lane.—The Commissioners of Sewers of the City of London hereby give Notice that they will meet at the GUILDHALL, on the 2nd day of APRIL next, at TWELVE o'clock at noon precisely, to receive PROPOSALS for taking on BUILDING LEASE for eighty years, certain PLOTS of GROUND, situate at the south-east end of Fetter-lane. Further particulars may be had, and a plan seen, on application to Mr. HAYWOOD, Engineer to the Commissioners, at the office in the Guildhall. The Commissioners will require a plan and elevation of the Premises proposed to be built thereon, and if approved of, and do not find themselves bound to accept any proposal unless deemed advantageous. JOSEPH DAW.

Sewers Office, Guildhall, March 4th, 1856.

FREEHOLD or LEASEHOLD GROUND or PREMISES. WANTED, within the boundaries of St. George the Martyr, Southwark, a FREEHOLD or LEASEHOLD SITE, of not less than 50 feet frontage to a public road, and 100 feet.—Part offers of price, dimensions, and situation to be sent in writing to A. B. Post-office, 109, Blackman-street, Borough.

FREEHOLD LAND.—Wanted, to Purchase, a piece of Freehold Land, of not less than an acre and a half, having a frontage to a public road, and not more than a quarter of a mile from the Royal Exchange; it must be in the vicinity of a market, and capable of good drainage.—Address, stating full particulars, quantity, price, situation, &c. to Mr. HERBERT WILLIAMS, Architect, 1 Great Ormond-street, Bloomsbury, on or before the 30th APRIL next

OLD FORD, near VICTORIA-PARK.—FREEHOLD BUILDING GROUND TO BE LET, with liberal cash advances, admirably suited for fourth-rate houses, which are much required in this rapidly increasing neighbourhood, and will be let at a low rent.—Further particulars apply to Mr. OLIO CLARKSON, Surveyor and Land Agent, 48, Peaton-street, Pentonville.

HOLLOWAY.—FREEHOLD BUILDING GROUND TO LET, with liberal cash advances, to respectable Builders, admirably situated for Villa Residences, where are much required in this favourite and healthy locality. The situation is healthy, and the roads and drainage good. For further particulars, apply to Mr. GEORGE CLARKSON, Surveyor and Land Agent, 48, Peaton-street, Pentonville.

TO BUILDERS

FREE, near BLACKHEATH.—FRONTAGES TO BE LET, for detached or semi-detached villas, on the Belmont Estate. This estate contains the finest sites for building upon anywhere near London, and the villas are in great demand, on account of the situation being lofty, dry, well drained, and very eminently healthy. Assistance will be afforded to responsible parties.—For particulars, apply to Messrs. J. and C. W. TODD, Milner-street, Brompton, London, or Belmont, Lee, Kent; or Messrs. NELSON and INNES, 6, Whitehall; and of Messrs. KIRKMAN and ENGLEHEART, King William-street, City.

BUILDING AGREEMENT TO BE SOLD. TO BUILDERS, BUILDING SOCIETIES, and OTHERS. HAVERSTOCK-HILL, HAMPSTEAD-ROAD.—TO BE SOLD, a valuable BUILDING LEASE, for forty years, of FREEHOLD LAND, situate in one of the healthiest and most commanding positions in London, and only three minutes' walk from the Railway Station, Chalk Farm, whereon is to be built Fifty-six Houses. There is sufficient brick-earth dug and prepared for making at once bricks sufficient for erecting the whole of the houses. The Plant necessary for carrying on the works could be had with the brick earth at a fair valuation, or the holder of the land would make the bricks at a low price to be agreed upon.—For particulars apply to Mr. NUTTER, Land Surveyor and Auctioneer, Prince of Wales-road, Haverstock Hill.

MAITLAND-PARK, HAVERSTOCK-HILL, HAMPSTEAD-ROAD, Land to be resumed.—TO BE LET, for building leases, for forty years, desirable BUILDING SITES upon the above estate. The continued demand for houses in the locality, and the picturesque position of the property, adjoining the grounds of the Orphan Working School, render this a desirable opportunity for builders or gentlemen wishing to invest well for themselves. For plans and terms apply to the Secretary of the Orphan Working School, 33, Lindsell-hill, Messrs. FERRELL and CHAMBERLAIN, 36, Basinghall-street; the Architects, Messrs. WEIMMER and ASHDOWN, 42, Charing-cross; or at the Lodge attached to the School.

ELIGIBLE BUILDING LAND TO BE LET, on the very best part of the immediate neighbourhood of Forest-hill. The ground is dry and finely timbered, and within ten minutes' walk of either railway station. A liberal peppercorn rent will be granted.—For particulars apply to Mr. T. L. ROBINSON, 16, High-street, Croydon, Surrey.

TO BUILDERS and OTHERS. — An excellent SITE TO BE LET or SOLD, for BUILDING PURPOSES, with a good double frontage, situate in a leading thoroughfare and in an essentially improving neighbourhood, with a lapse of fifty-and-odd most eligible years, and workships. The materials of the present premises may be used if sound, in erecting any new buildings that may be required. Money will be advanced if required by the purchaser, or taken, to carry out the undertaking, upon a satisfactory arrangement.—Inquire of Messrs. HOWARD and DOLLMAN, Solicitors, 4, Bedford-row, Holborn-street; Mr. EDWARD LOWTHER, 28, Red Lion-street, Clerkenwell, or of Mr. MURRELL, Auctioneer, 1, Walbrook, City.

BUILDING LAND TO BE LET, at HALLSVILLE.....Term long years, for small cottages.
CANNING TOWN " 1,000 " for small cottages.
NORWOOD..... " 1,000 " for villa residences.
SPRATFORD..... " 100 " for small cottages.
POPLAR..... " 98 " for fourth-rate houses.
Advances 7½ to 10 per cent. on each cottage.
Apply to Mr. WM. ELLISON, Architect, Stansby-road, Limehouse.

TO LET, Marsh-street, Walthamstow, a SITE of GROUND, whereon is now standing an old house, with large yard at the back, and lofty lime-timbered orchard trees. If the premises are to be arranged, the house will be pulled down; this presents, therefore, an opportunity of building on a site where the plantations and garden-grounds are already formed.—For further particulars apply to Messrs. PANSON, Laurence Pountney-lane, City.

BUILDING LAND near a RAILWAY STATION, where Houses are much wanted. FOUR ACRES with Frontage to the south and west, about a quarter of a mile from Grays Station. The Gas main passes along the south road. Near Lord Hardinge's Palace in the north, and Land adapted for Factories with river frontage, can also be obtained on application to Messrs. WILSON and CO. GRAYS, ESSEX. Bricks, Lime, Poles, &c. are very easily obtainable in this neighbourhood.

AN Architect about to retire wishes to LET his Offices. Address, J. CROSLAND, 1 and 2, Fencourch-street, City.

ELIGIBLE PLOTS of GROUND to be LET for building, at Castlebar-hill, seven miles from London, and ten minutes' walk from the Ealing Station on the Great Western Railway. Parties are to be and of G. LESLIE, Cliff-mall, Hammersmith.

HATFIELD, HERTS.—TO BE LET, very eligible BUILDING LAND, at Hatfield, seventeen miles from London, on the Great Northern Railway, suitable for the erection of villa residences. For further particulars apply to Messrs. GEO. NICHOLSON and SON, Solicitors, 4, Old Palace yard, Westminster.

TO BE LET, at PLAISTOW, SEMI-DETACHED VILLAS, in the immediate neighbourhood of the Victoria Docks. Each house contains two parlours and kitchen, with good cellarage, kitchen, scullery, pantries, and water-closet, they are completely fitted up with every convenience, dressers, soppers, water, stoves, and blind; they are partially stained and varnished, and are planned with the best of patterns; they are ready for immediate occupation, and in consequence of the failure of the builder, they will be let for the low rent of 18l. per annum. Property moderate, and railroad and omnibus conveyance within easy distance.—Apply to Messrs. W. G. and E. HABERSHON, Architects, 38, Bloomsbury-square, London; or to Mr. FISHER, Builder, Balaam-street, Plaistow.

N.B.—A railroad is now in course of construction from the Stratford Station to Plaistow, and the station to Plaistow will be opened in a few months. The station will be about a quarter of a mile from the above mentioned houses.

OXFORD.—Valuable BUILDING LAND, to be LEASED on terms not exceeding 99 years. It immediately adjoins the City of Oxford, and belongs to the President and Scholars of St. John's College. The land is principally suitable for small villas, for the erection of private residences, and builders, speculators, and others, may obtain plots on such terms as will insure peculiar advantages, as it is well known that houses are much wanted, and in daily request. It is most healthily situated on a fine bed of gravel, has springs of pure and excellent water, and good bricks may be obtained within a few hundred yards of the site.—For particulars, apply to Messrs. SECKHAM and CO. 9 and 7, St. Aldate's-street, Oxford.

MILITARY CAMP, ALDERSHOT.—To BUILDERS, HOTEL and SHOPKEEPERS, and OTHERS.—Plots of Land for Villas, for long terms, at peppercorn rents (with a premium), or at ground-rents, very eligible PLOTS of BUILDING-LAND at Aldershot, fronting the Queen's Parade, and other roads recently formed. Barracks now in course of erection, comprising the best situation in the locality for an hotel and shops; also several plots for the erection of lodging-houses and shops opposite the new station buildings, presenting to all are an unusually high rate of interest for capital expended.—For terms and particulars apply to Mr. BARRON, Auctioneer, Surrey-road, Blackfriars; Mr. W. PENDRED, Architect and Surveyor, 2, Charlotte-row, Mansion-house, London.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing office of COX (Brom) & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published, by the said Charles Wyman, at the Office of "The Builder," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, March 29, 1856.

ROYAL ACADEMY of ARTS, Trafalgar-square.—NOTICE to ARTISTS.—All Works of Painting, Sculpture, Architecture, or Engraving, intended for the ensuing EXHIBITION at the ROYAL ACADEMY, must be sent in on MONDAY, the 7th, or TUESDAY, the 8th of APRIL next, after which time no Work can possibly be received, nor can any Works be received which have already been publicly exhibited.

FRAMES.—All Pictures and Drawings must be in gilt frames. Oil Paintings under glass, and Drawings with wire mounts are inadmissible. Excessive breadth in frames as well as projecting mouldings may prevent Pictures obtaining the situation they otherwise merit. The finer resistance necessary to be observed may be obtained at the Royal Academy.

JOHN PRESCOTT KNIGHT, R.A. Sec.

Every possible care will be taken of Works sent for exhibition, but the Royal Academy will not hold itself accountable in any case of injury or loss, nor can it undertake to pay the carriage of any package.

The prices of Works to be disposed of may be communicated to the Secretary.

THE ARCHITECTURAL MUSEUM, CANON-ROW, WESTMINSTER.

SUMMER SESSION, 1856.—On MONDAY next, the 7th of APRIL, the Prizes for Stone and Wood Carving offered in 1855 will be presented to the successful competitors. Hour of admission, SEVEN o'clock. The chair to be taken at EIGHT o'clock. The Committee especially invite the attendance of artworkmen on this occasion. Cards of admission may be had gratis on application at the Museum.

GEORGE GILBERT SCOTT, Treasurer.
HENRY CLUTTON, Hon. Sec.

PRACTICAL GEOLOGY, KING'S COLLEGE, London.—Professor TENNANT, F.G.S. will commence a course of Twelve Lectures on Geology, having reference to the application of the science to Engineering, Mining, Architecture, and Agriculture. The Lectures will commence on WEDNESDAY MORNING, APRIL 9th, at NINE o'clock.—Fee, £1. 11s. 6d.

R. W. JELF, D.D. Principal.

COMPETITIONS.

TO ARCHITECTS, &c.

THE SOUTH SHIELDS and WESTOE UNITED BURIAL BOARD are desirous of receiving DESIGNS, SPECIFICATIONS, and ESTIMATES for the following WORKS, connected with the intended New Burial Ground, the extent of which, including the road, is seventeen acres, viz.:—Two Chapels (one for burials according to the rites of the Church of England, and the other for burials otherwise than according to those rites), a Superintendent's House and necessary Offices, a small Gatekeeper's Lodge and Two Gates, the total amount of which is not to exceed £2,200. Premiums will be given for the two designs which may be most approved of, and be also well adapted for the purpose, viz.—30l. for the first, and 20l. for the second; the plans, specifications, and estimates, for which they are given, to be the property of the Board, but neither of the premiums will be paid, unless a Tender be accepted by the Board, for the actual execution of the works, at or within the stipulated sum of 2,200l. Competitors must state the amount of Architect's charges required, over and above the premium, for furnishing all necessary working drawings and superintending the works, if the Board should require their services. A plan of the site may be seen at the Offices of Mr. C. THOMPSON, Borough Surveyor, Central Hall, Chapter-row, South Shields, and the whole of the designs, specifications, and estimates must be sent to me free of expense, sealed and endorsed, but without any name or distinguishing mark, on or before the 17th of April next, enclosing a sealed letter in each case, from the person forwarding it.

By order, THOMAS SALMON, Clerk to the Burial Board.
South Shields, 30th March, 1856.

COMPETITIONS.

TO ARCHITECTS.

ELIZABETHAN CLOCK-TOWER.—FIVE GUINEAS PREMIUM will be given for the best DESIGN for a SQUARE ELIZABETHAN CLOCK-TOWER, including elevation, plan, vertical section, &c. Materials, Red and White Brick and Flint.—For further particulars apply to Mr. GEORGE BENNETT, Maker of the London-bridge Clock, Greenwich Kent.

DINING-ROOM at CRYSTAL PALACE. WANTED, a DESIGN of an ornamental character internally, and ESTIMATE for a SECOND-CLASS DINING-ROOM, to cover 120 feet by 72 feet clear space on plan, in which light and ventilation must be combined. The two sides and one end to be wood-framing, and one end in brickwork. The lighting by the roof and the brickwork end. The roof to be supported independent of the side-framing. The staircase to the room to descend 8 feet within a space of 16 feet square, at one angle or other to the room. The floor to be 14 inch thick on dwarf walls, and foundations for columns, or roof supports, are to be included. The expense contemplated, about 1,000l. It will be seen if the plan and estimate approved, provided the design can be carried out for the sum named.—Plans, &c. to be delivered on or before SATURDAY, the 12th of APRIL, to Messrs. STAPLES, the Albion, Aldersgate-street.

CONTRACTS.

TO IRONFOUNDERS.

TENDERS for WEST HARTLEPOOL MARKETS.—Persons desirous of TENDERING for the necessary IRONWORK required in the ERECTION of COVERED PUBLIC MARKETS, at WEST HARTLEPOOL, may inspect the plans and specifications, at the Commissioners' Office, Athenæum, West Hartlepool, from MONDAY, the 14th day of APRIL, till MONDAY, the 28th; and copies may also be inspected at the Offices of the Architect, Mr. THOMAS OLIVER, Jun. 68, John-street, Sunderland, and 29, Grey-street, Newcastle, of whom further particulars and quantities may be had on application. Tenders to be delivered at my Offices on or before MONDAY, the 28th day of APRIL next, endorsed "Tender for West Hartlepool Markets." The Commissioners do not pledge themselves to accept the lowest Tender necessarily.—By order,

WM. W. BRUNTON,
Clerk to the West Hartlepool Improvement Commissioners.
March 6, 1856.

TO BUILDERS, MASONS, JOINERS, &c.

TENDERS for WEST HARTLEPOOL MARKETS.—Persons desirous of TENDERING for the MASON, BRICKLAYER, and JOINER'S WORK, required in the ERECTION of COVERED PUBLIC MARKETS at WEST HARTLEPOOL, may inspect the plans and specifications at the Commissioners' Office, Athenæum, West Hartlepool, from MONDAY, the 14th day of APRIL, till MONDAY, the 28th; and copies may also be inspected at the Offices of the Architect, Mr. THOMAS OLIVER, Jun. 68, John-street, Sunderland, and 29, Grey-street, Newcastle, of whom further particulars and quantities may be had on application. Tenders to be delivered at my Offices on or before MONDAY, the 28th day of APRIL next, endorsed "Tender for West Hartlepool Markets." The Commissioners do not pledge themselves to accept the lowest Tender necessarily.—By order,

WM. W. BRUNTON,
Clerk to the West Hartlepool Improvement Commissioners.
March 6, 1856.

WILTON LOCAL BOARD of HEALTH. The Local Board are prepared to receive TENDERS from competent Persons for the execution of the Works comprised in the following Contracts for the Drainage of the District, viz.

CONTRACT No. 1.—For excavating and Pipe Laying, to form Main and Collateral Sewers from the District Boundary in Wilton-park to the Outfall, and for forming such Outfall.

CONTRACT No. 2.—For Excavating and Pipe Laying, to form Main and Collateral Sewers throughout the District.

CONTRACT No. 3.—For Well-sinking and forming Street Gullies.

Specifications, with forms of Tender, may be had of the Clerk on payment of 2s. 6d.; and further particulars will be given on application to the Engineer and Surveyor to the Board. Tenders, addressed to the Chairman of the Board, to be sent in to the Clerk on or before SATURDAY, the 12th APRIL next.

By order of the Board, THOMAS THRING, Clerk.
Wilton, near Salisbury, March 17, 1856.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of the new CHAPEL at HELMSLEY, Bucks, may inspect the plans and specifications, and obtain bills of quantities on payment of one guinea, at the Offices of the Architect, Mr. CHANCELLOR, Chipping-Norton, after MONDAY, the 31st day of APRIL next. Tenders to be delivered at my Offices, Chelmsford, on or before MONDAY, the 28th day of APRIL.—The Directors do not bind themselves to accept the lowest or any Tender.

W. W. DUFFIELD, Secretary.
Chelmsford, March 27, 1856.

GLOUCESTER WATERWORKS.—IRON CASTINGS.—The Gloucester Board of Health are prepared to receive TENDERS for the SUPPLY of about 200 TONS of WATER-PIPES, and other castings for town distribution. Printed specifications and forms of Tender (price 5s.) may be had on application to the undersigned. All Tenders are required to be sent in to the Clerk, under a sealed cover, marked "Tender for Water-pipes and Castings," and addressed to the "Improvement Board of Health," on or before TUESDAY the 29th day of APRIL instant. The Board do not pledge themselves to accept the lowest or any Tender.

R. H. FRYER, Clerk to the Board.
Gloucester, April 2, 1856.

CONTRACTS.

NOTICE to IRONFOUNDERS and SMITHS.—The Commanding Royal Engineer of the Dover district begs leave to give notice that sealed TENDERS will be received at the Office of the Director-General of Contracts, Pall-mall, London, on or before MONDAY, the 14th day of APRIL, at 3 o'clock, from persons desirous of contracting for SUPPLYING ARTICLES of CAST and WROUGHT IRON at the several barracks in the Dover district for the War Department. Specifications and drawings of the articles to be supplied, with conditions of the contract, may be seen by persons fully competent to undertake the supply of the articles, and forms of Tender obtained, at the Royal Engineer Office, Archcliff Fort, Dover, between the hours of TEN and FOUR o'clock, from THURSDAY, the 27th of MARCH, to SATURDAY, the 12th APRIL, 1856, Sundays excepted. The party whose Tender may be accepted for the work will be required to enter into a bond, with two eligible securities, in both cases separately to be bound under a penalty of 500l. for the due performance of the contract. Tenders for the above service to be addressed to the Director-General of Contracts, Pall-mall, London, and endorsed "Tender for Stores, Dover District."

N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Dover, 18th March, 1856.

NOTICE to BUILDERS.—Notice is hereby given, that TENDERS will be received at the Office of the Director-General of Contracts, War Department, Pall-Mall, London, from such persons as may be desirous of entering into a Contract for the ERECTION of a GUARD-HOUSE and CELLS, &c. at Winchester Barracks, in the county of Hants. Plans and specifications may be seen at the Royal Engineer Office, Winchester, where also forms of Tender may be obtained, every day (Sundays excepted), from the 14th until the 22d day of APRIL, 1856. Tenders to be delivered on or before the 28th day of APRIL, 1856. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders. No notice will be taken of any of the Tenders unless made on the printed forms, to be obtained at the Royal Engineer Office, Winchester Barracks.

Royal Engineer Office, Portsmouth, April 1, 1856.

TO CONTRACTORS, BUILDERS, AND OTHERS.

CLUN UNION.—Persons desirous to CONTRACT for MAKING IMPROVEMENTS in the BRAKINGS of the CLUN UNION WORKHOUSE PREMISES, situate at Bishop's Castle, in conformity with the plans and specifications now being in the Clerk's office for inspection, are requested to send in Tenders, addressed to the Board of Guardians, at the Workhouse in Bishop's Castle, on or before the 7th day of MAY next.—By order of the Board,

FREDERIC PARDOE, Clerk.
Bishop's Castle, March 14, 1856.

PARISH of ST. MARYLEBONE, March 29th, 1856.—CONTRACT for SEWAGE DRAINPIPES, IRON GRILLE GRATES, and other IRON-WORKS for SEWERS.—Notice is hereby given, that the Committee of the Vestry of St. Marylebone will meet at the Court-house of the said Parish, on WEDNESDAY, the 16th day of APRIL, 1856, at ELEVEN o'clock in the forenoon, to receive TENDERS from persons willing to contract with the said Vestry of St. Marylebone for one year for the supply of Sewage Drain-pipes, Bends, Junctions, &c. and Iron Grilly Grates and other Ironwork for sewers. The Tenders to be upon the printed forms, and to be sent in, sealed, on or before ELEVEN o'clock on the said 16th day of APRIL. Further particulars may be known, and forms of Tender procured of the Vestry's Surveyor, Mr. ROBERT SCACE, at his dwelling-house at the Court-house, from TWELVE till ONE o'clock. The Vestry do not pledge themselves to accept the lowest Tender.—By order,

W. E. GRENWELL, Vestry Clerk.

EAST LANCASHIRE RAILWAY.—The Directors are prepared to receive TENDERS for the MAINTENANCE of the PERMANENT WAY and WORKS; and for the formation of additional lengths of Line of Rails from Salmon's Junction to Rawtenstall, including all the works connected therewith. Specifications and Plans may be seen on and after MONDAY, the 7th of APRIL, 1856, at the Engineer's Office, Bury Station.—Sealed Tenders, endorsed "Tender for Maintenance of Permanent Way and Works," to be addressed to the undersigned, before the 10th day of APRIL next.—By order,

MILES FENTON, Secretary.
Bury, Lancashire, March 29th, 1856.

TO BUILDERS, &c.

TENDERS are required for ERECTING TWO VILLAS at CASTLENAU, Barnes.—Drawings and specifications may be seen at the Bodenham Arms Tavern, Castlenau, Barnes, on and after MONDAY, the 7th of APRIL, 1856. Tenders to be delivered, or sent, to GEO. GREENHILL, Esq., at Barnes-common, Barnes, S.W. before MONDAY, the 14th of APRIL, for opening on TUESDAY, the 15th, at TEN o'clock a.m. precisely. The lowest Tender not necessarily agreed.

GORDON STANHAM,
Architect, North-end, Hammersmith.

TO BUILDERS AND CONTRACTORS.

MIDLAND COUNTIES INSURANCE COMPANY'S OFFICES, LINCOLN.—Persons willing to CONTRACT with the Directors of the Midland Counties Insurance Company for the ERECTION of their NEW OFFICES, proposed to be built on a site situate in Silver-street and Bank-street, in the City of the said Town, may view the plans and specifications, and obtain further information, relative thereto, on application at the Offices, at WEDNESDAY, the 9th day of APRIL next, until 2nd APRIL next, on which day, or after, by TWELVE o'clock at noon, Tenders are to be delivered at the Company's present Offices, Cornhill, Lincoln, sealed and endorsed "Tenders for Offices," addressed to W. MARRIS, Midland Counties Insurance Company. The Directors do not pledge themselves to accept the lowest Tender.—By order of the Directors,

BENJAMIN and HADLEY, Architects and Surveyors, Broad-gate, Lincoln.

Lincoln, March 25, 1856.

[For remainder of Contracts see next page.

CONTRACTS.

FILEY WATER COMPANY.—CONTRACT for LAYING WATER-PIPES.—The Filey Water Company are prepared to receive TENDERS from parties willing to contract for LAYING about FIVE MILES of WATER PIPE. The specification may be seen at the Office of Mr JOSIAH F. FAIRBANK, of Scarbor ugh, the Company's Engineer on and after MONDAY, 31st MARCH, 1856. A printed copy of the specification, with form of Tender, will be forwarded on receipt of five shillings. Sealed Tenders, addressed to the Directors of the Filey Water Company, and endorsed "Tenders for Pipe Laying," must be for warded on or before the 10th of APRIL, 1856. The Directors do not bind themselves to accept the lowest or any tender.

JOSIAH F. FAIRBANK,
Engineer and Secretary to the Filey Water Company.

Scarborough, 24th March, 1856.

GLASGOW CORPORATION WATER-WORKS.—MUGDOCK RESERVOIR and TUNNEL.—TO CONTRACTORS.—The Committee of Commissioners hereby give Notice that they have POSTPONED their determination upon the TENDERS lodged for No 2, or MUGDOCK CONTRACT, which are in the meantime retained and reserved under seal, for future consideration; and it has been resolved to receive new and revised Tenders from Contractors offering alternatively to execute any one or both of the two parts of the work into which it is divided, viz.—1st, the tunnel for separately by itself, or for that part, as well as by corresponding prices in schedule.—2nd, the one part comprehending the Mugdock Service Reservoir and relative work, and the other the Tunnelling and relative work, conform to specification and schedule—which new and revised Tenders will be considered and disposed of along with the Tenders already lodged, so far as not superseded by the Contractors offering revised Tenders now requested. As formerly advertised the whole work consists, among other things of a Tunnel 2,650 yards in length, and eight feet in diameter, excepting from near the village of Craiglaw to the valley south of Mugdock, near Milngavie, and the formation of a large Reservoir, to be called the Mugdock Service Reservoir with some short Tunnels, and all the masonry, watercourses, diversions of roads &c. &c. connected therewith. The earthwork, puddling and stoning in the embankment, and cutting of the Reservoir, will amount to nearly 500,000 cubic yards. The plans, sections, drawings, and specifications, will be again exhibited for the inspection of intending contractors in the Town-hall, at the Cross of Glasgow (entry by No. 15, Trongate), on and after WEDNESDAY, 2nd day of APRIL next, where copies of the specifications and quantities, and all other requisite information will be obtained, and also from the Subscriber, Mr. BURNET, at his office, City Chambers, Glasgow; and all further information necessary may be obtained from J. F. BATEMAN, Esq. the Engineer, at his offices in Manchester, and from Mr ALFRED MOORE, the Assistant Engineer, at Milngavie, who will accompany Contractors over the ground. Revised Tenders, in the form above required from those who have already tendered, and also new Tenders from other contractors, addressed to the Commissioners, sealed and marked "Tender for Mugdock Contract," must be delivered to the Subscriber at his office, City Chambers, Glasgow on or before THURSDAY, 17th APRIL next. By order of the Committee,

JOHN BURNET, Secretary

Glasgow, 26th March, 1856.

TO BUILDERS

THE UNION BANK of LONDON hereby give Notice, that sealed TENDERS will be received for BUILDING a BRANCH BANK in Fleet-street, the drawings and specification of which may be seen at Mr. ARCHIBALD SMITH'S offices, Mincing-lane, Trinity-square, City, on and after 10th APRIL next. The Tenders to be in one sum for the whole of the works. The quantities will be supplied on the payment of 1l each, and the builder who obtains the contract is to pay the difference of cost to the surveyors. The Tenders to be addressed to the Secretary, Union Bank of London, Princes-street, and sent in or before 4 o'clock P.M. next, and endorsed on the cover, "Tender for Branch Bank, Fleet-street." The Directors do not bind themselves to accept the lowest or any of the Tenders.

TO BUILDERS AND CONTRACTORS.

DUDLEY UNION WORKHOUSE.—Builder and Others are invited to deliver TENDERS for the execution of the several Works required to be done in the ERECTION of a NEW WORKHOUSE, proposed to be built at Shater's End, near Dudley in the parish of Sedgley, in the county of Stafford. The plans and specification may be seen on application at the Architects, Messrs. BIDLAKE & LOVATT, Market place, Wolverhampton. Sealed Tenders to be forwarded, under cover, to THOMAS GRIFFITHS, Esq. Clerk of the Guardians, Dudley, and endorsed "Tender for New Workhouse," and must be received on or before the 1st day of MAY next. A separate estimate to be given for each trade. Further particulars may be made personally to the form lodged with the plans and specifications, to which parties are referred for all further particulars relative to the proposed site. The Board does not pledge themselves to accept the lowest Tender.

CONTRACT.—The VESTRY of the PARISH of ST. GEORGE THE MARTYR, SOUTHWARK, hereby give Notice, that they are ready to receive sealed TENDERS from parties who may be willing to CONTRACT for the GENERAL WORKS and Repairs to Sewers, Roads, Gratings, Gullies, Watercourses, Privies, Flushing and Soil Inlets, during the ensuing year, according to the terms contained in a schedule of prices now lying for inspection at the Clerk's Office. The Contractor will have to sign his name to the said schedule, and the additional prices he may tender to carry out the required works. The said Vestry do not bind themselves to accept the lowest Tender; and the party whose Tender shall be accepted will be required to provide two responsible sureties for the due performance of the said works.—Tenders to be sent in to the Clerk's Office on or before TWELVE o'clock at noon, on TUESDAY, the 8th day of APRIL next; and the parties tendering must attend personally at the meeting of the Vestry, at the Board-room, in the Workhouse, in Mint-street, Southwark, at SIX o'clock in the evening precisely.—By order of the Vestry,

FREDERICA TRITTON, Vestry-clerk.

20, Bridge-house place, Newington-causeway, March 31, 1856.

TO BUILDERS AND OTHERS

THE BURIAL BOARD for the PARISHES of HOLY TRINITY ST. MARY, and ST. LUKE CHELSEA, FORD, in the County of Middlesex, are willing to receive TENDERS for the EXECUTION of the following WORKS, on the land selected as a Burial Ground, for the above parishes, known as Fulham Field, viz.:—

For the Erection of two Chapels, Lodge, and Entrance Gates.
For making the necessary Roads, Paths, and Drains
Also for Enclosing a Portion of the said Ground with an Iron Fence
Also for Enclosing the remainder of the Ground with a Pale Fence.
And for Planting certain Trees within the said Ground

The various plans and specifications may be seen from NINE to FIVE, on MONDAY, 7th APRIL, and three following days, at the Vestry-room, of Holy Trinity Church, adjoining the Office of the Burial Board, WELLCLOSE-square; Bethnal-green Chambers, 8, Stamford-street, Strand. Tenders for the above works are to be sent, under the hands and seals of three of persons, addressed to the Chairman of the Board, at the Vestry-room, aforesaid, on or before the 21st day of APRIL, 1856. The Board are not pledged to accept the lowest or any tender. Signed JOHN BULLEN, Clerk.

Chelsea, U.S.A.W., March 28, 1856.

TO BUILDERS

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original Inventors of the PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, to which they have made important additions, the main features of the same being explained in the following description and Engraving.

A represents the Patent Halter-guide and C-hanger, the fall of which is taken to the back of the manger-works with freedom and one up or down the guide-bar, and is noiseless in its operation, as also a sure prevention against the mischievous horse being cast in the stall.

B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C. The Seed-box detached, made of galvanized sheet-iron, light and durable.

D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

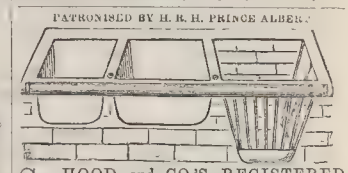
COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and impervious to infection. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE-DRAIN, with safety covers; Sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Saddle and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

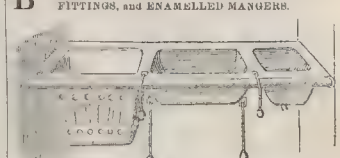
The New Illustrated Catalogue for 1856 gratis on application. Estimates and Designs.



COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

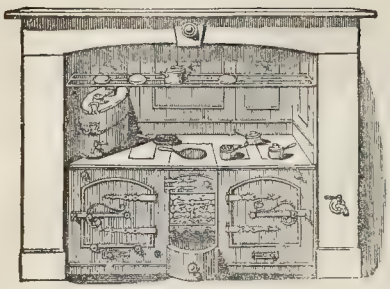
OLD STOVES and RANGES.—F. EDWARDS, SON, and CO. have constantly on hand a quantity of OLD STOVES and KITCHEN RANGES, in very good condition which are taken down by them at establishments when they erect new work, and which are to be sold at exceedingly low prices.—42, Poland-street, Oxford street.

JOHN TANN'S new patent RELIANCE LOCK and FIRE-PROOF SAFES are the best and cheapest safe in the world against fire and robbery. Testimonials to be had of Messrs. WATERLOW, Birchin-lane; and at the Works, 1, Hope-street, Hackney road, London. Iron Doors for strong rooms and party-walls.



TO ARCHITECTS, &c.—T. SMITH, of 11, Queen-street, Oxford-street, begs to call attention to his IMPROVED SELF-ACTING WATER-BAR for FRENCH CASEMENTS, the best and most efficient yet invented. A working model can be seen at the above address, or will be sent for inspection on the shortest notice.
N.B.—Espagnolette Bolts of a superior quality, at reduced prices.

PATRONISED BY H. R. H. PRINCE ALBERT.



S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled.
Costings Wax house repaired from 8l. to 6s. Upper Thames-street.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.

THESE FITTINGS will be found to possess all the latest and most important improvements and are of the best manufacture. All kinds of Ironfurniture in Stock. Iron Hurdles, Gates, Fencing, Tank Ladders, &c. New illustrated Catalogue forwarded on receipt of two postage stamps. JAMES BARTON, Ironfounder, &c. 379, Oxford-street, London.

FLAVEL'S PRIZE KITCHENER.

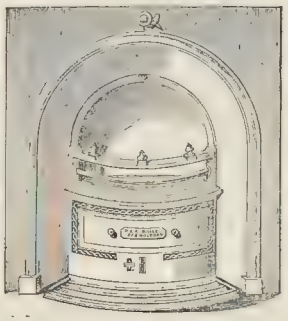
The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.



SOLE AGENTS:

BENHAM AND SONS,

19, WIGMORE-STREET, LONDON;

and at the Crystal Palace, Sydenham.

DR. ARNOTT'S SMOKELESS GRATES,

For the manufacture of which D. and E. BAILEY obtained the SILVER MEDAL at the PARIS EXHIBITION. The above excellent invention has been carefully modelled and manufactured by D. and E. BAILEY, 272, Holborn, who having experienced great difficulty in keeping pace with the increased demand for the above Stoves, have now made such arrangements as will enable them to supply their customers with the Smokeless Grates, of ordinary dimensions, from their stock on hand, which consists of various designs in black, bright, and polished steel, richly decorated with ormolu ornaments.

The great advantages of these Stoves over all others are—

1st. The entire absence of smoke.

2nd. An immense saving in fuel.

3rd. A cheerful fire, with simple means for regulating the heat.

4th. Will burn night and day, requiring only to be supplied with fuel twice in twenty-four hours.

For invalids' bed-rooms, these stoves will be found invaluable.

Prices and Prospectuses may be obtained on application where the Smokeless Grates may be seen in daily use.

D. & E. BAILEY, IRONMONGERS,

A

FIRST-CLASS MEDAL

WAS AWARDED TO

F. EDWARDS, SON, and CO.

AT THE

PARIS EXHIBITION,

For the SPECIMENS they exhibited of

DR. ARNOTT'S

AND SMOKE-CONSUMING COOKING APPARATUS.

SMOKE-CONSUMING GRATE,

F. EDWARDS, SON, and CO. beg to inform the public that their STOCK of GRATES is ENTIRELY REFORMED, and consists SOLELY of GRATES on the SMOKE-CONSUMING PRINCIPLE. A large variety in real Bronze, Ormolu, Steel, and Berlin Black, suitable for Drawing-rooms, Dining-rooms, and Libraries, from 7l. to 30l.

The following are the prices of those for ordinary use:—

Black Grates, for Parlours, Offices, &c. from 4l. to 6l. 10s.; for Bed-rooms, Offices, &c. from 2l. 10s.

By the Grates on this principle, as properly constructed by F. Edwards, Son, and Co. smoky chimneys are avoided, an agreeable fire is maintained, with one-half the trouble attending the ordinary grate, and a saving of from forty to fifty per cent. is effected in the consumption of fuel.

PROSPECTUSES, WITH FULL PARTICULARS AND TESTIMONIALS, SENT ON APPLICATION.

To be seen in daily operation at the Show Rooms, 42, Poland-street, Oxford-street, London.

BATHS and HOT-WATER APPARATUS. J. TYLOR and SONS' ILLUSTRATED CATALOGUE of BATH WORK, &c. to be had on application. Estimates and Plans for Fixing given.—J. TYLOR and SONS, Manufacturers, Warwick-lane, Newgate-street, London.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 143, Regent-street, London.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO., opening to the Monument, London-bridge. Established A.D. 1700.

HEATING BY  HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, and of the most extensive dimensions, can be effectually warmed by Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c. &c. where they have fixed their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.

OFFICES—{NEW YORK—71, JOHN-STREET. BOSTON—25, KILBY-STREET, U.S. MELBOURNE—94, COLLINS STREET EAST.

CORPORATE MARK —XLALL.—Granted by the Cutlers' Company, 1789.

Messrs. PARKIN and MARSHALL have also pleasure in stating that they are appointed Sole Wholesale Agents for the Sale of the undernamed Articles, manufactured by Mr. ENOCH OLDFIELD TINDALL, Iron Works, Scarborough, viz.:—TINDALLS PATENT PORTABLE MANGLES, WASHING AND WRINGING MACHINES, NAPKIN PRESSES, COOKING RANGES, LAUNDRY STOVES, SANITORY TRAP AND GRATE, CHAFF CUTTERS, OAT, BARLEY, MALT, AND LINSEED MILLS, BEAN MILLS, CHEESE BREAKERS, PORTABLE SAW-MILLS, TURNIP CUTTERS, &c.

THE PATENT COOKING RANGES AND ROASTERS are now amongst the most complete and inexpensive before the Public, and are rapidly superseding the antiquated Ranges of our country.

THE IMPROVED LAUNDRY STOVE will heat Fifteen Flats at once, occupies only 12 inches in space, is removeable from one room to another, and will be found invaluable in Public Hospitals, Infirmaries, Laundries, and Private Families.

E. O. T.'S SANATORY GRATE AND TRAP is now acknowledged to be the best and most secure from effluvia (as well as not easily liable to choke, and readily cleaned) that has been introduced.

THE MANGLES AND WRINGING MACHINES have been introduced into the Royal Household, most of the Public Laundries, and also into many thousand private Families, who bear testimony to their efficiency and superiority over all others.

THE OAT BRUISERS AND CHAFF CUTTERS, like the above, combine cheapness with the greatest simplicity of construction, and only need to be tried to be appreciated. They effect great saving, and should be in every stable.

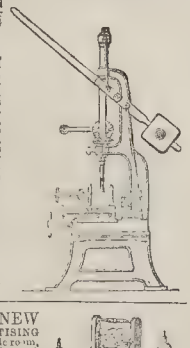
Drawings of Mangles, &c. with Testimonials, can be had on application at Telegraph Works, Sheffield, or of the Retail Agents, who are appointed in almost every principal Town in the United Kingdom.

CHEAP AND DURABLE ROOFING.

By Her Majesty's  Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and only Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.



Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

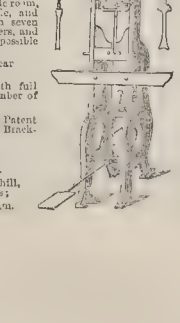
And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under plates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and cold. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its use, and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry Hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their roofing. They are likewise CAUTIONED AGAINST MISTAKES OCCASIONED BY THE COMMON NAMES IN GREAT BRITAIN where the above roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

WANTED, Five or Six Second-hand DOUBLE-PURCHASE CRABS, equal to four tons.—Address, RANDELL and SAUNDERS, Bath-Stone Office, Corsham, Wilts.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co.'s Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 36, Watling-street, City, and see in motion this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.



KIMBERLEY'S NEW PATENT MORTISING MACHINE (exhibited in the room), is most simple and durable, and complete within itself, with seven cutters and three drivers, and does all sorts of almost impossible figures of per pendicular.

Price and where it can be seen to it.

A Book sent by post, with full particulars, and a great number of testimonials.

Specialities, Kimberley's Patent Planing Cutters, affording Brackets, Door Springs, &c. &c.

"	XX.	A series of Leaves drawn from Nature as Models of Ornament	..	5 "
				100

The Author will endeavour in the several chapters to define the apparent origin and trace the development of the several styles of Ornament. He will proceed to ascertain the laws which govern their composition; both those which are common to all, and peculiar to each. He will further attempt to ascertain the principles which have led to the use of particular forms and colours in Ornament, so that we may get a step forward; and, without availing ourselves of the experiences of all time, may be enabled to produce works in harmony with our own times instead of blindly following in the footsteps of the past.

The collection of this vast amount of materials has been the work of many years. On the eve of giving it forth to the world, the Author fully feels the difficulty of the task he has undertaken; he trusts, nevertheless, that such the Work may prove useful to the student in the decorative arts, will have before them an amount of material which does not elsewhere exist in any such convenient form, and in the use of which it will be his endeavour to serve them as a guide.

N.B. The Letterpress will appear at intervals during the progress of the Work. Size, 8vo. royal.

Published by DAY and SON, LITHOGRAPHERS to the QUEEN, 6, GATE-STREET, LINCOLN'S-INN-FIELDS.

A CATECHISM of the STEAM-ENGINE.
By JOHN BOURNE, C.E.
Fourth Edition, revised throughout; with an entirely new set of Woodcuts

By the same Author.
In 4to. with Plates, &c. price 42s.
A TREATISE on the SCREW PROPELLER.
Printed by W. TRUNE
In 4to. with Plates, &c. price 42s.
The ARTISAN CLUB'S TREATISE on the STEAM ENGINE.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

In Two Volumes, 8vo. with nearly 1000 Woodcuts price 42s.

DR. URE'S DICTIONARY of ARTS, MANUFACTURES, and MINES: containing a clear Exposition of their Principles and Practice. The Fourth Edition, much enlarged and corrected throughout.

"These volumes of Dr. Ure's contain chiefly of original and exact treatises, written with so much accuracy and clearness that they may be universally regarded as authoritative; as indeed the former editions have been, as well by artists and manufacturers as by British and foreign scientific writers. The author has throughout the entire work taken much pains to free it from the one only set of promoting the best and most approved developments of the arts and manufactures, and so produced a work which altogether surpasses every other of its kind with which we are acquainted."—*Mechanics' Magazine.*
London: LONGMAN, BROWN, GREEN, and LONGMANS.

A New Edition, in one vol. 8vo. price 21s.

HISTORY of the IRON TRADE, from the Earliest Records to the Present Period.
By HARRY SCRIVENOR, Liverpool, Author of "The Railways of the United Kingdom statistically considered."
London: LONGMAN, BROWN, GREEN, and LONGMANS.

COMPLETION OF THE TRAVELLER'S LIBRARY.
In 16mo. price 2s. 6d. each Part, post free, 3s.

MR. MACAULAY'S ESSAY on CROKER'S EDITION of BOSWELL'S LIFE of JOHNSON: with Mrs. PIOZZI'S ANECDOTES of Dr. Johnson.

Forming Vol. XLVIII. of the "Traveller's Library."

The "Traveller's Library" will be completed in Three more Parts, as follows

On May 1, Part 100, AULDJO'S ASCENT of MONT BLANC.

On June 1, Parts 101 and 102, the WIT and WISDOM of THOMAS FULLER.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, 8vo. with Illustrations price 1s.

A DESCRIPTION of the GLOBOTYPE TELEGRAPH, or Recording Instrument; by which small Volumes Books are conveyed by one and the same mass over a series of both old and new lines of Electric Telegraph.
Invented by DAVID MACALLUM, Esq. Inverness, Devon
London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW AND CHEAPER EDITION OF CHEVREUL ON COLOUR

In one volume with Illustrations, price 5s. cloth.

THE PRINCIPLES of HARMONY and CONTRAST of COLOURS, and their Applications to the Arts; including Painting, Interior Decoration, Tapestries, Carpets, Mosaics, Glass Staining, Paper-staining, Calico-printing, Letterpress Printing, Map Colouring, Dress, Landscape and Flower Gardening, &c.
By M. E. CHEVREUL, Member de l'Institut de France, &c.
Translated from the French by CHARLES MARTEL.
Second Edition, revised.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, price 1s. 6d.

THE GEOMETRY of the THREE FIRST BOOKS of EUCLID, by direct proof, from definitions alone.
By HENSLEIGH WEDGWOOD, M.A. late Fellow of Christ's College, Cambridge.

FORTY DESIGNS for CEMETERY and CHURCHYARD MEMORIALS, complete in 1 vol. price 16s.
By JOSEPH B. ROBINSON, Cemetery Works, London.
The Designs in this work may be ordered from 10s. 6d. each. The Artist would forward the Book free to any part of the Kingdom on receipt of Post Office Order for the sum.

THE FREEMASONS' MAGAZINE and MASONIC MIRROR for APRIL, 1856, is now ready. Price 1s.
London: HENRY GEO. WARREN, 2, Redman-court, Fleet-street, and GEORGE ROUTLEDGE and CO. Farringdon-street.

CHUBB'S ILLUSTRATED LIST of LOCKS, FIRE-PROOF SAFES, CASH, DEED, and WRITING BOXES, with Prices, Sizes, fittings, and prices, will be sent post free on application or two stamps. Apply to CHUBB and SON, 57, St. Paul's churchyard, London.

CRYSTAL PALACE MUSEUM of NAVAL ARCHITECTURE.—To SHIP-OWNERS, SHIPBUILDERS, ENGINEERS, STEAM-NAVIGATION COMPANIES, and CITIZENS. The Directors of the Crystal Palace Company being about to form in the Palace a MUSEUM of NAVAL ARCHITECTURE, on an extensive and classified plan, extending to the progress of the art from its early infancy to the present day, with specimens of the most recent improvements, respectfully invite all parties having the means to assist them in this object by contributing for exhibition MODELS of SHIPS, BOATS, MARINE-ENGINES, &c. A detailed plan of the proposed museum, for which a considerable number of models has been already offered, may be obtained from the Secretary, to whom all communications should be addressed.
By Order, G. GROVE, Secretary
Crystal Palace, March 1, 1856.

CRYSTAL PALACE.—PICTURE GALLERY. It is intended to construct in the north wing of the Crystal Palace (at present occupied by the Fine Arts Court) a GALLERY for the EXHIBITION and SALE of modern PICTURES of all the schools of Europe. The gallery will open early in the ensuing summer. No charge will be made for exhibition; but it is proposed to charge 5 per cent on sales. Communications to be addressed to Mr. HENRY MOGFORD, F.S.A. at the Palace, in whose hands the Directors have placed the management of the gallery, and from whom full particulars may be learned. The Directors reserve to themselves a right of selection.—By order,
G. GROVE, Secretary.

LOANS from 25l. to 1,000l. upon approved personal or other security, repayable by easy instalments, extending over any period not exceeding fifty months, are readily OBTAINABLE from the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES. Prospectuses, reports, and every information may be obtained on application at the British Mutual Office, No. 5, New Bridge-street, Blackfriars. Rules 6d. each, post free.
CHARLES JAMES THICKE, Resident Secretary.

The Builder.

VOL. XIV.—No. 687.

ON Monday, the 31st of March, there was a large attendance of members and visitors at the Institute of British Architects, to witness the presentation of the Royal Medal for Architecture to Mr. Tite, Fellow, M.P. &c. including Sir C. Barry, Professor Donaldson, the Rev. R. Burgess, Messrs. Scoles, C. C. Nelson, Ferrey, Scott, Joseph Clarke, Hardwick, jun., H. Baker, W. P. Griffith, G. Pownall, S. Angell, Mylne, Christian, Bellamy, Penrose, Papworth, Bury, Porter, C. Barry, jun., S. Godwin, Mocatta, G. B. Williams, Garling, Edmeston, S. Wood, E. H. Martineau, J. Turner, Twining, Dr. Dickson, Bardwell, E. T. Parris, J. D. Harding, Lockyer, Cates, Kelsey, &c. &c.

The minutes having been read by Mr. Scoles, honorary secretary, the Fellows proceeded to ballot, and elected Mr. Frederick Marrable as Fellow; and Mr. J. K. Colling, Mr. Ignatius C. Scoles, and Mr. T. Roger Smith, as Associates.

Various donations were announced, including a finely-bound copy of David Roberts's "Egypt and Nubia," in three vols. from Mr. C. C. Nelson (whose liberality was properly eulogized), and the President proceeded to present the prizes adjudged by the Institute, with a few complimentary and congratulatory words to each, namely:—

To Mr. T. A. Britton, for his Essay "On the Timber-growing Countries of Europe and America," the Silver Medal of the Institute.

To Mr. L. R. Roberts, for his Design for a Town Mansion, the Soane Medallion.

To Mr. T. C. Sorby, for his Design for Courts of Law, a Medal of Merit.

To Mr. J. Blake, for his design for a Town Mansion, a Medal of Merit; and

To Mr. C. N. Beazley, student, for his Monthly Sketches, a Prize in Books.

The rewarded designs were exhibited in the meeting-room, and may be spoken of as most creditable to the skill and industry of their several authors.

The president, in addressing Mr. Tite, adverted to the advantages of sound sense and general acquirements, in addition to artistic ability; congratulated him on having gained the suffrages of his architectural brethren; and, with the full concurrence of Her Majesty, presented to him the Royal Medal.

Mr. Tite, in a very feeling speech, acknowledging gratefully the honour conferred upon him, referred to the part he had played in conjunction with the president, in effecting the coalition between the Architectural Society and the Institute.

Professor Donaldson afterwards read an able and interesting paper "On the Triumphal Arches of the Romans," which was illustrated by a number of drawings, and the meeting then adjourned. The paper described a Roman triumphal procession, and showed that the triumphal arch was a record in stone of the incidents and personages of the procession.

Amongst the objects exhibited was a beautifully executed model, by Mr. Thomas D. Dighton, of the buildings in new Victoria-street, Westminster, erected by Mr. Mackenzie.

MONUMENT TO THE LATE MR. PETER NICHOLSON.—The foundation-stone of a monument to be erected at the Carlisle cemetery, to the memory of the late Peter Nicholson, was to be laid on Monday last.

REVIEW OF THE BARRACK COMPETITION DESIGNS.

WE have not allowed a week to pass without giving a large amount of time to the drawings which are now being exhibited at Burlington House; but the present case is one of so extraordinary a nature, that we shall not attempt to prefer a judicial opinion on the whole competition. We must merely speak of impressions whilst travelling through the vast collection of designs, some of them numbering over thirty sheets in a set; and the great majority of the works the result of elaborate study, and affording valuable suggestions.

Whether the judgment of those who have been competitors could in such cases be made available, and would *secure* right decisions, can hardly yet be asserted; but we must say that the present case is peculiarly one that testifies to the view that similar study of the subject to that required in preparing drawings, is essential to the formation of an opinion, and is not easy to be procured in another way. During the last week the collection has been visited both by competitors and persons otherwise interested in the question of barrack-accommodation,—though by fewer in all than might have been expected. When, therefore, we notice persons of the class last mentioned, merely asking to be shown "what has gained the first prize," and then taking their way (though *not* without expressing wonder that so much labour should have been incurred); and when even those who competed are content with giving only an odd hour to the collection; when, in short, we see that the fact of the enormity of the demand made on one side, and the value of the squandered time and money on the other, have to be brought to the very knowledge of *both* parties, we shall not be surprised if we are misconstrued for any course we may take. So long as we have the sense of right, we do not fear animadversion, or even vulgar abuse,—whether we may have to refrain from opinions, or to express them. The letter which we print elsewhere, though written after longer study of the drawings than we had given last week, only corroborates what we then remarked,—or will at least show that we were not singular in the view we took. As to the matter of area of ground, another correspondent, indeed, draws our attention to what he regards as a decision that henceforth barracks will be "not connected with large towns, but detached from them; and that the probability is, that the barracks will be of considerable extent in those positions;" but we do not see that this justifies the extraordinary areas taken by some of the competitors. In the manufacturing districts we apprehend there will remain reasons for not withdrawing the barracks to a great distance; but in any case, were cost of ground not everywhere a consideration, is not the matter of compactness and free communication and supervision also important? The point of *number of stories*, also, is a question of expense, and distance of one part of the barrack from another. However, one of the most matured designs in the whole collection has an area vastly exceeding the thirty-four or thirty-five acres of the successful design.

The committee advertised for plans which should embody the recommendations contained in their report; and the discretionary power to architects, in regard to number and sizes of rooms, was limited to some matters of detail—few in number. The departments to be provided for in the infantry barracks, included the men's quarters; rooms for the married people; residence for the commanding officer, and rooms for the other officers, married and single; officers' mess-room and offices; also, officers' stables; rooms for the staff-sergeants, the ten pay-sergeants of companies, and the forty company-sergeants (or four to each company of 100 men); quarters for the band-master; sergeants' mess-room and offices; a washing-establishment; a drying-room for coats; a regimental library; a reading-room and librarian's quarters; a chapel to serve as school, an infants' school-room, and quarters for schoolmaster and schoolmistress; orderly and court-martial rooms; a band-practice room; a guard-house, near the principal gate, with lock-up and cells; a bakery near the barrack-master's and quarter-master's stores; shops for the master tailor, master shoemaker, and master armourer; also carpenter's and blacksmith's shops near the quarter-master's stores; barrack-master's stores, house for the fire-engine, and quarters for the barrack-sergeant; barrack-master's house just outside the barrack walls; quarter-master's stores; a drill or parade-ground, gravelled, measuring about 250 by 100 yards, or a little over five acres; covered spaces for drill in bad weather; a powder-magazine and shifting-room; a provost prison with twenty cells, and provost-sergeant's quarters; an hospital with its own wash-house, hospital-sergeant's quarters, orderlies' room, and an itch-ward, and a dead-house adjacent; the surgeon's and one of the assistant-surgeons' residences being near to the hospital; a canteen; a racket-court, ball-court, gymnasium, quoit and skittle grounds, and cricket-ground near to the canteen; gas-works (should there be none in the neighbourhood), and many other accessories.

The men's quarters had to be provided with the accommodation for sleeping, eating, and cooking, for ablution, and for cleaning accoutrements, and with other conveniences. Thus—without reference to the stables, riding-school, and particular requirements of cavalry barracks, to which we shall have again to refer—the subject is one that tests to the utmost the knowledge and skill of an architect. In providing the men's quarters, it seems essential—though sufficient stress has hardly been given to it in the report—to arrange the rooms so that the whole regiment may be turned out on the parade-ground at a moment's notice. This, it may be presumed, is a part of military discipline. In some districts of the country, also, as before referred to, where the troops have to be called upon occasionally to preserve the peace, minutes are on that score to be considered. Elongation of the quarters with reference to the parade, as opposed to the grouping them in block, would seem, therefore, the correct principle. At the same time, through-passages must be left for the purposes of the barrack. Further, the regimental strength of 1,000 men is divided into ten companies of 100 men each, and each company into four squads of twenty-five men each, with a sergeant to each squad; and this division and subdivision has to be observed in planning the quarters. It seems also to be admitted as desirable, that each squad should be divided in two dormitories, and Mr. Rawlinson, the author of an elaborate set of drawings marked with a geometrical figure and the motto "Hope," which we have alluded to above, but shall have to look at subsequently, goes so far as to contend for what is in effect a distinct room to each man. The necessity of accommodation for the six married privates of each company at a distance, being admitted, and the sergeant being accommodated so as to ensure him privacy with as little deduction as possible from his present supervision,—the improvements required in the men's department are chiefly greater space and ventilation in the barrack-room, with better provision for cooking and eating, and for ablution and cleaning. Anything that would interfere with the present system of living and sleeping in the same room, seems to be deprecated by most parties. A kitchen, or place where the men could cook and eat in the same room, is, however, not objected to: a distinct day-room is not desired. The dining-room kitchen, it is supposed, would serve for two squads; or the report says, "Should the dining-room be provided in any other manner, there is no reason why each kitchen should not cook the food of two companies; but it is not desirable that it should be used for a larger number, from the difficulty of giving the men their dinners hot, if they have to be carried any distance." This passage seems to have led to the departures from the general view of the committee, which are observable in some of the drawings.

The kitchens, it is laid down, should be in buildings detached, but connected by passages; and in most of the designs they are placed at the back, on the ground-floor, as are also in many cases the ablution-rooms and cleaning-rooms. There appears to us some defect in the instructions on these matters,—one question being whether it is necessary for the soldier to pass to such a distance in cold weather, and sometimes

through the open air, to perform his ablutions, and another, whether one of the reasons which prevailed against the admission of day-rooms, viz. the possibility of mislaying accoutrements, is not equally to be considered where the cleaning-rooms are provided as they are in some of the plans. The other conveniences are properly placed when attached to the departments of the companies, instead of being all together, and in remote positions. The system adopted is that of the trough and sluice, which really does not seem an objectionable one, and has been considered, in such cases, least liable to get out of order. The set of drawings by Mr. Rawlinson (No. 80), however, provides closets or soil-pans, under the idea that any other arrangement would be fatal to health. The alterations which he effected at Scutari were of so important a nature, that in less than a month the deaths were reduced from seventy and upwards a day, to not seventy a week. The diminution of fever cases may have been due to *several* of his alterations; — the supply of fresh air to the wards and corridors; the breaking up and cleansing of the general sewers, by which the foul air was prevented from being returned into the building; and the cleansing and deodorizing of the more foul abominations, which had, we presume, never been provided with any means of sluicing, had doubtless each one an importance, to which attention may well be paid in similar cases at home. The present "conveniences" in barracks are certainly quite sufficient to cause the quantity of sickness—six per cent.—which has to be provided for by the hospital. The soil-pans which are in use at Scutari, we learn, do not get out of order, as was predicted to Mr. Rawlinson; and at the town of Alnwick, in Northumberland, 800 of these "pans" have been fixed, and are said to be in constant order—even especially so with the poor Irish.

The principle in the second premiated design, to which we referred last week, is the provision of day-rooms apart from the kitchens. This, we have said, was advocated by some of the witnesses, but was discountenanced in the Report. The several departments of the barrack are grouped into five blocks of building, each round a quadrangle. Portions of each are, however, of one story only; and the block is generally open at the back, above the ground-story. The masses of the building are effective in grouping. In the central block, the angles are appropriated to the orderly-rooms, non-commissioned officers, residence of the surgeon, the band-master, and other rooms; the general range of ground-story contains day-rooms, and pay-sergeants' rooms, whilst the one-story buildings at the back are appropriated to kitchens, coal-stores, cleansing-sheds and conveniences—yards being attached. The interior court is marked as a gymnasium, to be roofed with iron and glass if required. The dormitories are in two upper floors, with a staircase to each company; but a narrow way through, runs across the rooms from end to end of the range. Bath-rooms and washing-rooms are attached, and the sergeants have separate rooms; many of these, however, having the bath-room between them and the dormitory. In the top story, at the angles, are fencing-rooms. In the main front, in the centre, are the library, and on the top floor, linen-rooms. At the back of the quadrangle, occupying a large space, are the stores and workshops, round a court of their own, and here also are the barrack-sergeant's quarters.—One of the smaller blocks of building at the front—that to the left in looking at the plan—serves for the officers' quarters; the unmarried being next to the parade, and the married on the opposite side,—the commanding officer being, with doubtful advantage, in the most retired quarter. The mess-rooms form the central feature in the front. The barrack-master's house is at the back, in the same block. The stables occupy the back of the square, as in the case of the stores in the larger quadrangle. The space appears to be confined, but they are of one story chiefly.—The corresponding block at the back is the hospital, and that to the right contains the prison, coal-store, magazine-yard, and gas-ometer. The quadrangle to the right, corresponding with the officers' quarters, is for the non-commissioned officers and privates. The chapel-school forms a feature in the centre of the front, corresponding with the officers' mess-rooms: the school-master and school-mistress have rooms at the angles; the back affords space for the canteen, the wash-house, and a swimming-bath; and the children's play-ground occupies the central area. Bowling-green and skittle-grounds are adjacent. The entrance to the barrack is opposite the middle of the parade. The back entrance seems to us to have been an omission by accident. The objections to the plan are very fairly put by our correspondent.

The third premiated design has the parade-ground placed endwise, and of unnecessary dimensions. The main line of buildings opposite the entrance has the dormitories in two upper stories, back and front of a covered space for drill, which is 950 feet long by 80 feet wide, and roofed over with a semicircular ridge-and-furrow roof. The rooms look on to this, with arcades and galleries reached by staircases at intervals; and there are larger archways through, for access to the buildings at the back of the barrack. The ground-level is appropriated to staff-sergeants' residences, stores, and shops; the dining-rooms (each for forty-eight men, with small kitchens) are in the same level; the kitchens for the men living on both sides being alike placed at the back, where also are the various conveniences. The length divides into separate sections for the companies. Rails for the conveyance of stores are contemplated along the drill-ground, and through to the back of the barrack. The officers' quarters are to the left of the grand parade, with mess-rooms in a detached building; and the chapel-school is on the right. At the farther part of the ground are the racket-court, prison, and various stores to the left; married men's quarters, wash-house and bath, in the centre; and the hospital is to the right. Farther beyond the hospital are the girls' and infants' schools,—thus at a distance from the principal school, which is at the front. Whilst praising the effort which is displayed in these drawings, we must say that defects in the planning will be discovered in them. We willingly accede to the architect's wish that we should contradict the report that any member of the committee, or any other hand than his own, had anything to do with the preparation of the design and drawings. It is not difficult to see how the report originated. The report of the committee to Lord Panmure says:—"The committee unanimously selected the plan 'Alpha' for the third place, as possessing merit of arrangement, and exhibiting the application of a glass-roofed covered space for the purposes of drill and recreation." The covered space itself is no doubt treated better than in some designs where a similar expedient has been attempted.

No. 4, with the motto, "What is worth doing, is worth doing well," has a parade-ground endwise; and at its farther end the companies' rooms, five companies at the back, and five at the front, with kitchens and conveniences intermediate, and covered spaces for drill at the ends. The hospital is at one end of the same range, the rooms for married men are at the other, and the prison is at the back. Flanking the parade are the officers' quarters, and stores, grouped in detached blocks.

The design No. 5, "Victoria," is less striking than the preceding, but differs from them, inasmuch as the men's quarters are all placed next the parade,—forming three sides of the quadrangle. The officers' quarters occupy the first portion of the wings,—and the quarters of the married men are at the internal angles. The chapel-school, stores, prison, &c. form a range of detached buildings behind; and the hospital is further back. The companies' quarters consist each of two stories of dormitories, two rooms in each floor, with sergeants' rooms close adjoining. On the ground level, the dining-room, with cooking space attached, together with ablution-rooms, forms a detached building in the middle of a yard. It is reached by a covered way, and adjoining it are cleaning sheds and conveniences.

No. 6,—"Vi et Armis," Mr. Knowles, jun. is one of the designs which are remarkable for their external character. This, in the present case, may be called a castellated version of the style of the building at the end of Chancery-lane. Besides the ordinary parade, there is a space between the first and the grand entrance, so that a façade of some importance is obtained. The lower story has a loggia of arches and columns, and there is a prominent central gateway. This range of buildings forms the officers' quarters. The actual parade-ground is placed endwise, and the men's rooms are opposite the entrance: the hospital is on the left (looking at the plan) and the married men's quarters on the right, with the chapel-school. The companies' rooms are arranged with large open courts. Large spaces in the plan are covered with ridge and furrow roofing.

No. 7,—"Si Fortuna Juvat," Messrs. Aickin and Capes, covering an area measuring 950 feet by 790 feet, with a parade-ground of the proper size, adopts an arrangement, which, though peculiar, escapes many of the disadvantages of other plans where the entrance is at the end. Though the entrance to the parade is placed in the manner stated, the companies' rooms are along one side of the parade; and at the back they have a long covered drill-ground, on the further side of which again are store-shops, and back entrance. The lavatory and kitchen arrangements shown in the detailed drawings, manifest knowledge of this branch of the subject. The canteen, and covered grounds for amusements, staff-sergeants' residences, and stores, are at the right of the entrance and guard-house. Left of the gate is a large cricket-ground, with a covered way round. In the centre of the same side are the officers' quarters, and behind them, across a square, are the mess-rooms and commanding officer's residence, as a detached building. At the end of the parade, opposite the entrance, are the chapel-school, the married men's quarters, the washing department, and the infirmary. The style of the buildings is Gothic, somewhat ornate in character. The plan may not attract attention; but deserves it. Much is provided on a very small space.—In No. 8,—"Ars, armis adjutrix,"—the soldiers' quarters open to a covered drill space, in which are bracketted galleries. The kitchens are grouped all together, and some of them are in consequence at considerable distance from companies.

We have scarcely touched the mass of drawings which there are in this marvellous collection, but are reluctantly compelled to defer the subject. Amongst the works which remain are some of the most elaborate of the sets of drawings, and some plans in which the principle of distribution is that which is generally considered to meet best the peculiarities of the case. That principle, we believe, is involved in the importance of keeping the whole of the quarters bordering upon the parade, and yet of leaving a sufficient number of through-passages. Other plans follow a more concentrated principle of arrangement; and whether these designs were considered wholly out of court, or not, some of them certainly are not devoid of particular advantages which the first are compelled to sacrifice.

The present occasion should be one of great value in settling the initial principles of planning for barrack accommodation. To settle similar points in structural works of other classes, though apparently an indispensable step, is often troublesome from the difficulty which architects and their employers have in comprehending one another. What will here be learnt, and for which ample opportunity should be given by the exhibition of the drawings, will be useful for all time; and though the knowledge may have been obtained at some cost to our profession, we hope it will save much future loss to the country.

THE BARRACKS COMPETITION: STRICTURES BY A COMPETITOR.

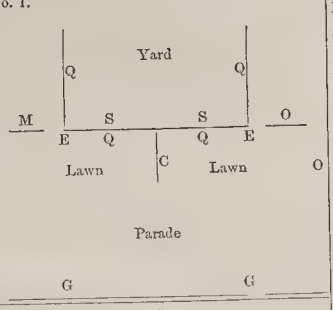
Now that the entire collection of designs is formally submitted to the public and all concerned for criticism, would it be out of place for a competitor to offer some remarks upon the decision? I may very likely be actuated by something like envy, however earnest my endeavour may be to judge impartially; but so vast is the maze of drawings offered for examination at Burlington House, and so complex is the subject involved, that it is, perhaps, impossible for any general observer, except it be a compe-

titor, who is necessarily familiar with the problem, to escape bewilderment. I promise to avoid all allusion to my own design (except that I cannot help referring to my abstract principles); and if your readers will accept my permission to make due allowance for the partiality of a defeated candidate, I think I may proceed without further apology. I send you privately my name, and the number of my own design, as a guarantee of good faith; and I leave it to you to inquire into my motives by these means before publishing my remarks.

A Blue Book of 200 folio pages was given to the competitors by way of their instructions, being the Report of a War-office Committee (the judges also in the competition), upon Barrack accommodation, its many defects and many requirements, and the evidence in detail which they had taken upon the subject. In this we possessed such unusually minute and precise data for our guidance (with an order to view any barrack buildings throughout the country), that one's only chance of positive error seemed to be a neglect to study the evidence thoroughly. It was a work of labour and generalization, no doubt, to digest this Blue Book properly, but it was nothing more: the problem became, I think, in all important points, as plain as possible.

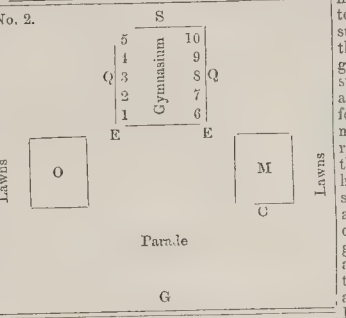
Let me confine myself to the infantry barrack in the mean time. Here the Blue Book simply details an array of the many and gross defects of all our present barracks, with suggestions for their remedy. What will "Administrative Reformers" say if I can show that there is but one design (of any importance) in the whole competition which adheres tenaciously to the existing system with all its faults, and that to this design there is deliberately awarded the first premium? If this be really the case, it exhibits our veneration for existing institutions in a form which was scarcely to be looked for.

It will be discovered, on a careful scrutiny, that although the designs now exhibited are supposed to be not arranged in any exact order of merit (except those premiated), yet that the practically sound suggestions are generally to be found towards the beginning of the numerical order, and that vital errors and fantastical ideas become more prevalent as the numbers progress. It appears to me, for instance, that the first great line of demarcation cuts off all plans wherein the erroneous principle of lighting the barrack-room from the *side*, instead of the *end*, is an essential. This line does not leave many designs above it; and in fact, any one who desires to come to a ready conclusion upon the merits of the committee's selection, need not trouble himself with more than the first ten designs in the series.



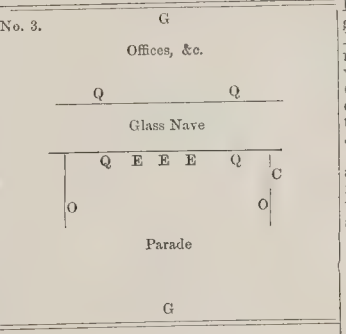
Let it be borne in mind that *the general arrangement of plan* is after all the sole problem: the mere details of structure are any one's work in such a subject as this. And it is worthy of remark, that if the committee had called for general plans alone, with descriptive particulars in writing, they would have saved themselves a good deal of trouble in examining the real merits, and they would have saved the competitors a thousand yards of paper, and more than *one* thousand pounds in money.

The utopian model barrack of the blue book (now, alas! all a dream) was to be merely a common-sense plan of the following divisions,—namely, quarters for ten companies of 100 men, with dining kitchens, washing-rooms, &c. in connection; suitable provision for sergeants and married men; quarters for the officers; chapel-school, library, and orderly rooms; offices (namely, stores, workshops, canteen, bakery, &c.), washhouses and baths, hospital, prison, a parade or drill-ground, and guard-house, and some shelter for drill in bad weather. I wish to compare the first few designs together upon the most important of these subjects.

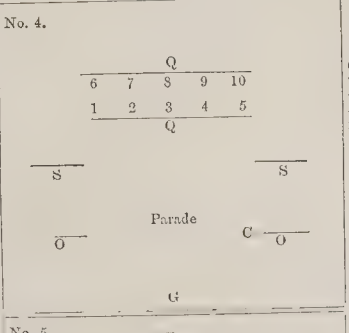


As to the *parade-ground*, the instructions specify the dimensions of 250 by 100 yards, which (allowing for a trifling excess on any account) becomes just *six acres*. If the entire establishment is to be capable of anything like effective individual control (and in all weathers), one might imagine that, with a single item of six acres to begin with, it would be considered desirable to economise space, to beware of unmanageable area. Now the design No. 1 (the first premium plan), and the one which we are to understand will in its essentials be the model for the kingdom), incloses within the barrack-wall positively upwards of *thirty-four acres!* and it cannot possibly be much reduced. No. 2 represents 20 acres, which must be increased to correct a vital error. No. 3 takes 30 acres; No. 4, apparently, as much. In the parade-ground itself, No. 1 gives upwards of *twelve acres*, properly speaking: in No. 2 it is only two-thirds of the required extent; and this, moreover, cannot be cured except through a dilemma of desperate expedients (either by lengthening the parade-ground, so as to lie endwise towards the quarters, or again by widening it so as to separate the blocks of buildings to a most inconvenient extent): in No. 3 the parade-ground occupies 13 acres; and in No. 4, an extravagant quadrangle is reduced to the limit by the impracticable idea of surrounding it with ornamental lawns. But there are several designs which enclose altogether only 17 or 18 acres (which, after all, is a sufficiently large minimum in practice), and afford notwithstanding the most abundant space for every purpose, and with no inferior arrangement of the buildings, I think, but quite the reverse. Take No. 5, for instance, and correct the error of its endwise parade-ground, and you have what I mean. But this design makes no show among the tremendous areas around it, although it actually gives to every man, woman, or child in the barrack a space of 600 feet of ground. It is all very well to handle acres in a plan as if they were dominoes, but think of this,—Lincoln's-inn-fields and Russell-square are as nothing; Colney Hatch, the Houses of Parliament, and the Crystal Palace, are altogether outdone: look at the whole length of Pall-mall from St. James's-street to the Haymarket (nearly one-third of a mile), and the whole breadth from Pall-mall to Jermyn-street (one-sixth of a mile), and you behold the precise dimensions of the enclosure of the model plan to accommodate a single regiment of soldiers. Just look at this in a map of London.

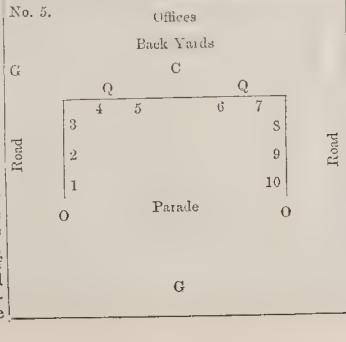
The accompanying sketches will serve to give an idea of the general principles of plan of the first five designs, in order to illustrate the observations which follow. (The sketches are not to scale.)



No. 1.



No. 2.



No. 3.

No. 4.

No. 5.

Q. signifies quarters for the men.
M. Married quarters.
O. Offices.
C. Chapel.
E. Entrances to quarters.
S. Stores and other offices.
G. Gates.

The numerals are the order of companies.

In the *Men's Quarters* we have the chief question of the problem. It seems to me that the first desideratum is to dispose the men so that the whole battalion shall turn out on parade with perfect readiness. I think also that the whole of the barrack-rooms should look out upon the parade-ground, if possible. In No. 1, only four of the ten companies so look out; in No. 2, only two I think; in No. 3, we may almost say none; in No. 4, five companies; in No. 5, and many others, *all*. In No. 1, again, the quarters being disposed as a hollow square, with one side towards the parade-ground, the whole of the men have to pass out and in at the two front corners E E: thus 500 men have one single entrance, and 400 of them go up and down one staircase (for the back staircase is of no practical account in most matters). In No. 2 also, although every company has its own staircase, yet there is the serious disadvantage of a common corridor for five companies, and the practical means of entrance and exit are not much better than in the last. In No. 3 the question of access is mainly sacrificed. In No. 5 every company has its own doorway opening directly upon the parade-ground; and No. 4 and many others exhibit modifications of the same sound principle. In No. 1, when the men pour out to parade in 500 at each corner, they actually are separated from the parade-ground by a *lawn* some 50 yards wide, with *roads*, not across, but *round it*. The soldier, who falls in on the extreme flank, in passing from his barrack-room (if this be at the corresponding extremity) to his rank—always expected to be a prompt move-

ment—has to walk *one fifth of a mile*. Nos. 2 and 3 are less objectionable here, but still sufficiently so: whereas, in Nos. 4 and 5, and very many others, but for endwise parades where they occur, every man may be said to step out into his place at once.

As to the details arrangements of the quarters, the three premiated plans present unmistakeable evidence of a most strange and sad system of selection having been resorted to. The blue-book, among other things, alludes to certain various ideas of plan. First, it holds up to reprobation the old "barrack room" system,—whereby the men are put into a long range of rooms opening successively on a corridor at one end, and lighted solely from the other, with a cookery in immediate conjunction, on all floors alike, and some awkward tables in the corridor for their meals. Secondly, it canvasses the "day-room" principle, whereby the barrack-rooms are to become dormitories only, and a distinct day-room is to be provided apart: this, however, the report disapproves of. Thirdly, the glass-roof, or Crystal-Palace principle is vaguely spoken of as available for covered ways, or covered yards, or the like. Fourthly, there is the system recommended by the committee, with improved barrack rooms and conveniences, "dining-kitchens," improved classification, and, for this end (as laid down by Major Jervois himself), separate blocks of buildings complete for the several companies. This last system is the prevailing principle throughout the whole exhibition of designs: in it, the great majority of competitors behold the only key to the problem. But, mark the result: it is wholly set aside: the Crystal-Palace principle—dragged in neck and shoulders as it must be,—is awarded a prize in No. 3: the "day-room" principle, specifically disapproved in the report, is awarded a prize in No. 2; and the one solitary project which offers to conserve the old "barrack-room" system, and perpetuate all its evils, is put in the place of honour, as if to pronounce the whole of this important competition as a failure or a farce. Nos. 1, 2, and 3, instead of representing degrees of practical improvement, are all at utter variance with each other, have nothing in common, are incapable of any amalgamation, and, if my arguments be correct, their defects are essential and vital errors, which cannot be remedied but by the entire abandonment of their fundamental principles of plan.

One more defect of No 1, under this head, is the following:—The men are specified to be quartered either in squads of twenty-four, or half-squads of twelve: the evidence points to the division for twenty four, with an arrangement for subdivision, if desired, for twelve. No. 1 has all its barrack-rooms made for twelve, without the possibility of resorting to the other mode, except by having the rooms lighted from the side, which would put the design at once below the line of merit.

As to the *sergeants' quarters*, the first question is to provide separate rooms for the company sergeants, attached to the several barrack-rooms, but effectually separated for the privacy of the sergeant and his wife, inasmuch as the manners and conversation of the barrack-room are found to be of a strong savour. The old system gives the sergeant and his wife a little corner in the barrack-room within a screen; and this is one of the especial evils denounced by the blue-book. Would it be believed that the only design which retains this arrangement is No 1? The good woman is to have for her new home a compartment (with no observable fireplace, by the by,) enclosed *between* barrack-rooms, surrounded on all sides but one by screen partitions a little higher than her head, and having all the talk of a hundred "single" men floating above that level in full chorus. Or suppose we trace her route in passing from the canteen, for instance, to this agreeable retreat in the further wing. She enters by the corner-hall, where 500 men pass out and in, and where a given proportion of that number are lounging: she passes along a corridor of nearly 500 feet, through stores' departments, and the like, to the other corner-hall of 500 men, or she may here prefer to take the open air through the back yards and racket-court, and pass the eighty conveniences, &c: then she goes up the public staircase, used by 400 men, then passes along the private corridor of 100 men, her company, 226 feet long; then enters, and passes through the barrack-room itself, to which her sanctuary pertains; then, lastly, and no doubt gladly, gains admission to that peaceful enclosure itself, a little out of breath perhaps, and it may happen, occasionally, a little out of countenance. In, perhaps, the majority of designs, the good woman passes quietly, and with perfect facility, to a proper and comfortable room, without meeting (at least in-doors) one man but of her own company, and that only on the staircase: when the door is shut, she and her husband may converse without being overheard: and the worthy sergeant shall have all needful control over the adjoining barrack-room notwithstanding.

In respect of *married quarters*, the instructions direct that the married soldiers, with their families, shall have a location by themselves, apart from the main quarters. Sixty or more soldiers' wives, all clustered together in this way, may become not only a noisy republic, but perhaps an independent one: moreover, this removal of sixty of the soldiers from their companies (to avoid which in many barracks common decency itself is avowedly sacrificed) may prove disadvantageous to discipline. Various attempts are exhibited to overcome these points, but not, I think, in any of the premiated designs.

The *offices*, that is to say, the stores for provisions, clothing, bedding, coals, arms, and accoutrements, the bakery, the canteen for malt liquor and groceries, the workshops for tailors, shoemakers, armourer, carpenter, and blacksmith,—all these for the supply of some 1,200 persons, are not easily disposed of: they are enough to fill a small street of shops, and their convenient arrangement is a most essential question in the problem. Carts are passing to and fro continually: the colonel will not have these cutting up his parade-ground, or appearing there at all: they must come and go without difficulty and without observation, as the butcher, the baker, the milkman, the dustman, come modestly to one's back door. In No. 1, the ground floor of the centre main building is indiscriminately cut up into these offices, intersected by the principal corridor of intercommunication of the building, and approachable, not by any rear access, but from the front gate along the end of the parade, past one of the entrance-halls for 500 and its little crowd, past the canteen and its little crowd, round by the back, into and across the back yards of the men, past the racket-court, and the privies, and so at length to the stores, a route in all of very nearly *half a mile*. In No. 2 it is similar, except that the carts pass by the more elegant route of a sweeping ornamental roadway through extensive lawns. In No. 5 we have the rear gate, the back yards, and the offices in line, "out of the way, but handy."

The *back yards* are the lounging ground of the men (and soldiers are very fond of lounging), and the thoroughfare for the general domestic business of the community: this seems to be an indispensable principle in barrack life. In No. 1 there are no back yards, but the interior of a square, with the privies and urinals in the middle, in clusters of forty, and the only cartway to the offices across their very midst: which is a confused arrangement, if nothing more. No. 2 has no backyards at all: the "Gymnasium," especially if covered, would not answer any such purpose. No. 3 has no back yards, but its great glass nave. No. 4 is also wide of the mark. No. 5, if the side roadways were widened, and the offices somewhat differently arranged, seems to exhibit the proper principle in perfection.

Some other defects in No. 1 may now be briefly noticed. To go from some of the barrack-rooms to the conveniences is a very long walk: to go under cover, in wet weather or at night (for there is no convenience of the sort near the barrack-rooms), is, to and fro, very nearly *one quarter of a mile*. The library, which ought to be cool and retired, and near the school, is on one side, and adjoining one of the quiet and noisy entrances for 500 men. The washhouses are difficult of access from the quarters. There are no baths. The barrack-master's house is within the walls, with a private gate (a most signal mistake), and he has to walk a furlong to reach his stores. There are no covered play-courts. The distance of the further great entrance for 500 men is, from the front gate, *one quarter of a mile*, to which the way beyond to the furthest barrack-rooms makes no inconsiderable addition. The abominable "*tub*" in the barrack-room at night seems to be retained, as the men cannot be expected to go to the urinals in the yards. By the bye, talking of the "tub," there is one design which positively has this refined convenience delineated in the middle of the floor of every room, and marked openly and triumphantly with a "T." it is a cavalry design, and it has the first premium!

The supposed merit of No. 1 appears to me to lie in the following points:—First, there is the close adherence to the old system; secondly, there is the alleged advantage of the principle of screen partitions, stopping short of the ceiling. But here any one who realizes the arrangement must surely perceive (see the plan on page 160, *ante*) that the principle is altogether inapplicable to barrack-rooms with women's apartments, washing-rooms, and corridor, all open to one ceiling, 226 feet long. The barrack-rooms, for instance, 28 feet long, are really lighted by only two windows at one end; for it is very little light that will come over the partition from the corridor, besides that one-third of the suite has not even this. The ventilation over the partitions is a fallacy, except that there will be abundance of draughts, and in winter bitter cold. The fumes of the dinner-tables will pervade the whole area for hours. The washrooms (needlessly numerous) will be dark, close, and offensive to the smell, and this last for the particular benefit of the serjeant's box adjoining. There may be another merit in saving lazy soldiers the trouble of going downstairs to their meals; but great cookeries for 100 men on the third floor above ground, are surely a greater evil in domestic economy.

No. 2, with numerous serious errors in detail, and with a fundamental departure from the instructions in its first principle, is, nevertheless, an able and successful plan, and must take a very high position among those which are beneath the proper line of merit.

No. 3 I cannot help thinking a vagary.

No. 4 brings us to more sound principles of plan, although there are various errors of detail which a more careful study of the blue-book would have prevented.

But in No. 5 (and I know nothing of its authorship) I fancy I perceive the proper solution of the problem. Certain deficiencies I have pointed out above, but all capable of easy remedy; and, although I am quite prepared to find that there are some essential principles which I, the critic, have myself overlooked, yet I feel extremely inclined to assert that there are no faults in this design but such as can be readily overcome without any departure from the model, and that this is not the case with any of the preceding.

No. 6 shows a most elegant plan, but with extravagant space and some of the defects above developed.

Nos. 7 and 8 are like No. 3, —one better, the other worse, but there is a plan attached to No. 8, designated as the embodiment of the suggestions of "an eminent and experienced person," which demands notice. The hand of the amateur is but too plainly discoverable in crude and confused details, but the general principle is the pith of the matter, and this is exactly that of No. 5.

Nos. 9 and 19 are good plans of their kind: but my remarks must be brought to a close.

As will be gathered from what I have said, after several day's attentive study of the designs, my firm opinion is this, that No. 1 is solely remarkable for a repudiation of all improvement upon the old system: that No. 2 is an able design, on a false basis; that No. 3 ought to stand nowhere; and that the really practical designs are altogether neglected. This, of course, is but my own opinion; but I have attempted to set it forth with such particulars as will enable others to judge for themselves.

I sincerely hope that what I have said will not be considered personally offensive by any party concerned. I impute no want of skill,

and no unworthy conduct: I only argue that a most serious mistake has been fallen into. I cannot tell what reasons may have governed the decision, but I think it is to be very much deplored for the public interest.

Allow me to say that I should be sorry indeed if my strictures on Mr. Morgan's design were to be considered a reproach upon his ability: if I were to speak of his cavalry plan, I think it would be very differently indeed.

In this matter it will be granted that I must subscribe myself ANONYMOUS.

ON THE MANUFACTURE OF CROWN AND SHEET GLASS.*

A TABLE of crown glass of to-day would scarcely recognise as of kindred origin a table of the earlier part of the present century. The principle of the process in each case was the same: it is the improvement of minute details that produces so different a result. To Mr. Hartley and Mr. Chance, who, during the years 1832 to 1836, gave to the manufacture of this glass their constant attention, is owing, in a great measure, its present status.

When the tables of crown glass are drawn from the kiln, they are covered with a whitish film or "hum." The history of this hum is curious. It arose, probably, in the first instance, from the deposition of sulphur from the fuel upon the surface of the glass. It thus became associated with the process of annealing, and buyers fancied that the more hum there was upon the glass, the better was the glass annealed. The manufacturers of crown glass, ever ready to accommodate themselves to the fancies of their customers, have taken the trouble to produce an additional hum, by the introduction of sulphur in the kiln. The members, however, of the Glass Jury of the Paris Exhibition, not being in the secret of this hum, stoutly maintained that glass thus clouded must be bad glass, and that the hum was owing to the exudation of the alkali.

In the warehouse, the tables are laid upon a "nest," or cushion, and are divided, by the diamond of the splitter, into two unequal parts, the larger half containing the "bull's-eye." The diameter of the table is measured on the nest, the usual size being now about 54 inches, and weighing 13 lbs. Tables have been made as wide as 70 inches, but the difficulty of manipulation, and the uncertainty of the result, render such sizes too costly to be general.

The splitter carefully examines each table before splitting it, and turns it round till he has brought it into the position in which he may split it to the best advantage, announcing at the same time its quality. The first quality is called "best"—*rara avis in terris*, the next seconds, then thirds, fourths, CC, CCC, or Irish, and tables containing any very glaring defects come under the denomination of "coarse."

These variations in quality depend on the presence or absence, number, and extent of those defects to which, even in the best regulated manufactories, glass is unavoidably liable. Perhaps the glass has been badly melted, and is seedy,—full, that is, of little vesicles, to which the rotary motion has given a circular shape; or, the gatherer may have enclosed air within his "metal," and a gatherer's blister is the result, or a pipe blister, or pipe-scales, or dust from the pipe-nose, or dust from the marver, or dust from the bottoming-hole, or dust from the nose-hole, or dust from the flashing-furnace, or bad bullions, or scratches, or music lines, may disfigure the table; or the glass may be crizzled, or curved, or bent, or hard, or smoky, or small and light,—defects to explain which, would be a long and dreary task. No wonder that tables of the best quality are few and far between, in some manufactories a forlorn hope never to be realised.

The difficulty of obtaining glass free from defects will account for what may at first astonish,—the fact that the value of a table of the highest quality is three times that of the lowest.

The defects enumerated, many as they are, are instantly detected, even through the obscuring hum, by the splitter, who not only can descry faults invisible to ordinary eyes, but can refer each fault to a particular stage of the process, and to a particular cause in that particular stage, and the faults are registered accordingly. The nomenclature of defects is much facilitated by the mapping out of the table into certain ideal divisions, derived from shapes assumed during various periods of the process. The centre lump is termed the bullion: round this lies the bottom; next the bulge; the shoulder; the top, and the rim, or the outermost edge of the circle.

Independently, however, of these defects, there are certain other disadvantages under which even a faultless table of crown-glass must unavoidably labour. The cutting of a circle into rectangular sheets must necessarily be attended with waste, while the bull's-eye confines those sheets to comparatively small sizes. Uniformity of thickness, also, except by the most skilful manipulation, is difficult of attainment. Wavy lines, termed music lines, forming a series of concentric circles round the bull's-eye, and owing to the treatment of the glass upon the marver, were formerly a common defect; but improvements in the process have in a great measure removed them.

On the other hand, extreme brilliancy of surface is a distinguishing characteristic of this glass, ascribed by some to the influence of the marver, by others to the effect of the flashing-furnace.

It is this brilliancy of surface which has enabled crown-glass to maintain in England its position against that formidable rival of which I must now briefly speak.

Imagine, as before, a lump of glass collected upon the end of the gatherer's pipe. For the metallic table or marver is now substituted a block of wood, so hollowed out as to allow the lump, when placed upon it, to be expanded by the blower to the diameter ultimately required. The block, during this operation, is sprinkled with water, to prevent the wood from being burnt, and from scratching the glass. From the block it is carried to the blowing furnace, which is accessible through a number of holes or openings, each hole being allotted to a single blower. In front of the furnace corresponding to each opening, is a stage or frame of wood, erected over a large pit or well about 10 feet deep, and these parallel stages are sufficiently apart to enable each blower to swing his pipe to and fro in a vertical plane, that the glass may run freely out, as the phrase is, to the required length. When the glass has been sufficiently heated in the blowing furnace, it is brought out, and swung round in a vertical plane, and also backwards and forwards; and the blower, at the same time, by blowing down the pipe, constantly keeps the lengthening cylinder full of air.

Uniformity of substance and of diameter is chiefly secured by the skill of the workman, who, when he finds the metal running out too freely, holds the cylinder vertically above his head, still keeping it well filled with air. These operations are continued until the cylinder has reached the length required. The diameter of the cylinder was determined by the wooden block, and remains the same throughout.

The next stage of the process is opening the end of the cylinder. The thinner kinds of glass are all opened by submitting the end of the cylinder to the fire, and at the same time forcing in air through the pipe and stopping up its aperture. The air is expanded by the heat of the fire, and bursts open the cylinder at the end; this being the hottest and most yielding part. The aperture thus made is widened out to the diameter of the cylinder, by subsequently turning the cylinder to and fro with the opening downwards.

The thicker kinds are opened by attaching a lump of hot glass to the end of the cylinder, which thus becomes the hottest and weakest part, and the air forced in by the blower as before bursts it open. The opening is then enlarged by cutting round it with scissors. If opened in the furnace, as in the first case, the ends of the thicker cylinders would be so thinned out that a considerable portion would be wasted.

The cylinder is now laid on a wooden rest, or "chevalet," and is easily detached from the pipe by the application of a piece of cold iron or steel to the neck of the glass near the pipe nose: the neck being hot suddenly contracts externally and breaks away from the cylinder. There still remains the cap or end of the cylinder, which is easily taken off by wrapping round the end of the cylinder a thread of hot glass, removing the thread and applying a piece of cold iron to any point which the thread covered.

On the continent, the operation of heating the glass cylinder is performed in the apertures of the melting furnace; but the obvious advantage of a separate furnace has induced, I believe, one French manufacturer to adopt the English plan, and others will probably follow his example.

The cylinder, as it now lies upon the chevalet, is little more in weight than two-thirds of the lump of glass which the gatherer collected on his pipe. The quantity left upon the pipe nose, with that which formed the cap of the cylinder, are nearly equivalent in weight to one-half the cylinder.

The finished cylinder is now split open by a diamond, which, attached to a long handle, and guided by a wooden rule, is drawn along the inside length of the cylinder, and should pass through or in the neighbourhood of some notable defect or group of defects, if such be present,—for defects thus brought to the edges of the subsequent plate of glass are of lessened injury to its value. An object to be avoided is the black mark which the cylinder sometimes receives from the charring of the wooden "chevalet," on which, while hot, it rested in the glass-house. If the diamond passes, inside the cylinder, over the space occupied by this mark upon the outside, the cylinder will fly to pieces. The reason of this is not difficult to understand. The chevalet prevented, by its non-conducting tendency, that portion of the glass with which it was in contact, from cooling equably with the rest, and the particles at that point remained in a state of tension. A careful blower will never place any large defect in his cylinder in contact with the chevalet, being aware of the probable result.

The use of the diamond in dividing plain surfaces of glass dates from the sixteenth century; but its application to the splitting of cylinders which had not undergone the process of annealing, was introduced not more than twenty years ago by M. Claudet. Previously, all such cylinders were split by a red-hot iron, and, even now, all cylinders of flashed glass, that is, of ordinary sheet glass covered inside with a skin of coloured, are still split in the same fashion.

On the continent, I believe, the diamond is gradually replacing the use of red-hot iron, though the latter is still the method more generally practised.

The cylinder is now ready for the flattener, who, having prepared it by a preliminary warming in the flue, by which it is introduced into his furnace, passes it, by means of a croppie, or iron instrument, on to the flattening stone, from the slight irregularities of whose surface it is protected by a lagre, or sheet of glass, laid upon the stone. Upon this lagre the cylinder, lying with the split uppermost, is soon opened by the flame passing over it, and falls back into a wavy sheet. The flattener now applies another instrument, a polissoir, or rod of iron, furnished at the end with a block of wood, and rubs down the waviness into a flat surface, often, upon a refractory piece, using considerable force. Some cylinders are so distorted in the blowing that no rubbing can flatten them; but all, good, bad, and indifferent, pass through the same treatment. The flattening stone is now moved on wheels to a cooler portion of the furnace, and by the aid of the flattening-fork, delivers its sheet to another stone, called the cooling stone. From this, when sufficiently stiff, it is again lifted, and then piled generally on its edge, in order to be annealed.

Very different, both in process and result, was the manufacture of spread, or German cylinder glass, which preceded the introduction into England of the French system. The cylinder, unskilfully blown, was cut open while hot with a pair of shears, and spread out immediately upon a plate of iron, covered with sand. The thickness of this glass was very irregular, and its surface very coarse.*

* The following is a continuation of Mr. Chance's paper, read at the Society of Arts. See p 141, *ante*.

* To be continued.

DIOCESAN TRADE SCHOOL IN BRISTOL.

LORD GRANVILLE ON EDUCATION.

The old Diocesan School at Bristol has been transformed into a trade school, and Lord Granville, as Lord President of the Council, presided at a meeting to inaugurate it on Friday, the 28th ult. The building has been remodelled. It formerly consisted of two large rooms—upper and lower. These are now partitioned off on the ground-floor—first, into a lecture-room; secondly, into the laboratory referred to, which is furnished and fitted on a plan supplied by Dr. Lyon Playfair; thirdly, an apartment for the lecturer's experiments; fourthly, a lavatory, &c. for the scholars. On the upper story are two large class-rooms, heated and ventilated, and a museum.

At the close of the proceedings, in reply to a vote of thanks, Lord Granville made an excellent address, clear, sensible, and persuasive. In the course of it, the speaker said,—It was certainly a most marvellous thing that the people of this country, while running the race of competition with other nations, should refuse to themselves such an element of success in commercial progress as that of education. What would be said of a strong man who, having to engage with a powerful adversary, should bind up one arm? With respect to the sort of education it was proposed to give, they ought to take great care, and not be the advocates of the theorist against the practical man. That which ought to be done was to give the practical man the advantage which he could obtain by learning something of the principles of the calling in which he was engaged. The ordinary effect of this would be, that they would establish a race of artisans—men who would be better artisans, men who would not only understand their work better, but would be more able to deal with new processes. They would establish a race of artisans who would derive pleasure and gratification from their employments, instead of that deadly weariness illustrated in the case of the man who put an end to his existence in consequence of not being able to work in mere routine. He believed that by these means they would raise the artisan both in his own self-respect and in the respect of his employers, and of all with whom he came in contact. He believed that an inventive genius was to be found in every class of society, and they would give that inventive genius enormous advantages if they trained the mind to learn those principles on which the labour of the artisan was founded. He could illustrate this by means of the steam-engine. Look at the position of one workmen learning that the steam-engine was a mere part of a machine, and compare him with the workman who understood the chemical part of the steam, understood the working of the cold and heat, and who from this knowledge was able to derive gratification and delight. If this argument had force formerly, how strong it must be now that the steam-engine had penetrated every nook and corner of the land. With respect to the school which they had that day met to inaugurate, he rejoiced to find that the boys were there instructed in the ordinary branches of a sound English education. He hoped that in this school special care would be taken to teach the English language—a subject which was too much neglected in every school of every class in this country. He believed there was no advantage which could be given to a man greater than to learn to speak and write his own language grammatically. With respect to the mining school, he (Lord Granville), from being an ironmaster and a colliery-owner, could not but rejoice that this was established in connection with the institution now inaugurated. As an instance of the value of scientific knowledge, he would mention that his colleague the Duke of Argyll had, from his peculiar education, mastered in a great degree all the physical sciences; and, being a Scotchman, he possessed those characteristics described by Mr. Commissioner Hill, and was not likely to let his habits of practical observation be entirely thrown away. Some time since his noble friend was looking at a quantity of refuse thrown away in the working of some metals, and was struck with its appearance. He sent it to a provincial metallurgist, and was told that there was nothing remarkable in it. Not satisfied with that, the Duke of Argyll sent it to the Museum of Practical Geology in London, when it was found that there was 11 per cent. of nickel, a valuable metal, and that every ton of this refuse was worth from 50*l.* to 60*l.* This was an instance of the value of a knowledge of science, and proved that such knowledge was not sufficiently spread all over the country at the present day.

PAYMENT TO ARCHITECTS FOR TAKING OUT QUANTITIES.

WIGAN WORKHOUSE.

There has been a little misunderstanding between the Wigan Board of Guardians and the architect of the proposed new workhouse, Mr. Mangnall, now, however, set right. The Board learnt that Mr. Fairclough, the successful competitor for the works, was to pay the architect 1½ per cent. for taking out the quantities, and that this was included in the amount of his tender, and therefore, of course, coming out of the pockets of the parish, the architect having also received 32 guineas for furnishing bills of quantities to the different competitors; and they considered that as the agreement with Mr. Mangnall that the 5 per cent. he was to receive for his services as architect was to include all travelling and other expenses, it should also include this charge for taking out the quantities. The builder told the Board that if the architect had not taken out the quantities, some other party must have done so, and that the expense would have been charged in the estimate. Mr. Mangnall, in explanation, reminded the Board, that when the appointment was made, he was asked the question, and said that the 5 per cent. would include all services rendered by him as architect; but he also stated that he was in the habit of taking out the quantities, and would do so if the committee wished it. He then informed the committee on what terms those quantities would be furnished, and also explained to them that the successful builder would have to pay for them 1½ per cent. The building committee distinctly understood that, and agreed to it. To show that it was a customary thing, he stated that at Leigh, 1¾ per cent. was paid by the builder; at Burton, 1½ per cent. was paid by the builder; at Warrington, 1¼ per cent. was paid by the builder; at Oldham, 1½ per cent. was paid by the guardians; at Runcorn, 1¼ per cent. was paid by the contractor; at Ashton, 1½ per cent. was paid by the guardians; at Manchester, 1 per cent. was paid by the builder; at Chorlton-upon-Medlock, 1½ per cent. was paid by the builder.

The Chairman said he thought it amounted to the same thing, whether the architect did the work and was paid for it, or whether it was done by another surveyor.

After some discussion, the Board came to a resolution that the explanation was satisfactory.

There were 114 candidates for the office of clerk of the works, and the Board elected Mr. Hugh Hughes.

METROPOLITAN BOARD OF WORKS.

WIDTH OF NEW STREETS, ETC.—BUILDING OVER FORECOURTS.

At a meeting of the Board of Works on the 28th of March, the following bye-laws, made by the Metropolitan Board of Works, at a meeting of the Board, held at the Guildhall, in the city of London, on the 29th of February, 1856, were read, approved of, and ordered:—

"Every new street within the limits of the metropolis, as defined by the said Act (excepting every mews), must be of the width of 40 feet at least; but if the buildings fronting any street be more than 40 feet high from the level of the street, then such street must be of a width equal at least to the height of the buildings above such level.

Every alley and every mews within the limits aforesaid, must be of the width of 20 feet at the least; but if the buildings fronting any alley, or to any mews, be more than 20 feet high from the level of the alley or mews, then such alley or mews must be of a width equal at least to the height of the buildings above such level. And with regard to every such alley, in reference to the entrance thereof, every alley must have two entrances thereto, each being at the least the full width of the alley, and one of the two at the least open from the ground upwards.

And with regard to both such streets and alleys, the aforesaid width is to be ascertained by measuring (at right angles to the course thereof) from front to front of the buildings, on each side of such street or alley.

The word 'streets' to include every square, circus, crescent, street, road, place, row, mews, lane, or place along which carriages can pass, or are intended to pass, and that whether there be or not, in addition to the carriage-way, a footway paved or otherwise.

The word 'alley' to include any court, alley, passage, or other public place, which can be used as a footway only.

In case of any breach of the regulations contained in this bye-law, the offender shall be liable for each offence to a penalty of 40s. and, in case of a continuing offence, the further penalty of 20s. for each day after notice thereof from the Metropolitan Board of Works."

This bye-law has been sanctioned by the Home Secretary, Sir George Grey, and therefore now has all the force of law.

Some applications for permission to erect a building over the forecourt of premises were *refused*.

The memorial from Southwark, respecting street improvements there, together with the report of the Finance Committee in relation thereto, was referred to the Committee of Works and Improvements.

Mr. D'Ifanger gave notice of the following motion:—"That in order to ascertain how far it may be desirable to carry out that portion of sec. 141, which empowers the Board, 'where more than one street in the metropolis is called by the same name, to alter the name of any and all such streets except one,' a letter be addressed to all the vestries and district boards, requesting them to furnish this Board with an alphabetical list of all their streets, &c. and that the consideration of the subject be referred to the committee appointed to confer with vestries and district boards."

PROJECTION CASES IN THE METROPOLIS.

The subject of projections from the street fronts of buildings is one of considerable difficulty under the regulations of the Building Act. I think that the *primâ facie* conclusion to be arrived at is the reverse of that of your correspondent "Tempora Mutantur." The Act provides, sect. 26, clause 5, that "Except in so far as is permitted by this section, in the case of shop-fronts, and with the exception of ..... architectural decorations, no projection shall extend beyond the general line of fronts in any street, except with the permission of the Metropolitan Board of Works." It seems clear, therefore, that without the *special* permission of the Board, projections are *inadmissible*: a strict construction of the Act seems even to prohibit ordinary porticoes, unless they may be considered to come under the denomination of "architectural decorations."

The question as to the power of rebuilding existing projections, particularly in cases of shop-fronts projecting more than 10 inches, is one on which I am aware that there is a difference of opinion. It is very desirable that the whole subject should be well considered and definitely settled, so that the building public may know what they may and may not do.

District Surveyor.

METROPOLITAN BOARD OF WORKS, AND BUILDERS' SHOP-FRONTS.

It is of some importance to householders to consider how far they may be affected prejudicially, or otherwise, by the meaning that may be attached to clause 143, of the Metropolis Local Management Act, giving vestries power to remove projections.

This clause says no "building" shall, without consent, &c. &c. &c. be erected beyond the regular line of the buildings in the street. Clause 119, prevents any actual obstruction being projected on roadways or footpaths.

Is a small addition of 3, 4, or 5 feet to the front of a shop, on its own ground, to be deemed a building within the meaning of this clause,—and as such amenable to its control? How is the regular line of the fronts in an irregular line of street to be determined, some setting back, others breaking forward?

Again, is the filling up of an unoccupied space between fronts already brought out, to be deemed the

erection of buildings,—and are these to be considered as projections extending beyond the regular line of the fronts?

These points are of great importance; and it is highly desirable that the fullest considerations should be given to them, to prevent any undue hardship without countervailing advantages being gained. In London, streets are so irregularly plotted out, and have been so added to and altered, that it would puzzle the whole bench at Westminster to determine what, in the words of the Act, is the "regular line of the buildings in the street." A Householder.

Party Fence or Garden Walls are not regulated by the Metropolitan Building Act, or subject to the supervision of the district surveyor, as was the case under the late Act. There is no restriction as to height or mode of construction, and a man in the New-road pleads that he is only building garden or party fence walls, and that he may build them as high as the houses. The Act is most defective.

A Bewildered One.

INSTITUTION OF CIVIL ENGINEERS.

On the 11th inst. Mr. Robert Stephenson, M.P. in the chair, the discussion was renewed on the paper, "On the Explosions of Steam Boilers," by Mr. William Kemble Hall, and was continued throughout the evening.

A new form of boiler was exhibited, and described as having been recently erected at the works of Messrs. Humphrys, Tennant, and Dykes. The fire-box, of 3 feet diameter, was composed of a series of flanged rings of Low Moor iron, fastened together in such a manner as that the rivets should be surrounded by water, and not be exposed to the action of the fire. The depth of water over the fire-box would be double that over the small iron flues, or tubes, which were 3 inches in diameter. No double thickness of plate was allowed anywhere. It was intended to supply steam of 70 lbs. per inch, and it had been loaded up to 120 lbs. per inch. The shell was much stronger than that of one of the Great Western locomotives; and it was anticipated that the steam might be permitted to accumulate without danger.

When it was remembered that the explosion of a boiler, under a pressure of 140 lbs. per square inch, was nearly identical with that of a 10-inch gun, the effects of such an occurrence were not surprising.

It was reiterated that it was not necessary to have recourse to the spheroidal theory,—to the decomposition of water,—or to any highly scientific arguments, and much less to mysterious or occult causes, for the reasons of explosions. Careful investigation would in general point sufficiently clearly to them, when the reasons were fairly sought for.

It was stated that the observed cases of corrosion of the plates of boilers might be referred to galvanic agency, and instances were given of such effects being produced, when the bilge water was taken up by the feed-pumps and injected into the boilers.

The decomposition of water on heated plates, although admitted to be an interesting chemical study, was now generally rejected, as a practical solution of the question of explosion; and as to the spheroidal theory, any such pressure of steam as must exist within a boiler would practically force the water into absolute contact with the heated surface, and would not permit the globules to be suspended amidst the film of steam, at atmospheric pressure, as in an open crucible, or on a plain heated plate. Therefore that theory must almost be abandoned in practice.

The causes of explosions might, at first sight, appear to be difficult of discovery, but careful investigation generally brought to light evidence of some condition of the boiler under which an accident would be inevitable.

On the 18th, Mr. I. K. Brunel in the chair, the paper read was, "On Improvements in Diving Dresses, and other Apparatus for Working under Water," by Mr. William Heinke.

In tracing the history of diving apparatus and submarine researches, mention was made of one undertaken by one Phipps, a ship carpenter, the son of a blacksmith, at Boston, in America. He devised some modification of the apparatus, which enabled him to operate, in 1687, upon the wreck of a Spanish galleon, lying off the coast of Hispaniola; and, on being assisted with money by the Earl of Albemarle, eventually succeeded in raising property of the value of 300,000*l.* of which his own share amounted to about 20,000*l.* He then continued to engage in similar ventures, so successfully, that he was knighted,—became sheriff of New England,—and founded the noble family now represented by the Marquis of Normanby!

In 1779, Smeaton first used diving-bells for civil engineering operations; and one of his apparatus was stated to be still in existence at Ramsgate harbour. Rennie employed them very extensively, and introduced great modifications in their construction, having them made of cast-iron, with lenses in the top, and using powerful air-pumps. Very extensive submarine works were thus constructed, and difficult repairs were made. Telford also used the diving-bell somewhat extensively; and, up to the present day, Sir John Rennie, at Plymouth, and Mr. Walker, at Alderney and Dover, and other places, had, in common with almost all the other marine civil engineers, employed the diving-bell for their works. Indeed, the contractors for such works now found them so useful, and the men managed them so skilfully, that works heretofore considered almost impracticable were undertaken without hesitation.

SANITARY IMPROVEMENTS IN CHELSEA.

The new Board and their officers appear to be working vigorously with the view of effecting sanitary improvements. Landlords are being called on to fill up cesspools, provide conveniences, to lessen the overcrowding, &c. &c. An extract from a recent report of the Medical Officer of Health, Dr. A. Whyte Barclay, will serve to show the condition of one part of the parish:—"Since your last meeting," he says, "one of the worst districts of the parish has been carefully inspected. It consists of a square of ground, bounded by Turk's-row, Franklin's-row, Queen's-road East, and White Lion-street, nearly every portion of which is covered by miserable houses, ranged in courts and yards, in the closest possible contact; and though most of the houses appear to be of comparatively recent date, they are generally of the worst construction, and in very bad repair. I trust the day is not far distant when the whole of these crowded courts and lanes will be demolished, but in the meantime it is imperative on me to ameliorate, so far as possible, with your assistance, the condition of the inhabitants, and especially in the first instance, to call your attention to such matter as require time for their completion.

I consider that, in many instances, the houses are over crowded, and that if any epidemic should appear in the parish, it would be necessary to take immediate steps for reducing the number of the inhabitants. In the meantime I would recommend notice to be served on the landlords, that over-crowding will not be permitted, specifying only the more glaring examples. In illustration I may cite to you two instances in Bolton's-gardens, in houses consisting of two rooms placed one over the other; that on the ground-floor, measuring about 12 feet by 7 feet and 8 feet in height, the upstairs room having the same dimensions, but being very little over 6 feet in height, which may be roughly estimated at 700 and 550 cubic feet respectively, together 1,250 cubic feet, which is no more than is allowed to one bed in the best ventilated wards of our metropolitan hospitals, and yet these two houses are occupied, the one by eleven, and the other actually by fifteen persons."

The return of mortality made with the report in question (for two weeks ending March 15), is very favourable. The deaths are twenty below those of last year, and eleven below the average of ten years, viz.:—

Deaths in two weeks mentioned	46
Deaths in corresponding weeks of 1855	66
Average mortality in corresponding weeks of ten years	57·1

This is very encouraging, with all allowance for the admitted healthiness of the present year.

CHURCH-BUILDING NEWS.

Rochester.—A new congregational chapel is about to be erected on the piece of vacant land at the top of Star-hill, Rochester, Kent, the foundation-stone of which was to be laid last week. The proposed site is in the centre of a dense population, far removed from the nearest place of worship. The following were the tenders for the erection of the chapel:—

Robins	£568	0	0
Spicer	554	10	0
Naylar	532	0	0
Cotton	529	16	0
Collins	517	0	0
Jennings (accepted)	512	14	0

Marton.—The new church of St. Mark, Marton, was opened on Thursday in last week, when the edifice was consecrated. The first stone of the new edifice was laid about St. Mark's day, in last year. Mr. E. Haycock, jun. of Shrewsbury, was the architect; and Mr. Henry Thomas, of same place, undertook the building, his contract being 650*l.* The church is situated above the Montgomery-road, and forms a conspicuous object for many miles. It consists of a nave, chancel, vestry, and porch, the latter of timber. There is also a turret and spire at the west end of the nave. The interior is fitted up with open moveable seats, which will accommodate 120 adults. The roofs are open-timbered, and, like the rest of the internal woodwork, stained a light colour. Stone from the neighbourhood has been used for the walling, but the dressings are of Grinshill freestone.

Brackenfield.—The chief stone of a new church, to be dedicated to the Trinity, was laid at Brackenfield, Derbyshire, on Monday in last week, by Mrs. Turbutt, wife of Mr. Gladwin Turbutt, of Ogston Hall, adjacent, who presented the site and a subscription of 600*l.* The church about to be erected will be in the Early Decorated style of architecture, and is estimated to cost 1,300*l.*

Whitkirk.—St. Mary's Church, Whitkirk, near Leeds, the interior of which has recently been renovated and improved, was re-opened on Thursday before last. The old lofty pews have been removed, and new deal seats, with tracery bench ends, and low doors, substituted. The pulpit is executed in Caen stone, lined with oak, and is octagonal in plan. The flat plaster ceilings have been taken down, and the old oak roof of the nave, with its moulded longitudinal and transverse ribs, exposed to view, new carved bosses being fixed at the intersections. New roofs have been placed over the chancel and aisles, corresponding in character. The piers and arches have been stripped of thick coats of whitewash, and the stone partly restored to its former colour and sharpness of mouldings and arrisses. The east wall of the chancel, the Ingram chapel, and the vestry have been rebuilt, and windows with rich tracery heads introduced, and a porch to the Ingram chapel provided contiguous to the east end. The west organ gallery has been removed, the organ being now placed in the tower, level with the church floor, and a carved tracery screen erected in front of the tower arch. Carved tracery oak screens have been erected round the Ingram and Waud mortuary chapels. Several of the windows are filled with stained glass. The east window, given by Major Waud, of Manston Hall, represents the Ascension, &c.: the east window of the south aisle, next the Ingram chapel, and the end window in north aisle, are memorial ones presented by Mr. Atkinson and Mr. A. Horsfall. The windows are by Messrs. M. and A. O'Connor. The two windows in the north aisle, given by Mrs. Ingram, of Templenewsam, and the whole of the clerestory window, were filled with stained glass by Mr. Lavers, of London. The chancel roof and east wall have been erected at the expense of the Masters and Fellows of Trinity College, who have also contributed towards the general restoration fund; and the vestry roof and wall, and the east wall and entrance porch to the Ingram chapel, by Admiral Meynell. The repairs and alterations have been carried out under the superintendence and from the designs of Mr. J. Dobson, of Leeds, architect.

Middlesborough.—The foundation-stone of a new Independent chapel was laid here on

Tuesday in last week. The building will cost, when completed, upwards of 2,000*l.* nearly all of which sum (including the sale of the old chapel) is provided for. It will be erected from plans by Mr. Oliver, of Sunderland, the proposed dimensions being 60 feet by 40 feet. The site is immediately opposite Queen's-terrace, near the railway station. The chapel will be built in the plain Italian style of architecture, and will contain seat accommodation for 700 persons.

Edinburgh.—A new church is to be erected at George IV.'s bridge, on the east side next to Merchant-street.

Lochlee.—A meeting of the committee of the congregation of the Free Church, says the *Montrose Review*, met with the Presbytery committee in Brechin, on Tuesday week, to receive estimates for the erection of their new church and manse, according to plans prepared by Messrs. Hay, of Liverpool. The following tenders were accepted:—Mr. Dinnie, Aboyne, for the mason work; Mr. Wm. Black, Brechin, for the carpenter work; Mr. Mackie, Brechin, for the plaster work; and a person from Montrose for the slater work. It was found, on examining the estimates for the manse, plans of which had been prepared by Mr. Greig, of Montrose, that they exceeded the amount the congregation were willing to engage for, and it was agreed to have the plans remodelled.

SCHOOL-BUILDING.

Seacombe (*Liverpool*).—The foundation-stone of new Wesleyan schools at Seacombe was laid on Tuesday before last, by Mr. John Farnworth. The site is on a piece of land at the left side of Brighton-street, midway between Seacombe and Egremont, on which it is said the Wesleyans also contemplate erecting a chapel at some future period. The buildings are to be in the Old English style of architecture, and capable of accommodating about 250 scholars—boys, girls, and infants—and to include a house for a resident master. The architects are Messrs. Hay, of Liverpool; the builder, Mr. H. Fisher, of Birkenhead. The estimated cost is 1,900*l.* towards which Government will grant 735*l.*

Peterborough.—The proposed schools are in a progressive state, and it is expected the foundation-stone of the practising school, which is to serve as the parochial school for the St. Mary's district, will shortly be laid in Touthill-close. The entire plan embraces also a training and a reformatory school; and as Government allows 7*s.* per week for each young culprit, it is supposed the latter will be self-supporting.

Worcester.—The new school-rooms built for St. Nicholas, at the expense of Mr. J. W. Lea, are now nearly completed. The buildings are situated in the Infirmary-walk, where they form a prominent object. There are two large school-rooms, one for boys and the other for girls; and the number that can be accommodated is about eighty of each. The school-rooms are divided from each other by four painted arches and a wood skirting, and are lighted by triplet windows, with stone moulded mullions. Apartments are appropriated for the accommodation of a schoolmistress, and the other arrangements and offices are complete. There are separate entrances for the boys and girls: their playgrounds are also divided. The architect is Mr. Elmslie, of Malvern; the builder and contractor, Mr. Perkins: the masonry is executed by Mr. Warmington. The premises are bounded by a low wall and palisading.

Cheltenham.—New parochial schools are in progress of erection here. The site was formerly occupied by the old parish workhouse. The building, which has been commenced, will be erected under the direction of Mr. D. J. Humphris, the architect. The plans were approved by the Committee of Council, and a grant of 1,030*l.* allowed towards the cost of erection. The building will contain on the ground-floor an infants' school-room, 50 feet by 30 feet, and 15 feet 6 inches high; a class-room, 25 feet by 15 feet; cloak-room, lobby, &c.; and on the upper floor a school-room for girls, 50 feet by 30 feet, with class-room, cloak-room, lobby, &c. of the same size as those below. In connection with the school is a convenient teacher's residence. The building will be erected in brickwork, with freestone window dressings, chimneys, &c. of suitable character, but very plain. The contract is entered into with Mr. Hunt, of this town, builder, at the sum of 1,715*l.*; his tender being the lowest of the three from builders who were invited to estimate for the work. The total outlay will exceed 2,000*l.* including the land. —— The directors of the Cheltenham College have granted their Institution for the sectional and other meetings of the British Association, in August; that building being extensive and well adapted for for the purpose.

STAINED-GLASS WINDOWS.

Culworth Church.—The inhabitants of Culworth, in respect to the memory of the late Rev. J. Spence, as their rector, have agreed to erect a memorial window in the chancel of Culworth church, and a tablet in the school which he built, and for which he left 1,000*l.* as an endowment. A committee has been appointed to receive contributions.

Holy Trinity Church, Coventry. — The east window of Holy Trinity Church, Coventry, in memory of the late Mr. R. S. Cox, has just been erected. It is by Messrs. Heaton and Butler, of London. The lowest row of figures represent—Elijah and the widow woman; Moses smiting the rock; Abraham entertaining three angels; Job comforted; Elisha raising the son of the Shunamite; and Joseph and the Butler and Baker. The figures above represent our Lord and the six works of mercy: "I was an hungered and ye gave me meat," &c. The small figures represent Abraham, Moses, Jacob, Noah, Joshua, Daniel, Joseph, and David. In the centre is an angel holding the symbol of the Trinity. Above are the sacred monograms, "I.H.C."—"I.H.S.;" the symbols of the Holy Spirit and the Christian Faith; and the Palm and Crown of Martyrdom. On a marble tablet will be the inscription. Both St. Michael's and Holy Trinity, Coventry, are now, pretty well adorned with stained-glass windows.

St. Peter's, Rock Ferry (*Liverpool*).—Two memorial stained-glass windows have just been placed in this church. The east, or altar window, is a triplet of the Early English period. Groups fill the centres of each compartment, comprising the following subjects,—The Birth, the Lord's Supper, and the Crucifixion. The designers and artists were Messrs. Forrest and Bromley, of Liverpool. The inscription for the east window is placed on a brass plate, engraved by Mr. Leatherbarrow, adjoining the window.

Glasgow Cathedral.—The Lord Provost of Glasgow is succeeding to his wish, it seems, in getting public-spirited families to undertake the responsibility of each filling in a window of the cathedral with stained glass. There is now no doubt that the whole forty-four windows of the cathedral will be appropriated, and that contributors will be glad to have the opportunity afforded them of decorating their revivified cathedral.

St. Mary's, Whitkirk (*Leeds*).—In connection with other improvements, several stained-glass windows have recently been put up in this edifice: for particulars as to these, we must refer to "Church-building News."

Holy Trinity, Colchester.—Mr. Warrington draws our attention to the circumstance, that a stained glass window, by him lately put up in Holy Trinity Church, Colchester, was inadvertently noticed by us, on 5th ult. under the head of Chelmsford. The window is intended as a monument to the late Miss Corsellis.

PROVINCIAL NEWS.

Chelmsford.—The site of the new corn exchange has been cleared of old buildings. The plans, for which contracts are now, according to the local *Chronicle*, about to be entered upon, are for a building in the Lombardic style, with a somewhat more Palladian cast than that generally adopted. The entrance from the square will be through three arches into a hall, from which three openings, with glazed swing doors, will give access to the exchange. This is to be 100 feet long, by 45 feet wide, and afford accommodation for 100 stands, with twenty-five counting-houses. The separating walls of these will form the main stay of the building, and serve to support seven pairs of perforated arched iron ribs, the apex of which will be 40 feet from the floor of the exchange, and to which will be attached the whole roof with its covering of glass. A ventilating chamber running along the ridge of the roof with ornamental panelled gratings in the ceiling, and smaller gratings in the side walls, are to be the means provided for ventilation, which can be increased or diminished at pleasure. The end of the building is carved for a platform, and near at hand is provided a keeper's room and other conveniences. At the entrance end will be a gallery opening into the market, forming a kind of mezzanine floor to the front building. A large room, applicable for auctions and meetings, and upwards of 40 feet by 20 feet, occupies the first floor of the front building, and faces the square, into which projects a stone balcony. It is proposed to face the front building with stone to the height of the first floor, with yellow stocks and stone dressings above, the whole crowned with a stone cornice and balustrade.

Brentwood.—A proof of the increased value of land in the vicinity of Brentwood was given lately, when a few acres on the Ongar side of the town, submitted to auction, realised the unlooked-for price of 100*l.* per acre. The favourite building ground has been on the opposite side: on the Warley declivities, land, it is said, has frequently exceeded 80*l.* and even 100*l.* an-acre. After a somewhat spirited competition, thirteen acres of land which, a few years ago, were disposed of for 900*l.* were knocked down for 1,240*l.*

Banbury.—The foundations of a wood-turning establishment have just been laid in Banbury. The site is close to the canal, and adjoining the baths. The design of the building and machinery is by Mr. J. W. Wilson, of Neithrop, who is superintending the erection. Mr. A. Kimberley, of this town, is the contractor. The building will be in one story, 70 feet long, and 30 feet wide, and the walls will be 12 feet high: the chimney-shaft will be about 50 feet high; and the walls are said to be of sufficient strength to permit of another story being added when required. With the same view, the roof, which is Queen-trussed, with skylights, has been designed so that it can be lifted off in one piece; and the front and back walls will be left toothed, so that the building may be also extended in length if necessary. The steam-engine is of 14-horse power.

Weymouth.—The directors of the new Weymouth Water Company have let the works about to be erected by contract to Mr. Leather, the contractor of the Portland Breakwater, who, it is calculated, with the large staff of workmen which he has at his command, will complete them so as to supply Melcombe Regis in about three months, and the whole of the borough before the ensuing autumn.

Wolverhampton. — The brass-cock founders lately in the employ of Messrs. Ready and Meynell, of Bilston-street, Wolverhampton, have left their work, in consequence of the introduction of machinery into the manufactory.——The town surveyor, Mr. Henry, has completed his report on the sewerage of this town. The surveyor proposes to construct the sewers sufficiently large to carry off the ordinary rain-water, which will assist in diluting the sewerage and scouring the sewers. The position of the town, on the ridge dividing the basins of the Severn and Trent rivers, affords three out falls, two of which may be ultimately combined. Sewerages immediately will be necessary for 1,150 acres, which will require 14,541 yards of main sewers, estimated to cost 15,549*l.* 13*s.* 8*d.*; 13,336 yards of branch sewers, at a cost of 7,865*l.* 10*s.* 8*d.*; and 52,265 yards of minor sewers, estimated at 19,803*l.* 17*s.* 6*d.* This gives a total of upwards of forty-five miles of sewers. Adding various other expenses, including compensation, land, &c. the total cost is set down at 50,951*l.* 1*s.* 10*d.* Mr. Henry recommended that 10,000*l.* should be expended annually, the money to be borrowed and repaid with the interest in equal annual instalments in thirty years.

Liverpool.—A large block of offices is about to be erected in Old Hall-street, Liverpool, to occupy the vacant space of ground between

George-street and Ormond-street. The principal front in Old Hall-street will consist of a granite basement, supporting the ground story of rusticated stonework, above which the principal story is to be arcaded and enriched with ornamented arch bands in stone, the arches being filled in with carved foliage and lunettes of red and green polished serpentine. Above the top story will be an enriched frieze, with lunettes of red and green serpentine at intervals, upon which will come a bold and effective stone cornice and balustrade. The plain portions of the upper stories will be of red brick. The principal entrance archway will have polished red granite jambs, and the entrance ceiling will be groined and panelled, and supported on detached columns, with polished red granite shafts. The offices will open into long corridors, 12 feet wide, which will be lighted from above by continuous skylights, the light being admitted through the stories by open well-holes. In the centre of the whole building will be an open court-yard, 170 feet by 35 feet, communicating with the front and side entrances, and having two small iron bridges for communication from one side of the building to the other. The frontage in Old Hall-street will be about 145 feet, and the depth of the building 230 feet. There will be between sixty and seventy complete sets of offices. The architect is Mr. James K. Colling, of London.——Eight years ago, according to the local *Journal*, the first portion of the Tower-buildings, Water-street, was erected by Sir Joseph Bailey, M.P. but circumstances occurred to prevent the completion of the whole stack according to the plans of Mr. Picton. The obstruction, however, having been removed, the architect will now proceed to carry out the original design, at a cost to Sir Joseph Bailey of about 20,000*l*. The buildings, which will be erected on the site of the yard occupied until lately by Bailey, Brothers, and Co. will face Water-street, and be named Tower-buildings South. They will contain about twenty suites of offices, and form, says the *Journal*, a handsome feature in the architectural adornments of the town. The style, we believe, will be of the Italian order,—something between the Roman and Venetian style. The brickwork is contracted for by Messrs. Jump and Son, and the masonry by Mr. H. Yates. The clerk of the works is Mr. T. Jones. On Saturday last the first stone of the buildings was laid.——The large floating landing-stage to be placed alongside Prince's-pier, for the accommodation of channel and sea-going steamers, is being rapidly proceeded with by Messrs. Vernon and Sons, the sub-contractors. When all is in readiness for the purpose, says the *Albion*, it is proposed to launch this vast fabric in four portions, which will be floated in succession to its place of destination at the Prince's-pier. The whole will be completed within twelve months; the period fixed by the contract. The stage, which is to be 1,000 feet long, will cost upwards of 140,000*l*. The principle of construction is the same as the landing-stage at George's-pier. The whole weight of the stage, mooring-chains, and bridges, is estimated at 4,500 tons, which, it is calculated, will displace about 160,000 cubic feet of water, while its actual draft of water will not exceed 3 feet.

Masham.—The laying of the foundation-stone of "The Riddell Memorial Mechanics' Institute," at Masham, took place week before last, Admiral Harcourt, of Swinton Park, officiating. The cost of the building is raised by a subscription entered into by the parishioners and friends of the late Rev. Thomas Riddell, M.A. vicar of the parish. The structure is after a design by Messrs. Perkin and Backhouse, of Leeds, architects. It is of the plain Italian style of architecture, and contains a vestibule and staircase, large reading-room, class-rooms, rooms for the librarian and hall-keeper, on the ground-floor; and a lecture-room, ante-room, committee-room, and bed-rooms, on the upper-floor.

Seaham-harbour.—It is said that Lady Londonderry has resolved upon enlarging the works at Seaham Harbour, at an outlay of 100,000*l*. The produce of the tracts of ironstone leased by her ladyship in the Cleveland district is to be brought to Seaham, where blast furnaces are to be erected.

Jedburgh.—Improved dwellings for the labouring classes in the rural districts are now springing up in various localities in this district. Two have recently been erected at Muirhouselaw, the property of Mr. J. Ord. Each cottage, according to the *Kelso Chronicle*, contains two apartments on the ground-floor, and attics above, besides other conveniences. Under the old system of constructing hinds' houses, the whole business of eating, sleeping, and cooking had to be carried on in one room, but the old-fashioned tumble-down cottages are fast disappearing.

St. Helier.—The thorough drainage of the town, says the *Jersey Times*, will very shortly be recommenced, when that portion of King-street from Charing-cross to New-street, and thence up that street to Val-plaisant, will be first undertaken; then Conway-street, Hope-street, Cross-street, and Bond-street. All these streets are thickly-inhabited thoroughfares. The streets already drained have greatly improved the sanitary condition, comfort, and cleanliness of St. Helier.

THE LATE MR. DAVID LAING, ARCHITECT, F.S.A.

We have this week to record the death of Mr. Laing, one of our veteran architects, at the very advanced age of eighty-two. This gentleman was one of the few architects who connected the present race with the past. He was the son of a merchant in the City, and was articled to Sir John Soane, about the time when, on Soane's return from Italy, he undertook the charge of the great works at the Bank.

At the beginning of this century, Mr. Laing published a small work, called "Hints for Dwellings." This book had a ready sale amongst those who began at that time to adorn the neighbourhood of London with those

"Suburban villas, highway-side retreats,
Which dread the encroachments of our growing streets."

About the year 1810 he received the appointment of "Surveyor of Buildings" at the Custom-house, and soon obtained directions to prepare designs for a new Custom-house, on a site west of the old work by Sir Christopher Wren, and between that building and Billingsgate. This edifice was just begun when the fire destroyed the old Custom-house; and about five years afterwards the new building was occupied, with much *éclat* at its opening. What this building then was is shown by the large work published by Taylor, of Holborn, which described its arrangement and construction. A few years after, alas! symptoms of decay showed themselves in the foundation of the building; and after much litigation and anxiety a new foundation was put in, and the whole building rearranged and much altered by Sir R. Smirke. Mr. Peto (the predecessor and uncle of the present baronet of the same name) was the contractor for this building; and the actions for penalties, and consequent vexations to which he was subject from the failure of this foundation, tended, we believe, to shorten his life.

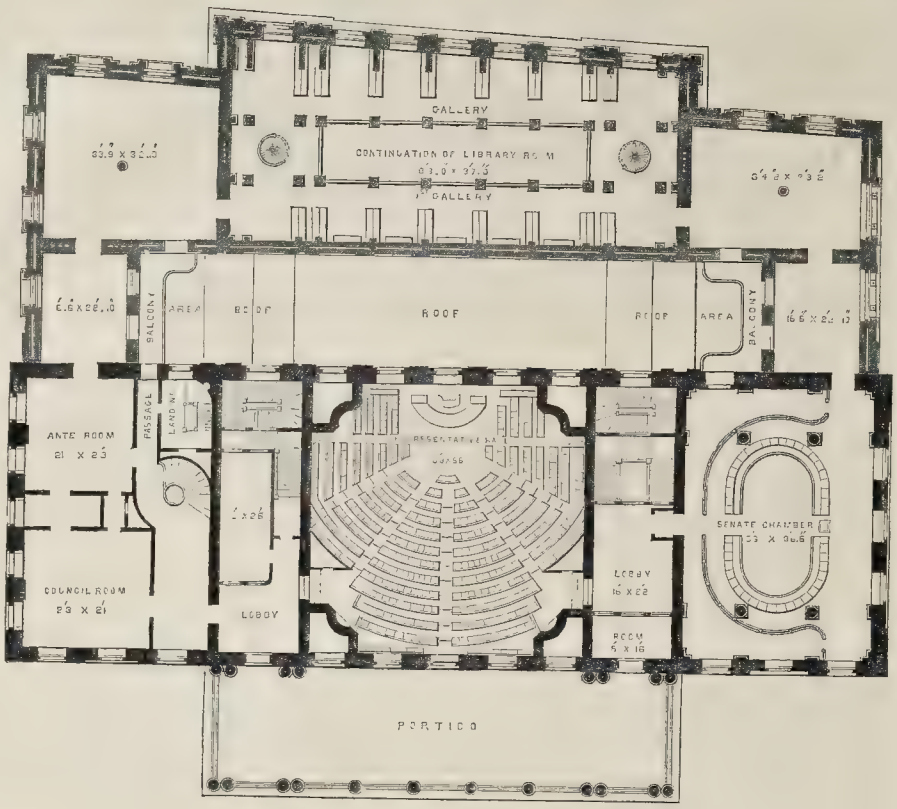
The cause of the failure in question was much canvassed at the time, and it was attributed by many to the decay of the beech piling and planking used as the substratum of the foundation. If this were the cause, we believe neither the architect nor the contractor was really responsible, as that material was used on the recommendation of a very eminent engineer of the day, who was consulted by the Government on that subject, and it was used in spite of the protests of both of the parties who were made liable for the result.

Mr. Kelsey, the well-known surveyor of the Commissioners of Sewers of London; Mr. Lee, the brother of Mr. F. Lee, the painter, and one of the most promising architects of the day, long since dead; Mr. Fowler, Mr. Tite, and Mr. Bellamy, were all pupils of Mr. Laing, and have been happily more fortunate than their kind-hearted master. Mr. Tite laid the foundation of his reputation as joint architect with Mr. Laing of the Church of St. Dunstan-in-the-East, which was re-erected principally from the designs of the former gentleman.

Soon after the accident at the Custom-house, Mr. Laing retired from public life, and his latter days, we have reason to believe, were cheered by the kindness of his former pupils and the profession generally.

STEAM-WASHING ESTABLISHMENT, WELLINGTON BARRACKS.

A new building has been erected in the rear of the Wellington Barracks, St. James's-park, to do the barrack washing of the London district by steam power. The building contains a receiving-room for dirty linen, a washing-room, a drying-room, ironing, mangling, and folding room; clean linen room, engine-room, and boiler-house. The washing-room contains two of Macalpine's patent washing-machines, one dash or rinsing wheel, one hydro-extractor, &c. The process of washing is as follows:—The washing-machines are supplied with a certain quantity of cold water from a tap immediately above them: this water is boiled in about five minutes, by a jet of steam supplied by a pipe in the centre of the machine: the dirty linen is then placed in the machine, which is then started, and revolves horizontally beneath a number of beaters, which are kept moving up and down until the goods are cleansed. The time occupied by this process varies from ten to twenty minutes. The goods are then placed in the rinsing-wheel, and in five minutes are ready for the hydro-extractor, in which they are placed for three minutes; and from thence they are carried into the drying-room, which is heated by steam pipes placed immediately under an open floor. The goods, when dry, are taken to the folding and mangling room; the entire process occupying but a short period of time compared with the old systems of washing, besides the saving effected in soap and labour. The machines are driven by an 8-horse horizontal high-pressure engine, in connection with two steam boilers. The washing-machine, engine, boilers, &c. have been manufactured by Messrs. Manlove and Alliott, of Bloomsgrove Works, Nottingham. Messrs. Bennett and Holdsworth are the contractors for the buildings, under the superintendence of Mr. J. Niblett, of the Royal Engineers department. Ultimately the system here adopted will probably supersede other known processes of washing.



With the aid of two females, 900 large coverlets may be washed in the day. The drying is done at the rate of 200 in two hours. A prison for twenty-two men, and schools for children and adults, are being built, with other works, to afford accommodation for 1,500 men, instead of 900, as at present.

ARCHITECTS AND ENGINEERS' CLUB.

It is manifest that at present students of architecture, engineering, and painting come but seldom into contact with each other. And it appears to me to be at least very desirable that in these, as in the other professions, mind should meet mind. I would suggest, then, an Architects and Engineers' Club, in which the resemblance to the clubs of Pall-mall, &c. should be carried so far as to admit of the members dining there habitually. Those who can afford to dine at the Wellington, dine certainly as gentlemen should—but few are rich enough to do this. A student myself, I have tried very many of the *restaurants* in London, and I can fairly say of them that there is barely one that is respectable: low, hot, crowded rooms, inferior cookery, and dirty dinner-services, render one's dinner a disagreeable necessity rather than a sociable repast Now all this might be easily obviated. By adopting the plan of the *table-d'hôte* or military mess, a commencement might be made. If any *restaurateur* would engage to find a good spacious room, good plate, &c. at a moderate charge, I am certain he would never find his table deserted. Thirty or forty students agreeing to dine regularly at his establishment would well indemnify him for his trouble. Of course, all such schemes as these can have but small beginnings. When the plan of a regular *table-d'hôte* was once fairly started, a club could be formed, each member paying a small annual subscription, which would enable the club to hire one or two rooms, adjoining the dining-room, with an architectural library, and the various professional periodicals regularly supplied.

Of course, I have here merely traced a rough outline, which I leave to be filled up when the plan itself has found sufficient favour to ensure its realization. I could say much more to prove the advantages of such a plan—but space fails. I hope that, if this letter should be so fortunate as to find a place in your columns, it may meet the eyes of some who, possessing the means, may also have the will to start the project.

H. B.

PLAN OF UPPER STORY, STATE-HOUSE, MASSACHUSETTS.

THE STATE HOUSE OF MASSACHUSETTS, U.S.

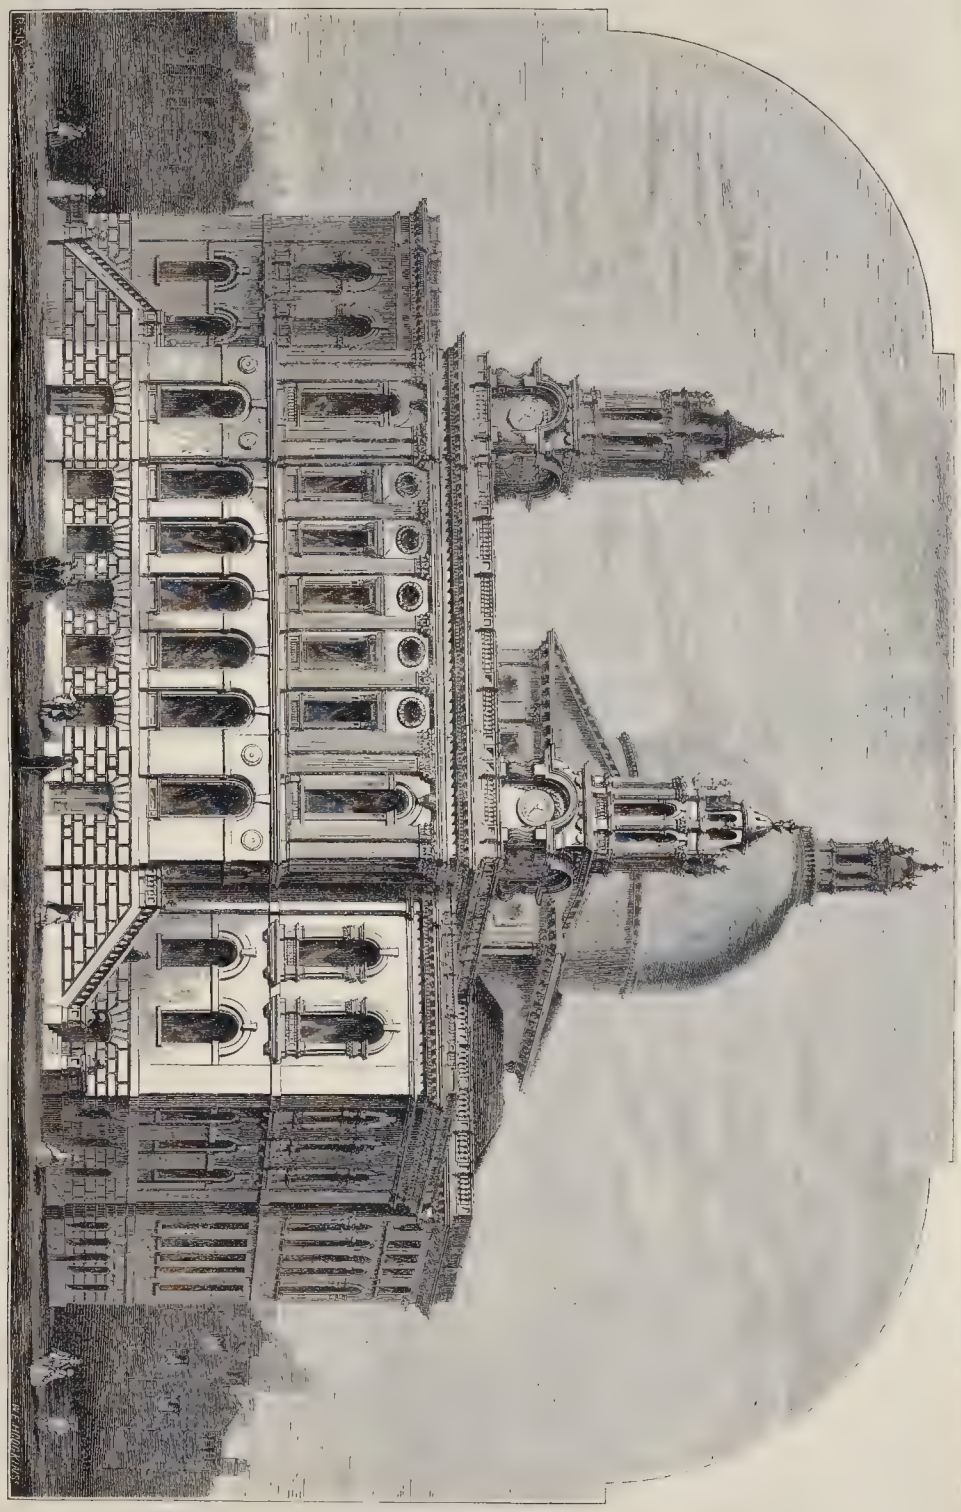
The State House of Massachusetts, in the city of Boston, the capital, has been recently very much enlarged and altered; and that it may be seen what our Trans-Atlantic brethren are doing in the way of architecture, we give a view of the building, and a plan of the upper floor, containing the Hall of Representatives, 53 feet by 56 feet, the Senate Chamber, 56 feet by 36 feet 6 inches, and the upper part of the Library, 88 feet long, and about 37 feet wide. Under the Hall of Representatives is what is called the "Doric-hall," which is divided longitudinally by two ranges of columns, and extends beneath the part marked "Roof" on our plan, and is terminated with a statue in a niche. The enlargement consists of a central building and two wings, shown in the view. The cupola is part of the old house. It is for the most part a brick building, with a granite basement.

The flooring of the first, second, and third stories of the enlargement is constructed with brick groined arches, supported upon piers projecting from the inside faces of the exterior walls, and upon interior piers and columns, arranged in the several stories. The remainder of the floorings, viz. those of the fourth stories of the wings, are to be constructed with segmental arches of brick, supported by cast-iron beams, spanning the widths of the wings. The two galleries of the library are of cast and wrought iron. All the roofs are of wrought-iron, covered with sheet copper. The staircases are also of iron. The supporting columns of the groined arches in the first, or basement, and in the second stories, are of cast-iron. All the interior columns of the library are also of cast-iron. All the exterior windows, dressings, and their balconies, including the window pedestals and architraves on the outside of the exterior walls, as also the string courses and cornices, mouldings, and balustrades around the roofs, are of cast-iron. The pilasters, with their capitals and bases, of the Corinthian order of the exterior walls facing Mount Vernon-street, are all of cast-iron.

The sashes and frames of all the windows, together with their inside shutters and finish, are of cast and wrought iron. The exterior and interior doors are of wrought-iron, with cast-iron frames and architraves. All the wall pilasters that support groined arches are of brick, and are fitted with cast-iron capitals and bases. The inside architraves of all the windows are of cast-iron. All the exterior walls are built hollow from bottom to top, their entire length.

The architect of the enlargement was Mr. Gridley J. F. Bryant: the contractors were Messrs. Cushing and Mack.

The Legislature of Massachusetts had until 1840 a greater number of members than that of any other State of the Union, but the Senate was then reduced to forty members, and the number of representatives to 356, elected by towns or district for which he desires to vote for six months preceding the election.* Massachusetts sends twelve members to Congress. Boston, the capital, where the means of education are very widely diffused, has been always favourably distinguished by her attention to literature.



* M'Culloch.

THE PLAN OF THE WAR-OFFICE COMPETITION.

A correspondent says,—"The idea of paying every competitor as proposed in the War Office case—the designs all remaining the property of the party proposing the competition, is not new and did not originate with Sir B. Hall." The scheme described in last week's *Builder*, is that which was acted upon under Professor Hosking's advice in the case of King's College Hospital. The author of the preferred design was employed and paid his 5 per cent. Each of the other competitors (four in number) had eighty guineas, and the designs all remained the property of the Hospital authorities. But the idea was devised, broached, and set forth by the gentleman named, in 1842, in his introductory lecture at King's College, London, on Architecture."

When we said last week, speaking of the matter, that "the idea originated, we believe, with Sir Benjamin Hall, who deserves credit for desiring to render such new buildings as may be required by the Government, worthy of the country," we meant simply the idea of *competition*, not of the manner of competing: our readers are fully aware that the mode has been adopted before.

Bury St. Edmund's Cemetery.—With reference to the time occupied in the works, and the money spent, a writer, "Anti-Humbug," upbraids the burial board with breach of faith towards the other parties who tendered.

THE STATE-HOUSE, MASSACHUSETTS.—Mr. Geidey J. F. Bryant, Architect.

REPORT ON THE BRITISH PORTION OF THE PARIS EXHIBITION.

A long and able report on the British portion of the Paris Universal Exhibition has been addressed by Mr. Cole to Lord Stanley of Alderley, President of the Board of Trade. From this report, which has been published, it appears that, as a whole, the British section, although necessarily much less in quantity, more completely represented the productions of the United Kingdom and its colonies than the Exhibition of 1851. The comprehensiveness of the colonial collections (says the reporter) left little to be desired, and they promise to be of great mutual benefit to the colonies and the mother country. The quality of the machinery displayed was very good; but, owing to the employment of some of the principal machine-makers in preparations for the war, several important kinds of machinery were not represented; and, curious as the fact is, perhaps the weakest of the British portion, considering the real position of its producers with those of the rest of Europe, was the machinery. The principal seats of manufactures were thoroughly well represented, except Leeds, Birmingham, and Belfast. Manchester appeared much more completely represented than in 1851, and its display attracted great attention. Glasgow and Bradford, Sheffield and the Potteries, were thoroughly represented. Nottingham showed well, although not so extensively as might have been wished. Kidderminster well. The glass trade was but partially represented. The furniture, almost wholly from London, was excellent, but not great in quantity. The musical instruments consisted only of a single organ and a few pianofortes. Civil engineering was abundantly illustrated by the best models of the chief works of recent times. The three principal goldsmiths and jewellers made a full display; but the exhibition of watches and clocks and philosophical instruments was less complete than it might have been, several of the chief producers not having exhibited at all.

The number of exhibitors in the industrial branch who finally exhibited was 1,555 from the United Kingdom, and about 1,070 from the British colonies. The number of British exhibitors who demanded space and did not exhibit was 124. The value of the goods sent to the Exhibition was 173,441*l.* exclusive of the goldsmiths' and jewellers' work, which was estimated at 520,186*l.*

The total number of visits to the Paris Exhibition by British subjects was 40,000, of whom 2,768 were persons who obtained workmen's passports from the Foreign-office without payment.

The work of the British portion will be brought to a conclusion with an expenditure not exceeding 40,000*l.* being 20 per cent. less than the sum voted in Parliament (50,000*l.*). This is greatly due to a steady maintenance of the self-supporting principle.

PRIZES FOR WROUGHT IRON-WORK AND STONE CARVING.

THE ARCHITECTURAL MUSEUM.

Prizes are offered to Art-workmen during the present year for the most successful specimens of wrought iron-work and stone carving, under the following conditions, to which we gladly give publicity:—

No. 1. The Committee of the Museum offer a prize of ten pounds for the best specimen of wrought iron-work.

"The example to consist of a complete panel or portion of a screen of the character of the latter part of the thirteenth century.

The specimens to be such as shall not either in bulk or in manipulation be characteristic of wood or stone.

The workmanship to be a combination of bar, flat, or other forms of wrought iron, forged and united by welding, rivetting, or screwing.

The specimens to exhibit the capabilities of hammered iron as a decorative art, combined with architectural fitness and metallic construction."

No. 2. The base of the Cathedral of Amiens is decorated with sculpture, composed of bas-reliefs in quatre-foils, connected by floral ornament. The photograph, No. 1, at the Architectural Museum, exhibits the arrangement clearly.

Mr. Ruskin will give a prize of ten pounds for the best sculpture of a similar quatrefoil, with included bas-relief, and the two floral ornaments which connect it with the quatrefoils on each side.

"The subject of the bas-relief is to be some incident illustrative of the Crimean War, or of national feeling respecting the war.

It must contain not less than two, nor more than twelve human figures, and of the twelve (if so many are admitted), at least six must be diminutive, merely to represent the presence of the army, or of any multitude.

Foliage or architecture must be associated with the figures, but not in large quantity, and is to be quite subordinate to them.

The foliage both in the bas-relief and floral ornament is to be English, not Oriental.* The architecture either Gothic or Modern English,† not Oriental.

The extreme diameter of the quatrefoil, including the external moulding, is to be 2 feet.

No attention will be paid, in adjudging the prize, to delicacy of execution, or quantity of labour; but solely to ingenious disposition of masses, grace of line, and truth of expression.

The name of the principal figure, or names of the principal figures, are to be legibly sculptured under or over each, in the bas-relief.

If horses are introduced, their pace must not be faster than a trot."

The specimens must be sent to the Architectural Museum, free of cost, on or before the 31st of December next.

The presentation of the prizes awarded for last year will take place on Monday, the 7th, inst. at Canon-row.

* "For the reason that the prize is to be given to workmanly invention and skill, not to botanical research, nor architectural information; besides other reasons, too many to state."

† "That is to say, either English cottages or old-fashioned streets; or the pure brick square-windowed house common among us, should the subject require squareness of line; but not Greek or Grecized buildings."

THE IRON TRADE.

The usual assemblage of the ironmasters of South Staffordshire and East Worcestershire, preliminary to the spring quarterly meetings of the trade, was held at Birmingham on 27th ulto. The *Times's* Birmingham correspondent thus speaks of what occurred. "The late questionable state of the iron trade necessarily occupied the attention of the meeting, but comparatively little discussion ensued. It was admitted on all hands that so late as three weeks back considerable depression existed in the iron districts, and that great doubts were entertained as to the possibility of maintaining existing prices: within the last fortnight, however, a marked improvement has occurred, and there are now prospects of renewed prosperity." The meeting resolved unanimously, subject to the approbation of the ensuing quarterly meetings, that the prices fixed in January should be the prices exacted during the quarter. Prices, therefore, now stand nominally as follows:—Bars, 9*l.* per ton; sheets and boiler plates, 10*l.* 10s. per ton; and hoops, 10*l.* per ton. It was stated that there is a better demand for pig iron at improved prices.

In their annual Report of the British Iron Trade, Messrs. Bailey, Toms, and Co. remark, that during the two years of active warfare from which we are emerging, prices have not given way to such an extent as many persons anticipated. The lowest point that rails have touched since the war broke out is 6*l.* 5s. per ton, and Scotch pigs 53s. 6d. per ton.

Their usual table of Exports of Iron for the past year, as compared with the two preceding years, shows the following results, all descriptions being reduced to pig:—

1855.	1854.	1853.
1,619,205 tons.	1,735,136 tons.	1,814,231 tons.

Thus the diminution amounts to about 200,000 tons per annum in the shipments of British Iron to foriegn ports during 1855, as compared with those of 1853. The make of Iron is estimated now at 3,500,000 tons per annum for the United Kingdom. The stocks on hand of pigs in Scotland are estimated to amount to 140,000 tons, and perhaps there are about 20,000 tons of pigs in the North of England. About half the iron produced is now exported, and the remainder used in this country.

The deficiency in American and Canadian orders, has been felt chiefly in the Staffordshire district of late. "This branch of the trade is in an unsatisfactory condition as a whole," remark Messrs. Bailey, Toms, and Co. writing on 28th ulto. or the day after the meeting at Birmingham, and the "marked improvement" of the preceding fortnight notwithstanding.

LIVERPOOL FREE LIBRARY AND MUSEUM.

You justly remarked in last week's *Builder*, the probable increase of trouble which would arise from the late decision of the committee of the "Liverpool Free Library and Museum," requiring architects to first compete by sketches to a small scale. So far from *saving* trouble to me, and doubtless, to many others who have got out their designs to the 1-8th scale, it will cause a great *increase* of labour, necessitating the design being got out afresh.

The arrangement, I think, will fail to give satisfaction to any one. The losing competitors will complain that their designs could not be appreciated at so small a scale, which, while benefiting a bald and meagre design, will make an elaborate one appear confused and heavy-looking; whilst to the competitors in the second trial it will be a *very serious evil*. It will be almost impossible to insure fair play.

The committee will probably talk about the designs between the first and second trial, and ideas will thus get abroad which will benefit some at the expense of others. Moreover, I should not be at all surprised if some one of the second competitors contrived to see the collection of sketches. This sort of thing *has been done*, and may be again. Furthermore, it will become known who the chosen parties are to send in the second time, and although their drawings bear only a motto, they will be known.

Under these circumstances, how little chance of fairness is there? Mr. Picton, doubtless, wishes a fair competition; but he will require to be very much on the alert to insure it.

The committee appear to have been frightened by the number of "instructions" applied for, but unnecessarily: probably not a fourth of the applicants would compete according to first arrangement; but now, probably *all* will, or nearly so.

It appears to me it would be much better to revert to the original intention, and I hope those who desire fair play will write to the secretary on the subject.

A Competitor.

THE TOWER OF LIVERPOOL.

A small fragment of the ancient tower of Liverpool, erected in 1404, by Sir John Stanley, has recently been laid bare, by the excavation of the site for new offices, to complete the modern "Tower-buildings," mentioned elsewhere. The only remnant of the tower is a few yards of wall about 3 feet high, standing about 3 feet below the level of the street. The foundations and size of the tower may, however, be clearly traced by the form of the old foundations, which have been cut across by the present excavation. On the south-east corner formerly stood the main building or tower, having two square bastions to the street, the building having apparently been a square tower, measuring each way about 35 or 40 feet, with a square bastion at each angle about 10 or 12 feet each. From this building a gate formerly spanned the narrow street still called "Tower-garden," which extended probably as far as the churchyard of St. Nicholas. On the south-west of the area, formerly the court-yard, are the foundations of a tower, which old views show as a low square tower next the river side; there being then no building between this tower and the river. On the west side of the court-yard are also traces of foundations, one apparently a gateway. The remains on the east and north sides are obliterated: probably they were only a plain curtain wall. These foundations are cut in the red sandstone rock to the depth of one to three feet, and it is singular that below the foundations of the main tower, and under the few courses of large blocks of yellow sandstone that remain *in situ*, are two narrow transverse trenches, which are filled in with small but good bricks, and appear like the foundations of an older building of brick which had been levelled when the tower was embattled in 1404.

The warehouse that formerly stood on the site of the tower was built without any excavation, and the ground appears to have been levelled with the rubbish from the old tower, as large quantities of mortar and fragments of yellow stone were lying above the old foundations. The tower was owned by the Stanley family, and afterwards was purchased by the corporation of Liverpool, and was used as an assembly-room and gaol: it was taken down in 1820.

BUILDERS' ACTIONS.

FINES FOR NON-COMPLETION OF CONTRACT.

A case of considerable importance to the building profession generally, was tried at the Galway Spring Assizes, on the 19th and 20th of March, 1856, before Mr. Justice Jackson and a common jury.

The case in question was an action brought by the personal representatives of a contractor, to recover the sum of 655*l.* being the amount of fine for non-completion of contract within the time specified.

The contractor, a Mr. Clarke, of Ballinasloe, entered into a contract, on the 31st of March, 1854, with the Town's Commissioners of Athlone (Ireland), to erect a gas manufactory and to light their town with gas.

There was a clause in the terms and conditions of the contract, that the contractor should be liable to a deduction of 5*l.* per diem fine, for every day the works should be incomplete after the 1st of September, 1854. There was also another clause which reserved to the Commissioners the right of ordering additional works or deviations, without vitiating the contract.

The gasworks were not completed before the 10th

of January, 1855, and the Commissioners deducted from the gross amount of the contract 655*l.* for 131 days' fine, at 5*l.* per diem, being the number of days between the 2nd of September, 1854, and the 10th of January, 1855, inclusive.

Evidence was adduced on the part of the contractor, as to alterations and deviations that had taken place during the progress of the works, causing additional works to be performed, which, however, did not exceed in extra cost more than from 100*l.* to 200*l.* The Commissioners' engineer also testified that the works were very creditably executed, and the contract fully carried out, and that the delay arose in a great degree from unforeseen circumstances.

His lordship held that the alterations and deviations were a complete waiver of the 5*l.* per diem penalty, and severely animadverted on the dishonesty of the Commissioners in thus attempting to shield themselves behind such a clause in their contract (seeing that they had suffered no loss by the delay), and thereby deducting the sum of 655*l.* from the payment due to their contractor; and the jury, without a moment's hesitation, returned a verdict in his favour for the full amount claimed, together with the costs of the action.

DESTRUCTION OF THEATRES.

The fate of a theatre is,—to be burned. It seems simply a question of time, as we have often said before.

The theatre of San Pedro di Alcantara, in Rio de Janeiro, has just been burned down for the third time; and the theatres of Bourges and Nantes have also fallen a prey to the flames. Some particulars forwarded to us from Bourges seem to show the probability that spontaneous combustion was the cause. No person had been in the house for several days previously to the conflagration. In six hours after it was discovered, nothing was left but the walls. Fears were entertained for the Hôtel de Ville and other buildings which adjoin it, but these were saved by great exertions. Two inferences, at any rate, are clear. Every theatre should be insulated; and, as it is almost certain to be burned one day, the most ample means of escape for its occupants should be provided.

The Théâtre de la Monnaie, the national opera-house of the Belgians, which was burnt to the ground in 1854, with much the same suddenness and rapidity as Covent-garden Theatre, was re-opened a few days since with great ceremony. The house has been rebuilt at the expense of the townspeople; and praise has been accorded to the architect, M. Poelaert, who in a very short time has restored the edifice to even more than its ancient splendour.

RECENT AMERICAN PATENTS.

The following are quoted from the lists of recent patents published in the Journal of the Franklin Institute of Pennsylvania:—

For an "Improvement in Excavating Machines;" J. J. Savage, City of New York. Claim.—"1st. The connecting of the scoop and staff of excavating-machines, to the swinging-post, by vibratory or oscillating arms or links, or their mechanical equivalents. 2nd. The adjustable broom, in combination with the excavating scoop and staff combined. 3rd. The combination of the vibrating or oscillating connecting arms or bars of the scoop-staff, with the feed-chain, windlass, gearing, and sheeve pulley, for the purpose of automatically feeding the scoop downwards, simultaneously with its forward motion."

For an "Improvement in Street Paving Machines;" Thomas Davidson, Jun. Kensington, Pennsylvania. Claim.—"The rammers operating by the lifting-wheels, in combination with the ratchets and pawls, whereby the machine is moved along, either backwards or forwards, as the rammers perform their work. Also, the arrangement of the gearing, whereby the motive power employed to operate the rammers may, by adjusting the wheel, be employed to drive the machine from place to place when the rammers are not in operation."

For an "Improvement in Machines for Sawing Marble Obelisks;" Abraham Straud, Melton, Pennsylvania. Claim.—"The combination of the divided toggle-jointed shaft, with a hinged or adjustable section of the frame, so that two or more saw-frames hung to or driven by said shaft may be worked in an inclined position to each other, but at right angles to the axis of motion, and so that the shaft saw-gates and their guides, as well as the sectional or hinged frame, may all be adjusted simultaneously and held in adjustment."

For an "Improvement in Rotary Pumps;" Thomas Crane, Fort Atkinson, Wis. Claim.—"The combination of the hinged valve, with the eccentrically moving round piston, when said valve is of the shape, and is so arranged in relation to the pump chamber, the offset chamber, the suction pipe, and the eduction pipe, as to render it impossible for said pipes to be, for an instant, brought into connection with each other, during any portion of the revolution of the piston."

For an "Improvement in Gas Burners;" Charles A. Cummings and Cortland Douglass, New London, Connecticut. Claim.—"The interposition, between two jets or streams of gas issuing from the same burner, of a plate."

A HALO.—GLASS SHADES.

At a *conversazione*, at which art-productions were exhibited, I discovered, accidentally, a mode of forming a halo around the head of a figure, which I think might be turned to account. In order to throw the gas-light upon the pictures and other mural objects advantageously, the rooms, or at least the one in which I found the halo, were lit up with temporary annular pipes, suspended at say 2 feet from the ceiling, and 10 feet from the floor: these rings would be about 4 feet in diameter; and they were perforated for jets perhaps a couple of inches apart, and inside, and somewhat up from them, was an inverted frustum of a cone, of polished tin-plate, for reflecting the light outward, with a downward direction. Below, but eccentrically placed in relation to the circular light, there happened to be a table, on which, with other objects of ceramic art, was a figure in Parian, of an angel or some saint, about a foot and a half high, and enclosed in a glass shade of a cylindrical form, with hemispherical top. I noticed in the dome of the glass, a little above the level of the head of the figure, but over one of the shoulders, the reflection of the circle of jets above; and I perceived that all that was necessary to convert it into a halo of stars to the angel, was the removal of the latter into a central position under the circle,—which, I accordingly obtained, and was attended with the result I anticipated. The halo would be about 1¾-inch in diameter, owing to its near approach to the focal point of the hemispherical portion of the shade. I think it worth while to record the circumstance; because, the effect produced was very pleasing, was something beyond the reach of the sculptor's art, and could easily be repeated. The only limit to the scale of the figure would be the practicable limit as to size in shade-blowing; and the effect might be enhanced, scenically, by placing the figure in a recess, with the actual lights screened from view.

I would conclude with suggesting whether these glass shades might not with advantage be more recognised for their capabilities as architectural features, interiorly, than they are; and with submitting the following questions to the manufacturers: What size of shades are the appliances at present in use adequate to producing? and might not the fan-blast be made available for obtaining shades still larger,—so as to cover statuettes approximating to life-size?

James Wilson.

METROPOLITAN BUILDINGS ACT.

At the Wandsworth Police-court, a few days ago, Mr. William Nevill, a builder, appeared before Mr. Dayman, to answer a summons under the New Building Act, charging him with having unlawfully constructed a flue from a boiler in the washhouse of some premises in the occupation of a female named Grossmith, residing at St. Ann's-road, Wandsworth, without giving two days' notice to the district surveyor, as the law required.

The defendant, who is the owner as well as the builder, pleaded not guilty.

Mr. Hiscocks, the surveyor, said, in February last, the defendant erected a flue from a boiler in the washhouse, and the pipe was carried up against the wall under the plate of the roof. The plate was made of wood, and the pipe was so close to it, that when he examined it, he found the wood quite warm from the heat, and the tenant told him that she was afraid to go to bed for fear of the house being burnt down. He had surveyed the house at the time of its erection, and the flue was not then constructed. The defendant had never given him notice of his intention to construct the flue; besides which, it had not been constructed according to law; that is to say, it was too near the timber of the house.

The defendant said the flue was built four months ago, and was at least 4 inches from the plate.

Mr. Dayman wished to know if the surveyor had any evidence to prove that the flue was built in February, or at any time in this year; for if he had not, the case could not be made out, inasmuch as the old Building Act was repealed by the new one, which only came in force on the 1st of January.

Mr. Hiscocks said he had no evidence, with the exception that, when he examined it in February, the mortar appeared quite fresh, and the whole appearance of it indicated its recent erection. The tenant told him that it had only been built a fortnight.

Mr. Dayman said that evidence was compatible with the statement of the surveyor; but according to Mr. Hiscocks' evidence, he could not tell the exact time the flue was built when he inspected it; and it might have been earlier than he (Mr. Hiscocks) believed, and then, a fortnight before that would bring it very near to December.

The defendant said it was not likely he should build a flue in such a manner as to jeopardise his property.

Mr. Dayman said the case was not made out, and he therefore dismissed the summons.

The correctness of this decision seems to us doubtful.

ARCHITECTURAL INSTITUTE OF SCOTLAND.

On Monday, the 17th ult. in the Scottish Exhibition-rooms, Glasgow, Mr. M'Gaffie delivered a lecture on geometrical stairs. The lecturer pointed out various particulars, in which the construction of wheeling-stairs was often found to be faulty, and suggested plans whereby the evils he described might be obviated. Mr. Lumsden occupied the chair.

At the next meeting, Mr. Rhind in the chair, Mr. Robert Ritchie read a paper on the "Farm Buildings of the Ancients," which he illustrated by plans of the different kinds of farm-buildings used by the Romans, showing the compactness of construction and minuteness of detail attained in them. After describing the farming processes of the Romans, collected from the Roman agricultural writers, Mr. Ritchie exhibited a plan which he had made of a modern farm-steading for a farm of about 500 acres, to show how steam or water power might be applied to various important purposes.

SELF-MOVING WHEEL-CHAIRS, GIGS, DROSKIES, CABS, &c.

We have more than once urged the immense utility to the million of some simple, light vehicle, self-moved, or by means of some spring-power easily wound up, whereby London workmen, tradesmen, clerks, &c. could go about their lawful calling, so as to be enabled to live in the suburbs, and to run along in all directions independent of omnibuses, which, moreover, traverse only the main thoroughfares, and are therefore unsuitable in thousands of instances, even were their fares much cheaper than they are. The idea struck us on seeing a workman bowling along on a small velocipede, with his tools in a box before him, and we are astonished that in these "perambulator" times a simple, cheap, self-moving,—traverser, shall we call it, has not been invented, patented, and already become almost universal, amongst all who do not at least "keep a gig." These reflections have just been resuscitated by a correspondent, "Urgeo," who impressively re-urges much the same ideas, but comes even more closely to the point than we have done, by specifying, as an available motor, the India-rubber "Accumulator," of which we some time since gave an account under the head of "Books." By means of the "accumulator," any one could readily "harness" the moving power of his own little vehicle, if otherwise suitable, and "Urgeo" states that these ingenious instruments (suggested, as may be remembered, from seeing an African negro lift an enormous log of mahogany by help of the resilient force of tree-branches, applied by means of wild vine withes), the "accumulators," are now made of even 100 horse power. The precise form of apparatus suggested by our correspondent is that of a barrel fixed to the axle, and round which the "accumulator" is to work, the wheels, we suppose, being made to rotate by means of cog-wheels communicating the power. It is not intended to dictate to inventors, however, how they ought to accomplish the great end in view: all that is desired is to set their wits to work towards the realization of a handy "traverser," "accumulator," or whatever it may be called, and "Urgeo" suggests that others should contribute their thoughts to the *Builder* on this important subject.

DESECRATED CHAPEL, COW HONEY-BOURNE, GLOUCESTERSHIRE.

Painful as it is at all times to witness an edifice once dedicated to the honour and worship of God, dilapidated and deserted, it becomes especially so when we find it situated in a populous village, and desecrated by being converted into mean cottages, with hovels and pigstics erected against its walls.

How or when the interesting chapel of Cow Honeybourne, near Evesham, became reduced to its present state, is unknown. Rudder's "History of Gloucestershire," published in 1779, states that there was formerly a chapel here belonging to the deanery of

Campden, but that it had been long converted into a poorhouse.

It consists of chancel and nave of the Middle-pointed style, and a Third-pointed western tower. The latter is entire with the exception of roof, floors, and pinnacles. There are some good windows, but blocked up and much mutilated, except the eastern one, the tracery of which is very perfect. On the north side of the chancel is a three-light transomed window, whose mullions and tracery appear to be of different dates, the former being executed in the same kind of stone as the Middle-pointed work, and the latter in the same as the tower. The south doorway is enclosed by a chimney on the outside, and converted into a fireplace.

The plan originally comprised chancel, nave, tower, and *north aisle*. Some piers and other remains of the latter were to be seen a few years since, but not a trace of them now remains, or of the chancel arch. We observed squinches across the angles of the tower, as though a spire had been contemplated, though probably never erected.

These "chapel cottages" are the property of the parish, and will be offered for sale by auction in a week or two. It is earnestly to be wished that some one could be found to purchase and rescue the chapel from the disgraceful state we now see it in. If there are at present obstacles in the way of its being restored to its former sacred use, it would be well adapted for a school. It is within a mile of the Honeybourne station of the Oxford, Worcester, and Wolverhampton Railway. The hon. secretary of the Worcester Architectural Society will gladly answer any inquiries respecting this. The total cost of restoration is estimated at 300*l.* The nave would hold about 150 people. The reserved price for the *chapel-cottages* is 170*l.* If converted into a school-room, and to be used for service as well, it would be most useful, we are told, there being no place in the two parishes where a Sunday-school can be held.

CLEANING AND WHITENING FLOOR-BOARDS.

Let the boards be cleansed as much as possible from all superficially-adhering impurities by sand, soft-water and friction; and afterwards cover the whole surface with a mixture of about three parts of pipe-clay (or any other non-ferruginous clay), and one of commercial "chloride of lime," rubbed up with water to a creamy consistence. This may remain on the wood for from twelve hours to three or four days, according to its previous condition: when at length removed, I think "F. H. E." will thank me for the visible improvement.

Grease of any kind may be extracted from boards by the application of moistened clay,* of the kind before-named, to the contaminated portion of their surface: it should be left in contact with them at least twenty-four hours. A little solution of ammonia, added to a clay, greatly increases its power in this particular; but, as the ammonia quickly volatilizes, it should be added several times each day.

Ink stains and "iron-mould," quickly disappear under a treatment of oxalic acid and water: if a large quantity of ink has been spilt, a previous wetting with solution of sulphuret of ammonium will materially facilitate its removal. Where a poison cannot be used without endangering domestic animals, tartaric acid must be substituted for oxalic, but the former takes a longer time to act.

Soap should never be allowed to touch unpainted woodwork, if it is thought at all desirable to preserve the natural colour of the latter. I am aware that it is used, and very generally, for all that. Its application to boards is a great mistake, as their pores speedily become filled with a kind of glutinous matter (a combination most probably of the excess of alkali in the soap employed with the natural resin of the wood), which obstinately retains any dirt that may be presented to it, London smoke especially. The result is well known—"Please m'm, them stairs look *so* black, they won't come clean nohow!"

To discover whether soap has been recently employed for cleaning (?) a floor, drag a chair upon it a yard or two, and a greasy-looking track will at once show and denounce the evil. To conclude with a succinct maxim,—Either never use soap to your boards, or wax them well, as on the continent: if the last alternative, don't be surprised if your children tumble down. W. L. S.

The Irish make use of freestone, with a hard round wisp of hay: they wet the hay, and dip it in the freestone, and then scrub their floors; then wash it off when dry. If any sand remains from the freestone, it is brushed off with a hard brush. Nothing can equal this. J. B.

* "Fuller's earth," and all other dark-coloured clays, are apt to stain a nicely whitened floor.

AUSTRALIAN AND TASMANIAN NEWS.

The foundation-stone of a new place of worship connected with the Free Presbyterian Church at Gawler Town, Adelaide, was laid in the beginning of November last. The church will be in the Grecian style of architecture, and will have a tower terminating in an octagonal spire. Tower and spire included will be 62 feet in height.

From the estimates for the Department of Public Works published at Adelaide on 10th November last, we quote the following items of information as to professional remuneration:—Salaries: Colonial Architect and Supervisor of Public Works (forage for one horse and) 600*l.*; Assistant Colonial Architect (ditto), 400*l.*; Clerk of Works, first class (ditto), 292*l.*; Draughtsman, second class, 208*l.*; Clerk, third class, 130*l.* Increase under Clerks' Salary Act, 30*l.* Salaries, provisional and temporary.—Superintendent of Works in Encounter Bay District, 200*l.*; occasional Overseers of Works, 600*l.* Allowances.—In lieu of forage for three horses, as above, 163*l.* 16s.

From an advertisement in the *Adelaide Observer*, it appears that a project is on foot for constructing a line of railway from Adelaide to the sea-beach at Glenelg.

The Melbourne Gas Company Directors had taken their last contract for pipe-laying for the city proper by last advices from that quarter. The successful competitor was Mr. Miles. The shops, it was expected, would be lighted up in a very few weeks.

At Sydney, notwithstanding the temporary dulness of the times, there were, during last November, a great number of private buildings going on, especially in the suburbs, nearly all of which were being constructed on a more substantial plan than many of the buildings in the same localities. Among the public buildings which were progressing rapidly was the new Government Printing-office. It will consist partly of stone and partly of brick, and when finished will have rather an ornamental appearance.——The public abattoirs at Glebe Island were to be completed about Christmas. The bridge to be constructed across Darling Harbour will open up a direct communication with the Glebe, and thus facilitate the conveyance of meat to Sydney, whilst the erection of the abattoirs will remove one of the greatest nuisances from the heart of the city, viz. the slaughter-houses.——The Australasian Steam Navigation Company's Works at Pyrmont were being improved by the erection of a large steam saw-mill, with both vertical and circular saws, and capable of sawing logs 70 feet long. The company had also sent home for upwards of 1,500*l.* worth of new machinery of a larger description than they then possessed. Their large patent slip, opened in May last, had been the means of taking up and repairing about forty vessels, some of large tonnage.——Active preparations, according to the *Sydney Herald* of 20th November, were being made for a start with the extension of the line of railway from Parramatta to Liverpool, by the contractor for this line. The distance is about 8½ miles, through a favourable tract of country. The engineering difficulties of this new undertaking being as nothing when compared with those encountered on the Parramatta line, its speedy completion was looked forward to with much confidence. The contract was 76,200*l.*

From Tasmania, or Van Diemen's Land, the only item of news is to the effect that the Hobart-town Gas Company's establishment was being organized, but the erection of the works was not to be commenced till the manager arrived. The company were on the look out for their iron piping and other materials sent out by the *John Bell*, and they were sanguine that the city would be at least partially lighted with gas by May next.

New church schools for Adelaide were projected in November, 1854, and 2,235*l.* have been raised. Lord Digby gave, besides the site, 200*l.* and allows 100*l.* for the old school buildings. The Committee of Privy Council on Education give 1,150*l.*; the National Society, 120*l.*; Winchester College, 50*l.*; and the remainder, upwards of 600*l.* has been raised by subscriptions, chiefly within the town. Mr. Charles Down has taken the contract at 2,060*l.* to be completed by the last day of October next, under a penalty of 5*l.* a day.

The electric telegraph, by last accounts, has just been set agoing, for the first time, in South Australia, Mr. James Macgeorge having commenced the transmission of messages to and from the port.

The whole of the plans, elevations, &c. for the new Houses of Parliament, says the Melbourne or Victoria correspondent of the *Adelaide Observer*, writing end of November last, are now ready, and on inspecting them I am fully satisfied that we shall possess a pile of buildings for legislative purposes on a scale superior to anything that has been hitherto attempted in the colonies. A portion of the extensive pile has been selected for early completion, namely, the chamber and its accessories intended for the accommodation of the Lower House. This is positively to be ready for occupation by the 1st of May. The chamber for the Senate will be proceeded with immediately after, and no delay will occur until the whole edifice is completed. The entire site will be fenced in with corrugated iron, relieved by pillars, before the end of January, and provided with handsome entrance-gates. The site is one of the most elevated contiguous to the city, and its immediate neighbourhood appears destined to be the "west end" of Melbourne.

A log of Western Australia jarrah is attested, in the paper just named, as having been twenty-three years under water in the form of a pile, at Freemantle old jetty, and it is added:—"We have had manifest proofs of the durability of jarrah as applied to naval architecture, public works, and private buildings. Our own gum-trees afford numerous admirable specimens of durable and even beautiful-grained wood; and if it be desirable to purchase from Western Australia, one of the inducements may be the facility of procuring great lengths, as well as timber of undoubted durability."

The value of landed property in Sydney is indicated by a transaction notified in the *Australian and New Zealand Gazette*. At a Government land sale which took place on 27th November, the Sydney Insurance Company purchased the corner allotment of Hunter-street and New Pitt-street, at 101*l.* per foot, being a price unheard-of before in this city, the rate per acre being 70,000*l.* Other lots sold at the same time and in the same line of street, but in less advantageous parts of it—realising from 46*l.* to 75*l.* per foot, and the land disposed of yielding all overhead an average of 42,182*l.* 13s. per acre. When completed, it is added, New Pitt-street will be the finest street in Sydney.

Miscellanea.

Bell-Hanging.—Mr. Denison, if I comprehend his meaning correctly, admits that a bell when hung *high* in the stock, may be more easily *set* than when hung *low*, supposing friction is not taken into consideration. Now we know from experiments that the quantity of friction in such cases is in proportion to the pressure on the *axle*; hence, when a bell is being swung, the friction will be, I presume, increased as the centre of gravity of the bell is removed from the axis: if so, it may be presumed, with some degree of confidence, that if friction were to form an element in the theoretical calculations referred to, the result would still be in favour of the high-*set* bell. The experiment I proposed with reference to two bells, one being hung *high* and the other *low* in the stock, all other conditions being the same, I still think would give a true result. But the experiment on the York bell is far from being conclusive, for we have yet to learn that the York bell *could be set if hung low*. It is true the Erfurt bell has been compared with it; but apart from the reasonable doubts which I have of its *ever* having been set, we are not in possession of all the conditions of both bells, some of which may materially affect the result.—John Burlison.

The Somerset Archæological Society.—The fifth and concluding *conversazione* of the Somersetshire Archæological and Natural History Society took place in the Society's Museum, Taunton, on Monday evening before last, and the proceedings are reported at length in the local *Courier*. Various art-works, including photographs, were exhibited on this occasion, and Mr. Lyte read an interesting paper on photography, in course of which he described his new honey process for keeping the collodion film in a moist state, and so, it was said, preventing its pores from collapsing till the film be brought into use, at any time within a period of four-and-twenty hours, or even for a longer time if a smaller quantity of nitrate of silver be used than in ordinary circumstances. Although this process, however, was published by Mr. Lyte, in June, 1854, there are still doubts as to its utility; but we are glad to hear,—from Mr. Lyte's paper and from his statement that a number of the photographs exhibited were prepared from collodion films which had undergone the honey-moistening process,—that the discoverer continues to have confidence in it.

Gas Fitters' Mutual Association.—The objects of this Association are, to advance the interests of its members by a mutual interchange of opinion; to enable them to obtain the best information on the various projects before the public, and the advantages likely to be gained by the inventions put forward as improvements; to give an impetus to the more extensive consumption of gas-lighting in private houses; to encourage its general adoption for culinary and heating purposes; to acquire information on the simplest and most efficacious modes of ventilation in connection with this mode of lighting; and to disseminate useful information on all matters connected with this subject to its members, and, through them, to the public. With such ends in view we cordially wish it success.

THE SMOKELESS FIRE.—Having done me the honour to insert in your journal of March 15th a few remarks on the new mode of fire-lighting, and its probable consequences, permit me to submit a few extracts bearing on the subject from a work I read with much interest, and to which I referred, viz. "Eckstein on Chimneys," &c. Weale. 1852. The author is now deceased. His father was an eminent painter, and his grandfather, I may remark, sculptor to Frederick the Great of Prussia. Many attempts have been made, with more or less success, to consume the smoke from coal fires. The best grate I ever saw for the purpose, as also for the more perfect combustion of the coal (patented about 1813,—the Cutler Stove), was so constructed that when the bottom (which was a *plain plate*, instead of a *grating*, and which was made to rise and fall by means of a spindle and two chains), was lowered, it formed a box capable of containing a supply of coals for twenty-four hours. The fire being lighted on the top of the coal, the heat caused it to emit the gas, and supply the fire above it, *as oil would a lamp*—thus the gas having to pass the fire previous to its ascending the chimney, the greater part of it was consumed, and very little smoke could pass up the chimney. Desirous to obtain farther information respecting this stove, I called on the patentee to ask him if it was possible in such a grate a fire could be used with economy, which, when burning well, was like a furnace?" [a proof it will suit for kitchens.] He replied that it could, explaining that a large portion of the heat was occasioned by *gas*, which, in a common stove, would go up the chimney. This I readily acknowledged; for when we consider the quantity of inflammable matter which accumulates in a flue, and which is only a very small part compared with what passes off at top, and impregnates the air, we must be sure that *the loss of fuel is immense*, while the combustion of the patent grate was so perfect, that the chimney did not even require sweeping." He adds, "I have seen the same principle applied in a common stove. Mr. Aitkin, secretary to the Society of Arts, used to have a grate in his sitting-room filled with small damp coal, and the fire made at the top, for the purposes of economy, consuming the gas, and requiring little or no attention. He says he had a fire to breakfast by; if he required to use the room in the forenoon, he raised the coals a little, as also at dinner time: towards evening the lower part became ignited, and no more coals were required. The remaining cinders were used next morning to make the fire at the top of the coals." This economical fire is spoken of as "burning gradually downwards, with little consumption, and requiring scarcely any attention." Here, then, is the *Builder's* Smokeless Fire, which, if generally applied, would save at least two million tons of coals per annum, calculating the consumption for the metropolis at five millions, and a fabulous amount in washing, doctors' bills, &c. and might enable us to remove those hideous additions of all sizes and forms to the already ugly million chimney stacks and pots. I may add the old stove maker and author, after fifty years' experience, came to the conclusion that the bottom of every ordinary grate should be *partly* or entirely closed, instead of an open grating.—E. R.

LIGHTING COAL-PITS WITH GAS.—The introduction of gas into the villages of Gildersome and Drighlington, three months ago, has led to the lighting of one of the coal-pits in the neighbourhood. There are at present about a dozen lights burning in a deep pit; and the practice, it is anticipated, will be extensively adopted in the mining districts of the West Riding. Care, of course, will require to be taken against the occurrence of fire-damp, or the natural *gas* of coal-pits themselves. This will probably be effected by the application of the Davy lamp to the gas-lights.

GAS AT STOCKTON.—A new gas company has been formed for Stockton and its neighbourhood, to be incorporated under the Joint Stock Companies Act and the Limited Liabilities Act, with a capital of 6,000*l*. This company proposes to light the town, and to give gas to private consumers at a great reduction in price. This they calculate they will be enabled to do by the saving of parliamentary expenses, in consequence of the powers given by the Act alluded to, and by adopting the modern improvements in the science of gas-making. The works, it is expected, will be in full operation before the autumn. Meantime the Stockton Gas Company have issued a notice that, after the 1st of October next, the price of gas in the borough of Stockton will be reduced from 4s. 6d. to 2s. 6d. per thousand cubic feet.

LUNATIC ASYLUMS IN MIDDLESEX.—Plans by Mr. Harris, for additions and alterations at Hanwell Asylum, to cost 67,300*l*. have been referred back to the Committee of Visitors, to obtain the sanction of the Secretary of State. A proposition, with respect to certain alterations at the Westminster House of Correction, at an outlay of 11,000*l*. is under consideration.

OPENING OF NEW SCHOOLS AT STOCKPORT.—On Good Friday the Hanover Schools, at Lancashire-hill, were inaugurated by a *soirée* and other proceedings, of which a full report appears in the *Stockport Advertiser* of last week, from which the following details, as to the building, are collected. The design was furnished by Mr. J. C. Gilbert, of Nottingham, architect. The building is a simple structure of brick. Messrs. Brown and Rittson, of Stockport, builders, were the contractors, and also provided the whole of the internal fittings. The cost altogether will, it is believed, exceed 3,000*l*.; of which sum about 1,200*l*. is still wanting to liquidate the outlay. The building covers an area of 81 feet 6 inches long by 43 feet broad, or equal to 390 square yards. The height, from the floor of the class-rooms to the apex of the roof, is more than 50 feet; and the accommodation which has been obtained comprises, on the ground-floor, an infant-school, 19 feet 6 inches by 16 feet 9 inches; three class-rooms, each 16 feet 9 inches by 11 feet; and a large one, 22 feet 6 inches by 11 feet 6 inches; all of which rooms are 14 feet in height. The next floor is chiefly occupied by the large hall for assemblies, 72 feet 9 inches by 40 feet, with a gallery at one end, and capable of accommodating 600 children in classes, with their teachers. The height of this room, from the floor to the apex of the roof, is 34 feet. The space in the chapel, immediately beneath the gallery, is used as a communion-pew. The whole is heated by the circulation of hot water, and lighted by gas. No attempt has been made at external decoration; and in the interior the effect is to be attributed solely to the combination of the materials absolutely necessary for the construction. No portion of the building consists of the imitation of any material not actually present.

THE ROYAL SCOTTISH SOCIETY OF ARTS.—The ninth meeting for the session of the Royal Scottish Society of Arts was held in their hall at Edinburgh, on Monday before last, Mr. Elliot in the chair. Mr. Edward Sang laid on the table a gyroscope, presented to Professor Playfair by M. Arago, and read a communication made to the Society about twenty years ago by himself, detailing some experiments made with this instrument, which had lately been attributed to M. Faucault. The communication was referred to a committee. Some account of artistic lithography was then given by Mr. Alex. Macpherson, F.R.S.S.A. A description and drawing of a railway-lighthouse signal, by Mr. Andrew Carrick, Glasgow, were brought before the meeting by the secretary. With the small size of the drawing, and the intricacy of the description, there was a difficulty in understanding Mr. Carrick's scheme completely. Mr. Bouche stated his objections to any self-acting signals. The communication and drawing were referred to a committee.

LODGING-HOUSES, VAUXHALL-ROW, LAMBETH.—With H.R.H. Prince Albert, I have felt "a lively interest" in the above scheme, and I should have been delighted had you been enabled to announce, in the observations on the subject in last week's number of your valuable publication, that occupants had been found for these model dwellings; but I am constrained to remark, that I fear it is to be apprehended the cost of the construction will be found a bar not only to their letting at rents which will afford even a moderate return for the expenditure, but, however philanthropic owners of property may be, no hope is held out to them "to follow an example," where they must in vain expect an ordinary return only for their capital. To the revenue of the Duchy of Cornwall, this is a matter, doubtless, of little consideration; but the less-fortunate owner of property can only be expected to build houses likely to find tenants; and the dwellings in question, though completed months ago, from some cause or other, are, as yet, as you may probably be aware, without an inhabitant. A very large class of the poor can ill afford to spare more for rent than 3s. 6d. or 4s. a week from their hard-gained earnings, and I cannot but think that he will perhaps be the greater benefactor to the poor who shall erect neat and comfortable residences for them, at rents which they are in a situation to pay, and thus save them from being driven to those haunts of misery and wretchedness, the existence of which we all so much deplore.—LAMBETH.

PAINTERS' STRIKES.—The journeymen painters of Glasgow have struck work for an advance of wages. The masters resist the demand, and advertise for good workmen, at 22s. 6d. a week, with constant employment. At Dundee, too, a number of working painters having presented certain demands to their masters, which the latter declined to accede to, are now on strike. Placards are posted by them warning off stranger operatives. One of the demands is said to be, that all hands be paid alike, and other requirements are described as being scarcely less preposterous. The masters are bringing workmen from Glasgow and elsewhere.

NO PAYMENT FOR IMPROPER WORK.—At the Birmingham County Court, March 26, in the case Taylor *v.* Johnson, the plaintiff claimed a sum of 1*l*. 12s. for a cast-iron column supplied to defendant's order. It was made out to the satisfaction of the learned judge (Mr. Dinsdale), that the pillar, when delivered and placed on the site intended for it, had been, by some misconception, as was said, made too large: in place of five inches, six inches and a half was the size sent in. Defendant had offered to take the column if some reduction was made, but plaintiff refused. His honour took a careful review of the evidence on both sides, and gave his verdict for the defendant.

THE CHAPTER-HOUSE OF SALISBURY CATHEDRAL.—The readers of the *Builder* will perhaps be concerned to know that an announcement has been recently made to the public, by a correspondent in one of the Salisbury papers, of the intended "restoration" of the well-known series of sculptures, illustrative of Bible history, on the walls of the cathedral chapter-house of that city. As this course, if adopted, must necessarily destroy the interest which at present attaches to these remains, as relics of Early English art, and render them worthless, both to the architectural student and antiquary of future times; it is sincerely to be hoped that the attention of the public having been called, through the medium of the press, to this important matter, some steps may be immediately taken by those persons interested in the preservation of our national antiquities, or some of the societies which have been established for this purpose, in order to prevent the contemplated step, which, if carried into effect, must destroy for ever the interest which these sculptures at present possess as relics of antiquity.—AN AMATEUR.

THE YORK SCHOOL OF ART.—A meeting of the friends of this institution has just been held. The Rev. Canon Harcourt presided; and a report from the committee was read, which stated that the average number of students did not equal that of preceding years, and that the Government had withdrawn the annual grant of 150*l*. and in lieu of it had granted stipends of 32*l*. to the master, and 10*l*. each to two pupil-teachers, so that virtually the school might be said to be thrown upon its own resources: the school, however, was recovering from its difficulties. From the statements of accounts, it appeared that the expenses during the past year had been 285*l*. and that a balance of 19s. 4d. was due to the treasurer. There were also bills unpaid amounting to 42*l*. 4s. 10d. The report was adopted. A subscription has been commenced for liquidating the debts on the institution.

PROPOSED SUBMARINE TUNNEL UNDER THE MERSEY.—A project for uniting Birkenhead to Liverpool has been recently started. The projector intends the tunnel to be treble-arched, one arch being for a double line of railway; one arch for waggons, carts, and commercial carriages; and one arch for quick-moving vehicles, equestrians, and pedestrians. The scheme is a modification of that proposed by Mr. W. Austin, for a passage under the sea from Dover to Calais. The Mersey tunnel, as proposed and arranged, would be about two miles in length, of which, about three-quarters of a mile would be under the river.

THE BRITISH ENGINEERS' BENEFIT SOCIETY.—The object of this Association of employers and employed, is to direct the attention of workmen to the establishment of a benefit society—to ask them to co-operate in establishing such an institution, and to appoint two or more delegates from each of the factories respectively; to communicate the names and addresses of such delegates to the secretary of the institution, and on the receipt of such communication the secretary be instructed to convene such delegates to confer on the promotion of a trades' benefit society. Among the employers who subscribe to the society are Messrs. Blythe, Derwent Foundry Company; Bryan Donkin and Co.; Easton and Amos; H. and M. D. Grissell; Graham, West and Co.; J. and E. Hall; Maudslay, Sons, and Field; Miller, Ravenhill, and Salkeld; D. Napier and Son; John Penn and Son; Spiller and Taylor; Summers, Day, and Baldock; Samuel, Brothers; George Scott; W. L. Tizard; Lewis Ash, &c. The receipts of the society for the last year amounted to 1,615*l*. odd; the liabilities to 413*l*. odd.

ST. PAUL'S, CLAPHAM.—Schools are to be built in connection with St. Paul's Church, Clapham; Mr. W. W. Gwyther, architect. Tenders on quantities supplied have been received, ranging from Clements, 931*l*. to Cable (accepted), 600*l*.

NEW BARRACKS.—A barrack is to be erected at Kensington to hold 200 infantry and a troop of cavalry, at a cost of 15,300*l*.; and new barracks are to be built in the island of Alderney. The new barracks being erected at Devonport are to accommodate two battalions of infantry, and the new artillery barracks 100 men and 100 horses.—*United Service Gazette.*

South Shields Mechanics' Institution.—The members of the South Shields Mechanics' Institution are about to reconstruct the building. The proposed erection will comprise a library and reading-room, with three class-rooms on the ground floor; while on the upper floor there will be a lecture-room, 52 feet by 28 feet, with a retiring room. The stairs leading to the lecture-room are contained in a tower at the north-west angle. The upper part of the tower contains an apartment for the reception of the telescope presented by Dr. Winterbottom. The building will be of brick, with dressings and decorations of coloured bricks to the doors and windows. Mr. R. Lamb, of South Shields, is the architect.

Inauguration of the Royston Institute.—Two years ago, the committee of the Royston Mechanics' Institute appealed to the public to assist them in raising a fund for the purpose of erecting a lecture-hall a museum, a library, and rooms for reading and class instruction. The project has been realized, and Royston has what no other town in Hertfordshire possesses—a spacious building, exclusively devoted to art, science, and literature. The building stands at a short distance from the town, on the Newmarket-road, and in the county of Cambridge. It has been erected in the plainest style, of white brick, and constructed more with a view to usefulness than beauty. The building consists of two floors—the museum, two reading-rooms, the library, and the rooms for class instruction, being upon the ground-floor, while the lecture-hall, which is 60 feet by 30 feet, and 20 feet high, occupies the whole of the upper story. The walls are sprinkled with white and black upon a green ground, and this colouring gives a light and airy, although rather cold aspect to the interior of the building. The hall is lighted with a large sunburner, depending from the centre of the roof, and consisting of seven clusters of nine burners each. The cost of the erection of the building was 1,600*l.* of which sum, 1,000*l.* has been already raised by donations, leaving a balance due of 600*l.* which has been advanced by the trustees and the committee. It is expected that by means of rentals, subscriptions, and the profits of entertainments given in the hall, sufficient funds will be raised not only to pay the interest on the debt, but gradually to liquidate it. On Tuesday before last, a meeting was held in the lecture-hall, for the purpose of publicly inaugurating the new building. The Earl of Hardwicke presided. A full report of the meeting appears in the *Herts Mercury* of last week.

New Road from Edinburgh to Portobello.—The Marquis of Abercorn, it is said, has purchased for 1,200*l.* the houses and ground to the south of the lane leading to Duddingston from the Queen's-park. Government has already agreed to give 2,570*l.* for the construction of a drive to Duddingston from St. Leonards, and the object of the marquis is to secure a continuation of that drive to Portobello.

Statue of Watt for Manchester.—A subscription has been commenced in Manchester for the erection of a bronze statue to the illustrious James Watt. A cast from a statue already in existence is what is intended, and it is to be placed in front of the Royal Infirmary, as a fellow to that of Dalton. It is calculated that a sum of 1,100*l.* will suffice. Upwards of 700*l.* have already been subscribed.

Manchester and Salford Sanitary Association.—Mr. T. Turner, F.R.C.S., delivered a lecture on "Good living, in its physical and moral aspects," on Tuesday evening before last, in Salford, under the auspices of the Salford committee of the above association. Mr. Alderman Agnew presided. The lecturer expressed the satisfaction he felt when taking part in the Sanitary Association lectures: their influence, he said, was proving most beneficial among the various classes of society. The invariably large attendance proved the conviction among the working classes, that the more educated were becoming increasingly interested in their welfare, and were seriously attempting the impartment of vital physical and moral truths. He held it as an axiom, that there was no such thing as "individual" happiness. The happiness of every member of the human family was dependent on the happiness of his fellows: herein, then, the selfish might discover a reason for endeavouring to promote the general good. Good living was often understood to mean only good eating and good drinking; but "good living" was not to be thus limited. To live well, is to live healthily, to live in obedience to the laws of God and man.—Mr. Powlson announced that the next lecture, to be delivered in the Town Hall, on Tuesday, April 1st, by the Rev. Canon Stowell, would close the present winter's session in Salford.

A T-square.—Messrs. Stanley and Robinson, of Great Turnstile, Holborn, have sent us a T-square, which appears to possess some advantages over the squares in general. The blade is screwed on to the face of the stock, and so allows the set square to pass freely to the extent of the board.

The Lewisham District Surveyorship.—For the information of those who are interested in the case, The Queen *v.* Badger, which ended in the restitution of Mr. Badger to his office as district-surveyor of Lewisham, we may mention that it is reported in full, with the judgments of the judges, in the *Law Times* of the 15th ult.

Partial Fall of a Warehouse.—A portion of a paper-mill, in Cottage-row, Bermondsey-road, fell to the ground last week. From twenty to thirty women and girls were on the premises at the time, but were not hurt, the wall having fallen outwards, owing to the pressure of some bags placed against it.

Proposed New Concert-room.—It is stated that a capital of 40,000*l.* is about to be raised in shares, with a view of building a vast concert-room between Vine-street and Air-street, Piccadilly, so arranged as to have entrances from both the latter thoroughfares, and likewise from the Quadrant. Messrs. Cramer and Co. it is added, are likely to take the affair in hand. The piece of ground in question has been on the eve of appropriation so often during the last year or two, that people will place little faith in the report.

Camberwell New Cemetery.—A correspondent comments on the way in which the earth-work there is being done, but he makes assertions to which we cannot give publicity without proof.

"The Churches of Essex."—Mr. G. Buckler announces a work under this title, wherein the buildings will be architecturally described and illustrated. The churches of Essex are curious specimens of architecture, of great antiquity, and distinguished by peculiar features from those of other counties. The object of this work is to preserve a record of these ancient buildings, by minutely describing them, and illustrating the description by drawings of such details and peculiarities of construction as may prove useful to the architectural student, and of interest to the general reader. Plans will be given to exemplify any unusual arrangement in the parts of the several structures.

To Cure Damp Walls.—We find the following in the newspapers:—Boil two quarts of tar, with two ounces of kitchen grease, for a quarter of an hour, in an iron pot. Add some of this tar to a mixture of slaked lime and powdered glass, which have passed through a flour-sieve, and been completely dried over the fire in an iron pot, in the proportion of two parts of lime and one of glass, till the mixture becomes of the consistence of thin plaster. The cement must be used immediately after being mixed, and therefore it is proper not to mix more of it than will cost one square foot of wall, since it quickly becomes too hard for use; and care must be taken to prevent any moisture from mixing with the cement. For a wall merely damp, a coating one-eighth of an inch thick is sufficient; but if the wall is wet, there must be a second coat. Plaster made of lime, hair, and plaster of Paris, may afterwards be laid on as a cement. The cement above described will unite the parts of Portland stone or marble, so as to make them as durable as they were prior to the fracture.

From and after the 1st January, 1856, the *entire postage* upon all newspapers sent to France, and Foreign countries *viâ* France, must be prepaid: the stamped copy of the paper is of no avail.

ADVERTISEMENTS.

SEWERS OFFICE, GUILDHALL, April 1 1856.

THE COMMISSIONERS of SEWERS of the City of London hereby give Notice that they will, on TUESDAY, the 15th of APRIL inst. meet to elect one additional INSPECTOR. Candidates must be fully 21, and not exceed 30 years of age. Their testimonials as to previous occupation and character, and certificate of birth, must be sent in addressed to the undersigned on or before SATURDAY, the 12th inst. and they will have to attend a committee for examination on MONDAY, the 14th inst. Salary, 1*l.* 4*s.* They must have been accustomed to works of building, and understand building materials; be able to measure superficies, and square up and abstract dimensions, and must write a fair hand. The person elected must give up his whole time to the duties of the office. By the City of London Sewers Act, 1848, each inspector is required to reside within the district to which he is appointed.

JOSEPH DAW, Principal Clerk.

BOROUGH of READING.—LOCAL BOARD of HEALTH.—Notice is hereby given, that the Local Board of Health for the district of the Borough of Reading, in the county of Berks, require a skilful and competent person to execute the duties of SURVEYOR and INSPECTOR of NUISANCES, under the Public Health Act, within the said Borough. The officer to be appointed must possess a thorough and practical acquaintance with works of drainage, sewerage, road-making, and paving; he must be competent to take levels, to prepare plans, sections, drawings and estimates, and to superintend the execution of all works of the description above referred to, or which may fall within the duties of the office of Surveyor and Inspector of Nuisances, under the Public Health Act, or the Bye-laws of the Local Board. The public lighting of the borough being under the management of the Local Board, the officer will be also required to superintend the same, and to see to the execution of their contracts by the gas companies who supply the gas to the public lamps. The office will be required to devote his whole time to the service of the Local Board. His salary will be 200*l.* per annum, and he will have a convenient residence attached to the store premises of the Local Board, in which he will reside free of rent and taxes. Any further information respecting the duties of the office may be obtained on application to the Clerk to the Local Board. Candidates must send written applications for the office, with testimonials of qualifications and competency, and with particulars of age and previous occupation; and all applications must be sent to me, endorsed, "Application for Office of Surveyor, &c." on or before TUESDAY, the 8th day of APRIL next.—By order of the Local Board,

THOMAS ROGERS, Clerk.

10, Friar-street, Reading, 20th March, 1856.

WANTED, by a quick, artistic Draughtsman and Colourist, a SITUATION with either of the above. He well understands Perspective, and design in Mediæval ornamentation.—Address, H. S. Messrs. Rixon and Arnold's, Stationers, 29, Poultry, London.

A WORKING SHOP FOREMAN, with good testimonials, is in want of a RE-ENGAGEMENT where from fifteen to twenty joiners are usually kept.—Address, H. B. 3, New Crane, Shadwell.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.
AN ARCHITECT and SURVEYOR desires a SITUATION in either of the above Offices. Salary, four guineas per week.—Apply, 10TA, Office of "The Builder."

TO TIMBER MERCHANTS, SAW-MILL PROPRIETORS, AND OTHERS.
A RESPECTABLE Young Man, 25 years of age, is equal and open to fill a SITUATION in a superior manner, as MANAGER, DRAUGHTSMAN, or CLERK. References of the first respectability; with an excellent character from last employers.—Address, A. Z. York Cottage, New Church-road, Camberwell.

A YOUTH of respectability who has a talent for drawing, wishes for a SITUATION in any business where such talent could be used to advantage. Board and lodging only required for the first twelve months.—Address, A. Z. 102, Regent-street.

TO ARCHITECTS
AS CLERK of WORKS, wanted, by a thorough practical Man, a RE-ENGAGEMENT. Has been engaged for the last ten years on works of great magnitude. Testimonials from architects, &c. first-rate.—Address to D. R. Post-office, Ford-street, Peckham-rye.

TO BUILDERS, SURVEYORS, AGENTS, &c.
A RESPECTABLE Young Man (aged 26 years) requires a SITUATION as CLERK or otherwise. He served his time to a Builder and Surveyor, and has since been two years clerk to a builder. He has a knowledge of drawing and the routine of the office. Salary moderate.—Address, W. S. No. 6a, John-street, Cumberland-market, Hackney.

TO CIVIL ENGINEERS AND ARCHITECTS
A PRACTICAL CLERK of WORKS, well experienced in the superintendence of large works, is open to an ENGAGEMENT, and is alone or single. Can speak French and German. — Address, W. C. 19, Pendall-street, Bermondsey, London.

A GENTLEMAN is desirous of an ENGAGEMENT, where good opportunities may be afforded for learning a general practice. He has lately completed his Articles with an architectural firm in one of the leading provincial cities; and is a neat and fair draughtsman. Salary not so much an object as improvement.—Address, P. I. A. 88, Lupus-street, Pimlico.

TO ARCHITECTS OR BUILDERS.
A CLERK of WORKS, SHOP or FOREMAN of WORKS, of practical experience, is in WANT of a SITUATION; can produce undeniable testimonials of honesty, sobriety, and ability from the gentleman he has served under.—Address, A. B. 28, Gibson-street, Lambeth.

TO BUILDERS, PAINTERS, BREWERS, AND RAILWAY COMPANIES.
A RESPECTABLE MAN, who has had considerable experience in the superintendence of painting, glazing, and paperhanging, wishes for a RE-ENGAGEMENT. Can measure work and take out the quantities. Can be well recommended from his last place.—Address, H. M. 202, Commercial Coffee-house, Bishopsgate-street.

TO PARENTS AND GUARDIANS.
A YOUNG GENTLEMAN may become a PUPIL under a Resident Engineer, on extensive Public Works in London.—Apply, by letter, to C. C. at the Office of "The Builder."

TO ARCHITECTS.
A GOOD DRAUGHTSMAN, possessing a knowledge of colouring and competent to make working, finished, and perspective drawings, desires a RE-ENGAGEMENT at a moderate salary.—Address, Q. E. D. 30, Seller-street, Chester.

TO BUILDERS, ARCHITECTS, &c. &c.
A RESPECTABLE Young Man is in want of a SITUATION in a BUILDER'S or ARCHITECT'S OFFICE; has a good knowledge of drawing, writes a good hand and has been used to surveying, measuring and taking out quantities.—Address, T. B. Mr. Cox's, House Agent, 6, Charles-street, Manchester-square.

TO BRICK-MAKERS, GOVERNMENT CONTRACTORS, BUILDERS, AND OTHERS.
A WORKING FOREMAN wishes an ENGAGEMENT, contract or otherwise. No objects in foreign service. Testimonials first class. Direct, A. B. 18, Charlotte-street, Bermondsey-wall-west, St. Pancras.

A SITUATION WANTED by a first-rate PLUMBER, who is capable of taking charge of work, or any place where confidence is required. Good references from preferred.—Apply to Y. Z. Mr. Wood's, Smith, George-yard, King-street, Maidstone.

THE Advertiser is desirous of EMPLOYMENT as TIMEKEEPER WHARF CLERK, or to assist in the general work of a builder's or contractor's counting-house. Writes a good hand, and understands accounts. Salary, 25s. per week.—Address, M. Office of "The Builder."

TO CONTRACTORS AND OTHERS.
A PRACTICAL MAN, who has had the management of a firm, is open to an ENGAGEMENT. Thoroughly understands measuring up every description of extra works taking out quantities, &c. together with making finished working drawings. Testimonials given.—Address, A. S. 14, Thornhill place, Caledonian-road, Islington. The country not objected to.

TO ARCHITECTS, STONE CARVERS, &c.
A YOUNG MAN, a WOOD CARVER, wishes to ENGAGE with an IMPROVER in the ornamental stone work.—Address, A. Z. 43, Upper Berkeley-street, Portman square, London.

TO BUILDERS, CARPENTERS, &c.
A YOUNG MAN of steady habits, a CARPENTER and JOINER, wishes to ENGAGE himself. Wages not so much importance as constant employment.—Address, B. Mr. Wright's Coffee-house, 7, Cumberland-place, Newington, Surrey.

DRAINAGE WORKS.—WANTED, by the Advertiser, a SITUATION as CLERK of WORKS over Public or Private Drainage Work. First rate testimonials as to ability and character can be given.—Address, R. H. Office of "The Builder."

TO ARCHITECTS AND SURVEYORS.
THE friends of a Youth (aged 16, a Protestant) want to PLACE HIM for five or six years in some country town as INDOOR PUPIL with an Architect and Surveyor doing a good business. Address, stating terms, &c. to ALPHA, care of Mr. Mawson, 4, Clarence-buildings, Booth-street, Manchester.

TO ARCHITECTS, SURVEYORS, AND BUILDERS
THE Advertiser, a practical and experienced Person (age 36) in preparing plans, taking out quantities, measuring, and estimating, wishes an ENGAGEMENT, on moderate terms or to take work by contract, or otherwise. Parties requiring confidential assistance will find this an acquisition. References.—Address, A. B. 27, University-street, Tottenham-court-road.

TO ARCHITECTS.
THE Advertiser is desirous of obtaining a SITUATION in an ARCHITECT'S Office. He is thoroughly acquainted with the practical part of his profession, is a good and quick draughtsman, understands perspective, and is a fair colourist.—Address, O. S. Office of "The Builder."

TO MERCHANTS AND OTHERS CONTRACTING for, or EXPORTING MACHINERY, CASTINGS, and IRON GOODS in general.—A Gentleman will shortly be DISENGAGED, who has been practically trained, and had extensive experience in the whole routine of Machinery Making, Buying, Selling, Correspondence, Drawing, Specifying, Inspecting, Shipping, &c. Character and habits are unexceptionable, and of untiring application. No objection to going abroad.—Principals (only) will please address by letter, with particulars of situation offered, which will be held strictly confidential, and replied to by Advertiser, J. L. care of Mr. Weaklin, Stationer, 91, Farringdon-street, London.

TO ARCHITECTS AND SURVEYORS
THE Advertiser, who is a neat architectural draughtsman, well acquainted with the routine of an office, and has been accustomed to measuring, surveying, is desirous of an ENGAGEMENT. — Address, X. Y. Z. 1, Albion-terrace, De Beauvoir square, Kingsland.

TO BUILDERS, PLUMBERS, PAINTERS, AND OTHERS.
THE Advertiser, a Plumber, Painter, and Glazier, with a general knowledge of the building trades, measuring and estimating, wishes for a SITUATION as FOREMAN, or MANAGER of a business as above. — Address, J. H. Mr. Barnard's, 23, Great Bath-street, Clerkenwell.

TO SURVEYORS AND HOUSE AGENTS.
THE Advertiser is in want of a SITUATION as IMPROVER, in the above offices, with a view to PARTNERSHIP or otherwise. Salary a secondary consideration.—Address, S. M. 3, Queen street, Edgeware road.

THE Advertiser is anxious to meet with a gentleman requiring the assistance of an active MANAGER, with a view to a PARTNERSHIP; or an efficient, practical, and assistant. He has had extensive draughtsman and general artist; excellent in design of mass, detail, and ornamentation; well versed and practical in thoroughly superintending every machine, detail, and the constructive application of all kinds of the best materials, including iron in which he has had considerable practice. Is thoroughly efficient in land and building surveying, valuing, estimating and dilapidations, setting out and measuring up works, general estimating, and accounts.—Address, X. W. P. 21, Brun wick-street, Barnsbury-road, Islington.

TO DRAIN and WATER-PIPE MAKERS.
WANTED, a PERSON of SMALL CAPITAL to go abroad and join the Advertiser, in a safe and lucrative Business. None need apply who do not thoroughly understand the Making and Burning of Glazed Pipes, &c.—Address full particulars to A. B. 35, Old Broad-street.

PARTNERSHIP.—An Architect and Surveyor, who is desirous of extending his professional engagements, is willing to PURCHASE a SHARE in the Practice of one Gentleman with a view to withdraw from the more arduous duties thereof.—Apply by letter, in the first instance, to S. B. F. care of Mr. Bishop, 11, Red Lion-square.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural, Civil Engineering, and Mechanical Drawing; Colouring, Shading and Tinting; Ornamental and Water-Colour Drawing; Perspective, Isometrical, and Oriental Drawing; Making Pencil and Working Drawings; Preparing Specifications, Taking out Quantities, Estimating, Measuring and Valuing Builders' Work, &c. &c. Terms:—Day Pupils, Three Guineas per Quarter. Evening Pupils, One Guinea per Quarter. There are no extras, the terms include the whole of the above, with the use of Drawing Boards, T Squares, Rules, Drawing Models, Specifications, and full particulars may be had at the Offices, 24, Guildford-street, Russell-square.

DRAWING, &c.—One Guinea per Quarter. At this Establishment Pupils are thoroughly instructed in Architectural, Civil Engineering, and Mechanical Drawing; Ornamental, Perspective, and Water-colour Drawing; Taking out Quantities, Measuring, Estimating, &c. &c. For prospectuses, &c. apply to Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. Offices, 24, Guildford-street, Russell square.

DRAWING CLASSES.—24, Guildford-St. For Architects, Builders, and Engineers' Sons, Assistants, Clerks of Works, Foremen, Bricklayers, Masons, Carpenters, Joiners, Mechanics, and Machinists in general. Measuring Taking out Quantities, Abstracting, Estimating, Architectural Colouring, Shading, &c. &c.—Terms, One Guinea per Quarter. For prospectuses, &c. apply to Messrs. HYDE, SMITH, and LEWIS, at the Offices.

TO SCULPTORS, MASONS, &c.—Designs of every description and Working Drawings furnished by Mr. JAMES REDFERN, Sculptor, and Author of "Original Designs for Mural and other Monuments." 12, Hart-street, Bloomsbury.

MECHANICAL and ENGINEERING DRAWING CLASSES, 20, Wardour-street, Oxford-road, and 29, Charlotte-street, Bedford-square, GOVERNING INSTRUCTION in Model, Mechanical, and Engineering Drawing, upon the principles of orthographic projection. By Mr. FREDERICK WOODS. Terms for the season, three guineas, commencing the Monday in April, and terminating third Monday in June.—Prospectuses to be obtained at either address.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 59, Westminster-Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever known for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded free on application.
N.B. A few New and Second-hand Levels and Theodolites always for sale.

CHAPPUIS'S NEW PATENTS.—GAS and DAYLIGHT REFLECTORS. See Description in Mr. Lindsay's Report of the Architectural Exhibition, in "The Builder," dated February 16th.
Manufactory and Warehouses 69, Fleet-street.

PORCELAIN LETTERS for SHOP SIGNS. Porcelain and China Lock Furniture and Finger-Plates, in great variety. Porcelain Scale Pans, Weights, Measure Mounts, and Pestles, of the best quality. Metal-covered, Patent stone and Earthenware Jars, Bath Tiles, &c. &c.—May be had at Messrs. FEDERMANN and JOSEPHY'S, China and Porcelain Warehouse, No. 2, Panoras-lane, Queen-street, London, where an extensive assortment of every style of pattern and quality. Shipping orders executed with care and promptness.

TO BUILDERS and OTHERS.—2,000 yards of ROAD GRIT has been lying in heap five years TO BE HAD GRATIS, to clear the Premises.—Apply at Cooper's-yard, Kipp-street, Union-street, opposite the National Schools, Borough-road.

ELIGIBLE PLOTS of GROUND to be LET for building, at Castlebar-hill, seven miles from London, and ten minutes' walk from the Ealing station on the Great Western Railway.—Particulars to be had of G. LESLIE, Upper Mall, Hammersmith.

MILITARY CAMP, ALDERSHOT.—To BUILDERS, HOTEL and SHOPKEEPERS, and OTHERS.—TO BE LET, on building leases, for long terms, at peppercorn rents (with a premium), or at ground rents, very eligible PLOTS of BUILDING-LAND at Aldershot, fronting the high road to Farnham, immediately opposite the Artillery Barracks now in course of erection, comprising the best situation in the locality for an hotel and shops; also several plots for the erection of cottages—the demand for houses of every description being so pressing as to insure an unusually high rate of interest for capital expended. For terms and particulars apply to Mr. BARRETT, Farnham, Surrey; or to Mr. J. W. PENFOLD, Architect and Surveyor, 2, Charlotte-row, Mansion-house, London.

ST. JOHN'S, HORSELYDOWN.—BUILDING LAND, PUBLIC-HOUSES, DWELLING-HOUSES, and PREMISES, TO BE LET by TENDER, by the Governors of St. Olave's Free Grammar School, Southwark, on twenty one ye rs repairing leases, from Midsummer, Michaelmas, and Christmas days now next ensuing: that is to say, all that well-built Publichouse and Premises, situate and being on the west side of Parish-street, and known by the sign of the "Naked Boy and Woolpack;" also all those Seven Messuages, Tenements and Premises, situate and being Nos. 38, 39, 40, 41, on the north side of Fair-street, and Nos. 37, 38, and 39, on the south side of Freeschool-street, the leases for which will commence from Midsummer-day next; also all that well-known Publichouse and Premises, situate and being at the eastern end of Fair-street and Freeschool-street, and known as the "City of Salisbury," the lease for which will commence from Michaelmas-day next; also all that Publichouse and Premises, situate and being on the south side of Freeschool-street, and known by the sign of the "Black Bull;" together with the Shop and Premises adjoining, being No. 47, Freeschool-street; and all those Four Messuages and Tenements, situate and being on the north side of Fair-street, and numbered 36, 31, 32, and 33, the leases for which will commence from Christmas-day next; also all those Two Sites for Building, situate and being respectively on the west side of Cross-street, with frontages in Fair and Free-school streets, and at the eastern angle of Cross-street and Freeschool-street, part of which being the site of the house late in the occupation of Mr. Suleman, the leases for which, for sixty-one years, will commence from Midsummer-day next. The Governors will be prepared to advance the sum of £500 upon the buildings proposed to be erected, bearing an interest of 5l. per cent. per annum, by instalments, or as may hereafter be arranged. All the above are situate in the parish of St. John, Horselydown, in the county of Surrey; together with the appurtenances thereunto respectively belonging. The particulars and conditions of leases of the premises, and specifications of the repairs to be performed may be seen at the Office of Mr. HENRY STOCK, the Surveyor, No. 6, Duke-street, Southwark, between the hours of TEN and FOUR o'clock, any day, Sundays excepted; and Tenders, in writing only, are to be delivered at the Office of Mr. R. MINSHULL JONES, No. 199, Tooley-street, Southwark, by or before ELEVEN o'clock on THURSDAY, the 10th APRIL next, immediately after which a Court of Governors will be held at the School house, for the purpose of taking the same into consideration, and where persons making such Tenders are to attend punctually at TWELVE o'clock of the same day; but the Governors do not bind themselves to accept the highest or any offer or offers. March 25, 1856.

TO BUILDERS and OTHERS. — An excellent SITE TO BE LET or SOLD, for BUILDING PURPOSES, with a good double frontage, situate in a leading thoroughfare, and in an established neighbourhood, well adapted for workshops and dwelling-houses, and workshops. The materials of the present erections may be used if sound, in erecting any new buildings that may be approved. Money will be advanced if required by the purchaser, or taken to carry out the undertaking, upon a satisfactory arrangement.—Inquire of Messrs. HOWARD and DOLLMAN, Solicitors, 141, Fenchurch-street; Mr. EDWARD LOWTHER, 36, Red Lion-street, Clerkenwell; or of Mr. MURRELL, Auctioneer, 1, Walbrook, City.

WORKSHOPS and WAREHOUSES, within a few minutes' walk of the City.—The Advertiser has several good dry, light WORKSHOPS and WAREHOUSES, each containing two floors, well adapted for any manufacturing business not of an offensive or dangerous nature, and which can BE LET WEEKLY or QUARTERLY to a tenant on moderate rents. No written application can be attended to, but every information can be obtained of Mr. H. HAYNE, Timber Merchant, 129, Old-street, Goswell-street, London.

GUILDHALL, March 31, 1856.—The Committee for Letting the City's Lands will meet at Guildhall, on WEDNESDAY, the 9th APRIL next, at ONE o'clock precisely, to receive PROPOSALS for LEASES of a House, No. 16, on the north side of New Broad-street, and a House, No. 32, on the north side of Great Leonard-street, Finsbury.—Plans of the property may be seen, and further particulars and forms of Tender obtained, at the Architect's Office, Guildhall.
FERDINAND BRAND, Comptroller.

TOTTENHAM.—TO BE LET, a FIELD, containing Six and a half Acres of exc llent Malm Brick Earth, situated by the side of the high road, five and a half miles from London. The bricks made in this field have always found a ready sale.—For terms and other particulars, apply to Mr. A. RICHARDS, Auctioneer, Tottenham.

OFFICES, WESTMINSTER. — TO BE LET, a capital GROUND-FLOOR SUITE of OFFICES, adapted either for professional men, law stationers, or lithographers. Apply at No. , King-street Parliament street.

HOUSES of PARLIAMENT.—OFFICES, PARLIAMENT-STREET. -TO BE LET, capital LIGHT CHAMBERS: new, and built for professional uses—Apply at No. 6, King-street, Parliament-street.

CHARING-CROSS, LONDON.—To Architects, Surveyors, and Others—The desirable LEASEHOLD PREMISES, 37, Charing-cross, lately used as the Chrence Life Office, with the Furniture, Fittings, &c. TO BE DISPOSED OF, or the Premises to be Let Furnished for a term.—Particulars of Mr. PALMER, Upholsterer, 24, Great James-street, Bedford-row.

STEAM SAW MILLS, with large Yard and Builders' Workhouse TO BE LET or SOLD, FIRST-RATE PREMISES, in an eligible situation, close to the City, with complete Sawing Machinery of the most approved construction, recently fitted up at a vast expense, including two steam-engines of 20-horse power each; 50-horse boiler, and a chimney-shaft 65 feet high; three vertical deal frames, three circular-saw benches, &c.—Further particulars may be obtained of PULLEN and SON, 80, Fore-street, Cripplegate.

CAMDEN-TOWN CEMETERY BUILDING ESTATE. — TO BE LET, on Building Leases, for Ninety-nine Years, very eligible SITES upon the above estate, having good frontages into Camden-street and Bayham-street, and intending frontages to an intended street, to be called St. Martin's place, and newly approached from Pratt-street, where is a great demand for private houses of the third-rate in this locality, which is enhanced by its near proximity to the North-Western and North London Railway Stations, and the Hampstead-road.—Plans may be seen and particulars obtained by application to H. E. KENDALL, Esq. Architect, 17, Suffolk-street, Pall-mall East; or to JOHN DANGERFIELD, Esq. Solicitor, 20, Craven-street, Charing-cross.

TO BUILDERS, CONTRACTORS, and OTHERS, finding their OWN MATERIALS. — The Labour and Solder of all Plumbers' Work taken in Town or Country, by applying to KELLAWAY and OLDRIDGE, 75, Collingwood-street, Blackfriars-road.

TO IRONFOUNDERS, ENGINEERS, and CAPITALISTS. — FOR SALE, the MACHINERY, STOCK IN TRADE, and BUSINESS of a valuable IRONFOUNDRY, with Fitting and Pattern Shops attached. The plant is quite new, the rent and taxes are very moderate, and the premises are ready for occupation.—Address, IRONFOUNDER, care of Mr. Clifford, 5, Inner Temple-lane, Fleet-street, London.

A FIRST-RATE old-established BUILDER'S BUSINESS in the City TO BE DISPOSED OF.—Apply, by letter only, to A. B. at Mr. Randall's, 14, Tokenhouse-yard.

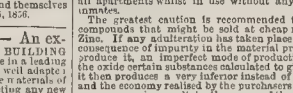
TO MANUFACTURERS and OTHERS.—Extensive and eligible FREEHOLD BUSINESS PREMISES, within two miles eastward of the Royal Exchange, TO BE SOLD, or LET on LEASE. The dwelling, of ten rooms, with stabling, is in front of an open piece of ground of several acres, that cannot be built upon; and the ground in the rear abuts on a street 40 feet wide, and a side gateway entrance next another street; contains near an acre, with good rewerage, and plentiful supply of good spring water.—Apply to Mr. ROSE, 19, Change-alley Cornhill.

TO AUCTIONEERS, BUILDERS, and UNDERTAKERS.—A person carrying on the above branches a short distance west of London, is desirous, through ill health, of DISPOSING of the GOODWILL, STOCK, IMPLEMENTS of TRADE, &c. of the business which has been well established, and for many years successfully carried on by the advertiser and his predecessors. The property consists of a convenient dwelling, with shops, sheds, garden, and yard, well adapted for the busines. Further arrangements can be entered into for a lease presumed to be advantageous to the purchaser.—Terms and other information may be known on personal application to Mr. GLEYSHER, Furnishing Undertaker, 193, Tottenham-court-road.

TO ARCHITECTS, &c.—TO BE DISPOSED OF, on moderate terms, an OLD-ESTABLISHED PRACTICE, in a fashionable watering-place in the south of England.—Address, DELTA, Ivy House, Albion-place, Southampton.

PATENT TERRA-COTTA. Tracery for Parapets and Terraces. Mullions, Pinnacles, Moulded Bricks. Coats of Arms, Crosses, Label Mouldings, Friezes, Trusses, Vases, Balusters, Capitals and Bases of Columns, Paving, Facing Bricks, Coping, Kitchen and other Sinks, Chimney Shafts and Tops, and numerous other Articles, manufactured by J. M. BLASHFIELD, in Patent imperishable Terra-Cotta, at Mill-wall, Isle of Dogs; and sold at No. 1, Wharf, Praed-street, Paddington basin.

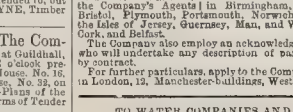
THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.



The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street, City; and by the Manufacturing and Painting Agent, Mr. FREDK. BRADY, Pitsroy Works, Newroad. In Manchester and Liverpool, by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-brush, and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.



For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

TO WATER COMPANIES AND PLUMBERS.
HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.
LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

PRIZE MEDAL, CLASS 2.
HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

ROBERT TUCKER, Secretary.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, weight, singly or in peals.

TUNING BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and peculiar to a new system which gives superior tone and facility for ringing.

TERRA-COTTA POTS, &c.
Erected in London upwards of 20 years since, are now as sharp and perfect as when first manufactured.
Drawings on application to
H. DOULTON & CO. High-street, Lambeth.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1856.

ARROWSMITH and CO., 60, New Bond-street.

11, George-yard, Lombard-street, City

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. This internal stucco may be painted or papered within a few hours of its application, and rooms be thus made dry and habitable immediately.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.

These cements set under water in a few minutes, and are not affected by extreme heat or cold.

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements used at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

BATH, PORTLAND, and ROMAN CEMENTS GROUND and LUMP HYDRAULIC BLUE LIAS LIME.

The LONDON and WEST of ENGLAND CEMENT COMPANY can offer to the trade the best Hydraulic Cements, at reduced prices, the material being excavated in its pure and unadulterated state, from quarries on their own property. The Company particularly recommend a trial of their XXXX Bath Cement, as far superior to any article now in the market. These cements can be sent by rail or ship-ed from their wharf, direct to all parts.—Agents required, and a liberal discount allowed. Orders received by Mr. KIALLMARK, 80, Old Broad-street, City, or by RICHARD WINTER, Cement Works, Dunball, Bridgwater.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Neel street, Liverpool.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Parian Wince, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

TO BUILDERS, CONTRACTORS, SHIPPERS and Others.

G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster.

DAVIES and NORMAN, Agents

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.
IN EVERY VARIETY.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT.
CHARLES NELSON, having completed his works for the manufacture of the above Cement, can supply Contractors, Builders, &c. with a very superior article. The manufacturing department being under his own immediate superintendence, he can confidently recommend it for all works in which Portland Cement is used, and only requires a trial to insure approbation.

Orders, addressed to
London Depôt, 16, South Wharf, Paddington,
BLYTH, BROTHERS, Sole Agents,
will meet with immediate attention.
Manufactory—Emscote Mills, Warwick.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT Messrs. ROBINS and Co. to whom the PRIZE MEDAL was AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, not adulterated by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

PORTLAND and BATH CEMENTS.
TATHAM and CO.
14, South Wharf, Paddington.

SOUTHAM BLUE LIAS LIME DEPOT.
Glazed Stoneware Sewage Pipes.
Brick, Lime, and Cement Merchants,
TATHAM and CO.
14, South Wharf, Paddington.

PORTLAND and ROMAN CEMENT.
PLASTER of PARIS
Manufactured by M. BLASHFIELD, at Millwall, Isle of Dogs.
Warehouse, No 1, Wharf, Paddington-basin.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.

Prepared only by W. J. STENT, Warminster.

London Agents: Messrs. GEO. and THOS. WALLIS, 84, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Marr-street, Dublin.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. These direful maladies, paralysis and painters' colic, will be altogether avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK—LONDON—PATENT. And when so marked, the quality is guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

DOVERCOURT CEMENT WORKS, HARWICH, ESSEX.

JOHN PATTRICK being now the only ROMAN CEMENT Manufacturer at Harwich, hereby informs the public that he continues to carry on a Wholesale Business, and offers to Contractors, Builders, &c. by the freight or half freight, ROMAN CEMENT of best quality upon advantageous terms. Application either at Harwich or to his Agent, GEORGE MORRIS, 20, New Ormond street, Queen-square, London.

P.S. Inland London trade will in future be supplied from Messrs. ROBINS and Co Scotland-yard, Westminster, instead of Whitefriars.

FRONTS of HOUSES.—GREENE and CO'S PORTLAND CEMENT WASH will not vegetate, and equal to Oil Paint for durability. In cake of 1 cwt. for 10s.

DAMP WALLS—GREENE and CO'S OXIDE SOLUTION PAINT, a guaranteed remedy, sold in quantities to cover 200 square feet, for 12s.—To be had only of the Inventors, GREENE and CO. 22, Norfolk-street, Islington.

BLUE LIAS LIME.—CHARLES NELSON begs to inform Engineers, Architects, Contractors, Builders, and the Trade in general, that he is prepared to supply direct from the Works in his own boats to any part of the Thames, River Lee, on any canal or by rail to all parts of the kingdom, large quantities of the above GENUINE HYDRAULIC LIME now so extensively used.

Quality, Weight, and Measure may at all times be strictly relied on, references in proof of the above can be given.

N.B. The Captain of the Boat will always bring with him the Grand Junction Canal Note, from which the contractor will be enable to know exactly what weight of Lime he is paying for

All orders addressed to the—
LONDON DEPOT, 16, SOUTH WHARF, PADDINGTON.
BLYTH, BROTHERS, SOLE AGENTS,
Will be promptly attended to, and any further information can be obtained from them

Works Stockton field, near Southam, Warwickshire.

PLASTER of PARIS.—MESSRS. BLYTH, BROTHERS, beg to acquaint the trade, that they have made a considerable reduction in price; the quality they are now manufacturing cannot fail to give entire satisfaction. Samples and prices forwarded to any part of England, or the metropolis. No extra charge made to any wharf or railway station in London. Any further information can be obtained at their Works, Baldwin's-place, Gray's-inn lane, Holborn; or at the Blue Lias Lime Depôt, 16, South Wharf, Paddington

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 9d. per ton.
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

NOTICE.

SOUTHAM HYDRAULIC BLUE LIAS LIME.

WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality ground and lump into boats, at the Works. Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works Southam

JOHNS and CO.'s PATENT PERMANENT STUCCO WASH (perfectly non-absorbent). STUCCO CEMENT, STUCCO PAINT.—CLARK and BENGOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road. Office, 4, George-yard, Lombard-street.

BRICKS.—White and Red Facing Bricks, and Hard Clinkers, for paving stables, &c. can be delivered by Thames or Eastern Counties Railway, at 10 per cent. under the usual prices.—Apply to W. and W. WRIGHT, Springfield, Essex

REMOVED FROM CRITCHILL-PLACE, NEW NORTH-ROAD, HOXTON.

BRICK MOULDS (improved), Steel-face Stocks and Plates, with Screw Stock Pegs, used four seasons. Various sizes kept on hand. References where in use. Brick Mill Work and Implements. J. LEACH, Millwright and Engineer, 9, St. Peter's-square, Hackney-road, London.

BROWN'S WELLS BRICKFIELD, FINCHLEY, near the three Cemeteries. TO BE LET, upon very moderate terms the above FIELD, containing 5½ acres of good brick earth. For terms and other particulars, apply to Mr. A. RICHARDS, Auctioneer, Tottenham.

BRICKS.—FOR SALE, CLAMP, STOCK, and PLACE BRICKS, delivered at King's-cross or any other station on the Great Northern Railway.—Apply to Mr MESSENGER, Greenwood Brickfield, three-quarters of a mile from Barnet station

IMPROVED BRICK and QUARRY-PRESSING MACHINES, made by THOMAS PORTER, LONDON-ROAD, Leicester.—T. P. begs to inform Architects, Builders, Brickmakers, and Others, that he is now engaged in making very superior PORTABLE BRICK-PRESSING MACHINES, at considerably reduced prices. The boxes are lined with brass.

For design of Press, refer to "The Builder," January 12, 1856.

IMPORTANT to BUILDERS.—GREAT REDUCTION in the PRICE of BRICKS.—BRICKS delivered to any part of the River up to Battersea-bridge, at the following prices, viz.—Grey Stocks, 25s. per thousand; Grizzles, 10s. per thousand; Rough Stocks, 20s.; Place, 13s. to 15s. per thousand.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

WHITE SUFFOLK and RED FACING BRICKS.
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.
KENTISH RAG-STONE of the FINEST QUALITY.
MILLS and PRICE, 8 ADELAIDE-PLACE London-bridge.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock and to judge for themselves.

Malm Place half-washed Stocks, and Place Bricks, also on sale These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

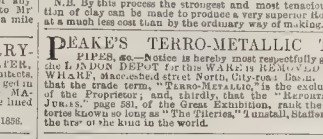
Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

THE BEST HERTFORDSHIRE MALM SECONDS;
THE BEST WHITE SUFFOLK and RED FACINGS:
DEEP-RED RUBBING BRICKS.
Also COWLEY and KENT STOCKS, in any quantity.
J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal Bridge, Old Kent-road, Surrey.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY
(Within a short distance of the five bridges).
THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.
Also, STOCKS, of FIRST QUALITY
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

WHITE SUFFOLK PERFORATED BRICKS.—Messrs. J. EASTWOOD and SONS take this opportunity of informing their customers and the trade, that they have made arrangements for the Manufacture of White Suffolk Perforated Bricks. In curing defects common to bricks of this description, care has been bestowed to produce them of a true and perfect shape, of an even and beautiful surface, and free from fire-flawe.—J. EASTWOOD and SONS, Belvidere-road, Lambeth



BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Flints for building and pottery work, Foundry Loam, Whiting, White Sand for sulphuric acid, Land Drain Pipes, Patent Drain Pipes, Gas Soil for brick-making, &c. &c. Sent in barge from Messrs MEESON and CO'S works at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and Southend and Essex Counties lines, or any railway connected with them. Vessels of 300 to 600 tons load alongside the said wharves at Grays, at MEESON and CO'S wharf and kilns, Bow-bridge, Stratford, Essex. The above-named article can also be procured, as well as all kinds of fire goods both Welsh and Newcastle), Fire-clay, Flare-burnt Lime, and Marble and Tower Lime; and here lime is packed in hogsheads, casks, jars, &c. for exportation.

General Office—No. 12, GEORGE-YARD, LOMBARD-STREET. Letters addressed to Grays, Essex, will meet with immediate attention.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 solid bricks per day, of far superior quality to hand-made, with 3-horse power; one man to feed the machine with clay, and boys to remove the bricks. For plate and description see "Practical Mechanic's Journal," for January 1st, 1856.—For further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

BY HER MAJESTY'S ROYAL LETTERS PATENT.

BRIDGEWATER'S IMPROVED DOUBLE and SINGLE CHANNELED ROMAN ROOFING TILE.

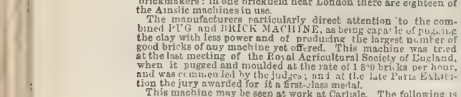
W. BRIDGEWATER begs to call the attention of the trade to his improved and superior method of manufacturing Roofing Tiles, whereby they can be produced cheaper, stronger, lighter, less liable to be damaged by the heat of the kiln in burning, or injured by the effects of the atmosphere, can be made either by Moulding or by Drain-tile Machines, from any description of clay, by the most inexperienced hand, and of larger dimensions than any other method. The fit is so exact that no pointing or mortar is required to be used, consequently, greatly increasing the external appearance. Parties desirous of manufacturing the above can be supplied with the necessary apparatus upon applying to the Patentee, at his residence, No. 1, Portland-street, Cheltenham, who will be willing to grant a limited number of licenses for their manufacture on royalty or otherwise.

N.B. By this process the strongest and most tenacious description of clay can be made to produce a very superior flooring-tile, at a much less cost than by the ordinary way of making.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for the WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "Honours of the Jurors," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Potteries," Tunstall, Staffordshire, as the first of the kind in the world.

PATENT PAINT for BUILDERS and IRONFOUNDERS.—The LONDON PATENT ANTI-OXYDE PAINT has been specially chosen by the Government Engineers as the best, cheapest, and most durable that has ever been discovered. Address to Mr. DEANE WALKER, at the Office of the Company, 20, New Bridge-street, Blackfriars, where very information is afforded.

THE AINSLIE COMPANIES and PORTER'S PATENT BRICK and PIPE MACHINES, manufactured by Porter, Hunde, and Porter, Engineers Carlisle.



The manufacturers invite attention to their machines for making solid and other Bricks, Quarls, Tiles, Cornices, Socket and Plain Pipes, &c. which they recommend as best adapted for producing good bricks or pipes where quantity is an object.

These machines produce articles superior to any hitherto made by other methods; they are simple in their construction, and not liable to get out of order. They are being largely adopted by brickmakers: in one brickfield near London there are eighteen of the Ainslie machines in use.

The manufacturers particularly direct attention to the combined PUG and BRICK MACHINE, as being capable of passing the clay with less power and of producing the largest number of good bricks of any machine yet offered. This machine was tried at the last meeting of the Royal Agricultural Society of England, when it pugged and moulded at the rate of 1,800 bricks per hour, and was examined by the Judges, one of the late Paris Exhibition the jury awarded for it a first-class medal.

This machine may be seen at work at Carlisle. The following is from the *Times* of July 16, 1855:—"A very high opinion was formed of the value of this machine by those who witnessed its performances to-day."

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide place, London-bridge.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES either old or new, whether of thatch, slate, or tile, and other structures. Sole agent, J. B. LAWES, 1, Adelaide-place, London-bridge. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by FOUR YEARS' EXPERIENCE, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It clears and preserves the premises all drip. It meets the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Copings for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Cellars, and Kitchen Ranges, may be had in great variety at their Warehouse, 6, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

TO ENGINEERS, MACHINE MAKERS, AND OTHERS.

CHARLES MACINTOSH and CO. Patentees and Manufacturers of the VULCANIZED INDIA-RUBBER in all degrees of elasticity, recommend this material as capable of sustaining the action of hot or cold water, gas, steam, acids and grease. It is used extensively for valves in marine and land engines, railway buffers and springs, washers for piped joints, hose and pipes, also for gas and other Lamps, alkali cisterns, &c. &c. Articles, moulded or otherwise, made to any size or figure.—Address, 3, Cannon-street West, London; and Cambridge street, Manchester.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, SHEETS, and MOULDED GOODS, for Hydraulic Purposes. Vulcanized Rubber Door-springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions, and Solid Strips cut to any required length or thickness.

Driving-bresses of superior make, and improved Vulcanized Rubber Supply-pipes for ditto.

Vulcanized Rubber in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions in plain: Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.

N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 60 per cent cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Bentham, Lancaster.

No. 1 quality, inches diameter, and price per yard.						
½	¾	1	1¼	1½	2	3 in.

6d.	8d.	10d.	1s.	1s. 3d.	1s. 6d.	per yard

The hose is Burnetized at an extra charge of 2d. per yard. Union Joints, Branch Pipes, and Jets are also supplied.

DURABILITY of GUTTA PERCHA TUBING. Many inquiries having been made as to the durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in having to reply to it by the following letter:—"SIR RALPH CARR HARVIS, Bart., M.P.S., to the GUTTA PERCHA COMPANY.—Special Testimonial. "March 16th, 1852. In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers admirably. Many Builders and other persons have already examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is fast adopted generally in the houses of that town (Newcastle)."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES.
18, WHARF ROAD, CITY-ROAD, LONDON.

TO ENGINEERS, MILL OWNERS, &c.
N. Woolwich Elastic Steam-packing Canvas and India-rubber), of the best quality.

S. W. SILVER and CO. INDIA-RUBBER WORKS, North Woolwich (opposite H. M.'s Dockyards), having considerably extended their manufactures in order to meet the increasing demand upon them for their Steam-packing, would intimate that orders are punctually executed at the lowest prices, and that prompt delivery in London, if required, may be relied on.

Specimens may be seen at S. W. SILVER and Co.'s Warehouses, Nos. 3 and 4, Bishopsgate-street (opposite London Tavern), where orders for Steam Packing, also Buffer Springs, Pump Clacks, and Discharge Buckets for dredging machines, may be left, or addressed to the Works, North Woolwich.

SILVER and Co. have on hand a large stock of Canvas and India-rubber, of all the manufactures, thus—"S. W. SILVER and Co. North Woolwich."

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney Pieces in the Metropolis; consisting of a selection of upwards of two hundred and manufactured by steam power from the finest Italian and other marble, and the utmost care and attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble: bold, massive Chimney-Pieces, in Black, Black and Gold, Sardilla, Sienna, Verd Antique, Brocatella, Dove, St Anne's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and Brit sh Marble, at the lowest remunerative prices.

MARBLE.—The Italian Marble Company, Importers of the produce of their own quarries in the province of Massa Carrara, Italy, beg to inform the general Marble Trade in the United Kingdom that they are prepared to undertake contracts for any quantity of Statuary, Veined, Sienna, Bardilla Dove, and other Marbles, in blocks of all dimensions delivered on shipboard at Leghorn, or in dock, London. A constant stock always on view on the premises, where orders are taken for Panels, Slabs, Sanded and Gilt Slates, Vases, Tazzas, Mortars, Consoles, Chimney pieces of all classes, Circular Tables, Mummers, &c. executed in Italy. For further particulars, inquire at the Office on the Q Wharf, Thames Bank, Pimlico, adjoining the east side of Vauxhall bridge.

WILLIAM W. BONNIN, Secretary.

ITALIAN and GALWAY MARBLE QUARRIES.—Depôt, WHITEHALL WHARF, Parliament street, Westminster.—Mr FRANKLIN begs to invite Sculptors, Marble Masons, Builders, &c. to inspect his extensive STOCK of Italian, Irish, and Foreign MARBLES, which he is constantly importing in blocks and slabs, consisting of upwards of twenty different varieties, which he is enabled to offer at very reduced rates. Several large blocks of statuary, suitable for sculpture, &c. now landing.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab the beautiful stone now raised from the lower beds of their quarries. Chimney-pieces, Columns, Fonts, and ornamental works on view, at 21, Surrey-street, Strand.

HENRY COX, Manager at the Lizard
F. W. RUFFLE, Agent in London.

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red ware is overcome by this manufacture, and it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

BY HER MAJESTY'S ROYAL LETTERS PATENT, APRIL 27, 1855.

JAS. LEWIS'S PATENT STENCH-TRAP.

FOR STREET USE.

Price, with Gutter Plate, 16 inches by 12 inches, each 22s.; weigh about 2 cwt. Larger sizes made, if required.

FOR AREAS, &c.

Price, with Back Plate, 6 inches by 7 inches, each 6s.

FOR CHURCHES, YARDS, &c.

10 inches by 8 inches, each 10s.

The above articles are protected for the Patentee by the British Government, on account of their construction, for the advantages they possess, being a perfect trap for preventing smell proceeding from itself or the drain, should there be water or not in the pan. When stench-traps are put down generally speaking no attention is ever paid to them afterwards—this renders them useless. The above, therefore, are a desideratum, as they require no attention. It is well known when cholera has visited this country, it commences and leaves most those places where the air is vitiated by obnoxious gases proceeding from drains, &c.

Any inhabitant suffering any inconvenience, is entitled, by the Sanitary Act to lay complaint before the public or private authorities of the property, to lay down stench-traps where they are required. Any persons interested in this advertisement would be kind enough to write to the patentee for drawings and testimonials. Please order from any respectable ironmonger, contractor, or the Patentee, JAMES LEWIS, Ironfounder, Abergavenny. Specimens to be seen in the Court of Inventions, Crystal Palace, Sydenham.

JOHN DOULTON, BROTHERS, AND CO.

With Handle, Lever, and Weight, ready for fixing.

Making the most COMPLETE, DURABLE, and EFFICIENT APPARATUS, as well as by far the CHEAPEST yet manufactured.

JENNINGS'S PATENT DRAIN-PIPES.

THE PATENT CHAIRS AND SADDLES above shown are to a line of pipes the SAME SUPPORT AS SLEEPERS TO A LINE OF RAILWAY, the base of each Chair being BROAD and STRONG. The pipes are simple cylinders, of uniform thickness, made without the usual socket; the drying and burning, in consequence, is much more perfect. Pipes thus made and connected will be found to BEAR ANY PRESSURE, and are in no way liable to derangement. The laying of these pipes, and the making of the joints, IS DONE AT ONCE, EACH PIPE BEING BEDDED AS IT IS LAID, and the space between allows the workman to strike up the joint, and the superintendent TO SEE that every pipe is ACCURATELY LAID and PROPERLY JOINTED.

A shows one of JENNINGS'S PATENT SADDLES OR COVERS, by means of which examinations are effected; B shows one of the PATENT JUNCTION COVERS, by which connections are made to finished lines of pipes, it being only necessary AT ANY TIME to remove a PLAIN Cover or Saddle, A, and substitute a Junction Cover, B, the Junction being THE SIZE of the Branch Pipe.

The favour with which these pipes have been received will no doubt give rise to many imitations, as it is much easier to COPY than to INVENT; but GEORGE JENNINGS hopes his sanitary patrons will give HIM CREDIT for being THE FIRST TO SHOW HOW JUNCTIONS MAY BE INTRODUCED, OR EXAMINATIONS MADE, TO FINISHED LINES OF PIPES. These important improvements, as above shown, are PATENTED; and GEORGE JENNINGS would caution those who desire TO PROFIT BY HIS IDEAS, NOT TO INFRINGE HIS PATENT RIGHTS, as they will not be allowed to do so with impunity, although he feels confident the ORIGINAL, for its SIMPLICITY and EFFICIENCY, will be preferred to any copy.

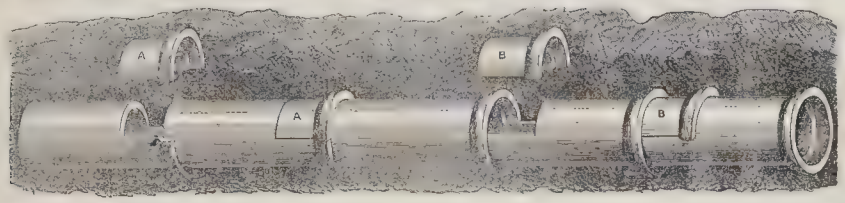
Prices of JENNINGS'S Drain Pipes, per foot run, including the Patent Chair and Saddle, are as follows:—4-inch, 6d.; 6-inch, 8d.; 9-inch, 1s. 1½d.; 12-inch, 1s. 10d.; 15-inch, 3s.; 18-inch, 4s.; with the usual discount to the Trade.

JENNINGS'S PATENT DOUBLE-SEATED VALVE-CLOSET.

Architects describing this Closet in their specifications will have a PERMANENTLY GOOD VALVE CLOSET, NOISELESS, and FREE FROM COMPLICATION. The Patentee has such confidence in its DURABILITY and EFFICIENCY, that he will guarantee every Closet for SEVEN YEARS.

JENNINGS'S IMPERISHABLE EARTHENWARE CLOSET AND TRAP.

This Closet has a large water surface, has no back to soil, is imperishable in its material, and the Trap and Closet is combined in one piece, suited alike for the PALACE or the COTTAGE.



JENNINGS'S IMPROVEMENTS IN LIFT AND OTHER PUMPS.

These Pumps would well repay a visit to Jennings's factory, where may be seen Jennings's Lavatories, Urinals, Sluice Valves, Fire and Steam Cocks, of every size; Shop-Shutter Shoes; Gully, Area, and Sink Traps, and other sanitary goods.

Or Illustrations and Prices can be had free by post, if two stamps are enclosed to

GEORGE JENNINGS, SANITARY ENGINEER, 29, GREAT CHARLOTTE STREET, BLACKFRIARS-ROAD, LONDON.

AYLESFORD POTTERY COMPANY'S PATENT DRAIN-PIPES.

The above Company respectfully invites the attention of Engineers, Architects, Surveyors, Builders, &c. to an improved DRAIN-PIPE, whereby al stoppages may be cleared without disturbing the invert of the drain, by simply removing the cover (marked A or B) whichever may be preferred.

The cover (marked B) may be used in conjunction with whole or half-socket Pipes.

Pipes thus constructed may be laid at intervals in a drain of ordinary Socket-Pipes.

With the great advantage these Pipes offer, they are cheaper than any yet submitted to the public.

London Depôt—AYLESFORD WHARF, Belvedere-road, Lambeth.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 22, Old Fish-street, near St. Paul's, London.—Price for Closet and Apparatus complete, from £2 2s. and perfect action guaranteed.

SALES BY AUCTION.

In the Western Suburbs of London and Parish of Kensington singularly valuable Freehold Lands, offering very choice and beautiful sites for Building.

MESSRS. DANIEL SMITH and SON will (unless an acceptable offer shall be made for the entirety) submit to AUCTION, at the MART, near the Bank of England, on TUESDAY, the 8th of APRIL, 1855, at TWELVE o'clock, in lots of from three to four acres each, presenting beautiful sites for the erection of mansions or villas, about TWENTY ACRES, rich sound FREEHOLD PASTURE LAND, forming some fine undulating inclosure, within a few minutes' walk of the Harrow and Bayswater roads, near several churches, but situate perfectly detached from any houses or other buildings, and containing some extensive and cheerful scenery. It would be a peculiarly fine spot for any public institution or establishment.—Particulars, with plans, may be had at the Auction Mart; of Messrs. R. M. and F. Lowe, Solicitors, Temple; of Mr. W. Sim, Architect, 39, Ebury-crescent, Notting-hill; and of Messrs. DANIEL SMITH and SON, Land Agents, in Waterloo-place, Pall-mall, who are fully authorised to treat for the whole or any part thereof. A valuable farm adjoining may be purchased if a large extent should be required.

---

300 Marble Chimney-pieces and 3000 feet of Stock.

MESSRS. EVERSFIELD and HORNE will SELL by AUCTION, on the PREMISES, Chambridge-hall Saw mills, Hackney-road, on TUESDAY, APRIL 22, at TEN for ELEVEN, 300 MARBLE CHIMNEY-PIECES, in every variety of design and colour, and a quantity of bog-stone chimneys. Also 3,000 feet of STATUARY, black and gold Bar Rills, Mouldings, and Sinkings.—May be viewed, and catalogues had four days' previous, on the Premises; and of the Auctioneers, 40, Parliament street, or Coal Exchange.

BANKSIDE. Valuable Stock-in-Trade, Crane, Travellers, Implements, and Effects of a Stone-merchant.

MESSRS EVERSFIELD and HORNE respectfully announce that this important SALE, will take place on the PREMISES, 32, Bankside, Southwark, in the following order, viz.:—WEDNESDAY, APRIL 4, at ONE precisely, 10,000 feet of tooled, self-faced, and rubbed pavings and slab, 3 to 4 landings, from 3 to 6 inches in thickness, 120 York steps, 200 cills, 3,000 feet of coping, 100 sinks, numerous blocks and scantling of Portland and Purbeck stone, granite, Rockhill and flat ashlar, &c. THURSDAY, APRIL 10, at ONE precisely, 2,000 feet of tooled paving, 2,000 feet of Rockhill paving, 80 landings of large dimensions, 16 steps, 40 blocks of Portland, 60 blocks Grey Chilton of pitching, milestones, grindstones, &c. &c. FRIDAY, APRIL 11, at TEN for ELEVEN, precisely, 8,000 feet of paving, 20 large landings, 200 tons granite pitching, half-sovereigns and cubes, 100 blocks Peterhead granite, Green Moor and Gazeby marble chimney-pieces and slab, a marble monument, numerous steps, cills, coping, sinks, octagon paving, grindstones, milestones, and Harehill slab. Also the valuable plant; consisting of two excellent travelling-cranes, with the jenpies and stout framework; a seven-ton iron crane on the wharf; four masons carts, a spring cart, four stone trucks, hand trucks, trolleys, hoisting jacks, three powerful cart-horses, harness, and other effects; the whole of which are arranged in suitable lots, and are to be sold without reserve, by order of the Trustee, Mr Henry Booth.—Catalogues will be forwarded, post free, or may be had on the Premises, and of the Auctioneers, 40, Parliament street, or Coal Exchange.

PAUL'S HOUSE, TAUNTON.

MR. KINGSBURY has been instructed to SELL by AUCTION, at PATTISON'S CASTLE HOTEL Taunton, on TUESDAY, the 8th day of APRIL next at TWO o'clock in the afternoon, all that excellent FREEHOLD MANSION, called "Paul's House," together with the COTTAGE and extensive SHRUBBERIES, VINERIES, and GROUNDS adjoining the same, containing by admeasurement 2a. 3r. 14p. in the parish of Bishop's Hull. The mansion is situate in a healthy portion of the town, agreeably secluded by its lawn and shrubberies, and within five minutes' walk of the market and churches. It is provided with spacious drawing and dining rooms, boudoir, library, breakfast-parlour, housekeeper's and butler's rooms, kitchen, laundry, china closets, &c.; twelve bed-chambers and dressing-rooms, and is amply supplied with every convenience; extensive walled gardens, stabling with loose boxes for three horses, harness-room, coach-house, &c.; brewhouse, extra stable, cow-houses, piggeries, and various other offices, are placed at a judicious distance, combining, as a whole, most essential comforts, and capable of being at once inhabited, with a trifling outlay. To a person desirous of making a building speculation, the said piece lends to call particular attention, as the house and garden can be separated from the other portions of the property, and a street carried across the field, forming a double frontage from Tower-lane to the garden-gate opposite the New Shire-halls; and also another building frontage of upwards of 100 yards, facing the Crescent-field, in those most improving situations, and tending towards the village of Bishop's Hull. And in the event of the property not being sold in one lot, it will be immediately afterwards put up in two lots, as described in the particulars, whereby the building portion distinct from that part which should remain the present use.—For viewing the premises, and further particulars of its application may be made to Mr. Kingsbury, Hammet street, Taunton (at whose office a plan for laying out the ground for building sites may also be inspected), and all further particulars may be obtained from him; or from Mr. Winslow Jones Solicitor, Exeter.

Hammet-street, Taunton, March 10, 1855.

The British Sperm Candle Company's Works, Farrnell-road, Brow Middlesex.

MESSRS. ELLIS and SON have been favoured with instructions by the Directors of the British Sperm Candle Company to SELL by AUCTION, in the month of MAY, in one lot (unless an acceptable offer be previously made by private contract), the valuable and extensive detached PREMISES, the former and lower, Plumpstead-marshes, and within the last few years at an expenditure nearly 50,000*l.* and the Goodwill of this important undertaking. It may be necessary in explanation to state that the Company was formed for the manufacture of stearic and composite candles: that an article has been produced of unrivalled purity, brilliancy, and extensive use, which formed through the kindness and other causes, creating a demand at all Continental watering-places, and the necessity for the present sale: thus offering to capitalists an opportunity of obtaining upon an established undertaking that must yield the most liberal profits. The whole of the plant and works are in complete working condition; they have been constructed upon the most approved principles, embodying all modern scientific improvements, regulated by practical knowledge of the object in view, which is evident in the masterly arrangement of the whole of the works. The heating processes, throughout the manufacture, are chiefly carried on by mechanical operations, are performed by steam. The present plant is equal to the making of upwards of 2,000 candles per week; but the premises would admit of a considerable extension of the manufacture by a small addition to the plant, which would, doubtless be called for on the increased demand. The premises are within five minutes' walk of the Bow Station, and occupy an area of upwards of four acres, are held on lease for a term of thirty-six years, at a ground-rent of 60*l.* per annum, with power to re-sell on the same, or better terms, free. Further particulars, and orders to view may be had on the Premises, and of Messrs. ELLIS and SON, Auctioneers and Estate Agents, 7, Fenchurch-street.

VALUABLE FREEHOLD BUILDING FRONTAGE and PLOTS, Lands-lane, Cromer, Hertfordshire, Surrey.

MR. HUMPHREYS will SELL by AUCTION on MONDAY, APRIL 9th, at TWELVE, at GARRAWAY'S (by order of the surviving executor of the late Mr. George Stevens), in five lots, valuable BUILDING PLOTS in Great Dowsett-street, Ritherdon-road, and Lands-lane, Bermondsey, near the Old Church; each containing from 105 feet to 150 feet frontage, and areas from 1,050 to 1,500 superficial feet. Particulars and plans may be had of Mr. J. and T. FISHER, the executor, 15, Riley-street, Russell-street, Bermondsey; Mr. PHILLIPS collector to the estate, 166, Bermondsey-street; Mr. FREDERICK HUTTON, Solicitor, 17, Essex-st., Strand; Messrs. THOMAS HUMPHREYS, Solicitor, 14, Fast-Indian Chambers, Leadenhall street; at Garraway's; and of the Auctioneer, 61, Lead-enhall-street.

SALES BY AUCTION.

TO COACHSMITHS, BUILDERS, SMITHS, IRONMONGERS AND OTHERS.

MESSRS. FULLER and HORSEY are instructed to SELL by AUCTION, on the PREMISES, George street, Oxford-street, TUESDAY, APRIL 15, at ELEVEN, in lots, without reserve, the valuable and SUPERFLUOUS IRONMONGERY, including 50 tons 8 C bars, 2 tons 8 C rods, tires, boxes for coach and harness, 3 tons cast and shear steel, 2 tons 3 cwt. patent leather, 2 gross coach bolts assorted, 1 ton iron plate, 100 copper and other head nails, 30 dozen horse nails, 30 cross wood screws, 2 tons coil, crane and skid chains, 2 tons hoop, nest tires, and bolt rings, double-purchase crab, several pairs of blacksmith's and brass sheaves, 1 ton 4 cwt. single and double harness, saddles, spades and shovels, and a general assortment of ironmongery.—To be viewed on MONDAY preceding the sale, and catalogues may be had on the Premises; and of Messrs. FULLER and HORSEY, Billiter-street, City.

ASHLEY-GREEN (midway between Chesham and Berkhamsted).

MR. W. BROWN has received directions to SELL by AUCTION, at the CROWN INN, Chesham, on TUESDAY, APRIL 10th, 1855, at ONE o'clock, the fine Oak, Elm, Ash, Beech, and Hedge TREES growing in Home Meadow, the oak standing and the remainder felled, lying upon Flamsteed Farm, in the occupation of Mr. Bliss, and one and the whole lying most conveniently situate in the vicinity of good roads, about two and a half miles from the Grand Junction Canal and Rails at Stat ion of Berkhamsted, and about three miles from Chesham.—Particulars may be had fourteen days previous; at the Crown Inn, Chesham; the Swan, Tring Station; King's Arms, Berkhamsted; Rose and Crown, Hemel Hempstead; Place of Sale; and at the Offices of Mr. W. Brown, Land Agent, Tring.

STARCH-GREEN, MIDDLESEX. To Builders, Bricklayers, and others.—TO BE SOLD by AUCTION, by

MR. JOHN JACOBS, on the PREMISES, Hewlett's Brickfield, on WEDNESDAY, APRIL 18th, 1855, at TWELVE o'clock, 1,000,000 good STOCK BRICKS, in lots of 10,000 and 20,000 each; the whole of which must be positively sold without reserve, to make room for the new line of road to Acton-bridge.—Catalogues may be had of Mr. Jacobs, at the Red Lion Inn, Acton; of Mr. Star Harrison, Builder, Acton-green; of Messrs. Hewlett, Brickfield, Hammersmith, within a few hundred yards of the Uxbridge-road and but one mile distant from Kensington Notting-hill, Bayswater, &c.—May be viewed by apply ng to Mr Hewlett at Starch-green, or of whom catalogues may be had; and of the Auctioneer, 36, Bedford-row, St Marylebone, St. Marylebone, St. Marylebone, St.

THE ARCHITECTURAL MUSEUM, CANON-ROW, WESTMINSTER.

PRIZES of TEN POUNDS each, will be awarded to Art-Workmen, during the present year, for the most successful specimens of WROUGHT IRON WORK and STONE CARVING.—Prospectuses, &c. may be had at the Rooms of the Museum, and at the Office of "The Builder."

GEORGE GILBERT SCOTT, Treasurer.
HENRY CLUTTON, Hon. Sec.

April 10, 1856.

ARCHITECTURAL ASSOCIATION.—At the next Ordinary Meeting, APRIL 18th, Mr. G. J. WIGLEY will conclude his "Archæological Notes on Jerusalem." The Class of Design will meet APRIL 25th,—subject for sketch, "Entrance Gateway to a Cemetery."

T. W. GOODMAN, } Honorary
J. A. BUNKER, } Secretaries.

Lyon's Inn Hall, Strand.

NOTICE is hereby given, that a GENERAL QUARTERLY MEETING of Members of the INSTITUTION of BUILDERS' FOREMEN and CLERKS of WORKS will take place on WEDNESDAY EVENING next, at the BAY-TREE TAVERN, St. Swithin's-lane, for the purpose of transacting the usual quarterly business. W. ALLARD, Secretary.

COMPETITIONS.

RICKMANSWORTH CEMETERY. — To ARCHITECTS The Burial Board for this Parish are desirous of receiving Plans and Drawings for TWO CHAPELS and SEXTON'S HOUSE, &c. &c. under the Burial Act. The site of the cemetery, with the buildings thereon, will not exceed two acres. The plans and drawings to be sent in on or before FRIDAY, the 18th APRIL instant on which day the Board meet), addressed "To the Clerk to the Burial Board, Rickmansworth." The Board do not pledge themselves to defray any expenses incurred in the preparation and submission of the plans and drawings, nor to accept any one plan or drawing in particular.—Rickmansworth, April 5, 1856

TO ARCHITECTS, LANDSCAPE GARDENERS, AND OTHERS.

SCARBOROUGH PUBLIC BURIAL-GROUND.—The Scarborough Burial Board is desirous of receiving Designs, Ground Plans, Sections, Elevations, Specifications, and detailed Estimates for the LAYING-OUT as a PUBLIC BURIAL-GROUND the land selected for the site, containing ten acres, and for erecting thereon two chapels, with lodges and entrance-gates. The whole cost of buildings and entrance-gates not to exceed 2,000*l*. The plan and levels of the ground may be inspected at the Office of the Board, Town Hall, Scarborough, and Premiums of 15*l* and 10*l* will be awarded to the two designs respectively which the Board may consider as being first and second as regards merit under the circumstances. Neither of the premiums will be paid unless a Tender be accepted by the Board for the actual execution of the works at or within the stipulated sum of 2,000*l*. The designs and estimates, with motto, and a sealed letter similarly endorsed, containing the author's name and address, are to be sent "To the Scarborough Burial Board, under cover to their clerks, on or before the 14th day of MAY, 1856.

JOHN COOK, } Joint Clerks to the
J. P. MOODY, } Burial Board.

Town Hall, Scarborough, April 5th, 1856.

LIVERPOOL EXCHANGE. — The Committee of the Proprietors of the Liverpool Exchange being desirous of EXTENDING the ACCOMMODATION of the NEWS-ROOM, and of improving the arrangement of the present Offices in the Buildings, are willing to receive DESIGNS in PENCIL to effect those purposes. If more than five designs be furnished, the Committee will select that number, for the authors to perfect each a set of plans, accompanied with an estimate of the cost, for each of which 20*l* will be given. Should any one plan in whole or in part be adopted, and acted upon, the designer will be preferred in carrying out the work. To be delivered on or before the 19th of MAY, to Mr. J. H. YOUNGHUSBAND, Secretary and Treasurer, from whom any further information may be obtained.

COMPETITIONS.

BLANDFORD UNION.—To ARCHITECTS BUILDERS, &c.—The Guardians of the Blandford Poor-law Union solicit PLANS for the ERECTION of a NEW WORKHOUSE capable of containing 250 inmates, with every necessary office required by the Poor-law Board. The ground on which the building is to be erected measures about 460 feet by 200. A plan of the ground if required may be obtained on application to the clerk on payment of 5*s*. The drawer of the plan approved by the guardians if sanctioned by the Poor law Board, will receive a premium of 10*l* provided he should not afterwards become the contractor for the works. Plans must be sent, free of carriage, to the Office of the Clerk, on or before the 3rd MAY.—By order of the Board,

Blandford, April 8, 1856.

TO ARCHITECTS.

THE COMMITTEE of the CONGREGATIONAL CHAPEL, DORCHESTER, are desirous of receiving DESIGNS, to comprise plans, specifications, and estimates for a NEW CHAPEL, to be erected in South-street (the land has a frontage of 92 feet bounded by houses on each side, tapering back to 42 feet,—118 feet long), to seat 820 persons on the ground-floor, and 100 in an end gallery, with a SCHOOL-ROOM and VESTRY attached: the whole expense of fittings of Chapel, &c. not to exceed 1,800*l*. Access to the school-room by a passage from the front. The neighbouring wall being high, the side-lights must be more than a usual height from the floor. The side-walls may be plain, as they will be hidden from the street by the adjoining houses. A premium of 10*l* will be given for the most approved design, unless the Architect shall be employed to carry out the work, the premium will then merge in the commission: the amount of such commission to be stated at the time of sending in the plan. A specification, stating the general mode of construction, the materials to be used, and the manner of finishing, to be sent with the plans to assist the comittee in their decision. Each design to be sent in accompanied with a sealed letter, bearing same motto or device, to distinguish it from others, on or before the 5th of MAY next, to M. PEVENSHI, Esq. Dorchester, of whom further particulars may be obtained.

TO ARCHITECTS.

ELIZABETHAN CLOCK-TOWER.—FIVE GUINEAS PREMIUM will be given for the best DESIGN for a SQUARE ELIZABETHAN CLOCK-TOWER, including elevation, plan, vertical section &c. Materials, Red and White Brick and Flint. For further particulars apply to Mr. GEORGE BENNETT, Maker of the London-bridge Clock, Greenwich, Kent.

CONTRACTS.

TO BUILDERS AND CONTRACTORS.

MIDLAND COUNTIES INSURANCE COMPANY'S OFFICES, LINCOLN.—Persons willing to CONTRACT with the Directors of the Midland Counties Insurance Company for the ERECTION of their NEW OFFICES, proposed to be built on a site situate in Silver street and Bank-street, in the City of Lincoln, may view the drawings and specifications, and obtain other information relating thereto, on application at our Offices after WEDNESDAY, the 9th day of APRIL next, until 23rd APRIL next, on which latter day, by TWELVE o'clock at noon, Tenders are to be delivered at the Company's present Offices, Cornhill, Lincoln, sealed and endorsed "Tenders for Offices" &c. addressed to WILLIAM ANDREW, Esq. Secretary. The Directors do not pledge themselves to accept the lowest Tender.—By order of the Directors.

BELLAMY and HANBY, Architects and Surveyors,
30, Broad-gate, Lincoln.

Lincoln, March 25, 1856.

TO GENERAL CONTRACTORS.

MARSH CHAPEL and GRAINTHORPE INCLOSURE, LINCOLNSHIRE.—The Valuer acting in the matter of the Inclosure of the Out Marsh and Fifty Lands at Marsh Chapel and Grainthorpe, in the county of Lincoln, is desirous of receiving TENDERS for the execution of the following WORKS:—viz.

CONTRACT No. 1.—For the construction of One Mile and Fifty Chains in length of New Sea Bank, and the excavation of Sixty Chains in length of new Drains.

CONTRACT No. 2.—For the erection of a New Sea Sluice of Brick and Stone, with Land and Sea Doors, to flow Waterway, with all necessary Piling, &c.

Plans and specifications of the above works have been prepared, and may now be inspected at the Contractors, until the 14th of this month, at Mr. LEWIN'S, the Witham Office, Boston, of whom all necessary information may be obtained. Separate Tenders for the above works are to be delivered to me, at my residence, before TWELVE o'clock on TUESDAY, the 29th instant.

SAML. VESSEY, Valuer.

Manor-house, Halton Holegate, Spilsby.

Ample security will be required, and the valuer will not be bound to accept the lowest Tenders submitted.

Grainthorpe Bank is available for small craft, at spring tides, to within 150 yards of the New Sea Sluice.

TO BUILDERS, PAINTERS, AND OTHERS.

THE CHURCHWARDENS of CHRIST-CHURCH will meet at the Vicarage, Watney-street, Commercial-road East, on MONDAY, APRIL 21st, at SIX o'clock precisely in the evening, to open TENDERS for REPAIRING and REPAINTING the said CHURCH and VICARAGE, specification of which can be seen at the Vicarage, between the hours of TEN and FOUR, at which time further particulars obtained at the Office of Mr. ANDREW WILSON, Architect, 34, Canon-street-road, St. George's in the East. The party contracting will, if required, be bound to enter into a written contract and bond at his own expense, with two sufficient sureties, to be approved of by the said Churchwardens, for the due and punctual performance of the works under the several terms, conditions, and stipulations contained in the specification. The Churchwardens do not bind themselves to accept the lowest Tender, or hold themselves liable to any charge connected with the preparation of the estimate.

CONTRACTS.

NOTICE to IRONFOUNDERS and SMITHS.—The Commanding Royal Engineer of the Dover district hereby gives Notice, that sealed TENDERS will be received at the Office of the Director-General of Contracts, Pall-mall, London, on or before MONDAY, the 14th day of APRIL, 1856, from persons desirous of contracting for SUPPLYING ARTICLES of CAST and WROUGHT IRON at the several barracks in the Dover district for the War Department. Specifications and drawings of the articles to be supplied, with conditions of the contract, may be seen by persons fully competent to undertake the supply of the articles, and forms of Tender obtained, at the Royal Engineer Office, Archcliff Fort, Dover, between the hours of TEN and FOUR o'clock, from THURSDAY, the 27th MARCH, to SATURDAY, the 12th APRIL, 1856, Sundays excepted. The party whose Tender may be accepted for the work, will be required to enter into a bond, with two eligible securities, jointly and separately to be bound under a penalty of 500*l*. for the due performance of the contract. Tenders for the above service to be addressed to the Director-General of Contracts, Pall-mall, London, and endorsed "Tender for Stores, Dover District."

N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Dover, 19th March, 1856.

NOTICE to BUILDERS.—Notice is hereby given, that TENDERS will be received at the office of the Director-General of Contracts, War Department, Pall-Mall, London, from such persons as may be desirous of undertaking a Contract for the ERECTION of a GUARD HOUSE and CELLS, &c. at Winchester Barracks, in the county of Hants. Plans and specifications may be seen at the Royal Engineer Office, Winchester, where also forms of Tender may be obtained, every day (Sundays excepted), from the 10th until the 26th day of APRIL, 1856. Tenders to be delivered on or before the 28th day of APRIL, 1856. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders. No notice will be taken of any of the Tenders unless made on the printed forms, to be obtained at the Royal Engineer Office, Winchester Barracks.

Royal Engineer Office, Portsmouth, April 1, 1856.

NOTICE to BUILDERS and CONTRACTORS—ORDNANCE WORKS.—The Commanding Royal Engineer of the Dover District hereby gives Notice that Sealed TENDERS will be received at the office of the Director-General of Contracts, Pall Mall, London, on or before THURSDAY, the 1st day of MAY, 1856 from Persons desirous of CONTRACTING for LAYING NEW BOARDED FLOORS and GALVANIZED IRON PLATE CEILINGS at WALMER BARRACKS. A specification of the works to be executed may be seen by persons fully competent to undertake the work (none others need apply), and forms of Tender obtained at the Royal Engineer Office, Barracks, Walmer, between the hours of TEN and FOUR o'clock, from MONDAY, the 14th of APRIL, to WEDNESDAY, the 30th of APRIL, 1856, both days inclusive. The party whose Tender may be accepted for the work, will be required to enter into a bond, with two eligible Securities, jointly and separately, to be bound under a penalty of 100*l*. for the due performance of the Contract. Tenders for the above work to be addressed to the Director-General of Contracts, Pall Mall, London, and endorsed "Tender for Work at Walmer Barracks."

N.B.—The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Dover, 7th April 1856.

TO BUILDERS AND CONTRACTORS.

NOTICE is hereby given, that TENDERS will be received by the Director-General of Contracts, War Department, Pall Mall, London on or before SATURDAY, the 10th day of May next, from Persons desirous of CONTRACTING with the War Department for ERECTING SOLDIERS' BARRACK ROOMS over the Stables, South Square, Brompton Barracks, Chatham. Plans and specifications of the work are to be seen, and Forms of Tender obtained on application at the Royal Engineer Office, Chatham, between the hours of TEN and FOUR, till the 9th of May next, Sundays excepted. The person whose Tender may be accepted will be required to enter into a bond, with two eligible securities, jointly and separately bound under a penalty of £3,000 for the due performance of the contract. Tenders to be addressed to "The Director-General of Contracts, War Department, Pall Mall, London," and to be delivered in envelopes endorsed, "Tenders for Works at Brompton Barracks, Chatham." No Tender can be admitted after the said 10th day of MAY, next.

N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

TO BUILDERS AND CONTRACTORS.

DUDLEY UNION WORKHOUSE.—Builders and Others are invited to deliver TENDERS for the execution of the several Works required to be done in the ERECTION of a NEW WORKHOUSE, prop sed to be built at Shavers' End, near Dudley, in the parish of Sedgley, in the county of Stafford. The plans and specification may be seen on application to the Architects, Messrs. HILDRAKE and LOVATT, Market-place, Wolverhampton to whom Tenders to be forwarded, under cover, to THOMAS SHUTHONS, Esq. (Clerk of the Court) Bank, Dudley, and endorsed "Tender for New Workhouse," and must be received on or before the 1st day of MAY next. A separate estimate to be given for the School Building. Each Tender must be made agreeably to the form to go with the plans and specifications, to which parties are referred for all further particulars relative to the proposed contract. The Guardians do not pledge themselves to accept the lowest Tender.

TO CONTRACTORS, BUILDERS, AND OTHERS

CLUN UNION.—Persons desirous to CONTRACT for MAKING IMPROVEMENTS in the DRAINAGE of the CLUN UNION WORKHOUSE PREMISES, situate at Bishop's Castle, in conformity with the plans and specifications now lying in the Clerk's office for inspection, are requested to send in Tenders, addressed to the Board of Guardians at the Workhouse, in Bishop's Castle, on or before the 5th day of MAY next. By order of the Board,

FREDERIC PARDOE, Clerk.

Bishop's Castle, March 14, 1856.

[*For remainder of Contracts see next page.*

CONTRACTS.

HASTINGS MUNICIPAL BURIAL BOARD.—To CONTRACTORS and BUILDERS.—The Council of Hastings give Notice, that they are prepared to receive TENDERS from competent persons for the ERECTION of TWO CHAPELS, TWO LODGES, RECEIVING-HOUSE, FRONT WALL, GATES, PIERS, and other WORKS, at the New Burial Ground near Ore Church, Hastings. The plans, drawings and specification may be seen on and after the 15th day of APRIL instant, at the office of the Town Clerk, High-street, Hastings, between the hours of TEN A.M. and FOUR P.M. where Tenders, only on the printed form supplied by the Council, are to be delivered on or before TWELVE of the clock at noon of TUESDAY, the 29th day of APRIL instant, properties according to the conditions will be required. The Council do not bind themselves to accept the lowest or any Tender.—By the Council.

JOHN G. SHORTER, Town Clerk.

Hastings, April 8, 1856.

GLASGOW CORPORATION WATER-WORKS.—MUGDOCK RESERVOIR and TUNNEL.—To CONTRACTORS.—The Committee of Commissioners hereby give Notice that they have POSTPONED their intention to open the TENDERS lodged for No. 2, or MUGDOCK CONTRACT, which are in the meantime retained and preserved under seal, for future consideration; and it has been resolved to receive new and revised Tenders from Contractors, offering alternatively to execute and complete the said Contract in two separate portions, the one part comprehending the Mugdock Service Reservoir and relative work, and the other the Tunnelling and relative work, conform to specification and schedule, which new and revised Tenders will be considered and disposed of along with the Tenders already lodged, so far as not superseded by the lodgment of the revised Tenders now requested. As formerly advertised, the whole work consists, among other things, of a Tunnel 3,840 yards in length, and eight feet in diameter, extending from near the village of Strathblane to the valley south of Mugdock, near Milngavie, and the formation of a large Reservoir, to be called the Mugdock Service Reservoir with some short Tunnels, and all the masonry watercourses, divormans of paths, &c. &c. connected therewith. The earthwork, puddling and stoning in the embankment, and cuttings of the Reservoir, will amount to nearly 500,000 cubic yards. The plans, sections, drawings, and specification, will be again exhibited for the inspection of intending contractors in the Town-hall, at the Cross of Glasgow, entry No. 12, Trongate, on and after WEDNESDAY, 2nd day of APRIL next, where copies of the specification and plans, and all other requisite information will be obtained; and also from the Subscriber, Mr. BURNET, at his office, City Chambers, Glasgow; and all further information necessary may be obtained from J. F. BATEMAN, Esq. the Engineer, at his offices in Manchester, and from Mr. ALFRED MOORE, the Assistant Engineer, at Milngavie, who will accompany Contractors over the ground.—Revised Tenders, in the form above required from the few who have already tendered, and also new Tenders from other contractors, addressed to the Commissioners, sealed and marked "Tender for Mugdock Contract," must be delivered to the Subscriber at his said office, City Chambers, Glasgow, on or before THURSDAY, 17th APRIL next.

By order of the Committee,

JOHN BURNET, Secretary.

Glasgow, 26th March, 1856.

GLOUCESTER WATERWORKS.—IRON CASTINGS.—The Gloucester Board of Health are prepared to receive TENDERS for the SUPPLY of about 250 TONS of WATER-PIPES, and other castings for town distribution. Printed specifications and forms of Tender (price 5s.) may be had on application to the undersigned. All Tenders are required to be sent in to the Clerk, under a sealed cover, marked "Tender for Water-pipes and Castings," and addressed to "The Gloucester Board of Health," on or before TUESDAY, the 15th day of APRIL instant. The Board do not pledge themselves to accept the lowest or any Tender. K. H. FRYER, Clerk to the Board.

Gloucester, April 2, 1856.

TO CONTRACTORS AND BUILDERS.

SURREY HOUSE OF CORRECTION, WANDSWORTH-COMMON.—The Visiting Magistrates of this Prison purpose Extending the Accommodation for Female Prisoners, and making certain Alterations in the Residences of some of the Officers; the specifications, and conditions may be seen at the Sessions House, Newington from the 10th to the 20th inst. The Visiting Magistrates will meet at the said Sessions House on TUESDAY, the 29th inst. at the hour of 12 o'clock, for the purpose of opening such TENDERS for the execution of the work as may then and there be presented to them.—Further information, and the plans and specification may be obtained upon application to Mr. HILL, Architect, at 27, King street, Cheapside, or Christ Church-buildings, Birmingham. The Visiting Magistrates do not bind themselves to accept the lowest or any Tender. Every contractor applying for a copy of the bills of quantities will be required to deposit the sum of £2 which will be returned in all cases in which a Tender has been delivered.

(Signed) WORONZOW GREIG, Clerk of the Peace.

Office of the Clerk of the Peace, North-street, Lambeth, April 10th, 1856.

TO PAINTERS and OTHERS.—TO BE REPAIRED, for the Freeholder, the HOUSE No. 74, WARDOUR-STREET, according to a specification to be seen on the Premises on MONDAY, APRIL 14th, and Two following Days. Tenders to be delivered on or before FRIDAY, 18th APRIL, at the Office of Mr. LOCKYER, Southampton-street, Fitzroy-sq. are. The advertiser will not be bound to accept the lowest Tender.

TO CONTRACTORS, MASONS, PAVIORS, AND OTHERS

ROAD MATERIALS, &c. PARISH of ST. MARY, LAMBETH.—The Vestry of the said Parish, hereby give notice, that they will meet at the Vestry hall, Kennington-green, on THURSDAY, the 17th day of APRIL instant, at SEVEN of the clock in the evening precisely, to receive TENDERS for the SUPPLY of GUERNSEY BROKEN GRANITE, CLEAN BROKEN FLINTS, PIT GRAVEL, &c to be delivered on the roads in such parcels, and through such wharf, as ordered, clear of any coarse [illegible]. Also to receive TENDERS for the performance of "LUMPS" and PAVIORS' WORKS. Persons disposed to contract, must send in tenders, sealed and indorsed, "Tender for ——," describing the nature thereof, before TWO of the clock, on the day of meeting. Such Tender must contain the names and address of two persons as sureties, for due performance of the Contract. The Contract will be prepared at the expence of the Vestry. Printed Tenders only will be received, and the Vestry do not pledge themselves to accept the lowest or any Tender. The only form of Tender which will be received, with other requisite particulars, may be obtained on application to the Clerk. By order,

THOMAS ROFFEY, Clerk to the Vestry.

Office, Vestry-hall, Kennington, Ap. 11 10, 1856.

CONTRACT for DAY and JOBBING WORKS.—The Vestry of the Parish of Saint John, Hampstead, hereby give notice, that they are ready to receive TENDERS from parties who may be willing to CONTRACT, until Michaelmas, 1857, for the EXECUTION of DAY and JOBBING WORKS in the said Parish, at or under, or above a schedule of prices, which, together with the form of Tender and Contract, may be seen, or copies thereof be purchased, at the Office of the Surveyor of the Vestry, on MONDAY next, the 14th of APRIL and on every subsequent day, between the hours of TEN and FOUR, up to the day and hour fixed for sending in Tenders. The Vestry do not bind themselves to accept the lowest Tender. Security will be required, and the contractor, or his authorised agent, must reside at Hampstead during the continuance of the Contract. Tenders in the form, and agreeably to the instructions contained in the scale of prices, must be sent or delivered to the Vestry Clerk, on or before TWELVE o'clock at noon, at latest, on FRIDAY, the 18th day of APRIL instant; and the parties tendering must attend personally, or by some authorised agent, at the meeting of the Vestry, at the Board-room, in the Workhouse, on the same day, at HALF-PAST SEVEN o'clock in the evening precisely.

By order of the Vestry,

THOMAS TOLLER, Vestry Clerk.

Vestry and Surveyor's Office, Workhouse, New-end, Hampstead, April 7, 1856.

CONTRACTS.

TO BUILDERS.

PERSONS desirous of TENDERING for the ERECTION of a SCHOOL and MASTER'S RESIDENCE at Croydon, near Accrington, Lancashire, will be ready, on or after THURSDAY, and specification at the Hardwicke Arms Inn, Accrington, or at the office of Mr. J. F. CLARK, Architect, Newmarket. Tenders are to be delivered on or before the 24th of APRIL next, and the lowest or any will not necessarily be accepted.

MORTGAGES of ROCHESTER-BRIDGE ESTATES. LOAN REQUIRED.—The Wardens and Assistants of Rochester-bridge will be ready, on or after THURSDAY, the 15th day of MAY, 1856, at their Audit Chamber at Rochester, in Kent, to open and consider TENDERS or PROPOSALS from persons willing to advance FIVE THOUSAND POUNDS, or any part thereof, in sums of not less than one hundred pounds each, to be secured with interest (payable half-yearly) by transferable mortgage of the Estates properties of the Bridge Corporation, under the regulations and provisions of the Rochester-bridge Acts 1846 and 1856 affecting such loans and the repayment thereof. All sums so advanced are to be paid within one week next after the acceptance of the proposal shall have been notified to the party making the same. Further particulars and extracts from the Acts may be observed on application at the Office. Proposals in sealed envelopes, marked "Tender for Mortgage," stating the amount offered to be advanced and the rate of interest required, may be sent to me at any time previous to SEVEN o'clock in the Forenoon of the said 15th day of MAY, 1856.

By order of the Wardens and Assistants,

The Precinct, Rochester, 4th April, 1856. GEORGE ERSELL, Bridge Clerk.
